This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

'STIGATION BY THE COMMITTEE ON NAVAL AFFAIRS.

TESTIMONY

TAKEN BY

COMMITTEE ON NAVAL AFFAIRS.

APRIL 27, 1876.—Ordered to be printed.

KITTERY NAVY-YARD.

KITTERY, ME., *March* 15, 1876.

re ANRREW BRYSON sworn and examined.

r. MILLS:

What is your rank and what duty are you now performing?—Answer. I am in the Navy, and commanding the naval station at Kittery.

long have you been in command here?—A. Since September 21, 1874—about nths.

e were you on duty before you were put in command here?—A. I was wait- it that time, living with my family at home. My former cruise was on board the a the Mediterranean.

many officers of the line have you on duty here?—A. A. Bryson, commodore. 'oung, captain; Commander Henry Erben, senior aid; S. D. Ames, ordnance officer; A. R. Yates, commander, commanding the Sabine; C. S. Cotton, lieu- mander, assistant to captain of the yard; F. A. Cook, lieutenant-command- re officer of the Sabine; T. M. Gardner, lieutenant-commanding the Speedwell; tony, assistant navigator, navigation officer; W. W. Rhodes, lieutenant of . Dunlap, lieutenant of Sabine; F. H. Delano, lieutenant of Sabine; C. J. urgeon of the yard; F. M. Dearborn, surgeon the Sabine; H. K. Law, past irgeon of the Sabine; A. J. Clark, purchasing paymaster, Portsmouth; C. F. ector of provisions, paymaster; E. Putnam, paymaster; G. F Griffin, paymas- Sabine; D. B. Macomb, chief engineer of the yard; G. D. Emmonds, chief in charge of engineer's stores; J. Q. A. Ford, past assistant engineer of the . Kelly, past assistant engineer of the yard; T. D. Wilson, naval constructor; ndler, civil engineer of the yard; John Vennard, mate attached to the yard; l, mate attached to the Speedwell; J. T. Choat, boatswain of the yard; T. R. nner of the yard: T. H. Fortune, gunner of the yard: L. Hanscom, carpenter d; T. H. Fields, major commanding the marine barracks; J. H. Haighbee, barracks: B. R. Russell, second lieutenant of the barracks; D. Whipple, tenant of Sabine.

ou think that there is a necessity for the employment of as many men as you yard at the present time?—A. Yes, sir.

ou think there is any necessity for the employment of the number of officers that ere at present?—A. I do.

think that none of them could be spared without detriment to the public service? ik not.

vessels are there here?—A. The Sabine, receiving-ship; Lancaster, Ticonder- rise, Kansas, and the tug Speedwell.

t use do you have for those vessels? How are they being used?—A. The els are not being used at all. They are in ordinary. The Speedwell is being

used in case of necessity. She is kept down alongside of the dock, with fires banked, during the winter season, in case of distress anywhere along outside on the coast here, that she may be sent out for the relief of merchant vessels. The larger vessels here, the men-of-war, are laid up in ordinary; one now being surveyed, the Lancaster; the Enterprise is being fitted out by contract.

Q. Are any of these undergoing repair, or being complete?—A. But one, sir; the Enterprise.

Q. How much does that lack of being completed?—A. For that information I shall have to refer you to the naval constructor.

Q. What material have you here for building vessels?—A. For that also I shall have to refer you to the naval constructor.

Q. Can you state in what condition it is?—A. So far as I know, good.

Q. Is it taken care of in your docks, and under shelter?—A. Yes, sir.

Q. Where is your live-oak?—A. The live-oak is in the wet basin, nearly all, if not quite. But it lay for some time in the yard. We had not the labor necessary to put it in dock. When we got the labor then we went to work and put it all into the dock where it belonged; or, if not quite all, nearly all.

Q. Are you familiar with the condition of the live-oak timber?—A. No; I am not.

Q. What is the capacity of your docks here? I mean are your docks capable of taking care of more live-oak timber than you have got in them now; or are they full?—A. No, sir; we can still take more, and in large quantity.

Q. You don't know whether you have timber enough of all sorts to build a vessel and complete her?—A. The constructor will give you that information. I presume we have enough to complete one vessel; but the constructor would give you more precise information on that point than I can.

Q. Will you give us the number of marines?—A. Forty-nine, sir; I wish we had more.

Q. Have you any suggestions to make to promote the efficiency of the Navy, or for economy of public expenditures?—A. Yes, sir. With reference to purchases made abroad, or made outside of the yard, for the use of the Navy, in my judgment we should do away with the open-purchase system, and go to contracts; whether for large or small quantities, or whatever may be required.

By Mr. JONES:

Q. You mean advertise for contracts—no open purchases at all?—A. Yes, sir; I think that would conduce to smaller expenditures of money, and to some competition.

By Mr. MILLS:

Q. Have you any further suggestions on the subject of economy?—A. Yes, sir: I think by putting into the hands of the heads of departments the employing of men, irrespective of outside influence, whether personal or political, holding the head of a department strictly responsible in his commission for the employment of men of the proper character, I think we would have better men, and probably require less of them.

Q. You mean the heads of the different bureaus?—A. The heads of the different bureaus. We call them "departments" here, and they call them "bureaus" in Washington.

Q. How could that be done?—A. It could be done by giving to the head of the department, by authority of the bureau to which those departments belong, authority to take on as many men as in his judgment are required to do a specific piece of work, he to be held responsibility for the capability of the man or men he employs, and to take on no more men than seem to be absolutely required. In that way we would be entirely free from outside influences of any kind; and I think we should have our work done cheaper and better probably in that way than it is now done.

Q. Would it not be possible for the head of the department to be controlled by somebody over him? How would you remedy that?—A. The only way to remedy that would be to keep a strict supervision over him, and if he was found derelect in duty, then try him by court-martial. That is the only way it could be done.

By Mr. JONES:

Q. What do you mean, the chief of the bureau?—A. No; I mean the head of the department in the yard.

By Mr. BURLEIGH:

Q. For instance, you would say that the naval officer was one?—A. Yes, sir; or the ordnance officer, or the civil engineer should be responsible for the employment of his men, and so on through all these departments.

By Mr. MILLS:

Q. Suppose these officers proceeded on that line, having the good of the service at heart, and some politician desired some men put on to a certain work in the yard, might he not have influence enough over those officers to cause that to be done? Have you not seen something of that kind?—A. Yes, sir; that has been done, I understand. I have never known of instances of that kind; but I have heard that it had been done.

Q. How could that be remedied? A court-martial could not reach a case of that kind, because the power is above him.—A. I don't know how anything of that kind could be reached other than by the politicians themselves agreeing among themselves not to interfere, except in case of necessity. If you or Mr. Burleigh find that I am doing wrong in the yard, then prefer charges and see what you can make out. So long as everything is going on honestly, fairly, and properly, don't interfere with me. You can supervise me as often as you choose.

Q. Generally, your idea is that the heads of the different departments should make the selection of their own men, without being interfered with by any outside parties—either by Congress or anybody else?—A. Yes, sir.

By Mr. BURLEIGH:

Q. In your experience have you not known of some heads of departments acting in a partisan manner themselves, without the influence of politicians?—A. I don't think a case of that kind has ever come under my observation, not one.

Q. There are partisans you know (or used to be more than there are to-day) among the officers of the Navy. I don't know as there is as much partisanship to-day as formerly.—A. There are black sheep in all flocks, and unfortunately we have them among us. I would like to see the service rid of them. It is possible some officers might do wrong even under those circumstances. But we are always in a position where you can put your hand on our shoulder at any time; and we can, as sailors say, "be brought up for it."

By Mr. MILLS:

Q. Is not the difficulty this, that you are simply wheels in the machinery? The abusing power is above you, and it has got to be reached somewhere else?—A. Yes, sir.

Q. Do you know of any abuses of any kind in the naval service, here or elsewhere?—A. I do not, only in the way I speak of.

Q. Do you know anything about the alleged abuse of taking on a large number of hands for political purposes just before election, and discharging them just after? Has it been done since you have been here?—A. No, sir.

Q. Have no hands been taken on that were unnecessary, preceding an election in Maine, or an election in New Hampshire?—A. The only way I can reply to that question is this: Certain men were taken on, I believe, before the election. They were considered necessary to do this work of which I have spoken. I think about that time we were getting the live-oak into the dock. How many men were taken on at that time I don't remember; but the constructor can tell you all about it, and it was presumed necessary to take those men on—whether at that special time or not is more than I can tell.

By Mr. JONES:

Q. As I understand, if men are taken on, the heads of the different bureaus come to you?—A. The heads of the different departments make out a list of the men they require; and after my name has been appended to that, the men are mustered in. They are presumed to be the judges of the number of men they require, not I.

Q. You have nothing to do with putting them on or taking them off?—A. No, sir.

By Mr. MILLS:

Q. Now, are there any instances that you remember where you have been ordered from Washington, by the Chief of the Bureau of Construction, or the Secretary of the Navy, to take on hands here, preceding an election, without any request coming from you before you received those orders?—A. In a number of instances I have received, from time to time, orders from the Secretary of the Navy to take on men. I have received the same order from the Chief of the Bureau of Construction, to take on men; but I don't think it was preceding an election.

Q. Have you got those orders where we can turn to them conveniently and look them over?—A. Yes, sir.

By Mr. BURLEIGH:

Q. You came to the yard after the election in 1874?—A. Yes, sir.

By Mr. JONES:

Q. You have all the papers where you have taken on men and where you have discharged them?—A. Yes, sir.

Q. And you have the papers during the time when Commodore Howell was here, previous to you?—A. Yes, sir.

By Mr. MILLS:

Q. I would like to have you give us the number of men employed in this yard through the whole year, commencing with January, 1868, monthly, to the present time; and the number of men discharged in each month.

By Mr. BURLEIGH:

Q. You spoke of political influence interfering with the labor here and increasing the cost more than it would if the matter were left to the heads of the departments; and then you spoke of getting orders from Washington to take on men. What political influence is brought to bear?—A. I don't know of any other influence save personal influence. I know very little as to outside influences. For instance, Mr. So and so, over in Portsmouth, or elsewhere, will come to the head of some department and say, "I have a friend here, and I would like to get employment for him in the yard." Well, if he is disposed to consult the wishes of his friends, this man's name may or may not go down. I know nothing as to the details of the matter. I only know when the lists of these names come in, signed by the head of the department employing these men, I put my approval down, and the men are taken on. I am not supposed to know whether this, that, or the other man is a capable ship-builder or not. That is for the head of the construction department in the yard to determine. It is presumed that when these names come before me they are the right kind of men.

Q. You don't know about the character of the men; but you do know that there are certain men who busy themselves in having their friends about the yard?—A. That is my impression.

Q. You could call those men by name, could you not?—A. No; I don't know whether I could or not.

Q. Not at all times?—A. No, sir; of course they don't come to me. They go to the heads of the departments.

By Mr. MILLS:

Q. Do you know whether or not men are put in this yard to do that work without reference to their skill—whether they are skilled or unskilled—whether they are qualified for the work they are called upon to do?—A. No, sir; I can't reply to that question. The heads of the departments can only answer it.

By Mr. JONES:

Q. Do the heads of the departments ever make any objections to it to you? Do you hear them find any fault with the men employed?—A. No, sir. For instance, I am not a ship-builder. The constructor is presumed to be, and he is presumed to be the best judge of the kind of men he wants.

By the CHAIRMAN:

Q. As far as your knowledge goes is the skill of the laborer the prime consideration of his employment in this yard? Is his employment with reference to his skill, or is it with reference to some ulterior purpose—political influence or otherwise? Are such men furnished for other purposes, and do you get unskilled labor instead of skilled?—A. A case of that kind has never come to my knowledge.

Q. Do you know any persons whose names are borne upon the pay-rolls who do no service in the navy-yard?—A. I do not.

Q. Have you any unnecessary clerks or writers in the navy-yard that you know anything about—men whose services are not really needed, and who could be dispensed with?—A. No, sir.

Q. Have you any written communications from the Secretary of the Navy, or chief of the bureau, on the subject of the employment of hands, or any orders to employ certain men?—A. Yes, sir; I have.

Q. I suppose such orders are liable to come along at any time.—A. At any time.

Q. Certain men are named?—A. Certain men are named, and we take them on. As military men we obey without question.

Q. These men are laboring men in the yard—blacksmiths, shipwrights, and all that sort of thing?—A. Yes, sir; in the various departments.

Q. That is, men are taken on without any requisition from your departments here, under peremptory orders from Washington?—A. Yes, sir.

Q. Do those orders comprehend more than one name or frequently a number of names?—A. Frequently a number of names.

Q. And do you receive orders sometimes preceding elections to give a large number of men employment here, and are the names furnished from Washington?—A. That has not obtained since I have been here; nor could I state positively whether those orders for a large number of men were given preceding an election. I don't think since I have been here I have received an order from either the head of the Bureau of Construction or from the Secretary of the Navy to employ any large number of men at any time. There may be half a dozen and there may be one. The number is small generally. The names are all down. The order is to give employment to such and such a man, giving his name.

Q. From whom do those orders come generally?—A. Sometimes from the Secretary of the Navy, and sometimes from the chiefs of the bureaus.

By Mr. JONES:

Q. Do you know any one who is now employed upon the yard that has been court-martialed and discharged?—A. There is a man in the yard whose conduct was investigated, I

think, before I came here, during Commodore Howell's administration of the yard, for refusing, I think, to render proper assistance to a sentry in a certain case; and he was, I believe, dismissed, but was taken into the yard again.

Q. In what capacity does he serve now?—A. I think he is now captain of ship-keepers.

Q. Was he placed here by the head of the Department at Washington a second time?—A. I cannot say positively without reference to our book. My impression is now that he was taken on by order of the Chief of the Bureau of Construction, though I will not be positive.

By Mr. MILLS:

Q. Give us his name.—A. Daniel L. Randall.

Q. They had a court-martial here, did they not?—A. I don't know whether it was a court-martial or a board of investigation.

Q. He now has a better place and more pay?—A. More pay; yes, sir.

Q. I have heard it intimated that there was somebody stealing, or carrying off some stuff, and the sentinel arrested the party and asked Mr. Randall for help, and he refused.—A. Yes. sir.

Q. There is an order from the chief of the bureau, ordering him to be re-instated in a better place and more pay?—A. Yes, sir.

Q. Have you got a copy of that order that you could furnish us, ordering this man to be taken back?—A. There must be such an order.

By Mr. JONES:

Q. Have you ever been required by outside parties, or by the heads of either of the departments, to require men, when, in your judgment, there was no necessity for such requisition or requirement?—A. I can answer no, save in two cases, and that is in my judgment: one, the case of Randall, and the case of Mr. E. C. Nealy, who was superintendent of our fire apparatus. That order was given by Mr. Robeson, Secretary of the Navy.

Q. Have you been ordered by the Department at Washington to make requisitions for more labor here, whether you wanted it or not, at certain times?—A. No, sir.

Q. Neither by the Department there nor by outside persons?—A. No, sir.

Q. They have never sent you orders to send up requisitions for a certain amount of labor to be employed in the yard?—A. No, sir.

Q. What was the occasion of Mr. Nealy's discharge? What do you understand Mr. Nealy's case to have been?—A. I don't know why he was discharged; I simply know that he was discharged, and I was ordered to put on another man in his place.

By Mr. BURLEIGH:

Q. Was he a good man—equally as good as the man discharged?—A. As far as I know—no, I don't think he is equally as good, for the reason that he has not had an equal amount of experience in the yard in that direct line. Probably he will get it in time. Mr. Nealy had been here some time, and knew all about the pipes, &c. He had been connected with the yard, and had had the care of the steam fire-engines for quite a length of time—I don't know how long before I came here; and it is natural to suppose that he would be more conversant with the thing than a new man, however good a machinist he might be. But Mr. Hamman seems to be an excellent, good man; but he could not, on account of his being a stranger to that kind of work, do it as well as the old man did. He may in time.

Q. Does not that same thing apply to changing commanders at the yard?—A. Yes, sir, it would apply to us all.

By Mr. JONES:

Q. Do you know anything about a man by the name of Weeks, who was on the yard here?—A. Yes, sir.

Q. Has he been on the yard since you have been here?—A. No, sir. As near as I can remember Mr. Weeks's case it was this: He was discharged for, I can't remember now what; but I received an order from the Chief of the Bureau of Construction to take on this man Weeks, and I made out a statement of Weeks's case. I think his offense was stealing; I am not positive.

Q. He was court-martialed, was he not, and put upon the blue-book?—A. Or examined; yes, sir; and when I called the attention of the chief of the bureau to this case, I was ordered, in my discretion, to take him or not take him. I did not take him.

Q. Well, was he not taken on afterward by an order from another department?—A. I don't remember that, sir. I know I hunted up the correspondence in his case, and sent it on to the chief, giving the presumed character of the man; and a letter came back to me directing me to use my discretion, and that discretion was not to employ the man, and I did not do it. I think the case was one of theft.

By the CHAIRMAN:

Q. Do you know of any person being employed on the yard with the understanding that he was to vote for any particular ticket, or use his influence for the success of the same?—A. No, sir They would be very apt to keep that from me.

Q. Do you know any officer or employé of the Navy who has given any consideration in

money, property, or the representative of either, for any position, or for any benefit to be derived by him?—A. I do not, sir.

Q. Do you know of any contractor or other person not connected with the Navy who has given any money or property, or the representative of either, to any person connected with the Navy for the procurement of any contract or other benefit from the Government?—A. No, sir.

Q. Do you know any person connected with the Government who has received any money or property or present for the procurement of any office, or any contract or any benefit to any one connected with the naval service, either as officer, contractor, or employé?—A. I do not, sir.

Q. Do you know of the improper or fraudulent removal of any of the arms, munitions, or materials for ship-building, tools or property of any kind, belonging to the Government?—A. I do not.

Q. Do you know of any person using the labor or property of the Navy for the use and benefit of others than the Government?—A. Yes, sir: I have done it myself. That is to say, there is a tug here called the Clara Bateman. There are no machine-shops over in Portsmouth. That tug is presumed to be necessary for the commerce of this place. She goes out and tows vessels in, and takes them out again; occasionally that little vessel is in need of repairs. The man in charge of her comes over here to me and says, "I have no means of getting my machinery repaired here. I have the men, and will you permit me to lie alongside of your yard, and give me the use of one of your lathes to do my own work?" Twice, or once certainly, I have had that steamer lying alongside of the dock, and she has used the Government tools, but no men being paid by the Government have done the work. On two or three occasions I think that was done. I remember she got pulled up on Pumpkin Island shoal on one occasion, and broke her propeller; they got a new propeller, but the hole was either too large or too small—I don't know which—and he asked me if he could use our lathe for boring out the whole of this propeller, and I told him yes, he using his own labor.

Q. Those are the only instances you know?—A. Yes, sir.

Q. Do you know of any person using the property of the Government without authority of law, and for their own use and benefit?—A. No, sir.

Q. Do you know anything about the disappearance of any copper from the yard since you have been in command?—A. I recall a case where father and son were reported to me as being in the ship-house with a saw and cutting up a piece of copper pipe or composition pipe. I had the parties arrested and sent down to Portland, I think, in Maine, stating the case, and the United States district attorney, or assistant district attorney, or the marshal, or somebody down there, took the case in hand, and it was proven that they were cutting up the Government property, and they were punished by confinement for a certain length of time—how long I don't know.

Q. They had not got off the island?—A. No, sir. This was not taking Government property; it was destroying Government property. I don't remember the names.

Q. Do you know anything about the removal of any iron by John Roach or others since you have been here?—A. I do; by Cramp & Son and by John Roach, I think, of Philadelphia. Some plate-iron, by order of the Chief of the Bureau of Construction.

Q. How much was there?—A. I can't tell you the quantity, but a large quantity. It was taken away in schooners.

Q. How many schooners?—A. Three, I think, sir.

By Mr. BURLEIGH:

Q. Was not that iron weighed here?—A. That I cannot tell you; I don't know. That came under construction. I presume if it was required to be weighed it was done.

Q. Have you got a copy of the order from the chief of the bureau ordering you to ship it?—A. Yes, sir.

Q. Do you know upon what terms that iron was removed?—A. I do not.

By Mr. JONES:

Q. Since you have been here have you known any material, timber, iron, copper, or whatever it may be, that has been removed by order of the Secretary of the Navy or chief of the bureau, without its previously being advertised for sale?—A. I have not. That is the only instance I now remember. That was not advertised.

Q. Was that new iron or old?—A. Neither. It was new in the sense that it had never been used for the purpose for which it had been made, to plate ships' sides—armor-plating. How long it had been rolled I don't know, sir. From its appearance I judge it to have been stowed in the yard some time.

Q. It was covered?—A. It was covered, a portion of it.

Q. Was it good iron, suitable for the purpose for which it was made, do you think?—A. Yes, sir; if we stick to the laminated armor, it was.

Q. Has any iron been returned in the place of that to this yard?—A. No, sir.

Q. It was iron suitable for the plating of a vessel of the Kalamazoo class, sent here for that purpose?—A. I believe it was.

Q. You do not know the terms on which it was obtained from the Government?—A. No, sir. I know of none other, save some scrap-iron that was advertised and sold at auction.

By Mr. BURLEIGH:

Q. Were you not here when they broke up an engine?—A. I had forgotten that. There was an engine sold, and taken out of this house, just in front of this office. I had an order for the delivery of that; to whom I don't remember.

Q. The engine was not advertised?—A. I think not. That iron, you see, will come under two different bureaus; the plate-iron under constructions, and the machinery would come under steam-engineering.

By Mr. JONES:

Q. Do you know of any steam-boilers that have been or are now being broken up at this station?—A. Yes, sir.

Q. Were they sold at public sale, or sold by order of the Department?—A. My impression is they were not sold at public sale. If they were, the sale was held elsewhere, not here.

Q. Well, you had an order to deliver them?—A. Yes, sir; I had an order to deliver.

Q. Do you know of anything else upon the yard that has been delivered, except what you have named here, by orders from the chief of the bureau—material of any kind?—A. I can recall nothing else, sir.

Q. Will you furnish copies of all orders since 1868, from the bureaus, authorizing the removal of property, either by public sale or otherwise; also orders directing public property to be removed from any department to any other station?—A. I will.

By Mr MILLS:

Q. How are bargains, sales, or exchanges of Government property conducted here—with or without competition at public or private sale?—A. Competition, sir.

Q. Do you know what amount of purchases have been made here by annual lettings?—A. I do not, sir,

Q. Or what amount of purchases under orders originating with the constructor at the yard?—A. The constructor would have them, sir.

Q. Or the amount of purchases made under directions from the chief of the bureau to make requisitions, or to receive property which may have been purchased directly by the bureau at Washington?—A. That you could only get from the head of the department.

Q. They would write to him and not to you?—A. They would write to me, and that letter goes to the head of the department, and he is governed by that, as though the letter were directed to him.

Q. Have you ever received a larger amount of material than was advertised for—$100,000 worth, for instance, where the advertisement was for $20,000 worth?—A. I believe we have. The particulars I cannot give you, though the constructor can. I remember a quantity of live-oak coming here, when we had no information as to its coming until it arrived. I would not allow any of that material to be landed without communicating with the chief of the bureau.

Q. I suppose you would not take notice of it so quickly as the persons who are at the heads of the departments. You merely make the requisitions for the amount they call for. I simply want to know if, when this letting is advertised, the head of the department, I will say the Chief of the Bureau of Construction, advertises for the amount that you require for those different bureaus?—A. I think not.

Q. Does he advertise for a quarter or a tenth as much?—A. I can't tell.

Q. The balance is got by open purchase?—A. If there is a smaller quantity than is required, the balance would be gotten on open purchase.

Q. It is merely sent here to you?—A. Yes, sir; and we are ordered to receive it subject to inspection, of course.

Q. I mean, more than the amount required by you arrives here, and then you are ordered to receive it, by the Chief of the Bureau of Construction and Repair?—A. Yes, sir.

Q. Whether or not large amounts of timber and lumber have been delivered at the yard since you have been here without your having had any notice of its coming until it came, and then orders came from Washington for you to receive it?—A. Yes, sir; there was some live-oak received here, one or two schooner-loads, we having no instructions at the time of the arrival of the schooner or schooners, and I refused to allow it to be landed, until I had got instructions from Washington.

Q. By whom was that live-oak delivered?—A. As near as my memory serves me, by Trickey & Jewett. I won't be positive about it. Either Trickey & Jewett, or it may have been Swift. I can't remember the names.

Q. Do you know anything of any false bidding, straw bidding, or combinations among bidders or dealers, for supplies for the yard?—A. I do not.

Q. Do you know anything of the character of that live-oak timber that has been received here—if it is of the best character, or what is called promiscuous timber?—A. That I can't tell you.

Q. Who is your timber-inspector?—A. John Locke.
Q. Do you know by whose influence he received his appointment?—A. I do not.
Q. Do you know what salary he receives?—A. I do not.
Q. What is his capacity for judging of timber?—A. So far as I know, good.

By Mr. BURLEIGH:

Q. How long did your live-oak timber lie here without being docked?—A. I don't know. Mr. Wilson, naval constructor, I think, can reply to that question very satisfactorily.

By Mr. MILLS:

Q. What duty does this timber-inspector perform?—A. I think his duties are simply and solely to inspect the timber.
Q. That is, the timber when it arrives?—A. Yes, sir.
Q. After that, he has nothing to do?—A. So far as I know.
Q. How long has it been since you have received any timber?—A. That I cannot tell you. Much of this information I could only give you by reference to the books.
Q. Do or not your books show that for the last four or five years, at the annual lettings, a small quantity of timber and lumber is advertised for, and during the year a much larger quantity is received from the contractor?—A. I presume the construction-books would show that; they should.
Q. Will you furnish the estimates that have been sent on each year for the last four years, for supplies of materials and everything that has been used in the yard, the total amount supplied during the year, the amount supplied by open purchases, and the amount by bid?—A. Yes, sir.
Q. Do you know of any of the appropriations being carried forward by order of the bureaus at Washington from one of these departments to the other?—A. I do not, sir.
Q. Do you know whether any of the bills of one fiscal year are carried over to be paid out of the appropriation of the next fiscal year?—A. I do. Bills in reference to live-oak, supplied by Bigler & Co. I can and will produce the correspondence.
Q. When the appropriation for the current year is exhausted, what do you do?—A. Generally lie on our oars. I do not know how else I can reply to that question. It is very expressive.
Q. You do not incur any debts, or issue certificates of indebtedness, or certify the accounts?—A. No, sir.

By Mr. BURLEIGH:

Q. What do you mean? You say that you have certified that certain things have been delivered.—A. Of course, I do that at any time, when bills come to me certified as correct. I know nothing about the payment of those bills.
Q. You dc that, when you know there is no money to pay them?—A. Yes, sir.

By Mr. MILLS:

Q. When you know there is no money to pay them, you go through the same process of accepting them?—A. Yes, sir. I never handle the money at all. I never see it.
Q. What do these men who get the certificates do with them?—A. I don't know. They should go to the paymaster at Portsmouth.

By Mr. JONES:

Q. He would pay all these bills, in the different departments?—A. Yes, sir.

By Mr. MILLS:

Q. Does he notify you when he is out of funds?—A. No, sir.
Q. So you can never tell how much you have got of floating debt?—A. No, sir; he would know.
Q. Do not your books show the certificates you issue during the year?—A. I presume they do.
Q. Will you furnish the amount of bills which you have certified to as being correct in each department since the first of December last?—A. Yes, sir.

By Mr. JONES:

Q. Should at any time one of the departments draw from the funds of the other, would you be aware of the fact?—A. No, sir; not necessarily. If it is done at all, it is done at Washington, because I have no authority to say to the paymaster, "You transfer a portion of the ordnance money over to construction." I cannot do that.
Q. That would come under the control of the chief of bureau and the Secretary of the Navy?—A. I presume so. There is not at any time a very great amount of funds in any one department, because this money is held at Washington, and we do not draw this money all together, in large amounts, but from month to month, as we require it.
Q. You do not know of any transfers being made from one department to the other?—A. I do not; no, sir.
Q. Do you know whether the bills that you are making this year are being paid?—A. I do not.

Q. Nor do you know how much money yet remains to your credit for the current year? Can you find that out?—A. No, sir; I cannot find that out.

Q. Those books are all kept at Washington?—A. Yes, sir.

Q. Do you know how much is appropriated for the different departments of your yard the last year?—A. No. I only know this: For instance, I want a sum of money in construction. I go to the constructor and ask him how much money he wants for the coming month. A requisition is made for that amount, and they may either give him that or they may give him less. How much there is in Washington for that particular bureau I do not know.

Q. The amounts required for construction and repairs in the different yards all come from one Department in Washington?—A. Yes, sir; and we draw this money from the Department month by month, as we require it, so that we do not have a great amount of money here.

Q. Don't you know that they allow you your estimate, I will say for the Bureau of Construction and Repair, for the year, when you start in on your fiscal year?—A. I don't know. I can't answer that positively, because I don't know. I only know this: That the first month in the fiscal year, for instance, the constructor and myself consult together, and we ask, how much money do we want to run our department here for this month, without any reference to the total amount that may be appropriated to that department for the whole twelve months. Well, we want $5,000 or $10,000 for this month. I make out a requisition for that amount of money, and if the powers that be at Washington think it necessary to give us that amount the requisition is approved and we are directed to draw for it. They may make it still less, but whatever amount they settle upon for the department for that month, they notify us and we draw for that amount and no more. It may be what we asked for, it may be less.

Q. So they notify you this month of the amount that you can have for April?—A. No; on our requisition first. For instance, we want a certain amount of money, in construction, to run us through April. Toward the latter part of this month we make out that requisition, say for $5,000. That goes on to Washington, and if they approve it for the amount which we ask for, we are then notified that we can draw for that amount.

By Mr. BURLEIGH:

Q. It takes about that amount to run the department?—A. We have been running it on much less than that for some little time back.

Q. Did you know anything in regard to the Enterprise until you came to the yard?—A. No, sir; she was built and launched before I came here.

Q. Do you remember what day she was launched?—A. No; I don't.

Q. It was only a short time before you came to the yard?—A. A short time before I came; how long I don't remember.

Q. Were you familiar with the contractor and his relations to the constructor?—A. No, sir.

Q. You had not been here long enough to understand anything about that?—A. No, sir.

Q. She was already in the water when you came here, you say?—A. Yes, sir.

Q. It appears, by a certificate we have here, that you certified that $4,000 worth of extra material had been received for the use of that ship. (Certificate shown to witness.) Not knowing anything about the building of that ship and the relations between the contractor and constructor, why did you sign such a paper as that?—A. I could have only one foundation, that given me by the constructor of the yard for the labor.

Q. Did he represent to you that that amount of extra material had been received?—A. I don't remember now. My memory will not take me back to October; but there must have been some foundation for this, and that the constructor would show on his records or his books. I signed nothing for construction or for any other bureau until the bills, or the amounts, or whatever they may be for, are first signed by the constructor or the head of that department, and certified to as being correct.

Q. Then, if the constructor certified that he had received those articles, you would approve the bill?—A. Yes, sir.

Q. Since that ship was launched another contract has been made with Mr. Griffiths in regard to that vessel?—A. A contract, I believe, for building her spars and to complete her in all respects.

Q. How many contracts have there been on that ship?—A. One to build her, I think, before I came here, one to complete her, and another to build her spars.

By Mr. JONES:

Q. Wasn't there one for launching her?—A. I don't remember.

By Mr. BURLEIGH;

Q. Then this $4,000 which was paid to the contractor did not apply to either of these contracts?—A. That I don't know, sir. I can't tell from this certificate what this extra work was for without going back to the constructor or his records.

Q. Does that read as if it was paid on either of the contracts?—A. No, sir; I can't explain this, Mr. Burleigh, without going back further.

Q. Should you think that that $4,000 was not in part payment of any contract?—A. I don't know, sir.

By Mr. JONES:

Q. It says "extras," don't it?—A. It says "to extra work." Now, the constructor could show what that extra work was; I could not.

By Mr. BURLEIGH:

Q. Have you ever read the original contract with Mr. Griffiths?—A. I have read two contracts. I have a copy of one; and I have a copy, not of a contract exactly, but a letter from the Chief of the Bureau of Construction, informing me that Mr. Griffiths is to make the spars for that ship for a certain amount of money; but the copy of the contract previous to this agreement may have been a contract or may not have been; I don't remember.

Q. Previous to the agreement to make the spars?—A. Yes, sir.

Q. You have two contracts besides that letter?—A. No, sir; I have only one.

Q. You said there was a contract to build the ship and another to complete her?—A. That is my impression. I know nothing about building the ship, because she was built and in the water before I came. I have a copy of the contract to complete her.

Q. Did you ever see the contract to build her?—A. No, sir. In addition to this contract I speak of, I have a letter from the Chief of the Bureau of Construction, in which I am informed that Mr. Griffiths is to build or make the spars for that vessel for so much money.

Q. You understood that to be in the nature of a contract?—A. Yes, sir.

By Mr. JONES:

Q. You did not understand it to be the contract?—A. No, sir; simply an order from Mr. Hanscom.

By Mr. BURLEIGH:

Q. It amounts to a contract, because he is going on to do the work?—A. Yes, sir; he is going on to do the work.

Q. Now, will you furnish us with the contract to complete the ship, and the letter?—A. I will furnish copies.

Q. You say you do not know anything about the contract for launching and had nothing to do with the payment?—A. No, sir. I don't know as to my having nothing to do with the paying it. I don't remember that, because some bills may have come in afterward.

By Mr. JONES:

Q. You understand by this contract that he was to have the facilities of the yard to do his work, didn't you?—A. Yes, sir.

Q. And the Government was to furnish the material?—A. Yes, sir.

Q. He never has been detained by the Government, in regard to this contract, to your knowledge, since you have been here, has he?—A. Not to my knowledge.

Q. No demand has been made to you for damages or anything of that kind?—A. No, sir.

Q. Your idea of the contract is that he is to have the facilities of the yard and the Government is to furnish all the materia?—A. Yes, sir.

Q. Now, I want to know if, as far as you know, the Government has fulfilled its part of the contract?—A. As far as I know.

Q. And you never had any complaint from the constructor or from Mr. Griffiths in regard to detentions or any claim for damages for any such detention?—A. No, sir.

Q. And he usually has had preference for anything that he wanted to do with your machinery or tools or oxen?—A. So long as our machinery was running, and up to the time of the discharge, when our machinery was all shut down on, I know nothing to the contrary.

By Mr. MILLS:

Q. This third contract, I will call it, the one for making the spars, was for $6,500, was it not?—A. I think that was the sum.

Q. The Government furnish all the material and pay $6,500?—A. I think it was.

Q. And the Government has furnished all the material, shops, facilities, tools, everything?—A. Yes, sir; everything. There was a question as to the spars of the Enterprise. Mr. Wilson and myself had one or two long talks about it. There seemed to be a question as to the meaning of the word "complete" in making these spars. The letter informed us that Mr. Griffiths would make the spars complete for a certain specified sum. After those spars were, in the opinion of Mr. Griffiths, I presume, completed, my attention was drawn to what I thought to be the incomplete state in which those spars were; that is to say, they had no dogs in them, they had no sheave-holes in them, nor sheaves in the sheave-holes. This letter says, I think, "the spars to be complete." I do not understand a spar to be complete without its sheaves, its dogs, its jack-stays, its saddles, and various other little things. I consulted with Mr. Wilson, and wanted to know whether he thought those spars were complete. We decided that in our opinion they were not complete. Mr. Griffiths referred the matter to the bureau, (at least that is my impression,) and without my writing in reference to this matter, I received this letter from the Chief of the Bureau of Construction.

By Mr. BURLEIGH:

Q. Let me ask if block-makers are not spar-makers, usually.—A. No, not always; not necessarily, because making blocks, I believe, is a regular trade. I should suppose that a man contracting to make spars would put the sheaves in. It seems natural for a sailor-man, at any rate.

Q. If they are not put in before painting the spars, they would have to be painted over again after that work is done; is not that so?—A. Yes, sir.

By Mr. JONES:

Q. Have you at any time had it intimated to you that any one of the departments at this station has raised or borrowed money from some other department? In other words, has not the whole or a part of the monthly allottment to one department been used by another?—A. No, sir.

Q. You never had it intimated to you, did you?—A. No, sir.

Q. This second contract on the ship was let since you were here, wasn't it?—A. Yes, sir.

Q. You don't know of its being advertised, do you?—A. No, sir.

Q. You don't know of anybody who bid against Mr. Griffiths?—A. No, sir.

Q. All you know about it is that you received a communication from the bureau at Washington informing you that he was to do the work for such a price?—A. That is all.

Q. Those orders came from the chief of the bureau to you?—A. From the chief of the bureau; yes, sir.

By Mr. MILLS:

Q. Is it customary when a man makes a contract for the purchase of a vessel, for that vessel to be delivered in the water? If you were making a contract with a contractor here to build a vessel complete for you, would you understand that it was to be delivered to you on the blocks or would you expect it to be launched?—A. In my own individual case, I should want her delivered in the water, because accidents sometimes happen.

Q. What is the custom about that as far as you know?—A. As far as I know, the vessel is supposed to be in the water.

By Mr. BURLEIGH:

Q. If a man takes a contract for the hull of a vessel, is he not bound to put her in the water?—A. I suppose so. I certainly would not make a contract with a man to build a ship for me and turn her over to me on the ways. She is no good to me there, and I can't launch her. An accident might happen, although they do not very often; the ship may turn over. I don't want to run that risk. That the man who builds the ship must attend to.

By Mr. JONES:

Q. Do you think that there would be a saving made to the Government and the service be performed more effectively and better if you employ your marines as watchmen?—A. I do, sir.

Q. In what particular?—A. I think they are more amenable to discipline and less likely to be interfered with by parties on the yard. Well, there is a certain antagonism as between a soldier and a sailor, if you like, or a soldier and a workman, in the navy-yard. They are not often seen together, and I would much prefer myself to see marines guarding the public property in the yard than watchmen. I personally feel that I could rely more implicitly upon them than I could upon watchmen; whether it is owing to the fact that a marine is a soldier, and carries a musket, I don't know; but that is the feeling I have.

Q. But there would be a great saving to the Government?—A. Undoubtedly, I think.

Q. You think the service would be done fully as well if not better?—A. I think it would be done fully as well if not better. In that case the marines would require to be divided into two parts, sentries and patrolmen. A sentry never leaves his post, you know, and you might be out of the sentry's beat and doing questionable things, and you could not get him off his beat. Therefore, in addition to the sentry who should confine himself to his post, I would have patrols who should all be marines. The patrols would move about as watchmen do; the sentries would be confined to their own proper places. I think a great saving could be made to the Government by substituting marines for watchmen, and I think the work would be done equally well if not better.

Q. And at a great deal less expense?—A. At very much less expense.

By Mr. BURLEIGH:

Q. Now, in regard to the retired-list. You are familiar with it and with many of the officers upon it, and their service to the country?—A. Yes, sir.

Q. Will you state if there are any abuses connected with it, to your knowledge, or suggest any changes that could be made that would be for the benefit of the service?—A. I think I can, sir. The retired-list, as I understand it, was created for the purpose of taking myself, for instance, or any other officer of the Navy, who was like an old horse after his work is

done, and making him comfortable. Or, in other words, not cutting him off entirely, but giving him something to live upon. It was, as we understand it in the Navy, to be an honorable position, and where we might be in our old age associated with men whom we supposed were, like ourselves, honorable, high-minded people; instead of which, if I am put upon the retired-list to morrow, I am there with a long list of others, some of whom I think are not worthy of being there, put there by whom I do not know, but men who should be out of the service entirely; drunkards, men who have seen little or no service, men who go to your place of business, or somebody's place of business, and run up bills, and, as Jack says, paying them with the flying fore-topsail, or not paying them at all. That is disgraceful. I look upon the Navy as one great family, and no one member of that family can disgrace himself without at the same time disgracing me; and he has no right to put me in such a position as that.

Q. Then you think that putting men upon the retired-list who would not be trusted at sea because of their vices, impairs the respectability of those gentlemen who are on the retired-list properly.—A. I think it does; and I do not see why the Government should be called upon to support a man who has been put upon that retired-list for drunkenness. You could not trust him at sea in command of a ship, because he is utterly unfitted for that position, and instead of putting him out of the service, where he should be, you put him on the retired-list, and make the Government support him.

Q. Have you never known of any instance in the Navy where men have been suspended by court-martials or dismissed the service and got back again?—A. I cannot recall to mind now any cases.

Q. Can you not recall a case?—A. I cannot recall any from my own knowledge. I have heard a case mentioned of a young man of the name of Quackenbush. He is a good deal younger man in the service than I am, and I don't think I ever saw him but once. His case as mentioned to me was a very flagrant one. As I understand it, he was on the South Atlantic station, "the Brazils," we call it, and he committed all sorts of outrages, keeping mistresses, dressing up in women's clothes, and behaving generally in the most outrageous manner. He was tried by court-martial, and the sentence was dismissal from the service, and he was dismissed; but by some influence, I don't know what, he was brought back into the service. I don't know whether he is in active service now or on the retired list.

Q. Do you know whether he was dropped from the list of officers in the Navy or not?—A. That I don't know. There are cases of that kind, undoubtedly, and I think it is hard that you should be compelled to support such men, and it is equally hard for me to be associated with such.

Q. Is he now on the active-list?—A. I think he is. I am not certain, however.

Q. He was a line-officer?—A. Yes, sir; he was a line-officer.

By Mr. MILLS:

Q. What would you suggest as a remedy for the evils of which you have spoken?—A. I don't know any other way than by a board.

By Mr. JONES:

Q. You have a board now, haven't you?—A. Yes, sir; but that board cannot try people.

By Mr. MILLS:

Q. What is the extent of its jurisdiction?—A. To pronounce whether I, for instance, am capable, mentally, morally, and professionally, of performing my duties.

Q. That is for the active-list?—A. That is for the active-list.

Q. If you are not, what then?—A. If I am not I am recommended to be retired by that board.

Q. And you are recommended to be retired, as I understand it, for causes which occurred in the line of your duty or for any other cause?—A. Or for any other cause.

Q. It does not make any difference what the causes are, if you are unfit for active duty, from whatever cause, you go on the retired-list?—A. Yes, sir: unless they recommend that I be tried by court-martial.

Q. We will suppose a case. Suppose a commander of a vessel behaves so timidly before the enemy that his ship is wholly worthless in the action: there are no charges of cowardice against him, on account of feelings of delicacy on the part of his brother officers, but it is understood that he is not fit to command a vessel; don't they put him on to the retired-list?—A. I don't know of a case of that kind, although I can readily understand how it might be done.

Q. Do you know of any persons on that retired-list who are fit for active duty?—A. I can't say without going over the list.

Q. What is your opinion about retiring men arbitrarily at sixty-two years of age?—A. I like it.

Q. Do you think that there are any officers on the retired-list who should be dismissed the service?—A. Yes, sir. In regard to the question of retiring men at sixty-two years of age; take a young man, for instance, who entered the service at the age of fourteen and a

half or fifteen, if he has grown up to the age of sixty-two, seeing a fair proportion of hard service, if he has been honest and conscientious in the performance of his duty, I think by that time he is ready to step aside.

Q. Don't you know that there are some who are fully capable of performing their duties after that age?—A. Some are: but where you can find one case of that kind, and I could point you to one or two, you can find a large majority who are not. If a man has done a fair share of hard work, he will be ready to be put upon the retired-list at that age. If he has been galivanting about on shore with the ladies, maybe he will last a little longer than the man who has seen hard service. There was Admiral Stringham, who, up to within a few years, was as active at the age of sixty-four or sixty-seven, and as fully capable of doing his work at that age as he was at fifty—strong as an ox, physically and mentally. But where you find one man of that kind, you will find a dozen of the other.

Q. So that you think it is best for the service to stick to the rule?—A. I think it is. You may occasionally stumble upon a man who is capable of doing his work at sixty-two, but in the majority of cases I think sixty-two hits it about fairly.

Q. I want to go back to that old iron-clad, and get your testimony about that. Is that vessel in your way here?—A. I can't say that she is.

Q. Suppose the Government were to become entangled and you were notified by a dispatch from the Secretary of the Navy to put your yard in order and go to repairing vessels and constructing and all that, would not that vessel be in your way?—A. Yes, sir; undoubtedly.

Q. Is it of any service to the Government as it is?—A. Not that I can see.

Q. Can it be made of service to the Government?—A. I think not, sir.

Q. What do you think is the best way to get rid of it?—A. That is a difficult question to answer; the best and the cheapest, of course. You don't want to throw away money on her. It is a very difficult question. It is possible that she might be calked where she is, floated and kept afloat long enough to pull her up at high water on some of these flats here, and there she might be burned, taking what copper and iron there is out of her; but I think the Government would lose by undertaking to break her up.

By Mr. BURLEIGH:

Q. Don't you think if you filled her with barrels and launched her she would float where you wanted her?—A. You might do that, and you might also lash casks around her, which would help to support her. I think that would be the cheapest way to do it.

Q. But as she is in the way and obstructing the yard, you think it best to have her disposed of in some way or other?—A. I think it would, and in the cheapest way.

By Mr. MILLS:

Q. I want to ask you again about the Illinois; do you know anything about breaking up or tearing down a vessel at this yard?—A. No, sir.

Q. That was done before you came here?—A. O, yes. I know nothing of that case.

Q. Or of the Ohio?—A. No, sir.

By Mr. JONES:

Q. Do you think it is necessary for the Government to have a civil engineer for each navy-yard?—A. I think, with the exception of erecting buildings, we can get along quite as well without the civil engineer as with him.

Q. If you wanted to erect a building, couldn't your masons and carpenters do it as well or better than the civil engineer? I suppose your civil engineer does not know anything about building except what he has learned since he has been on the yard. Can you not erect any building or do any piece of work of that kind under the direction of the heads of the different departments in this yard without a civil engineer?—A. I think we can.

By Mr. BURLEIGH:

Q. What buildings have you built the last two years?—A. None, sir.

Q. How much is he paid per year?—A. I can't tell you that without reference to the Navy Register.

By Mr. MILLS:

Q. Could not the constructor do the duty of the timber-inspector, and inspect the timber when it is delivered here?—A. That would come under the head about which we were talking some time ago, as to inspection. I believe the head of each department should inspect and be responsible for all stores received in his department.

By Mr. JONES:

Q. Looking at the good of the service, and at the good of the men also, because they are not good for much unless they have something to do, don't you think the line-officers when off duty on shore might do the duty of some of the civilians that you have in your yard?—A. I don't know what civilian we have here in charge of a department save the civil engineer. What specially do you refer to?

Q. Well, there are always about so many waiting orders, are there not?—A. Yes, sir.

Q. A man is waiting orders sometimes a year or two years?—A. Yes, sir.

Q. And really there is nothing for them to do?—A. They would be very glad, a majority of them, to get employment.

Q. Could they not be employed upon the yards to fill the places of timber-inspectors, or something of that kind?—A. Hardly, because a timber-inspector requires some special knowledge; unless a piece of timber was particularly bad I could not tell you its condition or its quality. I could say, generally, that this piece of timber is rotten or decayed, or shows signs of decay, but I could not go further than that.

By Mr. BURLEIGH:

Q. Are not the heads of departments better judges of the material to be used in their departments than any one else? Are they not educated with that object in view?—A. That is my impression. That is my belief.

Q Then the civil inspector who comes in has not the general education that the Navy officer in charge has?—A. I think not, and I think so for this reason: For instance, I am inspector of equipment stores; I have been dealing in them for a long time: I have been looking at them; they belong to my department, and I am supposed to know something about them. I have also men in my employment in the equipment department whose business it has been to work in this very material that I have required for certain purposes; they are presumed to be experts whether I am or not; and if a certain article in the equipment department comes into the yard I go and look at it, and if I am in doubt I go to the best man I know in my department. If I have doubt of him, I will go to the other departments. If I find a man who knows something about this thing that another man does not, I will take him, no matter what department he belongs to. I will bring him in as an expert; we will examine this article or these articles together, and decide whether the quality is such as will enable us to receive them. I think that can be better done, or certainly as well done, by the heads of the departments as by civilian inspectors.

Q. Has the decision of the civilian inspector, appointed by the Government for a special purpose, as to the quality of any article, more weight than the opinion of the head of the department to which it is to go?—A. It should not have.

Q. Does it in your experience?—A. No, sir.

Q. Is not the civil inspector subject to the approval of the head of the department?—A. If the civilian inspector is called upon to inspect certain articles coming in my department, and he certifies that he has inspected those articles and pronounces them of proper quality, that passes the goods.

Q. If you object?—A. He may possibly have overlooked something, and if, on looking at these things, I find that something does not, in my opinion, come up to the quality, I call his attention to that: but, as a general thing, his name passes those articles.

Q. Does not the foreman of the shop where those articles are to be used inspect them first; that is, do they not go through his hands? Is he not considered the inspector?—A. No, I don't think he is. He may receive these things in store, and after he receives them in store, he looks them over to see if they correspond in quantity with the requisition calling for them.

Q. And quality?—A. No; I don't think he has anything to do with that, unless he may be called upon by me as the inspector as an expert. If I am in doubt, that I may do.

Q. Then you mean to say that the inspector may receive any quantity of timber in this yard without regard to quality, and if he approves of it the constructor cannot say "no." Is that your idea?—A. No, not altogether, but partially. The constructor is receiving live-oak timber here. Suppose there are two or three lots; the constructor is not there to see every stick of timber that comes out of those vessels, the inspector is there, or is presumed to be there, and if he states to the constructor that all the sticks of timber taken out of those one, two, or half a dozen lots are of the proper quality, that is sufficient.

Q. Then his judgment is taken as final?—A. Yes, sir. Therefore I say that the heads of the departments should discharge the duty of inspectors.

Q. Have there ever been any cases here where the constructor has thought that the inspector has been too liberal in his measure and insisted upon a remeasurement?—A. I know of no such case. Therefore I say that the head of the department himself should be responsible. If he is in doubt as to the quality of any particular article, he has it in his power to call in an expert, because we have men of all trades here, you know.

Q. If you were to call in an expert would you take a civilian or a naval officer?—A. I would take a civilian. I would take one of the men in my department. For instance, I am upholstering a chair in the equipment department, and a piece of rep comes in to cover the arms of that chair. I look at it, and, as far as I can see, it is pretty good, but I am not quite certain, and do not like to decide without having somebody to sift it. Here is a man in the department whom I have no reason to believe is dishonest or would give a dishonest opinion. I say, "Jones, I want you to look at this piece of rep with me." This man has been working with just such material for years and years; he is a workman in my department, and it is to be presumed that, having handled so much of this stuff, he must be more or less an expert and be able to judge whether this material is good or not.

Q. You would not get a physician to do that?—A. Hardly; but this man might be a physician, too. But I would make the heads of the departments responsib e.

By Mr. JONES:

Q. Why could not some gentleman from the line or the staff, when on shore, perform the duty of inspector of timber?—A. So he could.

Q. Don't you think it would be better for the service? Don't you think the duty would be more apt to be more faithfully performed?—A. I think it would.

By Mr. BURLEIGH:

Q. Would there not be less liability of collusion between contractors and the officers of the Government?—A. Much less. We generally value our commissions.

Q. Then it is a fair deduction, from what you have said, that these civilian inspectors are useless, because the head of the department has got to be the judge, and he has experts in his employment, and if there is more danger of collusion by having them, it is a pretty good argument against having them on the yard at all.—A. If the question were put to me at this moment whether I thought civilian inspectors were necessary, I should say, "No."

By Mr. JONES:

Q. But if you were going to have any you would take them from the men who are not on active service.—A. I do not see even the necessity for doing that. Why should I have another officer in the yard when the duty can just as well be done by the head of that particular department, who is already here and being paid? Why should not the head of the department of steam engineering be responsible for the stores he receives and signs for, and if he needs assistance in the performance of this duty, call upon an expert or anybody who may be thought an expert either in his own department or in any other department in the yard? I see no reason for a civilian inspector. They are political appointments, I presume; or, if they are not political appointments, I don't know how far I can use the word "political." I only know they are civilian appointments, and I do not have anything to do with them.

By Mr. BURLEIGH:

Q. You don't want to be antagonistic to them?—A. I don't want to be antagonistic to anybody. In other words, I will use all proper means to gain the respect and good will even of a dog; beyond that I will not go. I think we can get along with our inspections quite as well among ourselves as to have any outside gentlemen coming in to act for us. There may be a necessity for it, but I do not see it.

By Mr. MILLS:

Q. Who inspects your munitions, powder and shot?—A. The ordnance officer.

Q. Is there not as much necessity for an inspector of munitions over the ordnance officer as for an inspector of timber over your constructor?—A. Quite.

Q. Have you any orders from Washington requiring you to change the dates of bills, &c., to carry them forward into the next year?—A. My impression is that there is such correspondence. What it is I cannot tell you without referring to it. I will furnish copies of such correspondence.

The following are the specifications, contract, &c., for completing the sloop of war Enterprise:

Proposals for building sloop of war at Kittery navy-yard.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
June 30, 1873.

Proposals will be received at this bureau until 12 o'clock m., the first day of September next, from builders or mechanics qualified to do the work, for the raising, framing, and ribboning, planking from keel to rail, ceiling, including keelsons, clamps, spirketing, and battery, to rail, putting in decks, including all bitts, &c., putting on main and hammock rails, channels, and chains, building storerooms, magazines, and lockers, joiner-work inside and out, calking and scraping, building quarter-galleries and setting head, and painting complete, of a sloop of war of about 640 tons. The materials, tools, and facilities for doing the work will be furnished by the Government.

The Chief of the Bureau of Construction and Repair will be at the Kittery navy-yard on Wednesday, the 20th of August next, and in connection with the naval constructor of that yard, will meet persons desiring to make proposals for the work above mentioned, and will give all necessary explanations concerning the work to be done, and in regard to the character of the materials, tools, and facilities to be furnished by the Government.

Plans and specifications may be seen and examined by applying to the commandant of the Kittery navy-yard after August 1, 1873.

Contract for building sloop of war Enterprise at Kittery.—Jno. W. Griffiths.

This contract, made and entered into at Boston, in the State of Massachusetts, the 18th day of September, one thousand eight hundred and seventy-three, between John W. Griffiths, of Charlestown, in the State of Massachusetts, as principal, and William T. Glidden, of Nahant, and M. D. Ross, of West Roxbury, and C. Allen Browne, of Boston, and John M. Glidden, of Boston, all in the State of Massachusetts, as sureties of the first part; and Isaiah Hanscom, Chief of the Bureau of Construction and Repair, acting under the authority of the Navy Department, for and in its behalf, of the second part, witnesseth:

That the said parties of the first part do hereby contract, covenant, and agree, for themselves, their executors and administrators, jointly and severally, with the said party of the second part, as follows: That for the consideration hereinafter named, the said John W. Griffiths will furnish the necessary labor therefor, and will construct, in the navy-yard, Kittery, Maine, (the materials, tools, and facilities for doing the work to be supplied by the Government,) the hull of a steam screw-propeller sloop of war, authorized under the act of Congress approved February 10, 1873, of the following general dimensions: Length between perpendiculars, 185 feet; extreme breadth, 35 feet; depth from main-deck to top of floor, 16 feet 2 inches; the work to be done under this contract being as follows: Raising, framing, and ribboning, iron-strapping, planking from keel to rail, ceiling, including clamps, spirketing, and battery to rail, putting in decks, including all bitts, &c., putting on main and hammock rails, channels, and chains, building storerooms, magazines, and lockers, joiner-work inside and out, calking and scraping, building quarter-galleries and setting head, and painting complete. All carpenters', joiners', fasteners', calkers', scrapers', painters', and plumbers' work, and all practicable galvanizing of wrought and cast iron, and all other work necessary for the completion of the hull of the aforesaid vessel, excepting blacksmiths' work, which is not included in this contract, to be done by the said Griffiths.

And the said parties of the first part do further agree that the work to be done by the said Griffiths under this contract shall conform in all respects with the specifications and drawings for the aforesaid vessel now in the Kittery yard, and which are hereby made a part of this contract; that in the performance of the work the parties hereby contracting are to be governed thereby as truly as if the same were incorporated in this instrument; nor is the omission of any detail or object necessary to carry into effect the intent and spirit of this agreement to be to the detriment of the United States; and further, that the work shall be done in the best manner, and equal in all respects to that done upon vessels built in the United States navy-yard by day's work, and to be to the satisfaction of the Navy Department and of the person or persons who may be appointed by the Navy Department to inspect the work, and who shall have full power to reject any bad or imperfect work in any stage of its progress, and to whom every part and arrangement and detail of the work must be entirely satisfactory.

And it is further agreed by the said parties of the first part that the aforesaid work shall be completed, in all respects according to the plans and specifications herein referred to, in ten (10) months from the date of signing this contract. And the said parties of the first part do further engage and contract that no member of Congress, officer of the Navy, or any person holding any office or appointment under the Navy Department, shall be admitted to any share or part of this contract or agreement or to any benefit to arise therefrom. And it is hereby expressly provided, and this contract is upon this express condition, that if any such member of Congress, officer of the Navy, or other person above named shall be admitted to any share or part of this contract, or to any benefit to arise under it, or in case the parties of the first part shall, in any respect, fail to perform this contract on their part, the same may be, at the option of the United States, declared null and void without affecting their right to recover for defaults which may have occurred.

It is further agreed and understood that the drawings and specifications herein referred to and considered a part of this contract shall not be changed in any respect when the cost will exceed one hundred dollars, ($100) except upon the recommendation of a board of survey composed of not less than five officers of the Navy, and approved by the Secretary of the Navy; and if changes are thus made the actual cost of and damage caused by such change shall be estimated by such board of survey; and the parties of the first part hereby agree that if such changes are made they shall be bound by the estimate of said board as to the amount of increased or diminished compensation they are to receive, if any, in consequence of any such changes as is provided in the second section of the act of Congress approved February 10, 1873, hereinbefore referred to.

And it is further agreed by the said parties of the first part that in the event of any neglect or failure on the part of the said Griffiths to complete the work herein provided for upon the said steam screw-propeller sloop of war in accordance with this contract, and with the drawings and specifications herein referred to and considered a part thereof, within the time hereinbefore specified, and in a manner entirely satisfactory to the Navy Department and to the officer or officers to be appointed by the Navy Department to inspect the work while in progress, and to finally pass upon it when so completed, they will forfeit and pay to the United States the sum of twenty-five dollars ($25) per day for each and every day delayed; and they further agree that, in addition to said forfeiture, the Navy Department is authorized, in case the work herein contracted to be done is not completed within the time

tion of both the superintendent and the Bureau of Construction: and whereas it is respectfully submitted that, to make a just comparison of the economy of contract-work with the present system, the whole vessel should be put under contract as far as may be practicable, to this end the undersigned proposes to continue the work beyond the hull, and to completion on said vessel, the facilities of the yard and the materials being furnished as required, and the blacksmiths', platers', and coppersmiths' work as required.

The following specification, it is believed, comprises all the carpenters', joiners', calkers', plumbers', scrapers', painters', fasteners', and laborers' work, embraced in the completion of the vessel in these branches; and should the specification not be found to embrace all the work to be done in these branches, the same is to be completed as if contained in the specification. The work to be done in a workmanlike manner, equal to any ever done in a Government yard, and to the satisfaction of the bureau, for the sum of twenty-five thousand five hundred dollars, ($25,500),* payments to be made as the work advances, in four equal installments.

Specification of labor required to complete the United States steamer Enterprise in the branches above named.

Stowage of waist-anchors; hawse-bucklers and winkles; composition hatch-coamings with mahogany sky-light; chain-nippers; stanchions in fire and engine room; putting on trail-boards; carving and putting on head-boards in gangway; travelers and blocks under fife-rails; sheaving and mortising pin-rails; plumbers' work, including water-closets; joiners' work in cabin, wardroom, steerage, and outside; recalking from keel up, including decks; coppering ship, including paying bottom and staging; gun-tackle and breeching-bolts; coal-ports through deck; iron on bulk-heads; rods for clothes-bags; cleats for mess-chests; coal-bunker bulk-heads of wood with iron covering; fitting and fastening catheads; fitting and fastening stern-bumpkins; making, fitting, and fastening head-bumpkins; painting inside and out, and puttying seams; eye-bolts for sheet-chains, rudder-pennants, and elsewhere; Lewis bolts; capstan and anchor bars, with belaying pins of wood; life-buoys and fittings; light-boxes on forecastle or elsewhere; bill-boards and ironing the same; channel, force, and head pumps; scuppers on forecastle and poop; port-shutters complete, with all fittings; accommodation-ladder fitted to both sides with gates; steering-wheel and stand with mountings; hammock-hooks, with numbers; rollers for sail-room and for chain at bowsprit bitts. cavels and cleats; chock-blocks for tiller-ropes; boom-crutch for anchor-davits, (and spanker-boom;) canopies fitted over hatches; hatch-bars for berth-deck, (and where required;) boat-chocks on rail complete, with davits elsewhere; swinging boom-irons on channels; cranes for spare spars; awning-stanchions; shot-racks on main and berth decks; scupper-plugs and chain-chocks; warping-chocks, ash-chutes; galley-pipe cooler; torpedo-fittings; hold-fittings for hawsers; channel-chests; stand-cask, boat-breakers, and scuttle-butt fittings; spit-kids; chicken-coops; bridge, with ladders; ventilators; heaters and pipes; spare tiller-fittings; fitting compass-stand; spider-band, with belaying-pins; catamaran fittings; mess-chests; scuttle-butt fittings, (and connecting-pipes;) halliard-racks; chain-chests; hawse-blocks, (rail and stanchions;) passing-scuttles; speaking-tubes for tops; furniture and fittings, (in cabin, wardroom, staterooms, &c.;) capstan-bar cranks; chocks for arm-chests; carpenter's chest and bench; grab-rods; deck-lights; four carpenters to attend on engineers; hanging bell; gangway for sentinel over bowsprit; pipe-railing around forecastle and poop; musket-racks; fitting up armory; fitting up signal-room.

All of which is respectfully submitted by—

Your obedient servant,

JOHN W. GRIFFITHS.

CAPTAIN'S OFFICE,
Navy-yard, Portsmouth, N. H., March 15, 1876.

A true copy. Attest:

JOHN H. KNOX, *Clerk.*

Received December 26, 1874. A. B.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, November 12, 1874.

SIR: Your offer of 31st August, 1874, and since verbally amended, to continue the work on the United States steamer Enterprise beyond the hull, and to "completion of said vessel, (the facilities of the yard and the materials being furnished as required, and the blacksmiths', platers', and coppersmiths' work as required,") for the sum of $25,000, is hereby accepted, subject to the following conditions: That you are to do all the carpenters', joiners',

* Afterward verbally amended to $25,000.

calkers', plumbers', scrapers', painters', fasteners', and laborers' work required to make the vessel in all respects complete, including in this not only the work specified in your offer, but also all other work (not above excepted under the head of blacksmiths', platers', and coppersmiths' work) required to complete the vessel to the satisfaction of the superintending naval or assistant naval constructor, and of the bureau. The work to be done in a workmanlike manner, equal in all respects to any ever done in a Government yard.

Payments of the sum named above for completing the work to be made in four equal installments as the work progresses, in bills in triplicate certified by the superintendent that the work has sufficiently progressed to entitle you to a payment, and that it is in all respects satisfactory. The fourth or final payment is not to be made until the vessel is completed and accepted, and certificate furnished of that fact, and that no other work remains to be done by you; and it is hereby expressly understood that no claim founded on delay of the Government in doing its portion of the work or in furnishing the materials required, will be considered or paid, but that the maximum amount to be paid, under any and all circumstances, for doing the work mentioned, is the sum of $25,000.

It is further understood that by blacksmiths', platers', and coppersmiths' work which is to be done by the Government, is meant such work only as is usually done by such workmen, and does not include the proper attachment of articles made by them to the vessel, where that portion of the work is usually done by a different class of mechanics.

Inclosed please find copy of a statement from the yard, giving the work necessary to be done by you to complete the vessel for sea, by which you will be guided, subject to the exceptions herein noted or implied.

Please signify in writing your acceptance.

Respectfully, your obedient servant,

I. HANSCOM,
Chief of Bureau.

JNO. W. GRIFFITHS, Esq.,
Portsmouth, N. H.

Building directions for sloop of war of about 640 tons, live-oak frame.

BUREAU OF CONSTRUCTION AND REPAIR,
Washington, D. C., July, 1873.

Length from fore side of rabbet of stem at	11	0
water-line to after side of forward stern-post	185	0
Extreme breadth	35	0
Depth of hold	16	2
Keel of white oak, sided	1	2
To be in two (2) depths, the upper pieces to be in five (5) lengths, the lower edge being below the base line		8
and parallel to it.		
Scarphs in length	10	0
to be plain with two (2) rows of dowels let in		
Dowels in diameter		3
and in length		4
The nibs to come under a filling or futtock.		
Upper nibs in thickness		3
Lower nibs in thickness		3
Care must be taken that this upper nib is well calked before the frame is raised, and that the scarph is calked and stop-watered before the garboard strake is put on.		
The nibs to be fastened before the lower piece is put on with two (2) copper bolts in each nib. Bolts in diameter		$\frac{3}{4}$
riveted on composition plates let in on the lower side.		
Plates in thickness		$\frac{1}{4}$
and in width		2
Scarphs to be fastened with three (3) copper bolts riveted on rings on the lower side. Bolts in diameter		$\frac{11}{16}$
Care must be taken to keep these bolts clear of the floor timber and keelson bolts.		
Lower piece of keel to be in six (6) lengths, so arranged as to make a good shift of butts with the upper piece.		
In depth at the forward perpendicular		8
below the upper piece of keel continued to the same point and at the after perpendicular	1	4
Thus the whole depth of the main keel below the base line will be at the forward perpendicular	1	4
and at the after perpendicular	2	0
Scarphs of the lowest pieces will be in length	7	6

To be plain with two (2) rows of dowels let in; dowels in diameter..... 3
and in length..... 4
The nibs of this scarph to be in thickness..... 4
To be fastened before the upper piece is put on, with two (2) copper bolts in each nib. Bolts in diameter..... $\frac{3}{4}$
Riveted on composition plates let in on the under side.
Plates in thickness..... $\frac{1}{4}$
and in width..... 2
The scarphs to be fastened with two (2) copper bolts riveted on rings on the under side. Bolts in diameter..... $\frac{11}{16}$
Care must be taken to keep these bolts clear of the floor and keelson bolts. The remaining scarphs and nibs to be reduced as the size of the keel diminishes.
The upper and lower pieces of keel to be doweled with two (2) rows of dowels (staggered) to be put in under the fillings. Dowels in diameter..... 3
and in length..... 4
asunder or fore and aft..... 7 6
The upper and lower pieces to be bolted together with copper bolts driven from above through each dowel and riveted on rings on the under side. Bolts in diameter..... $\frac{3}{4}$
About three (3) inches above the lower side of the main keel it will be bolted athwartships under the joints of the frame with copper bolts in diameter..... $\frac{3}{4}$
asunder..... 7 6
Riveted on rings on alternate sides.
False keel of white oak in thickness.....
in lengths not over..... 12
to be fastened to the main keel with copper bolts in diameter.....
in length..... 1
asunder not more than..... 2
The false keel to be put on after the keelson and deadwood bolts are riveted and the keel has been coppered.
The butts of the false keel must be kept clear of the lower nibs of the scarphs of the keel.
Hang of keel.—The keel will be laid with a hang of.....
in a length of..... 185
Stem.—Of live-oak, sided..... 1
The aft side will be at or near the bearding line and the fore side not less than....
clear of the rabbet at the upper end. The lower scarph on the keel to be in length not less than..... 4
The upper scarph to be in length not less than..... 4
Each to be hooked.....
and fastened with two (2) copper bolts in each nib.
Bolts in diameter.....
riveted on composition plates in thickness.....
and in width.....
The scarphs to be bolted with four (4) copper bolts in each.
Diameter of bolts in lower scarph.....
and in the upper scarph.....
Care must be taken to keep these bolts clear of the apron and deadwood bolts.
There will be a composition ring let in on each side of the lower scarph, in diameter on the outside not less than..... 1
and in thickness not less than.....
the scarphs to be bolted athwartships with six (6) copper bolts, in diameter...
riveted on alternate sides on these rings.
Bearding.—The stem will be bearded, commencing two (2) inches from the rabbet, so that the front of the gripe when finished will be.....
Apron and forward deadwood of live-oak, sided..... 1
To be molded to conform to the plan, and fastened to the stem with copper bolts, in diameter..... 1 $\frac{1}{16}$ and
Bolts asunder on the outside not more than..... 1
To be kept clear of the hook and cutwater bolts. Bolts all to be riveted on rings.
These bolts to be of copper as high up as..... 14
above the base line, above which they will be of iron, galvanized.
Stern-post of live-oak, sided at heel..... 1
at center of shaft..... 2
and at the head..... 1
Molded at the head, not less than..... 1
and at the heel..... 2
or larger if it can be procured—to have two (2) tenons into the keel. The stern-post to be sufficient in length to reach the top of the gun-deck beam, and will be fitted to conform to the plan.

If the stern-post can NOT be procured in one (1) piece, it may be scarphed fore and aft ways in wake of the shaft hole. If scarphed, the scarph will be in length not less than 7 0
and be fastened with copper bolts, in diameter ..... $\frac{11}{16}$
riveted on rings on alternate sides. Care must be taken that these bolts are kept clear of the bolts securing the propeller chair casting.

Shaft-hole.—Center of shaft-hole at aft side of forward stern-post, above base about 5 10
to be rough-cut, in diameter 11

After stern-post.—Shoe and rudder to be of copper or composition, to be fitted to conform to the plan.

Rabbet.—The rabbet on the keel will be ..... $3\frac{1}{2}$
On the stem ..... $3\frac{1}{2}$
On the stern-post ..... $3\frac{1}{2}$
except abreast the shaft, where it will be 3

After deadwood—of live-oak, sided ..... $\frac{1}{2}$

At the height of the center of the shaft the deadwood will side as the stern-post, at the same height, and will be molded to conform to the plan.

Stern-post knee—of live-oak will fay on the keel and against the post, and will be bolted before the deadwood is put on, with two (2) copper bolts through the post and two (2) through the keel. Bolts, in diameter ..... $\frac{15}{16}$
riveted on rings on the outside, and one (1) blunt bolt in the fore end of the knee into the keel, in diameter ..... $\frac{1}{16}$
This knee will be doweled to the post and to the keel. Dowels, in diameter 3
and in length 4
Over this knee the deadwood will be built. Each piece of deadwood will be doweled to the piece on which it fays. Dowels, in diameter 3
and in length 4
This deadwood will be fastened with copper bolts, in diameter ..... $1\frac{1}{16}$ and $1\frac{3}{16}$
All the through-bolts riveted on rings on the outside.
These bolts will be asunder on the inside not more than 1 8
Care must be taken that the bolts through the shaft-box at the height of the center of the shaft shall be from center to center athwartships, not less than 1 6
To admit of shaft-hole when finished, to be not less than 1 3
To avoid bad holes, all the bolts through the keel, stem, stern-post and deadwood should be laid off and bored through the separate pieces.

Frame—of live-oak timber and room 2 6

Siding sizes.—Floor timbers will side 1 0
First futtocks will side 10
and the remaining timbers will side 10
At the ends of the vessel where the timbers are straighter, they will side ..... $9\frac{1}{4}$
and the cant timbers will side 9
except the aftermost cant timber, which will side 10

Molding sizes.—Throats of floors will be 1 2
Floor timber head ..... $10\frac{3}{4}$
First futtock head 10
Second futtock head ..... $9\frac{1}{4}$
Third futtock head ..... $8\frac{1}{4}$
Fourth futtock head ..... $7\frac{1}{4}$
Port sill ..... $6\frac{1}{4}$
Rail 5
Top-gallant forecastle plankshear ..... $4\frac{3}{4}$
Poop-deck plankshear ..... $4\frac{1}{2}$

Cant-timbers.—The cant-timbers would mold the same as the square frame. The molding sizes are on a square from the beveling when dubbed off inside and out, ready for planking.

The timbers of the frame will be close together, and each scarph in the floor-timbers, first, second, and third futtocks, will be bolted with three (3) galvanized iron bolts, in diameter ..... $\frac{15}{16}$
The scarphs in the remaining timbers will be bolted with three (3) galvanized iron bolts in each, in diameter ..... $\frac{13}{16}$
These bolts will be 2
less in length than the siding of the frame, and will be punched in 1
Care will be taken to keep these bolts clear of the lodge-knee bolts and those through the water-way.
The frame will be doweled at each frame-bolt. The dowels in the floor-timbers, first, second, and third futtocks, will be in diameter 3
and in length 4
Those in the remaining timbers will be in diameter ..... $2\frac{1}{4}$
The heads and heels of the floor-timbers, first and second futtocks, will be doweled with dowels in diameter 3
and in length 4

The heads and heels of third and fourth futtocks will be doweled with dowels in diameter ..... $2\frac{1}{2}$
The heads and heels of the remaining timbers will be doweled with dowels in diameter 2
All dowels, wheresoever used, will be of well-seasoned lignumvitæ.
Knight-heads and hawse-pieces of live-oak, sided 11
The butts so arranged that one may be in the hawse-hole.
To be bolted to the apron and to each other with galvanized iron bolts, in diameter ..... $\frac{15}{16}$
These bolts will be about 2 6
asunder, and keep clear of the hook-bolts and hawse-holes.
The heels of the knight-heads and hawse-pieces will be boxed into the apron and dead-wood ..... $1\frac{1}{2}$
and will be bolted with galvanized iron bolts, in diameter ..... $\frac{7}{8}$
driven through and riveted on alternate sides.
The heels of the cants will be boxed into the dead-wood ..... $1\frac{1}{2}$
for a length of one (1) foot to 1 foot 4.
Care must be taken not to cut into the after-dead-wood in wake of the shaft.
The heels of each first futtock of the cant-frame will be bolted through the dead-wood with two (2) galvanized iron bolts, in diameter ..... $\frac{7}{8}$
and the heel of the half-cants with one galvanized iron bolt, in diameter ..... $\frac{7}{8}$
When the timbers are dubbed off, ready for planking, these bolts will be riveted on rings on alternate sides.
The cants and counter-timbers will be located and arranged to conform to the plan.
There will be seven (7) counter-timbers, the outer one of which will be sided 10
The center counter-timber will side 1 2
The remaining ones will side 9
The center counter-timber will heel against the stern-post, into which it will tenon.
Tenon athwart ships 4
and up and down 8
This center counter-timber, from its heel to the knuckle of the counter, will be molded so that there will be sufficient wood to finish fair with the outside of the bottom plank, and into it the bottom plank will nib.
The side counter-timbers will run by the stern-post and heel against the after-most cant. These side counter-timbers will be doweled and bolted to the center counter-timber. Dowels in diameter ..... $2\frac{1}{2}$
and in length 4
asunder not more than 2 6
To be bolted through each dowel with galvanized iron bolts, in diameter ..... $\frac{7}{8}$ and $\frac{3}{4}$
riveted on rings on alternate sides, also to be bolted through the stern-post and aftermost cant, if it can be done.
Fillings.—The spaces between the frames will be filled in solid with live-oak to a height of 6 inches above the throats of floors at the molding-edge of the timber. The top or outer ends of these fillings will be cut with a curve from the molding-edge to the throats of the floor-timbers in such a way as to form a water-course. The joints of the frames and fillings will be calked inside and out.
Bolting the frame to the keel.—When the frame is raised and stationed, there will be one (1) copper bolt through each floor-timber and the keel on alternate sides. Diameter of bolts ..... $\frac{1}{16}$
riveted on rings on the lower side of the keel.
Main keelson, of live-oak, sided 1 2
in two (2) depths, the lower piece to be in depth 6
and in length not less than 25 0
To be butted and not scarphed; the butts to come over a futtock or filling, and to be kept clear of the scarphs in the upper piece of keel.
The lower piece of keelson will be doweled on alternate sides to each alternate futtock. Dowels in diameter 3
and in length 4
If found necessary, this lower piece of keelson may be fastened with locust tree-nails or small copper bolts in the futtocks or fillings.
Upper piece of keelson will be of live-oak, sided 1 2
and depth 10
Thus the whole depth of the keelson will be 1 4
To be in lengths of not less than 30 0
These upper pieces will be scarphed—scarphs in length 5 0
The upper nibs will be 4
and the lower nibs will be 3
The scarphs will be doweled with four (4) dowels in each scarph; dowels in diameter 3
and in length 4
and bolted with two (2) copper bolts in the upper nib, in diameter ..... $\frac{3}{16}$

and in length	1	0
and one copper bolt through each dowel; bolt in diameter		$\frac{11}{16}$
and in length	1	1
Care must be taken that these scarphs do not come over the butts in the lower piece of keelson, or the scarphs in the upper piece of keel.		
The upper piece of keelson will be doweled to the lower piece on alternate sides; dowels in diameter		3
and in length		4
asunder fore and aft	5	0
or over every alternate floor timber. The keelson will be fastened with one (1) copper bolt through each floor timber driven on alternate sides and opposite the floor-timber bolts; bolts in diameter		$1\frac{1}{8}$
riveted on rings on lower side of the keel.		
Sister keelsons of live-oak on each side and close adjacent to the main keelson; in depth		11
and in width or siding		8
To be scarphed; scarphs in length	5	0
To have four (4) dowels in each scarph; dowels in diameter		$2\frac{1}{2}$
and in length		4
These scarphs to be kept clear of those in the main keelson.		
Through these sister keelsons in every timber, there will be a copper bolt in diameter		$\frac{13}{16}$
riveted on rings on the garboard strake.		
These keelsons will continue forward and aft until their outer edge becomes		6
their top being parallel with the top of the main keelson.		
These keelsons will be bolted athwartships where it can be done through the main keelson with galvanized iron bolts, in diameter		$\frac{13}{16}$
asunder, not more than	7	6
Care must be taken that these athwartships-bolts are kept clear of the copper through-bolts.		
Capping.—There will be a cap on the main keelson of live oak, sided		$\frac{1}{2}$
and in thickness		3
fastened with copper bolts, in diameter		$\frac{1}{2}$
and in length		7
asunder not more than	2	6
driven on alternate sides.		
In wake of the mast-steps and engine-keelsons this capping will be omitted. The upper corners will be chamfered on the side		$\frac{3}{4}$
and on top		$1\frac{1}{4}$
Breast and deck hooks.—Forward there will be one (1) hook at each deck, and one (1) between and one (1) in the hold below the berth deck; these hooks will be formed by a live-oak chock, sided		9
and molded from	8 inches to	10
fayed against the inside of the apron and deadwood.		
On the inside of these chocks there will be a galvanized iron hook, sided		4
and molded at the throat		$2\frac{1}{2}$
and at the ends		$\frac{3}{4}$
Arms in length not less than	4	6
fayed against the timber of the frame; there will be one galvanized iron bolt through the stem, driven from the outside and riveted on the hook; bolt in diameter		$1\frac{1}{16}$
and one (1) galvanized iron bolt through each timber on which it fays, driven from the inside and riveted on rings on the outside of the frame; bolts in diameter		$\frac{15}{16}$
Hooks aft.—There will be a hook at the poop-deck of live-oak, sided		$6\frac{1}{2}$
and molded to conform to the plan, fastened with one (1) galvanized iron bolt through each timber on which it fays, to be driven from the outside before the plank are put on, and riveted on rings on the inside; bolts in diameter		$\frac{11}{16}$
There will be a hook at the port sill of live-oak, sided		8
and molded to conform to the plan, fastened with one (1) galvanized iron bolt through each timber on which it fays, driven from the outside before the plank are put on, riveted on rings on the inside; diameter of bolts		$\frac{15}{16}$
Under the berth-deck, on top of the deadwood, there will be three (3) hooks of live oak, sided		8
fastened with one (1) copper bolt through each timber over which they pass, driven from the outside and riveted on rings on the inside; bolts in diameter		$\frac{15}{16}$
These hooks will be located to conform to the plan and will be put in after the ceiling-plank are put in.		
Port sill, of live-oak, sided, or in depth		7
in width same as the frame at that point, to be set with the round of the beam, and bolted at the ends with two (2) galvanized iron bolts, in diameter		

and into the heads of the intermediate timbers with one (1) galvanized iron bolt into each timber; bolts in diameter		$\frac{5}{16}$
driven at opposite angles to each other.		
Port-sills in height above top of the deck when finished	1	6
Ports in width, fore and aft	3	8
Ports in height to under side of main rail	3	2
Care must be taken that the timbers forming the face of the ports have a smooth face, and are full and square.		
Fillings.—In wake of the hawse holes and engineer's openings, the space between the frames will be filled in with live-oak; at each air port and scupper there will be a filling of yellow pine in length not less than	3	0
In wake of the rigging, the space between the frames will be filled in with yellow pine in length not less than	4	6
The upper ends of these fillings to be on a line with the port sill.		
Diagonal braces of iron on the inside of the timbers, in width		$3\frac{3}{4}$
and in thickness		$\frac{9}{16}$
There will be two (2) sets at right angles to each other, one (1) of which will be let into the timbers laid at an angle of 45° from the joints of the frame, the upper ends being under the head-strap, which will be let into the timbers back of the water-way and sperketing.		
These braces will continue down so that a bolt can be driven into the head of the second futtock. The other tier will lay on the timbers, the inside plank jogging over them; the upper ends will lay on the head-straps.		
The upper ends will be between every other frame, or about	5	0
asunder, and will be hot riveted to the head-strap; rivets in diameter		$\frac{7}{8}$
The head-straps will be of iron, in width		$4\frac{1}{4}$
and in thickness		$\frac{9}{16}$
let into the timbers of the frame, the upper edge being below the port-sill	1	0
This head-strap will be continued from the stem to the aftermost cant; this head-strap will be lapped and riveted at the butts so that it may be continuous, having a galvanized iron bolt in every timber; bolts in diameter		$\frac{13}{16}$
driven from the outside in the middle of the timber and riveted on the straps; care must be taken that these bolts are well headed before driving, and that they are punched in sufficient to be clear of the outside plank when ready to be put on; the crossings of the braces will be hot riveted; rivets in diameter		$\frac{13}{16}$
and bolted to every timber on which they lay with galvanized iron bolts; bolts in diameter		$\frac{15}{16}$
driven from the outside in the middle of the timber and riveted on the braces same as the head-strap. Care must be taken that these braces are let into the timbers and the plank jogged over them so that they will fit close and tight.		
On the outside of the frame aft, there will be an iron strap located as shown on the plan, in width		$3\frac{1}{4}$
and in thickness		$\frac{9}{16}$
This strap will be welded in one piece and bolted through every timber with one (1) galvanized iron bolt in diameter		$\frac{3}{4}$
riveted on rings on the inside of the timbers.		
In order to connect the deadwood below the shaft with the frames that are above it, there will be two (2) composition straps or braces, in width		4
and in thickness		$\frac{5}{8}$
On each side of the vessel the straps will be let into the deadwood and frames, except in wake of the shaft where the plank will jog over them, and be fastened with copper bolts, in diameter		$\frac{13}{16}$
Below the shaft these bolts will be driven on alternate sides and riveted on the strap, asunder not more than	1	4
Above where they come through the frames, there will be one (1) bolt in each timber riveted on rings on the inside; bolts in diameter		$\frac{7}{8}$
The lower end of the aftermost strap will continue down and bolt to the stern-post; the other end will continue down and bolt to the keel, to be located and arranged to conform to the plan.		
Mast steps of the foremast and mainmast will be of galvanized cast iron, fitted and fastened to the keelsons.		
Engine keelsons of white oak sided	1	10
Distance from center to center	4	10
thus being asunder	3	
There will be three (3) of these keelsons in height and location as shown on the plan, to be put in after the ceiling-plank are put in.		
These keelsons will jog over the main and boiler keelsons; also over the sister keelson ceiling and bilge strake, to be doweled to the timbers between the main and boiler keelsons with dowels in diameter		3
and in length		4

asunder not more than 2 0
and fastened with copper bolts in diameter ..... $1\frac{1}{8}$
asunder not more than 3 0
riveted on rings on the outside of the frame before the bottom plank are put on; at the outer ends where the keelsons are shoal the bolts may be 1
Care must be taken that these bolts are kept clear of the holding-down bolts of the engine, the location of which will be furnished by the engineer.
If it is necessary to make these keelsons in more than one (1) depth, in that case the pieces will be doweled to each other, with dowels in diameter 3
and in length 4
asunder not more than 3 0
There will be several keelsons of white oak for the shaft-bearings, located and in height as the engineer may desire; that for the thrust-bearing may be of live-oak.
Boiler keelsons, on each side of the main keelson of white oak, sided 11
to be in height same as main keelson, with which it will be parallel; these keelsons will continue forward and aft until their ends become in height 6
to be in the clear from the center line 4 4
thus being asunder 8 8
to be scarphed; scarphs in length 5 0
These scarphs must not come in wake of the scarphs in the main keelson; these scarphs will be doweled and bolted through each dowel; bolts in diameter ..... $\frac{3}{4}$
these keelsons will be doweled on alternate edges to each futtock with dowels in diameter 3
and in length 4
In wake of the boilers these keelsons will be bolted through each dowel with copper bolts in diameter ..... $\frac{7}{8}$
Every alternate bolt will be a through bolt and riveted on rings on the outside of the frame before the bottom plank are put on.
Forward and aft when these keelsons become shoaler, the bolts may be less in diameter; and where it can be done, these bolts will take the place of the outside fastening and be driven from the outside of the plank and rivet on the keelson.
In wake of the boilers, there will be an additional piece on top of these keelsons, in height sufficient to bed the boilers; these additional pieces will be doweled on alternate edges to the boiler keelsons; dowels in diameter 3
and in length 4
asunder not more than 3 0
and bolted with galvanized iron blunt bolts; bolts in diameter ..... $\frac{3}{4}$
Care must be taken that the butts or scarphs of these upper pieces do not come over or near the scarphs in the boiler keelsons.
Bilge-strake.—Of yellow pine, seven (7) in number, the first or lower strake being 11
below the first futtock-head and the upper strake being 1 6
above the second futtock-head.
In thickness amidships ..... $5\frac{1}{2}$
Thinning at the ends of the vessel to 4
In width amidships 11
Narrowing at the ends to 9
These bilge-strakes will be fastened with galvanized iron bolts in diameter ..... $\frac{5}{8}$
There will be one (1) bolt in each frame in alternate edges of the plank, but in the middle of the timbers; these bolts will be headed before driving, and care must be taken that the holes are reamed to prevent the heads from splitting the plank when the bolts are driven home; care must be taken that these bolts do not go entirely through the timber when punched in.
Ceiling.—Of yellow pine below from the bilge-strakes to the boiler keelson.
In thickness amidships ..... $4\frac{1}{2}$
Thinning at the ends of the vessels to 3
In width amidships about 11
Fastened with galvanized iron blunt bolts, in diameter ..... $\frac{9}{16}$
driven on alternate edges of the plank, but in the middle of the timbers; all short fastening for any inside work will be driven near the edge of the plank, but in the middle of the timbers so as not to interfere with the fastening from the outside, as all through-bolts from the outside will rivet on these plank.
Upper-deck clamps and ceiling of yellow pine, in thickness amidships ..... $5\frac{1}{2}$
thinning at the ends of the vessels to 4
and in width amidships ..... 10 to 11
filling the space to the thick strakes.
These clamps will be fastened with one (1) galvanized iron blunt bolt in each frame driven in alternate edges of the plank, but in the middle of the timbers; bolts in diameter ..... $\frac{11}{16}$

To be bolted edgewise (where it can be done) in every alternate room or about.... 5
asunder with galvanized iron bolts, in diameter.....
keeping clear of the air-ports.
Care will be taken that the butts of the upper strake of clamps come in an air-port, and that no butt on the second strake comes under or near an air-port, nor on the same frame with that of an outside plank.
These clamps will be keyed in five (5) seams with a galvanized iron key made in the form of a ×, in width up or down.....
in length fore and aft.....
in thickness.....
in length in and out to conform to the thickness of the plank, to be driven on alternate edges of the plank in every alternate room, these being on the seam asunder..... 10
Berth-deck clamps, of yellow pine. These clamps will consist of a yellow-pine strake, set with the sheer of the deck on the inside of the ceiling to be in thickness on the upper edge amidships.....
and on the lower edge.....
in thickness at the ends of the vessel on the upper edge.....
and on the lower edge.....
in width.....
fastened with one (1) galvanized iron blunt bolt in every timber; bolts in diameter.....
and in length..... 1
Berth-deck beams of yellow pine, sided.....
molded.....
to have a spring of.....
in a length of..... 35
Knees of white oak.—There will be one (1) hanging knee to each end of every beam, sided.....
There will be a lodge-knee to each end of every beam, sided.....
The arms of these knees will be in length not less than..... 4
The bodies of the hanging-knees will be in length not less than..... 5
The bolts in the arms to be of galvanized iron, in diameter.....
not less than four (4) in number, the bodies to have not less than five (5) bolts in addition to the throat-bolt.
The throat-bolt will be driven from the inside and be of galvanized iron in diameter.....
Those through the side of the vessel will be of copper, in diameter.....
and to be driven from the outside of the plank, and riveted on rings on the knee.
The lodge-knees will be fastened with galvanized iron bolts in the arms, in diameter.....
four (4) in number, the bodies to have (1) bolt in each timber over which it passes, in addition to the throat-bolt. The throat-bolt will be of galvanized iron, in diameter.....
and will be driven from the inside. Those through the side of the vessel will be of copper, driven from the outside of the plank, and riveted on rings on the knees; bolts in diameter.....
If any of these bolts come above the line of copper-fastening, they will be of galvanized iron, and will be in diameter.....
Where practicable, the bolts through the side of the vessel will take the place of the outside fastening.
The arms of these knees will have two (2) dowels in the beams; dowels in diameter.....
and in length.....
The bolts near the end of the knees may be $\frac{1}{16}$ less in diameter, and the points of the knees will be fastened with spikes, or small bolts.
Forward and aft, where a hanging-knee cannot be got under the beam, it may be placed against the side of the beam, which gives an out square knee.
The beams at the midship ends of the berth-decks will have a lodge-knee on both the forward and aft side. The remaining beams will have one (1) lodge-knee only—those on the forward deck, on the fore side of the beams, and those of the after-deck, on the after side of the beams.
Stanchions under the beams forward of white oak, square.....
and aft in two (2) rows, fore and aft.....
and athwartships.....
Those under the mizzen-mast will be.....
Mizzen-step.—On the berth-deck there will be an additional beam of yellow pine under the mast, molded amidships.....
and at the ends.....

and in length.....

The body of the hanging knee to reach the berth-deck water-way.

Forward and aft these hanging knees may be slightly angled so as to give a more out square knee.

Toward the ends of the vessel the knees may side.....
less, and the length of the arms may be reduced to..... 4

Bolts of galvanized iron, those in the lodge and lap knees to be in diameter.....
and in the hanging knee.....

There will be not less than four (4) bolts in the arms of the lodge and lap knees, and in the bodies one (1) in every timber over which they pass, and not less in number than in the arms.

The arms of the hanging knees to have not less than five (5) bolts and in the body not less than six (6) in addition to the throat-bolt: forward and aft where the knees side less, the bolts may be $\frac{1}{16}$ inch less in diameter, the bolts in end of the knees may be $\frac{1}{8}$ inch less, and the points of the knees will be fastened with small galvanized bolts or spikes; the bolts in the bodies of the knees will be driven from the outside of the plank and riveted on the knees, taking the place of the outside fastening.

Stanchions—under the upper deck beams, of yellow pine or locust, in diameter....

To have galvanized cast-iron caps and shoes.

The partner beams to be bolted through these stanchions to the deck below, with galvanized iron bolts, in diameter.....
set up with plate and nut on lower side of berth-deck beam

Stanchions in engine and boiler room—to be of galvanized iron, in diameter.....

To be well secured to the beams and keelson, particularly those to the partner beams.

Mast partners of live-oak, to the fore and main mast, in width.....
in thickness.....

The mizzen partners in width.....
and in thickness.....

The fore and main to be kneed with lodge and lap knees of white oak, sided.....
bolted with galvanized iron bolts, in diameter.....
to the mizzen the knees will side.....
and bolted with copper bolts, in diameter.....

Carlings or fore and aft pieces—of yellow pine, sided.....

Molded or in depth.....

In three (3) ranges.

Ledges—of yellow pine, sided.....

Molded or in depth.....

There will be one (1) ledge between every two (2) beams.

Boiler hatch—The fore and aft pieces forming the boiler hatch of yellow pine, sided.

Molded or in depth .....

Kneed at the ends on the outside with lodge knees of white oak, sided.....
and fastened with galvanized iron bolts, in diameter.....

The half beams will be kneed to those fore and aft pieces with lodge and lap knees of white oak, sided.....
fastened with galvanized iron bolts, in diameter .....
and at the side of the vessel will be kneed as the other beams.

Half beams—will side.....
and mold at the side of the vessel.....

The half beams will mold at the fore and aft pieces.....

Engine hatch.—The fore and aft pieces and framing to be the same as the boiler hatch, including the half beams.

Hatches—will be first formed by a fore and aft piece of yellow pine, sided or in width.....
molded or in depth.....

All the deck framing to be let down with a double jog, each in depth.....

Coamings and head ledges—of white oak, sided.....
molded or in depth.....

Dressed straight on top from the deck-edge to the inner upper corner, and after the iron coaming is put on, to be cooved out from the angle-iron to finish fair with the top of the deck-plank.

These coamings and head ledges to be doweled to the beams and fore and aft pieces; dowels in diameter.....

And in length.....
asunder not more than.....
and bolted through each dowel with galvanized iron bolts in diameter.....

Riveted on rings on the under side of the beams and fore and aft pieces.

Iron coamings.—The coamings will be of plate-iron, in height above deck when finished.....
and in thickness.....

The outside fastening will come through and rivet on these plank.

Battery-plank.—Inside between the upper strake of spirketing and under side of rail, of white oak.

In thickness at the spirketing.....

and at the rail.....

and in width not over.....

or to fill the space with six (6) strakes, fastened with galvanized iron bolts, in diameter.....

The through-bolts from the outside will rivet on these plank.

Care must be taken that this fastening is kept clear of the gun-tackle and breaching-bolts.

In the strake of battery-plank that comes below the rail or upper strake, there will be in every room a ventilating-valve of approved pattern. In rooms which have fillings or other obstructions, these valves may be omitted.

Rail of yellow pine, in thickness.....

and in width..... 1

To be set with the round of the beam, the lower side being above the port-sill.. 3

To be scarphed; scarphs in length..... 6

To be hooked; hooks.....

One (1) timber of each frame will tenon into the rail, in depth.....

in length, or fore and aft.....

Athwartships the full size of the timber, to be bolted to each timber with galvanized iron bolts, in diameter.....

and in length.....

To be driven at opposite angles to each other.

Top-gallant forecastle and poop-deck clamps, of white oak, in thickness.....

In number, two (2) strakes, the upper edge being in height above upper deck 6

Beams of yellow pine, sided.....

Molded at center.....

and at the ends.....

To jog into the clamps.....

To have a spring of.....

in a length of..... 31

The grub or beam at the after end of the top-gallant forecastle and fore end of the poop-deck will side.....

and mold at center.....

and at the ends.....

This beam will be chined on to receive the deck-plank.....

and will from thence coove out.....

and show a thickness on top of.....

Partners to the fore mast and mizzen mast of yellow pine in width.....

and in depth.....

Kneed with lodge and lap knees of white oak, sided.....

Framed to take a white-pine wedge.....

The partners to the foremast to be fastened with galvanized iron bolts, in diameter.

and to the mizzen mast with copper bolts, in diameter.....

Mast coamings to project above deck.....

and show a thickness on top when finished.....

To be fitted with galvanized iron band and composition ring similar to those on the deck below.

Stanchions under the top-gallant forecastle, of galvanized iron pipe, in diameter...

To have galvanized iron caps and shoes. Through these stanchions there will be a galvanized iron bolt, in diameter.....

Driven from the top of the beam and set upon the under side of the upper deck beam.

The stanchions under the poop-deck in the cabin will be in two (2) rows and behind the bulk-heads.

Knees.—Each end of every beam will have a lodge knee of white oak sided.....

Arms in length..... 3

And a hanging knee of galvanized iron, arms in length not less than..... 3

Bolted with galvanized iron bolts, in diameter..... ⅝

Coamings of hatches and sky-lights of white oak, in height above deck.....

and have a thickness on top of.....

Those to the sky-lights to be rabbeted on the outside to receive the hoods.

Deck-plank, top-gallant forecastle, of yellow pine, in thickness.....

and for poop-deck, white pine, in thickness.....

and in width not more than.....

To be fastened with galvanized iron spikes, in length.....

To be plugged.

Plank-sheer of white oak, in thickness		4
and in width	1	1
To project outside		$\frac{3}{4}$
and to be chined on the inner edge		1
To form a water-way.		
The heads of the timbers will tenon into the plank-sheer, and the plank-sheer will be scarphed; scarphs in length	5	0
and to be hooked		2
Plank-sheer to be fastened with galvanized iron bolts through the knees into the clamps; bolts in diameter		$\frac{5}{8}$
and into the heads of the timbers with galvanized iron bolts, in diameter		$\frac{9}{16}$
Driven at opposite angles to each other.		
Capstan-bed on upper deck to be formed by letting down between the beams a center-piece of live oak, in width	1	4
Jogging down between the beams		$6\frac{1}{2}$
and projecting above the deck		2
The whole depth being		$1\frac{1}{2}$
On each side of this center-piece there will be two (2) pieces of yellow pine, in width each		10
The outer piece will be rabbeted on the outside to receive the ledge		2
In other respects the same as the center piece, to be fastened to the beams with galvanized iron bolts, in diameter		$\frac{5}{8}$
and athwartships with galvanized iron bolts in diameter		$\frac{13}{16}$
After the capstan is set, these pieces will be dressed down to show a thickness above deck of		$\frac{3}{4}$
and the corners will be neatly rounded.		
If an iron capstan is used, in that case there will be an additional piece of live oak, in width	1	4
jogged up under the beam to meet the upper piece, having a lip under the beam of		3
The beam abaft the capstan will be bolted through the stanchion to the deck below with a galvanized iron bolt, in diameter		$1\frac{1}{4}$
set up on under side of berth deck beam.		
Mast coamings of white oak, in height above deck		7
To be finished round on the outside and show a thickness on top of		$4\frac{1}{2}$
at the corner of the wedges.		
The coaming to the foremast and to the mainmast will have a galvanized iron hoop or band shrunk on their upper edge, for which they will be properly rabbeted. Hoops or bands in width		$2\frac{1}{4}$
and in thickness		$\frac{5}{16}$
On the coaming to the mizzenmast there will be a composition ring let in on top, in width		$2\frac{1}{4}$
and in thickness		$\frac{5}{16}$
The outer edge being fair with the outer edge of the coaming, to be fastened with composition screws.		
Cable-bitts.—To be of cast iron, galvanized, if it can be done; bitts in diameter	1	2
Beds for these bitts will be formed by letting down between the beams a piece of live oak, in width	1	5
Jogging down between the beams		6
and projecting above the deck		2
The whole depth being	1	0
And under the beams there will be a similar piece of live oak let up between the beams to meet this upper piece; this lower piece will have a lip under the beam of		$2\frac{1}{4}$
and be bolted through the beams with galvanized iron bolts, in diameter		$\frac{11}{16}$
riveted on rings on the lower side. The cable bitts will be secured to these live oak pieces with galvanized iron bolts, in diameter		$\frac{11}{16}$
riveted on galvanized iron plates let in athwartships on the lower side; plates in width		$2\frac{1}{4}$
and in thickness		$\frac{5}{16}$
and in length sufficient to take two (2) bolts; the beam abaft the cable bitts will be bolted through the stanchion to the deck below with a galvanized iron bolt, in diameter		$1\frac{1}{4}$
set up on the lower side of the berth-deck beam.		
Deck stopper bolts.—There will be three (3) deck stopper bolts forward of the cable bitts, and one (1) in every beam between the bitts and the deck pipe to range with the outside of the bitts; bolts of galvanized iron, in diameter	1	$\frac{5}{16}$
Diameter of ring in the clear		5
Riveted on plates on the under side of the beam.		
Chain stopper beds.—Forward near the manger there will be a bed of live oak, projecting above the deck		5

In other respects formed as that for the cable bitts, sufficient in width to take the stopper; the center of these stopper beds will be on a line from the center of the forward hawse hole to the outside of the cable bitts.

Chain and deck pipes.—At each chain pipe there will be let down between the beams two (2) fore and aft pieces of yellow pine in width each 1

Through these fore and aft pieces the chain pipes will be cut; to be fastened through the beams with two (2) galvanized iron bolts, in diameter .....
riveted on the lower side of the beams and bolted athwartships with two (2) galvanized iron bolts, in diameter .....

Bowsprit bitts of white oak, sided .....

Molded or fore and aft .....

To continue above the top-gallant forecastle deck 3

There will be a cavil above the top-gallant forecastle.

The upper ends of these timber bitts will be finished timber-head fashion.

Top sail sheet bitts to the fore and main mast.

To be of locust, square .....

Those to the foremast to continue down and bolt to the deck beam below, tapering so that at the deck they will be square .....

To be in height above the top-gallant forecastle 4

Bolted to the top-gallant forecastle deck beam with galvanized iron bolts, in diameter .....

To have two (2) bolts in each.

Top sail sheet bitts to the mainmast will not run below, but will be secured to the main deck beams; in other respects the same as those to the foremast.

Towing bitts aft near the mizzenmast of galvanized cast iron in diameter ....

These bitts will be located as shown upon the plan—if within of the binnacle, they will be of composition. 8

Fife rails.—There will be a fife rail and stanchions to the foremast and mainmast stanchions, to be square at the deck, to have two (2) shieves in each stanchion.

Rail to be of white oak in thickness .....
and in width .....
and in height above deck 3

Between the stanchions there will be a galvanized iron rod, in diameter .....
fittted with thimbles for leading blocks.

There will be a composition band and belaying-pins on the mizzen mast.

Pin rails.—In wake of the rigging there will be a pin rail between the ports, of white oak in thickness at the side of the vessel .....
and on front edge .....

In height above deck about 4

Bolted through the side of the vessel with galvanized iron bolts, in diameter .....

On the top-gallant forecastle and poop decks, the pin rails will be fitted with locust stanchions secured to the deck and fitted with rods for leading-blocks, similar to the fife-rail stanchions.

Garboard strake.—Of white oak, in thickness next the keel .....

The second strake sufficient in thickness to fall in fair with the running-plank of the bottom, in width amidships about 1

To be square fastened—that is, every timber to have one (1) through bolt and one (1) short bolt; bolts of copper, in diameter .....

The through bolts that come through the sister keelsons will be in diameter .....
and will take the place of the through bolt of the garboard strake.

The rabbet on the keel will be .....

Bottom plank, of white oak, in thickness when dubbed off .....

Wales of white oak, the thickest plank being .....

Being the three (3) strakes below and the four (4) strakes above the 12
water-line, thence falling in fair with the bottom plank and upwards to the port sill to .....

The first six (6) strakes below the port sill will be .....
thicker and jog that much between the timbers, for which the edges of the timber will be carefully trimmed but not rabbeted.

Between the first (1st) and second (2d) futtock-heads there will be two (2) strakes .....
thicker and jog that much between the frames in a similar manner.

The outside plank will be hollowed out on the inside to fit the timbers, and the timber of the frame will not be dubbed straight for the plank.

The wales will be in width amidships .....

The plank will increase gradually in width, not exceeding 1

The plank under the bottom and subject to compression may be in length from .....35 0 to 40

But the wales, clamps and spirketing subject to extension must be the longest plank and will be in length from .....40 0 to 50

Bulwarks outside for the length of the top-gallant forecastle and poop decks, of white oak in thickness at port sill 3
and at the rail ..... $2\frac{1}{2}$
In working these planks they will be first fastened with galvanized iron spikes, in length 6
afterward fastened with two (2) galvanized iron bolts ch frame; bolts in diameter ..... $\frac{5}{8}$ and $\frac{9}{16}$
riveted on rings on the inside.
Between the top-gallant forecastle and the poop-decks, the bulwarks outside will be of yellow pine of same thickness and fastened in same manner.
Forward and around the stern the bulwarks or plank above the rail will be of white oak, in thickness ..... $2\frac{1}{2}$
fastened the same as the bulwarks below.
Fastening outside.—The copper fastening will extend from below to 13 6
above the base-line amidships and will sheer up forward to 14 3
and aft to 14 9
above the base-line, above which it will be of galvanized iron, except the counter immediately over the propeller, which will be copper-fastened to the upper deck.
All the outside plank below the port sill will be square-fastened, that is, there will be two (2) through bolts and two (2) short fastenings in each frame.
The copper through bolts will be in diameter ..... $\frac{3}{4}$
and the short fastenings ..... $\frac{11}{16}$
The galvanized through bolts will be in diameter ..... $\frac{11}{16}$
and the short fastenings ..... $\frac{5}{8}$
The length of the short fastenings will be about twice and one-third ($2\frac{1}{3}$) the thickness of the plank through which it is driven, but in no case are these bolts to be longer than within 1
of going through the timber.
Whenever a knee bolt, water-way bolt, hook-bolt keelson, or any other through bolt will take its place, the fastening outside will be omitted.
In the frame next on each side on which the strake butts in lieu of one (1) of the short fastenings in the timber nearest the butt there will be a through bolt.
The hood end bolts, where they can be got through, will be driven from alternate sides and riveted on rings; when they cannot be got through, they will be in length 10
Where the plank are reduced to 6
in width, the fastening will double and single, a short bolt in every frame, the through bolts being placed on alternate edges.
The heads of all bolts driven from the outside will be carefully trimmed, and driven home with a swedge or punch so as not to bruise the plank, and the heads will not be plugged.
Water-tight bulkheads will be built of white pine in two (2) thicknesses, each thickness to be 2
tongued and grooved, supported by stanchions on the after side.
Decks in the hold of white pine in thickness 3
located to conform to the plan.
Store-room decks aft—on each side of the shaft alley.
Beams of yellow pine, sided 5
and molded 5
Deck plank of white pine in thickness ..... $2\frac{1}{2}$
in width not over 7
fastened with galvanized iron spikes in length ..... $5\frac{1}{2}$
not to be plugged.
Shaft alley.—To be built as shown on the plan.
The magazine and shell-room floors.—To be battoned up so that water will not lay on them.
The bolts and spikes used in the magazine and shell-rooms will be of copper or composition and not of iron.
Cat-heads—to be of iron, in width when finished 10
and in depth at outer end 11
To be formed of plate-iron, in thickness ..... $\frac{1}{2}$
galvanized if it can be done.
Located and fitted to conform to the plan.
Cutwater of white oak, sided so that the front edge may be in thickness 3
Falling in at the water-line to ..... $3\frac{1}{2}$
The main piece will run up and form the back of the lacing, and to which the head-rails will be fastened by a galvanized iron knee connecting them together.
The body of the lacing knee will run down the stem and the arm out under the bowsprit; between this knee and the main piece the filling-in pieces will be worked.

If the main piece is not of sufficient breadth to receive the fore end of the lower cheek, a piece will be fayed on its fore side.
The several pieces forming the cutwater will be grooved and have a tongue of yellow pine inserted.
It will be doweled to the stem with dowels in diameter.....
and in length.....
asunder not more than.....
The gripe will be scarphed on the lower end of the main piece.
The upper bolts will be galvanized iron, in diameter.....
The remaining bolts will be in diameter.....
The copper bolts will be in diameter.....
The bolts must be laid off and bored through the separate pieces so that there may be no bad holes.
Cheeks of white oak, sided.....
Bolts in diameter.....
to be galvanized iron.
The space between the upper and main head-rails will be planked fore and aft, and not staved up; the plank to be tongued and grooved; plank in thickness.....
and in width to correspond with the plank between the top-gallant forecastle plank sheer and the main-rail.
Quarter galleries.—Rims of white oak.
To be fitted with bath-tubs and water-closets to conform to the plan.
Channels of white oak, placed at second (2nd) strake below the main-rail.
In thickness next the side of the ship.....
and at the outer edge.....
In width about.....
To be made in two (2) widths, doweled to each other; doweled in diameter.....
and in length.....
Bolted through the side of the vessel at each frame with galvanized iron bolts, in diameter.....
Channel-stays—to be galvanized.
There will be two (2) channel-stays to the short lengths, and three (3) to the long lengths, to have an eye in the upper end, and ring bolts in the lower ends.
There will be galvanized iron knees under the channels, in number same as channel-stays.
Chains.—Chain-plates of flat iron, galvanized.
Fore and main plates in width.....
and in thickness.....
Mizzen chain-plates in width.....
and in thickness.....
The upper end of these chain-plates so formed that the dead-eyes may shackle to them.
In wake of the holes for the chain-bolts, the plates will be swelled sufficient to retain their strength, and the edges of the plates will be neatly chamfered or rounded.
Fore and main chain-bolts, in diameter.....
Mizzen chain-bolts in diameter.....
Fore and main preventer-bolts in diameter.....
Mizzen preventer-bolts in diameter.....
Every other chain-bolt will be a ring-bolt; diameter of ring in the clear.....
Size of iron for ring for fore and main.....
and for the mizzen.....
All of the above iron work to be galvanized.
Pumps, of composition; diameter of chambers.....
The force pumps to be fitted to work on the gun and berth decks.
The pipes for the head, channel, and other pumps will lead inside to cocks through the bottom below the water-line; the holes for these pipes will be cut in the joints of the frame, and not in the room or space between the frame.
Scuppers.—Several on each side, located as shown on the plan; in size in the clear fore and aft.....
and up and down.....
in the clear when finished.
To be fitted with composition valves on the outside.
To be kept clear of the gun and air ports.
There will be scuppers on the top-gallant forecastle and poop-decks; also in the manger and head.
Port shutters—To be made in two (2) thicknesses, the lower halves to be hinged to the port-sill.
The shutters to the bridal port to be of oak; also those to the stern-port.
Hammock-rail of yellow pine, in depth.....

ı thickness 3
air with the top-gallant forecastle and poop-deck plank sheer.
ıock-stanchions will be of iron, galvanized.
ock-netting will be of white pine, in thickness 1
with galvanized iron nails.
s.—Diameter of the forward holes in the clear 10½
ıe after one 10¼
on top-gallant forecastle, of galvanized iron; height above deck 30
he upper ends of these stanchions there will be a life-line of galvanized
in ..... $\frac{3}{16}$
er end of the deck, the stanchions will be fitted with galvanized hand-
gas-pipe, in diameter 1¼
ɔp-deck there will be a similar hand-rail and stanchions all around; the
on the fore end of the poop-deck will be of composition.
ıd gratings.—There will be sea-steps and side-ladders on each side of the
itted with galvanized iron stanchions and hand-rails.
ghts will be provided with composition-wire gratings.
es will be fitted with white-ash gratings, and close hatches where neces-

ill be of white ash.
es and scuttles to be fitted with galvanized iron flush-rings.
he magazine and shell-rooms to be of copper or composition.
ır passing coal to the bunkers, will be cut and fitted to conform to the
ıd will be of cast iron, galvanized, in diameter in the clear 1 4
ıd moldings.—All work exposed to the weather will be planed smooth,
bottom will be planed fair before the copper is put on; the inside work
planed, including the berth-deck, the lower corners of all beams framing
projection at the spirketing will be rounded and there will be no mold-
ny part except the main rail.
ck-framing will be let into the beams and into each other with a double

ends of all athwartship bulkheads, boards, or planks will be rounded,
ns being the length of the board.
athwartship bulkhead comes under a beam, the bulkhead-strip on the
ill be omitted in the doorway.
-piece in the hatches on which the gratings lay must be placed in the
ı of the ladders, so as not to interfere with the head-room in passing up

-The wales and bottom-plank will be calked solid and home to the
the upper deck with not less than three (3) threads, and the berth-deck
t less than two (2) threads for the first calking; the bulwarks, poop-deck,
-gallant forecastle in proper proportion.
ıms to be payed with pitch and scraped clean, except outside above the
ınd inside above the upper deck; and the poop-deck and the decks in the
ıd ward-room, which will be payed with three (3) coats of white lead.
he vessel is painted, and when painted the seams will have an additional
paint.
and galvanizing.—It is to be particularly observed that all ring and eye
ɔ to be carefully annealed after they are made, and all iron-work of what-
ind is to be galvanized, if it can be done, including the gun-tackle and
ıg-bolts, which are to be made and put in to conform to the Ordnance

.—The copper will be 30 and 32 ounces, the upper edge being above the
amidships 12 6
ng up at the forward perpendicular to 13 0
the after perpendicular to 14 0
be a composition casting on the front of gripe and cutwater, continuing
..... 3 0
the keel to 3 0
ve coppering-line on the cutwater.
ss on the front at the water-line ..... $\frac{7}{8}$
g back on the gripe sufficient to get good fastening, the after edge being
less ..... $\frac{5}{16}$
—One in each state-room and several on each side on the berth-deck; also
ıe top-gallant, forecastle, and poop-deck, located as shown on the plan.
pipes.—There will be a ventilating-pipe leading from the after end of the
ey to the poop-deck; also forward there will be a ventilating-pipe leading
fore end of the berth-deck to the top-gallant forecastle.
ked of locust and mahogany, the spindle to be of copper or composition.
and shell-room to be of seasoned white pine; to be calked and made
en lined with lead, and fitted as the Ordnance Bureau may direct.

Cabin bulk-heads, &c., of seasoned white pine.

To be fitted to conform to the plan with state-rooms, clothes-lockers, berths, coat and hat hooks, stationary washstands, cot-hooks, Venetian blinds for windows and doors, glazed sash in doors, windows, ports, and skylights; glass to be best, clear, double thick white glass.

Ward-room bulk-heads of seasoned white pine, fitted with berths, lockers, shelves, coat and hat hooks, Venetian blinds to the doors and bulk-head openings, pantry fitted with hooks, shelves, and other conveniences, all to conform to the plan.

Steerage and warrant-officers' quarters of seasoned white pine, to be fitted to conform to the plan; fitted with berths, lockers, shelves, &c., similar to the ward-room.

Berth-deck.—Hammock-hooks of galvanized iron, to be placed for as many men as can be hung on the berth-deck and under the top-gallant forecastle.

Sail and bread rooms.—The sail-rooms and bread-rooms to be lined with tin.

The sail-rooms to have a white-pine grating on the deck, and white-pine slats on its side to prevent the sails from coming in contact with the tin.

The store-rooms and dispensary to be fitted according to naval usage.

Chain and shot lockers of white pine, in thickness 3

The bottom to be made tight.

Galvanized iron bolts for securing the chain to be properly placed.

Galley-platform to be leaded, and beams and parts exposed to the action of the fire to be protected by tin properly furred off, steam gratings to be fitted and the galley properly secured.

Water closets to be provided for the ward-room and steerage as shown on the plan.

To be properly fitted with water-tanks, china basins, delivering-pipes, &c., and arranged that they may be readily cleared.

Head.—The head to be fitted with three (3) or four (4) seats on each side.

There will be a head-pump properly fitted on each side of the bowsprit.

Companionways.—To be fitted with suitable canopies, those to the ward-room and steerage to be of composition; the remaining ones to be of iron, galvanized.

Masts and spars to be bark-rigged; the spars of the material usual in naval vessels.

To be properly fitted with iron-work.

All iron-work to be galvanized; all to conform to the plan.

All work to be done in a complete and workmanlike manner, and to conform to the plans and specifications; and any omission in these specifications will not relieve the party of the first part in this contract from furnishing the labor necessary to complete it. In any omission of detail, the vessels building in the navy-yard will be the guide.

I. HANSCOM,
Chief of Bureau.

BUREAU OF CONSTRUCTION AND REPAIR,
NAVY DEPARTMENT,
Washington, D. C., July 8, 1873.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, August 30, 1875.

SIR: Will you please inform the bureau for what sum you will make and fit complete the spars of the United States steamer Enterprise, at the Portsmouth yard, including in this all spar-maker's, ship-smith's and painters' work.

Respectfully, &c.,

I. HANSCOM,
Chief of Bureau.

JNO. W. GRIFFITHS,
Portsmouth, N. H.

(Original.)

OPEN PURCHASE.

The U. S. Navy Department to John W. Griffiths, Dr.

Appropriation: Eight steam-sloops—Enterprise.

BUREAU OF CONSTRUCTION AND REPAIR.

1874.
Oct. 26. To extra work as per bill of items rendered in part payment and on account, four thousand dollars $4,000 00

4,000 00

(Subject to being confirmed by a board as per agreement.)
I certify that the prices of the above articles are at the lowest market-rates.

RUFUS PARKS,
Paymaster, U. S. N.
For C. H. ELDREDGE,
Pay Inspector, U. S. N.

Approved:
I. HANSCOM,
Chief of Bureau.

Having fully examined the articles above charged, we certify that they are of good quality.

Examined and approved.

T. D. WILSON,
Naval Constructor, U. S. N.

NAVY-YARD, ———, 187-.

The public exigencies required the immediate delivery of the articles mentioned in this bill, and as there was not time to advertise for proposals, they were properly obtained by open purchase; and the same is approved for the sum of ——— dollars and ——— cents.

A. BRYSON, *Commandant.*

PAYMASTER'S OFFICE,
Portsmouth, October 26, 1874.

Received of Chas. H. Eldredge, paymaster, four thousand dollars and ——— cents, in full of the above bill.

JOHN W. GRIFFITHS.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, October 4, 1873.

SIR: Direct the naval constructor to superintend the work under the contract with Griffith.

Very respectfully, your obedient servant,

I. HANSCOM,
Chief of Bureau.

Commodore J. C. HOWELL, U. S. N.,
Commandant Navy-Yard, Portsmouth, N. H.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, September 27, 1875.

SIR: Your letter of the 23d instant in reply to the bureau's letter of the 30th ultimo has been received, and your offer, therein made, to make and fit complete the spars of the United States steamer Enterprise, now at the Portsmouth yard, for the sum of six thousand five hundred dollars, ($6,500,) the work to be done by you to include all spar-maker's, blacksmith's, iron-plater's, and painter's work required, and to be to the entire satisfaction of the bureau, is hereby accepted. The iron and other materials required for doing the work will be furnished by the Government, as needed, and the usual facilities of the yard allowed you. Payments will be made as the work progresses, upon bills in triplicate, approved by the commandant of the Portsmouth yard.

Respectfully, your obedient servant,

I. HANSCOM,
Chief of Bureau.

JOHN W. GRIFFITHS, Esq.,
Portsmouth, N. H.

I certify the above to be a true copy.

WESTY,
Second Clerk to Commandant.

PORTSMOUTH, *September* 23, 1875.

SIR: In reply to your inquiry of the 30th ultimo, would say that I will do all spar-maker's, blacksmith's, iron-plater's, and painter's work for steamer Enterprise for the sum of sixty-five hundred dollars, and to the satisfaction of the bureau.

Your obedient servant,

JOHN W. GRIFFITHS.

ISAIAH HANSCOM, Esq.,
Chief Bureau of Construction, Washington.

WASHINGTON, D. C., *February* 24, 1876.

JOHN W. GRIFFITHS sworn and examined.

By Mr. WILLIS:

Question. Where do you reside?—Answer. In Brooklyn, N. Y.

Q. What is your business?—A. I am a ship-builder, and have been in that business over fifty years.

Q. Have you during that time had any business transactions with the Government so far as the Navy Department was concerned?—A. I built the Pawnee in 1859 at the Philadelphia navy-yard.

Q. Have you done any work for the Government since that time?—A. I superintended during the war the building of one of the double-enders.

Q. Have you had any transactions with the Navy Department during the incumbency of the present Secretary?—A. None other than the timber-bending machine and the United States steamer Enterprise. She is not finished yet. She is at the Kittery navy-yard.

Q. Has everything that has been done on that vessel been done by you?—A. I did all that was to be done under my contract. The Government has to furnish the iron-work, castings, &c., and all the materials.

Q. Can you produce that contract?—A. I have not got it here; the contract was in writing.

Q. Did you enter into more than one contract for that vessel?—A. Yes, sir.

Q. Just state the particulars of your contract.—A. I have a synopsis here of my first contract in the handwriting of the chief of the bureau: "Work to be done by the job; ship to be put in frame; planking inside and out, from heel to rail; ports trimmed; rail put on, channels, and chains, air-ports, deck-lights, ventilating, chain-pipes, magazine scuttles complete. Decks, including beams, ledges, carlings, combings, stanchions, deck-planking complete. Lockers, hatches, grating, store-rooms in the hold; rails, main hammock and fife hammocks, stanchions, poop-deck, and trestle-deck complete, with the iron-work for the same."

Q. State the circumstances under which that memorandum was handed to you.—A. The advertisement, as I understood it, inviting proposals justified me in thinking that it was the whole ship he desired built, and consequently my figures were based on that idea. saw the chief at the Revere House. He told me previously that this was an experiment; that it was for contracting work in the yard, the Government furnishing the material and tools of the yard and the contractor furnishing the labor, according to the specifications, and under the supervision of the naval constructor in the yard. To this end he invited proposals, and, as I supposed, for the whole ship complete. When I saw him in Boston I asked him if that was what he wanted, and he said no, and he gave me the synopsis I have just read. I bid $46,200 for the work, which was $500 below the lowest bid for the same amount of work. There were a number of bids for small sections of the work, but my bid was the lowest for the whole thing.

Q. Then the contract was entered into according to that synopsis?—A. Yes, sir. In drawing up the contract, in making the specifications, they enlarged a good deal beyond that synopsis. Before I got through I found there was going to be trouble. When I got up to this line of limitation that the synopsis covered, the constructor at the yard, Thomas E. Webb, insisted that I should go on further. I remonstrated, and the chief said that I was not obliged to do that work.

Q. Did you receive pay according to the contract when specified things were done?—A. The pay was made as the work advanced on the certificate of the naval constructor that the work was properly done. I showed the number of men I had at work, what their wages amounted to, and every fortnight payment was made to me.

Q. What was the occasion of the naval constructor insisting on this performance beyond the contract?—A. It was evident that he was nettled. He was building a ship at the same time on the same model, in the yard, and my work would have a tendency to disparage his, make it appear that his work cost more. I was working my men ten hours a day; he was working his eight; and I paid them more wages. I could take what men I chose; he had men put upon him by politicians.

Q. It is alleged, by certain parties connected with the Navy Department, that, legitimately,

the vessel should have been launched at your expense, although nothing was said about it in the contract. Please explain how that is.—A. There was not a hint or anything of the kind said about launching the vessel. It was simply to build the vessel, and it was for the Government to say how it should be launched, and by whom. Nothing was said about it in the contract, either verbally or in writing. I made a special contract with the chief on that point. The constructor put in his estimate for what he could do the spar-work, blacksmith-work, and painter's work. I was $200 below him, and I got the second contract; otherwise it would have been done by the Navy Department. The reason why this was not advertised, as is usual, was because it would not do to bring strange men in to finish a job that had been begun by somebody else, and my estimate being below the constructor's for doing it by the day, they gave it to me.

Q. Is it an ordinary thing, when you contract to build a vessel, to have anything said about launching?—A. In private ship-yards, if I build a vessel, of course I launch it. I build it to completion.

Q. You say that this thing was exceptional?—A. Yes, sir.

Q. Then, you have now on hand a contract in regard to the same vessel?—A. Yes, sir.

Q. Which is incomplete?—A. Incomplete. I can go no further with it until the Government does the iron-work.

Q. Are you acquainted with Varney, an assistant naval constructor?—A. I know him.

Q. None of this work was subject to his official supervision?—A. No, sir. I do not remember his having anything to do with any work of mine.

Q. Have you had any difficulty with the Navy Department, in so far as the performance of these particular contracts is concerned, outside of the interference of the naval constructor?—A. No, sir.

Q. Was there not some difficulty arising in the building of that ship in the navy-yard as to the disposition of some timber or some materials used in the building of that vessel?—A. I do not know. Since this report was made out I think I heard Mr. Webb say that he loaned some timber to yards and docks, and they never paid for it; but things are so loose in that way that you can never account for it. There is a great deal of timber in the ship-house that the other bureaus can take.

Q. Is there not an excess of timber charged to your vessel over the other?—A. I can explain that to you. Mr. Webb molded out both frames, the one for my ship and the one for his, and it would be very easy for a molder to take a large piece of timber for the one vessel and a smaller one for the other, the design being both the same size, and the waste would be larger on one than on the other. You can see how that could be done. I do not charge that that was done, but it might be done. In filling up between the frames a large amount of condemned live-oak was used, and that brought to my ship was a good deal of it rotten and had to be cut away, but the timber that was brought to the other ship was all new, fresh stuff; but how this timber was charged I cannot tell.

Q. Were there not some charges against Webb on account of disposing of certain timber?—A. I made no charges. All I know about it is that I remonstrated with him as to the cuttings and fillings. The moldings I could not say anything about, as they were all cut when I went there.

Q. That was done to make it appear that your ship cost more than the other one?—A. Yes, sir: I have got extra bills against that ship. The chief paid me $4,000, and the rest to be paid when the vessel was done. They had some bolt-copper in the yard for the bottom of the ship, and I commenced boring holes to suit that copper according to specifications, and when I got a large number of holes bored the copper had suddenly disappeared. I inquired for it, and they said it had been cut up for the other ship, although she was not then ready for it. I was in advance of that vessel. I could not go on without it, and they sent to Washington for bolt-copper. When it came it was too small; by this time I had bored more holes; they sent a second lot, and when that came it was too large, and I had to bore these holes larger. That caused me more delay and put me back, and I claimed damages for it. I had to wait for planking too; the planking they sent was inferior, such as I would not put on the outside of a merchant-vessel.

Q. By whom was that planking furnished?—A. I cannot tell you. Finally they got good planking. It was Susquehanna plank, and I would not put that on a first-class merchant-vessel, except for ceiling and that kind of thing. You can get good plank out of it, but it requires a good deal of labor to get it; so much so that my contractor to plank the vessel threw up his contract, and it cost me several hundred dollars. I had to do it all by the day.

Q. Have you done anything in the way of repairs on any vessel under Robeson's administration?—A. No, sir.

Q. What was the name of that vessel being built at the same time?—A. The Essex.

Q. What progress has been made with her?—A. She is lying at the Boston yard. McKay got a similar contract at the same time to finish a ship, the Government to do the iron-work.

Q. What was the name of the vessel built by Mr. Webb, previously, in the Kittery yard?—A. He built the Marion; she was launched before I began; then he commenced the Essex, and I believe she was in frame when they changed constructors. Mr. Webb was

sent out to Rio on a commission, or some investigation about the Lancaster, and Mr. Wilson took his place. Mr. Webb is now at the Washington yard.

Q. Where did you build the Pawnee?—A. At Philadelphia. I made the model and plans; the engine I had nothing to do with.

Q. You have been an observer of the mode in which naval matters have been conducted for a long time?—A. I finished my apprenticeship in the Norfolk yard under Mr. Grice. I know how the work is done in navy-yards, and that enables me to estimate on naval vessels.

Q. In what particular way?—A. All the way through, in the finishing off of a vessel. A war-vessel has a certain load-line—a merchant-vessel may, when she is loaded, draw twenty feet of water, and when she is unloaded draw ten feet; a war-vessel draws always the same; there may be a difference of two or three feet when the coal and stores are out. There has always been, since I have known the Navy, some disposition to make political capital out of the Navy. For instance, in building the Pawnee, there is a table which shows the amount charged for. Table annexed in magazine article. A contractor that comes in is looked at with suspicion; the constructor opposes him; they don't want to encourage an outsider to come in. Mr. Thomas Florence was member of Congress at the time the Pawnee was being built in the Philadelphia district. I wanted to get a span of horses to do the teaming-work on that ship; it would have been a great saving. He remarked to me, "Horses don't vote, but laborers do."

Q. Have you encountered any difficulties in your endeavors to get work from the Navy Department under Secretary Robeson?—A. I never exchanged a dozen words with him.

Q. Was this timber-bending machine an invention of yours?—A. Yes, sir.

Q. Was it patented?—A. Yes, sir.

Q. Have you had any transaction with the Department regarding that bending-machine?—A. I made a contract to furnish it. The machine was built in East Boston, and was first used in bending timber for a ship there. The owners of the ship went over to Commodore Rodgers, in command of the Boston yard, and invited him to come over and watch the operations of the machine. He sent over Isaiah Hanscom, with directions to examine it. Mr. Hanscom did so from time to time. After this ship was completed and went to sea, the Secretary was requested to appoint a commission to examine into the mode of bending timber and its utility. He did so, and appointed a commission of Captain Chandler, Isaiah Hanscom, and several line officers. I bent a frame-timber before them, that was fifteen by sixteen, and some forty feet long, bent into a form that Mr. Hanscom gave me to bend by. The commission reported favorably, and then proposals were made to sell that machine to the Government with the improvements upon it, the improvements that I have since devised. Before it was accepted another commission was appointed to examine it, and here is their report:

"UNITED STATES NAVY-YARD,
"*Boston, April* 19, 1872.

"In compliance with the orders of Charles Steadman, commandant and rear-admiral, we have examined the timber-bending machine, and find that it performs all the work required of it under the contract, and that it is complete in accordance with the terms of the contract, and satisfactory in every respect.

"EDWARD R. CALHOUN,
"*Captain, United States Navy.*
"W. L. HANSCOM,
"*Naval Constructor, United States Navy.*
"R. B. LOWERY,
"*Captain, United States Navy.*
"THOMAS A. SCHOCK,
"*Chief Engineer, United States Navy.*
"CHARLES HASTINGS,
"*Civil Engineer, United States Navy.*"

Q. Did you ever pay taxes on this machine in the city of Boston?—A. The president of the company that built the machine will be more competent to answer that question than myself.

Q. You mean the company you employed to build the machine?—A. I was one of an organized company who built it. The president of that company, Mr. C. A. Browne, can tell you.

Q. How much did you receive for that machine?—A. I cannot separate the machine from the buildings, because the contract comprised the building, steam-stoves, saws, tools, &c.

Q. Were they all delivered to the Government?—A. Yes, sir.

Q. How much did you receive for all?—A. The company received $160,000; that comprised the building, machines, tramway, and all connected with it.

Q. Was there any other constructor at the navy-yard while you were building this ship than Webb?—A. Mr. Hitchbourn was assistant constructor, and a part of the time acted as constructor.

Q. Did you have any trouble with any constructor except Webb?—A. No, sir; I had no ier trouble with him on this than that I had to appeal from his decisions. When I first nt there he even objected to letting the men have a bucket to get some drinking-water with.

Q. According to your experience, what is the capacity of naval constructors in so far as signing vessels is concerned, taking them altogether?—A. Naval constructors don't have y practical knowledge outside of the Navy; they don't have experience like those who ild merchant-vessels. The private constructor has all kinds of vessels to build, and it is his interest to build economically and well, for if he don't he won't get work. A man ill build seven to nine ships in one yard in a year, while in the Navy a constructor builds ne or two in a life-time; the late war is an exception to the rule. Their experience in navy-ards is in repairing vessels. Another mistake is retiring naval constructors at sixty-two. am sixty-six, and the man I served my time with is yet living. Ship-builders are remark-ible for their longevity.

Q. According to your best judgment, could the work be done more reasonably by contract outside the yard than by the Government itself?—A. Yes, sir.

Q. Can't you always get more labor from your men than the Government can?—A. Yes, sir.

Q. Is it economical on the part of the Government to purchase this live oak in great quantities before it is wanted?—A. No, sir.

Q. Don't you think that that has been done extensively?—A. I do. Live oak is not a timber that will bear exposure to the sun. It must be kept in the shade and seasoned gradually. If it is not entirely covered with water the frost gets into the heart-canal at the northern navy-yards, and it splits badly. In getting spars for this same ship Enterprise, fifteen spars were rejected on that account.

Q. Does your son do any business for the Navy Department?—A. No, sir; my son is my clerk.

Q. Do you know why there is such a vast accumulation of live oak?—A. Only this, that all the live oak was consumed during the war.

Q. Is there any danger of there being an exhaustion of the supply of live oak?—A. I am not able to answer that; there is a large quantity being cut and carried away. There are some dozen or twenty different kinds of timber adapted to ship-building.

Q. Did you publish a Nautical Magazine some years ago?—A. Yes, sir. My first work on ship-building was written in 1850; in 1854 I published the Ship-Builders' Manual, and in 1855 and 1856 I published the Nautical Magazine. Now I am publishing the Progressive Ship-Builder.

Q. State how the vessels of our Navy compare with those of Great Britain, so far as speed is concerned.—A. We have only one in our Navy which is a match for the best vessels in the English navy: that is the Florida.

Q. How many knots an hour can she make?—A. I think 16.

Q. What is the average speed of our vessels?—A. The average speed before the war was 8.40 knots, and the average speed since has been 8.31.

Q. How would you remedy this?—A. The secret of fast vessels is light draught. Although the British navy have some fast vessels, they keep loading on the iron, and consequently the British navy is not what it ought to be, or what the English nation think it is.

Q. Do you know anything about the Wiard boiler-attachment?—A. The compound boiler and engine is a high-pressure condensing engine. The principle is old. It has too much weight—too heavy. I think the vertical engine is better than the horizontal, but when you insist upon having the machinery below the water-line you cannot expect a high rate of speed. In regard to the timber-bending machine, I will say that my foreman would bend sixteen knees in eight hours, two knees at a time, and he didn't think that anything like its capacity. The man they have now in charge of it is partially deaf, and as you have to guide the machine in some measure by sound, of course he cannot operate it successfully.

Q. Don't naval constructors, under the system now in vogue, have great facilities for colluding with contractors?—A. I do not know; there are certainly chances for it.

Q. Have you ever known of any case where they did so?—A. No, sir.

Q. Have you ever heard any statements to that effect?—A. Only rumors.

Q. Tell me any rumors.—A. I heard Mr. Varney's statement in connection with Mr. Hartt.

Q. Have you ever heard any other?—A. There is a great deal in keeping the accounts between one bureau and another. Each bureau has its own plans for its part of the ship, and consequently a great deal of confusion arises.

Q. Have you ever known of any corruption in the Navy?—A. Not of my own knowledge.

Q. Have you known of anybody to assert of their own knowledge they knew of any?—A. I have heard a great deal said, but know of nothing myself.

WASHINGTON, D. C., *February* 29, 1876.

JOHN W. GRIFFITHS recalled.

By the CHAIRMAN:

Question. You have been sworn already in this matter?—A. I was, by Mr. Willis, a few nights ago.

Q. How came you to appear before Mr. Willis as a witness?—A. Some of my friends, Mr. Gibbons for one, wrote me in regard to a newspaper-article that appeared derogatory to my character.

Q. Did anybody else inform you?—A. No, sir—yes; one of my sons sent me an article cut out of the newspaper. Perhaps I had better explain why I did not myself see it. My eyes have been overtaxed for the last few months, and an oculist told me I must stop and give them a rest, and I have not read the papers.

Q. You had no communication with Mr. Hanscom in regard to it?—A. No, sir.

Q. You came voluntarily as a witness?—A. I did. I was urged to come by my friends.

Q. You sold a bending-machine to the Government, did you not?—A. Yes, sir.

Q. At what price?—A. The whole work was $160,000.

Q. Who were your partners in that?—A. I represented a company.

Q. Who were the members of that company?—A. The president was Charles Allen Brown.

Q. Do you remember the stockholders?—A. There was a number. I was one stockholder in it; I owned an eighth of it.

Q. Putting it directly to you, I ask you if any one connected with the naval service was in any way connected with that company?—A. No, sir.

Q. Was Mr. William L. Hanscom?—A. No, sir.

Q. Prior to your sale of that bending-machine to the Government. had you not failed?—A. No, sir.

Q. Did you pay, or give, any commission or fee, or anything of value, or promise any fee, commission, or anything of value, to any person to effect that sale to the Government?—A. No, sir.

Q. Did you pay or give anything to any one, or have it done afterward, after the sale of it?—A. No, sir.

Q. Do you know anything of a charge made against William or Isaiah Hanscom for receiving $5,000, or any other sum of money, in connection with the public service?—A. I have heard rumors that they received money, but I do not know anything of the kind; I know nothing, of myself, at all.

Q. Did not a son of yours make such a charge against them?—A. I understood he did, out of spite against Mr. Browne, who had discharged him. It grew out of the fact of a little patent that he took out on that machine just before the last payment was made. He withheld that patent, knowing that the company could not receive the last payment unless that patent was signed. He held that as a threat over the company, that he would have what money he wanted.

Q. Mr. Browne, of whom you speak, is the president of the Bending- Machine Company?—A. Yes, sir.

Q. Had not that company failed or become bankrupt before you sold that machine?—A. No, sir.

Q. I ask you if any member of Congress in either branch was a member of that company?—A. No, sir; there has since. Mr. Williams has since been elected a member, but that was long after the machine was built, and a ship built upon it.

Q. I had reference to the time of the sale to the Government.—A. No, sir.

Q. Explain the threat to its full extent made by your son against Mr. Browne.—A. Well, that he would have a sum for his services commensurate with his duties. He thought that he ought to have more than his salary. His salary I do not remember now. It seems to me it was a hundred dollars a month, or something like that. He thought he was entitled to more.

Q. Now, didn't he make that threat having in his possession correspondence upon the part of Mr. William L. Hanscom and Mr. Isaiah Hanscom?—A. He had no correspondence to my knowledge. I think not. It was a disposition on his part to extort extra pay, to which he was not entitled. He got that patent out without my knowledge. I did not know it until he showed it to me.

Q. He got his pay, did he?—A. He got his pay right along—yes, sir; but he thought he ought to have more, and used this means to get it.

Q. I mean he got what you say he extorted?—A. Yes, sir; he got it; I think it was $4,000 from Mr. Browne before he would assign that patent, knowing that they could not get their last payment until he made that assignment.

Q. Was your son at that time a partner with you, or interested in it?—A. No, sir,

Q. Has he since been a partner of yours?—A. No, sir; not since he was discharged. I took another son in company with me.

Q. Has he not since been employed by you?—A. No, sir.

Q. Has he not since had a contract with the Navy Department?—A. No, sir; not to my knowledge. As I told you, when Mr. Browne discharged him, I let him go, and took another son.

Q. What is the name of that son?—A. O. W. Griffiths.

Q. That made a change?—A. Yes, sir.

Q. Where is he now?—A. In Williamsburgh, I think.

Q. What has been the extent of your dealings with the Bureau of Construction since the

year 1869?—A. The date that machinery was received and the payment made, I cannot tell you from memory. If you have got the date there and know it, I can refer to that. If that is the date you refer to, I can tell you.

Q. That was your first transaction with the Bureau of Construction since 1869?—A. I think so; yes, sir.

Q. Have you had any other transaction?—A. No other transaction than the contract for this ship, the Enterprise.

Q. The building of the Enterprise?—A. Yes, sir.

Q. You were at Portsmouth upon the 23d day of August, at the time Mr. Hanscom advertised that he would be there to meet bidders, were you not?—A. I think so; he invited ship-builders to come and look at the facilities of the yard for building vessels prior to their making any contracts.

Q. Had you seen Mr. Hanscom prior to that date?—A. It strikes me I had.

Q. Had you seen him in the city of Boston, at a hotel there?—A. Yes, sir; I will show you the document he made out; it is in evidence there—you have got it in evidence. The advertisement led me to conclude it was for the whole ship he designed to contract, and when I asked him at that interview if I was correct in regard to that, he stated no; that he did not design to contract for the whole ship, to complete it, but that much of it. That is his own handwriting.

(The witness exhibits the paper.)

Q. You state that the copy that you have made of the memorandum of work to be done upon the Enterprise, furnished to you by Mr. Hanscom in his own handwriting, was done at Boston?—A. No, sir; I do not state so.

Q. Where was it done?—A. I state that that was done in Boston, but that was the amount of work that bidders were expected to bid on. A man must know what he is going to bid for before he bids. The advertisement was different to it, and I wanted a fair explanation, and he gave me that.

By Mr. MILLS:

Q. Why should he give a letter separate from the proposals advertised?—A. That, gentlemen, was given in explanation of what the amount of work was which was advertised to be done

(The memorandum presented by the witness is as follows: "Work to be done by the job: ship to be put in frame; planking inside and out, from keel to rail; ports trunned: rail put on; channels and chains, air-ports, deck-lights, ventilating, chain-pipes, scuppers, magazine scuttles complete; decks, including beams, ledges, carlines, combings, stanchions, deck-planking, complete; lockers, magazines, hatches, gratings, store-room in the hold, rails, main hammock and fife, hammock stanchions; poop-deck in forecastle, forecastle-deck complete, with the iron-work for the same.")

By the CHAIRMAN:

Q. That is in the handwriting of Mr. Hanscom?—A. Yes, sir.

Q. At what place was it furnished to you?—A. The Revere House, in Boston.

Q. Prior to the day at which bidders met?—A. O, yes, sir; I do not know but weeks beforehand—immediately after the announcement was made in the papers, or the advertisement.

Q. I ask you if you did not meet Mr. Hanscom at the Revere House, in Boston, when he was on the way to the Kittery navy-yard.—A. No, sir.

Q. Did you travel with him from Boston to Portsmouth?—A. No, sir; I understood that he was to be in Boston, and understanding that he was to stop at the Revere House. I went there and saw him. He had business with other men at the time.

Q. I ask you if, upon the day he went to Kittery, the 23d day of August, to meet bidders or contractors, mechanics, &c., you did not meet him at Boston while he was on his way to that meeting?—A. No, sir; I was there before.

Q. You saw him, did you?—A. I saw him. I saw him in Boston, and I saw him in the Kittery yard, as other men saw him at the same time.

Q. Did you have any conversation with him in regard to this Enterprise, the building of it at that time?—A. Nothing beyond the facilities—the house she was to be built in, and the facilities of the yard, to look at them; to see what they were. I was not familiar with the tools of the yard, nor were any of the bidders, unless some that lived there were.

Q. I ask you if it was not understood between you and Mr. Hanscom at that time that you were to get the building of the Enterprise?—A. No, sir; emphatically, no, sir.

Q. Have you not so stated?—A. No, sir; I have not.

Q. Upon the 23d of August, 1873——A. I take it for granted you have got the date; I do not know anything about it. My memory is not good on dates.

Q. It is the time that Mr. Carmichael, and yourself, and Mr. Hanscom, and others were at the Kittery yard.—A. I was not at the Kittery yard when Mr. Carmichael was there.

Q. You were there, however, at the time Mr. Hanscom was?—A. Yes, sir; and the Secretary. They staid several days; I do not know that they were there twice, but they were in that vicinity a day or two, I think.

Q. Did you make a proposition on that day?—A. No, sir.

Q. How long after that was it before you made it?—A. My proposals were not made until the day on which they were to be opened. They were then handed in to the bureau on the day—perhaps within an hour of the time of opening.

Q. When Mr. Hanscom returned from the Kittery navy-yard, did you meet him in Boston?—A. I think not, but I will not be positive.

Q. At the Quincy House?—A. No, sir.

Q. Are you positive that you did not see him upon his return?—A. Yes, sir.

Q. Did you see him between the 23d day of August, 1873, that being the day when he exhibited the model, drawing, and specifications to bidders at Kittery, and the day the contract was let?—A. No, sir; not until the time I put my bid in.

Q. You had no conversation or communication with him?—A. No, sir.

Q. Did you tell the constructor or the assistant constructor at the Kittery navy-yard that you had met Mr. Hanscom, and that you knew you were going to get the contract?—A. No, sir; Mr. Webb, the constructor, went through the yard to show us the facilities of the yard, I think; whether Mr. Hanscom was with him I do not know, but he was detailed by the chief to go and show us the facilities of the yard, the blacksmith-shop, the saws, and the house. The chief was also in the house to show what a fine house there was, the Franklin ship-house. The two vessels were to be entirely distinct from each other, and had separate places in the yard. It was then suggested to Mr. Webb that he saw out the frames, and pile up the frames in each house so that there could be a fair start together, whoever got it.

Q. You said that you did not say to either the constructor or the assistant constructor at the Kittery navy-yard that you knew before the contract was made that you were going to get it?—A. No, sir; nor no living man. That is a base slander, whoever said it, like the rest of the Varney statement.

Q. You entered into a written contract upon the acceptance of your proposal, did you not?—A. The contract was made on this basis, as I suppose.

Q. You entered into a written contract?—A. I did.

Q. You gave surety for its faithful performance?—A. I did.

Q. After it was made, has there been any alteration made therein?—A. No, sir; not to my knowledge. Yes; there has been where it conflicts. In almost every Government vessel, when plans conflict, one or the other must give way. The plans seldom harmonize.

Q. Plans of whom?—A. Plans of different bureaus. A plan comes from an equipment bureau, and another from a construction bureau, and if they do not harmonize with each other, one or the other must give way; there must be a change.

Q. At the time you made your proposal, were not the model, the drawings, and the specifications of the vessel submitted to you?—A. I never had seen the model, I think, until after the ship was half done. I saw no model at the time, only the drawing and specification. The drawing was a part of the contract. With the drawing I had nothing to do. I did not lay the ship down. The molds were furnished and the timber-frame all sawed out. With the draught of the ship I had nothing to do.

Q. To what extent had those alterations been made?—A. Well, without referring to my papers, I could not tell you. I did not agree to make alterations.

Q. Have you made more than one contract in regard to this Enterprise?—A. Yes, sir.

Q. How many?—A. I made a contract to launch her. After she had been accepted on the stocks she was afloat; she was off my hands; they accepted her then.

Q. What sum of money was paid, or agreed to be paid, to you for launching her?—A. $2,000.

Q. Have you received that?—A. I have.

Q. Have you received any extra pay or compensation?—A. Yes, sir.

Q. What amount?—A. $4,000.

Q. What was that for?—A. For detention, delay.

Q. No other items?—A. That is not the full amount; the balance is to be adjudicated by referees.

Q. I mean, what items entered into this extra pay?—A. Well, in the first place, the materials were to be furnished as required. I had eight months to build that vessel in. I was on time. The materials were to be furnished as I required, and the facilities of the yard. When I came to want fillings, I was delayed there. When I came to require plank, the plank was inferior. Vessels are always planked by subcontract. It is a kind of work you cannot well do by the day, to do it with facilities and all. In private yards planking is done by the day, because, if you have a heated plank in the steam-box, and the bell rings too quick, you do not leave that plank there; you work it, and therefore it is "give and take;" and such jobs are done by contract. Now, the plank was inferior, and my contractor threw up his contract. Sometimes three planks out of four would be condemned. I could not put anything but first-class plank in. I could make them first class with a great deal of work. A piece must be cut out of this edge and that edge, and knot-holes would have to be plugged up. It required extra work. He threw his contract up, and I had to wait for plank. Then, when I came to plank, as far as the plank went on, it was necessary to fasten them. The fastening of war-vessels is square, and the copper in the bot-

carry it myself, I took that course. There would be no rule fixed for that at all, because when they had the teams employed, or when they were using a saw or plane, I waited until they got through.

Q. Had not you commenced the building of the Enterprise from twenty to thirty or forty days before the constructor commenced the building of the vessel that Mr. Webb was engaged in building?—A. No, sir; the keel was going out and put together alongside of the platers' shop when I first commenced, and the timber was being sawed in the ship-house.

Q. When you commenced work upon the Enterprise, was not Mr. Webb working upon the Marion?—A. Yes, sir; at the same time.

Q. Did not you have the advantage in the selection of the house, in getting the first open house, the Marion being in the other? Did not you have the advantage of some twenty or thirty days?—A. Well, I do not so understand it, for the reason that the Franklin ship-house is near the extreme end of the yard, and the blacksmith's shop and the usual facilities around there were nearer the ship-house in which he built his ship. The conveyance was farther. From the platers' shop we were about an equal distance, I should judge.

Q. Are you able to state how much you have received from the Government for the building of the Enterprise?—A. Yes, sir. I received $46,200; that was the amount of my contract. I received that fortnightly, as it was advanced. Every fortnight I would show the constructor the extent of my pay-roll and ask a payment of that amount. Of course he kept some back all the while; paid me what he pleased, and in that way I received the payment of the first contract; for the launching I received that $2,000 in one payment. The contract, that is now nearly completed, for the spars was $6,500. There I did all the work, iron-work and all, painting all the spar-maker's work, the plater's work, the iron-work, the blacksmith's work, and the platers' shop at the same time, which is the finishing—the painting. I do not think there is anything more in that contract.

Q. That is, you received $46,200, and $2,000 for launching?—A. Yes, sir.

Q. And $4,000 on account of extras?—A. Yes, sir; not extras—$4,000 for delays, violations of contract. The contract on the spars cannot be completed until the spars are in and the holes cut. The paint is put on when they are in the shop, and then they received two coats. I think within a day or two, and I do not know but to-day, that contract is completed. It should have been done by the middle of this week.

Q. That contract was $6,500?—A. That was $6,500.

Q. With your further claim of $1,926?—A. Yes, sir.

Q. Was there any contract between the time the ship was launched and the time the spars were done?—A. No, sir. I have been waiting for the iron-work, and we took another contract to do all the carpentering work in the bureau of construction.

Q. On this sloop of war?—A. On this sloop of war; the carpenters, the joiners, the calkers—it was to be caulked you know—coppering, painting, puttying, the cabin work and furniture, and I think the plumbers; that contract was $25,000, the Government doing the blacksmith-work. The shops were engaged for other vessels and there were no shops. On that contract there is $10,000 yet held by the Government.

Q. In the second contract and the third contract that you made with the Government, I ask you if there was any advertisement or public proposal made of these contracts—I mean the second and third?—A. No, sir.

Q. You made them, so to speak, privately with the head of the bureau?—A. I made them in competition with the constructor. He made his estimate of what that work could be done for by the day, and my estimate was some several hundred dollars below his. The gentlemen will see in a moment the impropriety of advertising for bids for one man to come and finish another man's job. The ship was done, ready to launch. A war-vessel is only about half done when she is ready to launch, and then launched; that was the end and completion. Then if you bring another man to finish another man's work under an advertisement of that kind, you see what confusion it would make. Hence it was necessary to get a constructor to estimate for the amount of work that was required. He took the best lights he had—his assistants all over the yard in each department—and he sent his estimates to Washington. I asked if I could be permitted to bid on that work. Yes, I might; and I did so.

Q. Had you seen the estimates made by the constructor before that?—A. No, sir.

Q. The sloop Essex was built at the same time with the Enterprise?—A. Yes, sir.

Q. The Essex was built by the Government in the yard?—A. Yes, sir.

Q. Up to the time of launching?—A. Yes, sir.

Q. Then she was towed out of Boston to Donald McKay to finish?—A. Yes, sir.

Q. Why would there not have been just as much propriety in the Government finishing it after you built it as there was in its being finished by McKay after the Government built it?—A. That is not a question for me to decide.

Q. That was the only competition you spoke about—the constructor's estimates in regard to your second and third contract? A. I do not know what object he had, but I understood there was an estimate from the constructor of the yard.

Q. Your proposal, as I understood you, for the first contract, was made upon that memorandum or explanation furnished to you by Mr. Hanscom?—A. No, sir. My estimate was made on that; yes, sir; my proposals were in consonance with that, and presented on the day at which the bids were to be opened. No one knew what was in them but myself; my son might have known.

Q. It is only a mere matter of adjustment?—A. No measure of damages; it is only a simple agreement.

Q. Then you stated that one of the contracts contained an express clause that the Government should not pay for any time.—A. Yes: that is, this last contract.

Q. Have you preferred any claim on account of that delay?—A. I have not preferred any claim at all; the job is not done and I do not know what delay that will have caused. I have waited, as I told you, about eight months, and only a man or two at work on the ships, and now I am working two or three men making the furniture; but it is no kind of consideration to have two or three men. It requires no more time for me to work forty or fifty men than to work two or three; it requires my time and my son's time.

Q. Have you ever known of any corruption in the Navy?—A. Not of my own knowledge.

Q. Have you known anybody to assert of his own knowledge that he knew of any?—A. Yes.

Q. I read from an answer that you gave the other day: "I have heard a great deal, but I know nothing myself." Have you known anybody to assert of his own knowledge that he knew of any corruption—that is, do you know of parties making this assertion?—A. I say no; I have heard rumors.

Q. You admit that you know of the names of certain persons who have asserted that they had knowledge of the existence of corruption in the Navy Department. Now I will ask you to state the names of such persons who have asserted that they had such knowledge.—A. I am not sure but I have heard my foreman say that things were not right.

Q. What is the name of your foreman?—A. My foreman is dead, as I stated. His name was James N. Hallenbeck.

Q. Who was his immediate successor as foreman?—A. That ended the contract and finished the job; the vessel was finished some months before he died.

Q. Where did he live?—A. He lived part of the time in New York. His father was in New Jersey, some where about Red Hook.

Q. Do you know the name of any other parties?—A. I know of no other parties that know of their own knowledge.

Q. Have you heard anybody say that there was corruption in the Navy Department?—A. Well, if you consider this corruption, to employ mechanics or men in the yard because of their political qualifications rather than their mechanical qualifications, I do; I have so heard; if that is not corruption, I do not know. I paid no attention to other people's business. I had as much as I could do to attend to my own.

Q. Is that the only name you can mention?—A. That is all I now call to mind.

Q. What particular instance of corruption did your foreman mention to you?—A. Why—men that were incompetent and were not doing the thing right; that they were not competent to do what they were engaged to do. Men, for instance, operating in two departments—

Q. What do you mean by that? That they were on two pay-rolls at the same time?—A—Working in two departments; I do not know whether he meant that or not.

Q. What do you mean by that?—A. I drew no inference from it. I have heard him speak of these rumors.

Q. What would that necessarily mean?—A. I do not know; I should think it was not honest between man and man.

Q. Do you not think it meant that they were drawing pay in two places at the same time?—A. Yes; it seemed to me so.

Q. Have you had personal observation that such was the fact?—A. I have not examined the pay-rolls or muster-rolls of the yard for many years. I do not know how that was.

By Mr. MILLS:

Q. Did you ever hear any persons say that they were drawing pay on two rolls?—A. No, sir; not directly; I never did. I have heard rumors to that effect, but nothing that I know of.

Q. Did you ever hear any person named as doing that? Did you hear this gentleman, or his companion, name certain persons as drawing pay on two rolls?—A. I cannot identify any person.

Q. Do you remember any person who made the remark that incompetent persons were employed on account of their political motives?—A. I have heard that said.

Q. By whom have you heard it said?—A. I cannot identify any particular man.

Q. In what bureau was that alleged to have taken place?—A. It strikes me it was in several bureaus. You see I am doing work for equipment as well as construction. They must come together. Therefore I come in contact with both, although my contract is under one bureau.

Q. Do you know of any officer of the Federal Government who has assisted in having those incompetent persons employed on political grounds?—A. No, sir; I cannot say; I do not know. You doubtless think my position is peculiar in that respect, and I am peculiar. I had as much as I could do to attend to my own affairs. I never attended to anybody else's. These things came to me.

By Mr. DANFORD:

Q. Where is that newspaper article to which your attention was called?—A. I never have seen it. The pieces were cut out and sent to me.

Q. Where are the pieces; have you got them?—A. Not with me; they may be at the hotel. It was in the Tribune. This letter of Mr. Gibbon's, I think, inclosed one of them.

Q. Can you refer to these articles so that we can get them?—A. I think possibly I can give the dates, so that you can get the papers.

Q. Will you produce those articles and let the committee have them?—A. I will if I have them. They may be at my house in Brooklyn, or among the papers at the hotel.

Q. In making your bid upon the Enterprise, what advantage over those who had no other opportunities than the advertisement, did you derive from the memorandum made by Mr. Hanscom, a copy of which you have given us?—A. I don't know but they had the same. If they asked the chief for an explanation they got it.

Q. Suppose they did not have the same?—A. If they did not have that explanation, there was only $525 between the bids, and they must have calculated pretty closely.

Q. What did you understand to be the difference between the advertisement and the memorandum?—A. The advertisement, as I understood it, contemplated finishing the ship.

Q. That is the way you understood the advertisement?—A. That is the way I first understood it, until it was explained.

Q. You did not so understand the memorandum?—A. After I received the memorandum I did not so understand it, and bid accordingly.

Q. If you had been bidding upon your understanding of the advertisement, you would have made your bid much larger, of course, than you did make it?—A. I would have bid for the whole ship; my specifications would have covered the whole thing, and that would have ended it. Then, doubtless, there would have been another advertisement, if the bidder did not understand the proposal.

Q. Do you know whether other bidders upon this ship were directed in making their bids alone by the advertisement, or whether they had the same memorandum that you had?—A. I take it for granted, although I have never heard any one say so, that the parties who were invited to come down to Kittery yard to see received all the explanation they required. The chief of the bureau was there several days.

Q. Have you any knowledge that they got all the information that you had?—A. I have no reason to doubt it.

Q. That is all that is contained in this memorandum?—A. I have no reason to doubt it.

By the CHAIRMAN:

Q. Do you mean to assert it as a fact, or is it an expression of opinion on your part?—A. I have no definite knowledge in regard to it. I only say this, that the Secretary of the Navy and the chief of the bureau announced a notice to the bidders to be at that yard at that time to hear explanations. One of those days I was there, and I understood that Mr. Carmichael was there the next day.

By Mr. DANFORD:

Q. Were there other bidders present on the day you were there?—A. We bidders were there who lived in the immediate vicinity.

Q. Did they have the same opportunities that you had to hear the explanation?—A. They had the same opportunities that I had.

Q. You make contracts for building private ships?—A. Yes, sir.

Q. I will ask you whether the building of a ship in a private contract does not include putting the vessel in the water?—A. No, sir; not unless you agree to build a ship to completion. Otherwise it does not.

By Mr BURLEIGH:

Q. Does not the contract to build the hull and spars of a ship include putting her in the water?—A. Yes, sir.

Q. What have the spars to do with the launching of her?—A. That is quite another question. When you propose to launch a ship you have got to test her to determine whether she is tight. You cannot do that until she is overboard.

Q. You could not test your work until she was in the water?—A. She was watered like other ships.

Q. She was watered at the Government expense and not yours?—A. I had the facilities of the engines, hose, &c., of the yard. My own men attended to it.

By Mr. MILLS:

Q. In building ships for private individuals did you ever make extra charge for launching one that you remember?—A. No, sir; when I built the Pawnee, I built her by the day, and I completed her. I built her for the Government in the Government yard at Philadelphia.

Q. How many other vessels built for the Government have you made a charge for launching?—A. I never built a vessel under circumstances like this before. It was an experiment whether the work could be done by contract in the navy-yard. This is the only one, perhaps, that ever was built so.

By Mr. WILLIS:

Q. Were you advised by any one that your attendance was required here as a witness?—A. No, sir; my promptings came from Mr. Gibbons.

Q. Do you know whether that gentleman received any intimation that your attendance here would be desirable?—A. I do not know.

By the CHAIRMAN:

Q. Did you read or show a memorandum furnished you by Mr. Hanscom to any other contractor? If so, to whom did you show it?—A. No, sir; at least I do not call to mind any. Let me distinguish. There was an advertisement for a vessel to be built outside of the navy-yard. You do not connect these two at all, do you?

Q. No, sir.—A. Then I say no.

Q. After the election of Mr. Williams as a member of the Bending-Machine Company was there any vessel built on timber bent for her by this machine?—A. No, sir; the ship was built, but the Government knew nothing about it until their attention was called. Commodore Rodgers, of the Boston yard, directed Mr. Hanscom to see to the ship, the bending of the timber.

Q. What was the name of that ship?—A. The New Era

Q. Were the timbers of any other ship ever bent by that machine?—A. Yes, sir; the Pawnee had as many bent for her as I could get bent in 1864.

Q. Any after the Era?—A. Yes; the knees put in the Vandalia, now in Hampton Roads, were bent timber. The plank around her stern were bent on that machine.

Q. I ask you if Mr. Williams has not declared within your knowledge that he did not want to see either the Government or any individual build a vessel out of timber bent by that machine?—A. I do not know what Mr. Williams has stated. He never stated that to me. I do not know what he stated. I cannot answer for him.

By Mr. DANFORD:

Q. Mr. Williams is a merchant in Boston, isn't he?—A. Yes, sir; formerly a member of Congress.

By the CHAIRMAN:

Q. To whom did the New Era belong?—A. She belonged to Charles L. Browne, William T. Glidden, and William D. Ross. The performance of that ship can be got at any time you want it.

Q. Did Mr. Williams have any interest in the New Era?—A. I do not know; I think he did. Glidden and Thomas owned a part of her.

Q. Do you know, or have you any reliable information, of any gift or fee or commission being paid to any one, in reference to any contract to be made, or contract already made?—A. To an officer of the Government, no, sir.

Q. You have not information upon that subject that you could give the committee?—A. I have not. I have here a paper which I desire to have made a matter of record before the commitee. It is as follows:

"DEAR SIR: I am so well pleased with the work done by you, in building the Enterprise for the United States Government, that I cannot refrain from informing you that nothing else could have been expected of one so well known and whose reputation stands so high as a naval constructor and ship-builder.

"Your past history and ability have been before this country through your published works on ship-building and the many vessels of your design and construction, which renders it unnecessary for me to speak more particularly of your superior qualifications; and should any question arise relative thereto, which could tend to affect your standing abroad, you are at liberty to refer to this Department for information or for its recommendation.

"Very respectfully, &c.,

"I. HANSCOM,
"*Chief of Bureau.*

"Mr. JOHN W. GRIFFITHS,
"*Portsmouth, N. H.*"

This arose from some scurrilous articles in the papers coming from Portsmouth, or its vicinity.

By Mr. MILLS:

Q. Have you got any of those articles?—A. No, sir; I have not. I did not keep them. But my instructions to my foreman were to do the work a little better than the ordinary

al work, because contract-work was under a cloud, and it would not pass as of equal ality unless done a little better.

Q. What was the purport of the articles which called out that letter—what did they rge?—A. Well, that the ship was built on the old Enterprise bottom, and the work, the terials, &c., were bad, and the seams had lath in them, instead of being properly calked. at is my memory. I cannot give it to you exactly.

Q. Was there no name signed to it?—A. No, sir; no name. It was in the New York Sun. it it could be traced; its whole character seemed to me to justify one in thinking that it me from that yard.

Q. You are not a practical shipwright, are you?—A. I went as an apprentice to Stephen awrence, New York City, the 1st of March, 1823, and served my time with him.

WASHINGTON, *March* 2, 1876.

THOMAS E. WEBB sworn and examined, as follows:

I am naval constructor at the Washington navy-yard at present. Six years ago I was in the Norfolk navy-yard as naval constructor; since which time I have been stationed for three years and three months at the Kittery navy-yard. I was then on special duty at Rio de Janeiro four months and twelve days. I was then on waiting-orders for about one month, and finally was ordered to where I am now stationed.

By the CHAIRMAN:

Question. During the time that you were stationed at Kittery, were the two vessels of the eight sloops of war authorized by an act of Congress, known as the Essex and the Enterprise, being built?—Answer. Yes, sir; they were.

Q. Is either of those vessels completed?—A. No, sir.

Q. Until completed how can you well ascertain the cost of either of them? Can you do it at all?—A. Yes, sir; the cost can be ascertained up to any day, but a computation has to be by a regular survey.

Q. I mean can the entire actual cost be ascertained until the vessel is completed?—A. No, sir. What I meant to say was that the cost of either one of those vessels up to that date could be ascertained; but the cost as it will be when finally completed cannot be ascertained except by estimate.

Q. Which one of these vessels was built by the Government and which by the contractor?—A. The Enterprise by the contractor. The Essex by the Government. The name of the contractor was John W. Griffiths.

Q. Were you appointed superintendent of the construction of the Enterprise, or designated to any such duty?—A. I was designated by the commandant of the station, under whose order I acted, to act as inspector on that ship; and at a subsequent period was authorized by him to associate Mr. Philip Hitchman with myself as inspector.

Q. In the performance of your duty, state whether you were or were not furnished with copy of the contract made by Mr. Griffiths.—A. I was furnished with the contract, specification, and drawings.

Q. Have you a copy of that contract now that you could furnish the committee?—A. I have the contract by which I was guided while superintending her in my possession. (Produces it.)

Q. This paper which you furnish the committee, which is marked "Exhibit T. E. W." you state is a copy of that contract?—A. It is.

Q. Did the contractor complete his contract in accordance with the terms therein and the specifications and drawings which were furnished you?—A. In my opinion he has not.

Q. Have you the specifications?—A. I have, sir.

(Witness produces copies of the specifications, which are marked "Exhibit T. E. W., No. 2.")

Q. Were you not at the Kittery yard at the time the Enterprise was launched?—A. I was at the Kittery navy-yard at the time she was launched, but was not the naval constructor of the yard, having been relieved on June 13. She was launched June 23. She was about ready for launching at the time I was relieved.

Q. I observe in the copy of the contract which you have furnished me that, as a part of the undertaking of the contractor, he was to do all practicable galvanizing of wrought and cast iron, and all other work necessary for the completion of the hull of the aforesaid vessel, excepting blacksmith work, which is not included in this contract.—A. That is the way I read it.

Q. Your construction of these words was that he was to do everything that was necessary to the completion of the hull of the Enterprise, excepting blacksmith work?—A. Yes, sir.

Q. Did that contractor do that?—A. He did not.

Q. I observe, also, in the contract these words: "Under this contract, shall conform in

all respects with the specifications and drawings for the aforesaid vessel now in the Kittery yard, which are hereby made a part of this contract; that, in the performance of the work, the parties hereby contracting are to be governed thereby as truly as if the same were incorporated in this instrument; nor is the omission of any detail or object necessary to carrying into effect the letter and spirit of this agreement to be to the detriment of the United States." In reference to this clause, and to the work upon the vessel, had you any disagreement or controversy with the contractor in your construction of the terms of the contract?—A. I had.

Q. Were you sustained or not sustained by the commandant of the yard?—A. I was not sustained by the commandant of the yard, under whose orders I acted.

Q. His decision was in favor of the contractor?—A. It was.

Q. Do you know under whose orders he was acting?—A. He was acting under the order of the Bureau of Construction and the Navy Department. That I believe; I did not see his orders.

Q. The records at Kittery will show how that is, will they not?—A. They will, in part.

Q. Can you form any estimate as to the amount of work to be done on the hull to complete it, except the blacksmith work, which ought to have been done, in your opinion, and which was not done, by the contractor?—A. I could not, unless I went into a calculation to form such an estimate.

Q. If the contractor had completed his contract in accordance with the terms of his written agreement, and the specifications and drawings which were made a part of it, how much would the Government have made?—A. As an approximation, I should say in the neighborhood of $15,000. They certainly would have made that, because they paid the money and did not get the labor.

Q. Do you know whether it is a fact that money was paid upon Mr. Griffiths's first contract for labor never performed by him, and without the usual certificate from the superintendent?—A. I could not answer that question, for the reason that the final bills were not made by myself.

Q. Have you not information, and, if so, from whom derived, that the entire sum agreed to be paid for the building of the hull has been paid to Mr. Griffiths?—A. I have that information. I derived it by looking at the books on file at the Kittery navy-yard.

Q. And no final survey or inspection of the vessel has been had?—A. I was so informed.

Q. State if you have any knowledge or information upon the subject of $4,000 being paid to Mr. Griffiths on account of alleged extra work, or anything of that kind?—A. I know that a bill for $4,000 was made at the Kittery navy-yard for alleged extra work, the triplicate of which is there on file.

Q. Was there any extra work done on the Enterprise?—A. There was.

Q. To what extent would you say?—A. [Referring to the record.] Of two of the changes made, one cost $18; $30 was allowed; for the second one, there was $35 allowed. An alteration in the boring of holes in the ship was brought about by the size of the metals furnished not being right. That alteration, in my opinion, cost less than $100, or I would not have been authorized or have undertaken to have allowed it.

Q. Do you know whether for any alleged alteration or extra work, any survey was had in order to determine its character and extent?—A. I never knew of any board of survey having been appointed.

Q. If any payment, then, was made to Mr. Griffiths in excess of $100, so far as your knowledge extends, it has been done without the approval of a board of survey?—A. So far as my knowledge extends, there being no board of survey, if it has been paid it has been paid without such authority.

Q. What interference or detention or hinderance was placed in the way of the contractor by any act of omission or commission upon the part of the contractors and other officers of the navy-yard at Kittery?—A. As to myself I know of none, and believe that there was none offered on the part of any others.

Q. You were there upon duty from the time her keel was laid until she was ready for launching, were you not?—A. I was.

Q. And you say that there was no interference or detention or hinderance in the construction of the Enterprise, and chargeable to any act of commission or omission on your part or on the part of those under you?—A. Not that I know of.

Q. Can you give the relative cost and condition of the Essex and the Enterprise at any given date?—A. In the reports made December 1, 1874, the cost of material on the Enterprise was $111,341.09; the labor was $34,694.94; amount paid contractor on his original contract, including reservation, $44,200. For launching, $2,000; for extras, $4,000; making a total of $198,236.03. That is the Enterprise. The Essex at the same date, material, was $87,413.02; labor, $91,673.77; total, $179,086.79.

Q. The Essex was launched at that date also, was she not?—A. Both had been launched.

Q. It would appear from the statement you have just submitted that the cost of the Enterprise at that date was more to the Government than the cost of the Essex?—A. Yes, sir; by $19,149.24.

Q. From and after that time the Essex passed into the hands of a contractor, Mr. McKay,

parently the vessel built by the Government, the Essex, has cost more than that the contractor. If there exists any reason why this should be a fact, will you state n?—A. The only reason I could give would be that probably men are employed that were either not required or not qualified for the work, or that the excess in was paid for the balance of the work necessary to complete her.

e principal item of cost in the construction of a vessel is labor, is it not?—A. Yes,

d if that labor is unnecessary or unskilled, it adds materially to the cost?—A. It

the selection of the labor by the constructor, is he in chief control or does somebody for him?—A. Those that he selects he has to judge as to their qualifications, but a any men are employed by instructions from higher authority—the commandant of -yard.

en do you say that the commandant of the navy-yard selects the labor, or is he the somebody else?—A. I presume that he is the agent of a higher authority.

n't you know that to be the fact in some instances?—A. I do.

ate in what instances and the circumstances surrounding it.—A. Instances when een told verbally, and also in writing, to put certain men to work.

ate as a matter of fact if this interference on the part of the chief of the bureau does r pending elections in the States in which the navy-yards are located —A. It does, n at other times.

e amount of money that you can spend at a navy-yard is in the first place deter- ere in Washington?—A. Not at all times, as the commodore and the naval con- at the yard having in view the amount of work to be performed, will ask for a stip- mount.

it not set apart here in Washington?—A. That I have no knowledge of.

u are subordinate to the authorities here at Washington?—A. We are.

d you of yourselves cannot determine, without the sanction of the chief of the here, the quantity or extent of work that you may perform?—A. Not unless we w much money we will be allowed, and that is determined here.

the selection of that labor at any one of the yards at which you have been located, hin your knowledge that a contest of either political party has in any way inter- as to determine anything about their selection?—A. Not with me.

you know whether the fact exists?—A. I know the fact exists by information de- m the commandant of the station.

d you ever know of a meeting to occur in the office of the commandant of the navy- Kittery in which politicians of either New Hampshire or Maine were present?—A. I informed by Commodore Pennock that such was the case.

d you see a list that was furnished at that meeting?—A. I was furnished with a he commodore of the station, which was addressed to him by a committee.

at was a list of men to be taken on for work?—A. A list of men to be employed.

dn't it come to you in the first instance, and you refused to recognize any outside y?—A. It did.

dn't you demand that it should have the sanction of some other authority?—A. I ack to where it came from, with word that it must be addressed to the commanding

ward, by orders from superior authority, taken on again?—A. I do. I have in view one case of a man named Weekes, who was discharged, after investigation, for stealing. He was afterward ordered to be employed in my department.

Q. What position did he hold and what salary did he receive?—A. As near as my memory serves me, he was rated as a helper, and received $2.26 a day.

Q. When he was returned to the yard what salary did he receive?—A. The same.

Q. By whose order was he returned?—A. By the commandant's order to me; I took orders from nobody else.

Q. Have you any knowledge from whom the commandant received his order?—A. He informed me that he received it from the Department.

Q. The charges to which you refer, under which Weekes was discharged, are they a matter of record at the yard?—A. I think not.

Q. Was there any record of it made anywhere?—A. No record made. The charges were investigated by Captain English, in connection with Mr. Swayne, foreman machinist, and myself, witnesses being called in to prove them, and the accused finally admitting his guilt.

Q. Was no note or memorandum made on the pay-roll of the reason of his discharge?—A. I was led to believe that he was put on the black-list.

Q. That being the orders from the commandant that that man should never appear at the yard again for any purpose?—A. Unless ordered by the Department.

Q. You don't know who directly interfered in his case to have him returned?—A. I am led to believe that it was by a person who was said to be his brother-in-law, Comptroller Brodhead.

Q. Did you ever see the order of the commandant to take him on?—A. I think not; not that order.

Q. Did you see the order under which he was originally taken on?—A. I have that one. This is it:

"Com. Pennock will employ this man, at request of Comptroller. G. M. R."

(Indorsed on back:) "Wm. H. Weekes, of Greenland, N. H. Recommended by Comp. Brodhead."

Q. Do you know of any other instances?—A. I do. Marks. He was discharged because he was not a qualified mechanic. He was taken back by direction of Commodore Howell.

Q. Do you know of any higher authority interfering to have him restored?—A. I was informed verbally by Commodore Howell that he was ordered to do it by the Navy Department.

Q. Was he a skilled mechanic?—A. He was not.

Q. What was he?—A. I was led to believe that he was no mechanic of any kind.

Q. Did the order require you to rate him as a mechanic and give him that pay?—A. The final order gave him a rating, as near as my memory serves me.

Q. Was he competent to fill his rating?—A. He was not.

Q. Do you know any other instances?—A. I do. A man who was ordered in as a shipwright, and whom I questioned, and who in answer told me he was a shoemaker.

Q. What did you do with that man?—A. I set him to work in obedience to my orders.

Q. Had he never worked at shipwright work?—A. He had not.

Q. Nor carpentering?—A. He informed me that the only carpenter-work that he ever performed in his life was to help to put the roof on his boss's shop.

Q. Do you think he could pass as a carpenter?—A. He told me that he made application to go in the boat-shop to leather oars, and he was told that he would be put in the carpenter's department, and it did not make any difference.

Q. What eventually became of him?—A. He worked there until it became too hot for him, I suppose, and then requested to be discharged.

Q. Do you mean too hot in weather or too hot under the orders of his bosses?—A. The kind of work that it was necessary for me to give him to do made it too hot for him.

Q. In reference to launching the Enterprise, was there any advertisement made, or in any manner competition invited by the officers of the Navy Department or at the yard?—A. Never that I know of.

Q. I noticed that Mr. Griffiths was paid $2,000 to launch that vessel, and that under his contract or agreement certain material and other advantages were to be supplied by the Government. Looking to what the Government did supply and furnish to Mr. Griffiths to enable him to make the launch, how much additional would it have cost the Government to have launched it by the agencies and resources they had?—A. In my opinion, about $800.

Q. Then, in your opinion, the Government lost about $1,200 in making the contract with Mr. Griffiths?—A. It did.

Q. In the contract made by Mr. Griffiths to complete the vessel, (his proposal here before me shows it to be the sum of $25,000,) was there any advertisement or competition in any way invited for that?—A. None that ever I knew of.

Q. In his other contract for the spars, was there any competition in any way?—A. None that ever I knew of.

Q. Look at the paper which I hand to you, and marked "Exhibit T. E. W., No. 3." Isn't that the estimate submitted by the constructor then at the Kittery navy-yard for the things necessary to be done, and the cost thereof, to complete the Enterprise?—A. This is a copy of

Q. Didn't Mr. Griffiths tell either you or some person who informed you of it, and, if some other person, please state his name, that he knew he was going to get that contract?—A. No, sir; he neither told me nor was I ever so informed.

Q. Did you ever learn in any way that he had made any agreement or come to any understanding with Mr. Hanscom in reference to it?—A. Only through Mr. Griffiths. He told me that he had an understanding with Mr. Hanscom.

Q. An understanding of what kind?—A. That he should do the work differently from what I, the superintendent, said that he was bound to do it by the terms of the contract.

Q. Under what circumstances did he tell you that, and why was it necessary that he should tell you that?—A. Because I directed him to do certain work.

Q. The contract being your guide in making the direction?—A. In all cases.

Q. And he informed you that he had an understanding with Mr. Hanscom?—A. He so informed me.

Q. Did he exhibit to you or claim that he had a writing or a memorandum of any description from Mr. Hanscom?—A. He never did.

Q. Did he state to you where he had come to this understanding with Mr. Hanscom—in Boston or at any other place?—A. In Boston, at one of the public hotels.

Q. Did he state to you when he had come to this understanding with Mr. Hanscom, before or after the trip to Kittery?—A. Immediately after the trip to Kittery, at the time when they were consulting, when every body was supposed to be in the field.

Q. In your directions to him were you not constantly reminded by Mr. Griffiths of this understanding that he had with Mr. Hanscom?—A. I was reminded two or three different times.

Q. In cases wherein you disagreed and an appeal was taken to the chief of the bureau, were the decisions made in your favor or in favor of the contractor?—A. Generally in favor of the contractor.

Q. Did you not receive a designation of the kind of work done, or to be omitted to be done, from the contractor, and did not that instruction come through a paper in the possession of Mr. Griffiths?—A. It did.

Q. Have you the means of furnishing the committee with a copy of that paper?—A. I made a record from the list which was in possession of Mr. Griffiths; having been informed that Mr. Hanscom had made a change, I asked him if he had. He said "Yes." I asked him what it was, and he referred me to the list that Mr. Griffiths held, on which he, Mr. Hanscom, had checked off what Mr. Griffiths was not to do, and that I could get that list and copy these checks off, which would be my guide.

Q. In your opinion and judgment as superintendent of the work, was not that a departure from the written contract and specifications?—A. I certainly think so.

Q. You say it was in that manner that you received your instructions from Mr. Hanscom, the chief of the bureau?—A. It was, on that occasion.

Q. And in the records of your office as constructor, or in that of the commandant, there is no official memorandum of the instructions so received, is there?—A. None that I know of.

Q. Can you estimate approximately how much advantage there was to the contractor in that ruling of that chief of the bureau?—A. I never made an estimate, and therefore I cannot at the present time tell.

Q. Please call off the things that you think he ought to have done, but which were exempted on that list.—A. Quarter-galleries, carving, fit capstan, complete fife and pin-rails, coppering and shoe, steering-wheel, canopies over hatches, shot-racks and spar-frame, awning stanches, cleats for mess-chests, rods for clothes-bags, torpedo-fittings, chain-chocks, chocks on main-rail for boats, hold fitted for hawser gear, reels for hose and hawsers, channel-chests, chocks and holes for tiller-rope, eyebolts to fit, boom-crutch for anchor-boom, eye-bolts for outside for sheet chain, capstan and anchor bars, life-buoys, light boxes, rollers against bowsprit bits. That is the first contract. Those are the exemptions made on that list, without reference to anything else that may have been omitted afterwards.

By Mr. JONES:

Q. Was there anything omitted afterwards?—A. There were other things that at that time were not thought of, and that it is considered that the contractor should have done.

Q. Was it not in his contract for him to do it?—A. According to my interpretation it was.

Q. Taking it altogether, approximate, if you can, the value of the exemptions made in the contractor's favor?—A. According to an estimate that I have now roughly made, I should say not less than $10,600.

Q. Is that in the first contract or the second?—A. In the first contract. I don't know anything about the second contract.

By the CHAIRMAN:

Q. You don't know anything about any exemptions or favoritism in any other than the first contract?—A. No, sir, I do not; any more than I have already stated.

By Mr. JONES:

Q. You say that his first contract would have held him to the performance of this work?—A. My interpretation of the contract, with the specifications and plans, is to that effect.

Q. Were there any irregularities in the building of the Enterprise about planking, about material, about work?—A. There was.

Q. To whom was the cost of that charged?—A. It was at the expense of the contractor in labor, but at the expense of the Government in material.

Q. Do you know whether any deduction has been made in favor of the United States as against the contractor, on account o such irregularity?—A. I know of none.

Q. For labor or work done by the Government which ought to have been done by the contractor, do you know of any credit being allowed to the Government?—A. I do not.

Q. There was such work and labor done, was there not?—A. There was, without question; the galvanizing.

Q. And the contractor has been paid in full in money, has he not, on his contract?—A. He has.

Q. And no abatement or set-off or deduction has been entertained or allowed?—A. I have no knowledge of any.

Q. Has any certificate of the completion of the first contract ever been given by yourself or any other constructor or superintendent?—A. None that I know of.

Q. It has been alleged that the cost of the Essex showed an excess of about $15,000 in labor, while the cost of the Enterprise showed an excess in comparison of about $14,000 in material. Are these true allegations?—A. I believe such to be the case.

Q. How do you account for it?—A. As to the material, I account for it from the fact that I as the naval constructor and superintendent was to furnish all the material, and that in every case the material issued to Mr. Griffiths, wherewith to build his ship, was issued from the stock in hand and charged upon the books of the yard; while a large amount of material used in the Essex was that which was taken from the Illinois, which had been torn up and had already been expended and which I felt in duty bound to use in my own favor in the ship Essex. Therefore the same amount of material is in the two ships; the one being charged for every dollar's worth, while the other is not, because it was taken from an old ship that was torn up.

Q. Was there any difference in the selection of timber?—A. There was. In every case where I could use what is known as promiscuous timber, which was charged at a less rate, I did it; while in the case of Mr. Griffiths' ship, the timber which was known as curved timber was used as a general thing, which had cost more.

Q. Did not he and his foreman have some power of selection in that matter?—A. Mr. Griffiths and his foreman were from time to time shown where the material was, and teams were furnished by which he could have it hauled to be wrought and ready for being put in the ship.

Q. In that way, he having the selection of the larger and curved timber, it being the most costly, and for the other reasons you have mentioned, the cost of material in the Enterprise would be more, necessarily?—A. It could not help but be so.

Q Was any false measurement or false accounting made in order to produce this difference in the cost of material, between the two vessels?—A. I know of none, and do not believe that any was made in either vessel; for I made it my business to caution all those that were under my charge that this was to be a fair test as between contractors and ourselves; that in every case everything was to be done honestly.

Q. According to my recollection Mr. Griffiths mentioned, the other day, something about the difference in the cost of the filling—A. I have no doubt there was a difference, for I made it a rule where I used promiscuous timber of large scantling that I saved what is called the slab and filled in my ship with it; thereby avoiding the necessity of taking a stick specially for that purpose. In the majority of cases Mr. Griffiths had material selected from the stock on hand for that purpose. What is known as "filling" is the distance from frame to frame which has to be filled. The distance is 2 feet 6 inches, and the siding of the frame is 1 foot on each side, leaving a space of 6 inches to be filled.

By Mr. BURLEIGH:

Q. Would you put sap timber in that?—A. I should consider that it was unfit to be put in.

Q. Why did you put it in, then?—A. It is not known that it ever was put in.

Q. Do you mean to say that you put in timber that was unsuitable, knowing it to be unsuitable?—A. No, sir; in neither case—in the contract ship nor our own.

Q. Then I think you contradict yourself.—A. No sir; live-oak does not have what is commonly known as sap. These were live-oak frames.

Q. As far as the labor is concerned, which would be the cheapest timber to build a ship with, promiscuous timber or curved timber?—A. If it had to be wrought by hand the curved timber would be the cheapest; but in the case at Kittery yard, all the timber was wrought by steam power.

Q. Then you could get out your promiscuous as cheaply as you could the curved timber?—A. Very nearly the same. If there was any difference, it would be against the promiscuous timber.

Q. I call your attention to the bill of extras, so termed by Mr. Griffiths:

Thirteen days' demurrage, $35 per day	$455 00
Seventeen days' demurrage, $35 per day	595 00
Sixty-seven days' demurrage, $35 per day	23,045 00
Forty-six days' demurrage, $35 per day	1,610 00
Seven days' demurrage, $35 per day	247 00

This demurrage is claimed by him on the ground that it was in consequence of a failure upon the part of the Government to furnish the material that the Government had agreed to furnish him under his contract; what have you to say as to the number of days that he was delayed, whether in point of fact it was as he states and whether the Government was in fault therein by any of its agents?—A. Previous to this, I had no knowledge that he ever claimed or that there was any real demurrage, according to my way of thinking. I will admit that there was a time when the copper necessary to fasten that ship was not in the navy-yard, although requisitions had been made for it, and finally it came from Boston: but in the mean time Mr. Griffiths did not knock a man off from the work on that ship, but changed them to another part, and simply told me that if he did not get the copper by such a time, he would have to claim demurrage. That copper arrived from Boston within two days after the time specified, and I did not know, or was not notified, that he claimed demurrage on that account.

By Mr. BURLEIGH:

Q. Is it usual when they knock men off there to pay them their wages?—A. No, sir; not men who work by the day's work. I will say further that Mr. Griffiths had the use of the machinery in the yard at times to our detriment. We had got out a set of cant-timbers by hand, and when timber suitable for a second set failed to arrive from the Boston navy-yard, I gave him the cant-timbers that we got out for the Essex, which enabled him to continue his work.

Q. You were present at the yard during the period of time covered by his claim for demurrage in November, 1873?—A. I have no knowledge but what I was.

Q. If there had been any suspension of labor upon the part of Mr. Griffiths you would have known it?—A. I have every reason to believe that I should, for it was to the commandant or to me that he should have complained.

Q. He says also: "Compensation is asked for the loss sustained from the bad quality of oak plank and the meagre supply, making it necessary to consume ninety-two days in planking, whereas, with good material furnished as required, twenty-five days would be ample to plank the vessel. * * * * * The contract price was $2,650, and the cost more than double."—A. I would say to that, that the plank was located in the navy-yard from which Mr. Griffiths and myself had to select in the building of the two ships, and that in several cases a plank was defective, and still it was gotten out and put upon the ship, and Mr. Griffiths or his foreman was properly notified through Mr. Hitchman or myself that it must be removed.

Q. Was there any delay occasioned by the bad quality of oak plank and the meagre supply?—A. I should say that the quality was not quite so good as it should have been, but as to quantity I think there was no reason for delay.

Q. In the selection, as well as in everything else, was not the contractor deferred to, or rather preferred?—A. He was deferred to in every case where we received notice that he required machinery, teams, &c., for his use.

Q. In other words, the Government delayed its work for his interest and accommodation?—A. Yes, sir. In my opinion it was a detriment to the Government to have a contractor come into the yard and operate in the way it was done in the case of the Enterprise.

Q. Was he not preferred?—A. He was.

Q. That was under orders from the head of the bureau?—A. Yes, sir

Q. The fourth charge is for forty-six days' demurrage, waiting for bolt-copper, the supply becoming suddenly exhausted.—A. As to any reduction of force, I had no notice of it. There was a time when he had bored a number of holes which had to be reamed to suit the copper that was furnished finally.

Q. How much additional cost would that have been, and, as a matter of fact, was it not settled for?—A. I should say that the reaming of the holes would be equal to five days' labor for one man, at $2.75 a day.

Q. Sixteen hundred and ten dollars, then, would be a very large grab for that amount of detention?—A. I consider that that amount is exorbitant.

Q. Demurrage, seven days, waiting for plank to be sawed for deck?—A. This is the first knowledge I have had of that.

Q. Was any such claim made while you were there as constructor?—A. My first knowledge of any claims for demurrage having been made by Mr. Griffiths is since I came into this room, with one exception: On my way here I was so informed by the chief of the bureau.

Q. The sixth item is compensation for excess of work which does not belong to the hull proper of the vessel; also for excess of work consequent upon the alteration of plans. Summarized: Extra engine-kelson, $225; damages to plank, $250; extra molding outside,

$150.—A. I have no knowledge as to the extra molding. A change was made to the officers' quarters on the plan previous to Mr. Griffiths putting the work up, and the difference was, that that which he put up was less in quantity than that which he would have had put up if the change had not been made.

Q. So that it ought to be an item of credit instead of an item of debit to the Government? —A. Yes, sir; the berth-deck, hatch, and door were authorized to be altered, and the expense of the hatch, as returned to me by Mr. Hallenbeck, Mr. Griffith's foreman, was $78. I allowed him $30. The cost to change the clamps and run up the frame on the forecastle-deck was $25, as I was informed by Mr. Hallenbeck, which was allowed; and in no case did I allow any extra work to exceed $100 without a survey first made.

Q. Did you make that record to which you are referring at the time?—A. I did. As regards the shaft-alley, this is the first knowledge I have had that he made a claim for any alteration made in it.

Q. Was there any alteration made?—A. My memory does not serve me as to whether there was or was not. My opinion is that there may have been a change made, but I don't recollect.

Q. If it had been of any great magnitude, you would have known it?—A. I think so.

Q. Do you know anything about the son of Mr. Griffiths being interested with him in the first contract?—A. I do not. I only know him as a clerk to Mr. Griffiths.

Q. Was he the clerk at that time?—A. The only clerk that I ever knew him to have.

Q. Have you ever seen the timber-bending machine at the Boston navy-yard, bought by the Government of Mr. Griffiths and others?—A. I have.

Q. What is your opinion of its value?—A. I think it was a very costly thing to the Government.

Q. Supposing you were told that it cost $160,000, how much in excess of its true value would that be in your judgment?—A. According to my opinion, it cost $60,000 too much.

Q. You knew of the machine before the Government bought it?—A. I knew of the timber-bending machine which was located, as I was told, outside of the navy-yard, and of another which was formerly located at Green Point.

Q. Do you think any board of naval constructors who had been called to examine that bending-machine, looking to its usefulness to the Government, would ever have advised its purchase?—A. I know of several constructors that would not.

Q. Do you regard it as of any practical value to the Government?—A. Taking into consideration the fact that it is laid down as a correct principle that we should build our ships of live-oak, I consider a timber-bending machine a useless thing.

Q. Do you know about the barter or sale of iron upon the part of the Government to anybody?—A. Not personally.

Q. Have you any information upon that subject which you can give the committee?—A. The only information I have is that I have been told that iron had been sent from several navy-yards and exchanged, the Government giving three tons for one.

Q. That is, three tons are taken to be re-wrought, and there is delivered back to the Government one ton for the three?—A. I know not the process through which the iron goes, but simply have heard the assertion that for the three tons given by the Government it is to receive one ton in return, of suitable shapes and sizes.

Q. That iron goes to Mr. John Roach, as I understand?—A. I have been so informed by Mr. Steele, naval constructor.

Q. Is he, or not, charged with the duty of inspecting those iron ships?—A. I don't know that personally, but I am told that he is the inspector.

Q. You know nothing of his orders, do you?—A. I do not: I have never seen them.

Q. State what you know of the ship in the Kittery navy-yard, which this iron was gotten out to plate; what was her size?—A. She was of the Kalamazoo class, as near as my memory serves me: she was three hundred and thirty-two feet six inches long; I don't know her width, but I think it was in the neighborhood of fifty feet

Q. Was the iron placed upon her?—A. It was not. So far as my knowledge extends, it was piled up in the navy-yard.

Q. Was it sufficient in quantity to cover that ship?—A. I have every reason to believe that it w s. The side armor was in plates, three inches in thickness, two thicknesses being designed to be put upon her; the bars were eight inches square amidships, tapering forward and aft. The deck-plating, as near as my memory serves me, was one inch and a half in thickness.

Q. According to your information, what became of that iron?—A. I have been led to believe that that iron was shipped from the Kittery navy-yard to Mr. Roach under the terms I have already stated.

Q. There was no order of sale of that iron?—A. I have no knowledge of any order, or under what circumstances the exchange was made. This iron has been shipped from the yard within a year.

Q. I understood you at the outset to state that you had been stationed a while at the navy-yard at Norfolk?—A. For about three years previous to my going to Kittery.

Q. What have you to say in regard to that yard, about the taking on or discharging of

men, and the activity of political influences therein?—A. The same course, I consider, was pursued at the Norfolk yard in the hiring and putting on of men as at the Kittery yard.

Q. At the Norfolk yard did not a political party recommend men, and did they not make assessments, or requisitions upon the laborers, to contribute to the funds of their party?—A. I have no knowledge of the political parties designating the men directly, or that any assessments were ever made at that navy-yard.

Q. Do you know who is the timber-inspector at the yard?—A. I do; Jonathan Bush.

Q. Do you know anything about his qualifications for that position?—A. He is not the man that I would select for a timber-inspector.

Q. State if you know of any irregularity or neglect on his part in the performance of his duties as such inspector.—A. I cannot recall but one instance; that was in the inspection of about ten thousand cubic feet of white oak, where I considered he did not study the interest of the Government; I officially called his attention to it, and he re-inspected the timber and returned a less amount for which the Government should pay.

Q. Did that occur more than once within your recollection?—A. That was the only occurrence in which I had to take official action.

Q. Had you reason to suspect that he was either neglectful or indifferent?—A. I had reason; and after personally examining a number of times the material which he had measured, and finding that he had allowed, in my judgment, a larger size than should have been allowed, I verbally called his attention to it, and the change was made.

Q. Whenever you suggested it, it was made?—A. I cannot say that I gave it to him as a suggestion, but more as an order, considering myself the superior authority and the more directly accountable person.

Q. It is his brother who is naval constructor at that yard at present, is it not?—A. I am so informed and believe.

Q. Looking to the facilities of the Government to take care of and preserve live-oak and other timber, is there not an unnecessary accumulation of timber and lumber in the different navy-yards of the United States?—A. At some of the yards I believe there is.

By Mr. BURLEIGH:

Q. Is, or is not, live-oak timber, like other timber, liable to decay unless it is put in the water soon after the tree is cut down?—A. I so consider; and I believe that in every case live-oak should be submerged, in a proper manner, in either water or mud.

Q. Is the live-oak purchased by the Government, in its recent contracts, so taken care of in all the yards?—A. It is not in all cases.

Q. In your opinion, is it deteriorating to-day?—A. It is.

Q. How long would it take to dry-rot, probably?—A. Under some circumstances, it would rot within three years.

Q. That would rot it entirely, and make it unfit for use, would it not? Would it not be injured by one year of exposure?—A. I consider that for it to be piled away at all, without being submerged, is a cause of injury.

Q. And the injnry commences at once?—A. Yes, sir.

By the CHAIRMAN:

Q. From your knowledge of the different navy-yards, and the wet-docks provided, is there not an excess of live-oak timber purchased over the means or resources of the Government to protect it in those docks by submerging it?—A. I consider that such is the case at some of the yards.

Q. Do you know anything of the accumulation of ship-knees at League Island?—A. I have no knowledge of it.

Q. Do you know of an instance where ship-knees have been removed from the yard here at Washington, some or all of which were condemned by you or the constructor, and afterward received at the Philadelphia yard?—A. The rumor which reaches me is that the knees that I condemned here were taken to League Island for sale. I have no knowledge that they have been bought.

Q. Who was the party offering them at this point?—A. Mr. Joseph Savage.

Q. Do you know who were the partners of Joseph Savage?—A. I do not

Q. By common reputation, do you not understand Mr. Orvil Grant to be a partner of his?—A. I have, but heard it as a rumor.

Q. You know nothing about the means of taking care of the knees received at League Island, or of any other kind of lumber?—A. No more than my opportunities would allow me to judge; there is facility for taking care of a large quantity of knees at that place.

Q. How is it in regard to other timber?—A. I consider that the space that could be occupied by timber is larger at League Island navy-yard than at any other navy-yard on the Atlantic coast.

Q Were you of the board ordered by the bureau to visit the different navy-yards to inspect their capacity and means of building ships?—A. I was a member of the board of constructors, which was ordered to visit the six Atlantic navy-yards.

Q. How many vessels could you build out of the timber at the Kittery navy-yard?—A. As near as my memory serves me, the timber at that yard of the proper proportion would not admit of building over two ships of medium size.

Q. How many at the Boston yard?—A. I don't remember as to that, or any of the other yards, except my own here, where there is not enough to build one ship; I am speaking of the proportions of the different kinds of timber.

Q. Did not your examination show that there was an excess of promiscuous timber?—A. It did.

Q. Is the purchase of that kind of timber for preservation through a series of years a proper and wise policy to be pursued by the Government?—A. I cannot see but that it is proper.

Q. Is there not a deficiency in curved and principal pieces, in proportion to the promiscuous timber?—A. I so consider.

Q. The promiscuous timber is more easily obtained, is it not?—A. I should say it was.

Q. Are you able to give the committee your judgment as to how much timber has been purchased within the last two or three years, at annual lettings, and how much by what is termed open purchase?—A. I have no information which I could give the committee.

Q. Do you remember Mr. John S. Porter, former constructor at the Norfolk navy-yard, Mr. F. W. Jett, shipwright, and Mr. Phillips?—A. I remember Mr. Jett and Mr. Porter. I know them personally.

Q. What do you say as to their standing as shipwrights?—A. I have always considered them good mechanics and reliable men.

Q. Their opinion, as to the quality of timber, in your judgment, is entitled to respect, is it not?—A. It is.

Q. Is not the system of letting somewhat after this manner? Commencing with a period of the year when the head of the bureau calls upon the constructors at the different yards to make their estimates of what is needed, are you not notified at the same time of how much money is set apart for your different yards?—A. The usual custom is, that I am informed, through the commandant of the station, that a certain amount is allotted wherewith to buy the necessary material required at the navy-yard, under the usual yearly lettings, and he orders that in making up my schedule I shall not exceed that amount.

Q. When you have made such estimates and returned them to the bureau here, have you ever noticed the fact, if such was the fact, that they were lessened or reduced or abated in any way?—A. I have.

Q. Has it been to such an extent as to become notable, in your opinion? From your observation, has not the relative quantity purchased at the annual lettings, and that purchased at open purchase, been largely in favor of open purchase?—A. It has, in many cases.

Q. In making the annual lettings have not small quantities of timber and lumber been advertised for, and then has it not so happened that either the contract was not taken, or, if taken, that the contractor who had secured the letting afterward, delivered large quantities at open purchase?—A. I have noticed that in some cases the contract was not given. I have also noticed that when given it was in excess, and that more than the original quantity contracted for was received.

Q. Have you not within your own experience, in making an estimate, found that there was delivered at your own yard, under open purchase, a larger quantity of timber or lumber than you had estimated for or required?—A. I should say yes.

Q. I understand you to say that you have noted the fact that where a small quantity of timber was advertised for, a larger quantity was afterward delivered at the yard and ordered to be received?—A. Such has been the case.

Q. Assuming that you desired to favor any party as a contractor, could not it be done in this way, to wit, to advertise for a smaller quantity of timber or lumber than an ordinary-sized vessel would load with, the effect being that unless he were advised that a larger quantity would be wanted later, it would not be sufficient to induce a party to make a bid, but that if the party had knowledge that a larger quantity of timber of that quality or description would be received at the yard, he would have a very large advantage in making his bid?—A. I should say yes.

Q. Calling your attention to the deliveries of timber and lumber made at the Kittery yard while you were there, were not the principal parties in delivering it, Messrs. Swift & Trickey & Jewett?—A. I cannot call to mind any deliveries made by Mr. Swift while I was stationed at the Kittery yard, but I should say that the larger quantity had been delivered by Messrs. Trickey & Jewett, and Mr. Bigler, of Newburgh.

Q. Do you remember any instance within your experience where you have estimated for a large amount of timber or lumber where when it got to the head of the bureau it was reduced in amount, and so advertised, but, when it came to be delivered, the amount that you had originally called for, or in excess of that amount, would be delivered?—A. I have noticed that where I have asked for a certain quantity, within the amount of money allowed me by the Department, that quantity was reduced in the printed schedules by which contracts were made out, but in the delivery of material by the contractor, whoever got it, a larger quantity was received at the navy-yard; in most cases by an order from the commodore.

Q. Do you know, as a matter of fact, that that order came from the head of the bureau?—A. I have no doubt of it.

Q. Then it was the same party who scaled your estimates in the first place, who made the advertisement in the second place, and who controlled the reception of the timber in the third place?—A. It was so done, as I understand it, in the bureau.

Q. Large opportunities for favoritism (so to call it) may occur in that way?—A. I should think so.

Q. Do you remember any difficulty or controversy between Messrs. Trickey & Jewett and yourself about the reception of any timber at the yard, and how it was settled?—A. I do not remember any controversy, only as regards some white-pine deck-plank which was cut from the State of Maine, second-growth inferior pine, to the amount of 10,000 feet, which I condemned, and in its place, good material was furnished. So far as my dealings with the firm of Trickey & Jewett are concerned, I have no reason to find any fault; I being the one to study the interest of the Government; they have always, to the best of my knowledge, furnished a good material, for which they were paid.

By Mr. JONES:

Q. Do you know any case where there has been any proposal for lumber, or certain things in the Kittery yard, and that proposal has been made, we will say, by Trickey & Jewett, and their proposal received, and then other parties have told you that they got their share of it, that they made just as much as though they had furnished it themselves, as if they had gone into competition in bidding?—A. I was once told that such was the case.

Q. Who was the party that got the contract?—A. Mr. Jewett.

Q. Who was the party that told you that he got as much as if he had furnished it himself?—A. Mr. Adams.

By the CHAIRMAN:

Q. Do you know anything about any false bids or combination among bidders?—A. I know of none.

Q. Have you any information upon that point?—A. I have been told that such was the case.

Q. How is it managed?—A. As I understand it, merchants in the same business are induced by the most interested parties to put in a bid, which was to be understood by the party of the first part, and a portion of the material was to be bought of the party of the second part.

Q. Was it not Trickey & Jewett who did that?—A. I have heard of such a thing as having been done by them.

By Mr. JONES:

Q. How came Mr. Adams to say to you that he had his share of that?—A. I went, I suppose, and told him that Mr. Trickey had the contract to put in the white-pine lumber.

Q. Had Mr. Adams bid on it?—A. He told me that he had. He told me that he made his profit.

Q. Of course he bid above Messrs. Trickey & Jewett?—A. I am led to believe that Mr. Jewett was the lowest bidder.

Q. Are you not led to believe that there was a combination between them in the bids, by his making that remark?—A. I would naturally infer that such was the case.

By the CHAIRMAN:

Q. In order to make themselves the lowest bidder, Trickey & Jewett would ask some other gentleman to put in bids, they knowing what their bids would be, and then they would put in one lower, so that the paymaster could award it to the lowest bidder?—A. I have no knowledge of the way in which it was done other than as stated.

Q. Coming down to the navy-yard at Washington, do you know of men being borne on the rolls of the construction department who were never there to perform the service for which they were employed and paid?—A. Yes, sir.

Q. How many?—A. I have on my rolls from eight to nine men here at this yard.

Q. Where are the men?—A. I am informed, by a certificate received on the usual pay-days, that they have been performing labor in the bureau, and in the Navy Department.

Q. Can you give us the names of those men?—A. I cannot without referring to the muster-book of the yard.

Q. Please do that. The workmen are generally discharged at your yard now, are they not?—A. I have a very small number of men employed at present.

Q. And that is so in all the yards?—A. It is so in our yard.

Q. Is it not the fact that while the workmen are discharged the clerical force is still retained?—A large portion are.

Q. The proportion of discharge is relatively in favor of the clerks and against the workmen, is it not?—A. It is not at the present time in my department.

Q. Has it ever been so?—A. It has.

Q. When?—A. Within the past six months.

Q. Did you express any wishes or ask any instructions in regard to it yourself?—A. I did not. I made a suspension of the clerks. They were ordered back again by the commandant.

Q. Do you know under whose orders he was acting?—A. By the documents received and recorded in my office, it appears that it was done by order from the bureau.

Q. What is your opinion of the Alert, as a sloop of war?—A. I consider that from the

fact of her being built of iron, she is not so good as if built of wood. She is a vessel that I would never build myself.

Q. What do you say as to her machinery and speed?—A. I have no knowledge as to her speed or machinery.

Q. You did not examine her while she was at this yard?—A. I examined the ship proper only.

Q. Taking her even as an iron vessel, was she well built or not?—A. She was as well built as I consider she could be.

Q. Who constructed the Alert?—A. I have been told that Mr. Roach constructed her.

Q. The material that was intended to be used in the repair of the Tallapoosa, where is that?—A. I have no personal knowledge where it is.

Q. Is there any timber in the navy-yard here now that was gotten out for the purpose of repairing that vessel?—A. No material that was gotten out.

Q. Any timber?—A. There is timber in the yard, which I am informed was received for the purpose of rebuilding the Tallapoosa.

Q. Where was the Tallapoosa rebuilt?—A. At Baltimore.

Q. By contract?—A. I have no knowledge as to whether a contract was made or not. I simply know that Mr. Booz did the work.

Q. Do you know whether it was done by the day or by the job?—A. I don't know personally, but I have been told that it was done by the day.

Q. Do you know whether the timber was taken from here to Baltimore?—A. It was not.

Q. Who supplied the timber, the Government or the contractor?—A. I don't know. I am told that it was bought in Baltimore.

Q. Did you inspect the Tallapoosa after she was rebuilt?—A. No, sir; I did not.

Q. Did you ever have occasion to examine her?—A. I did.

Q. What do you say as to that job?—A. I should say that it was a fair job.

Q. I understand you to say that you did not know what the price paid by the Government was?—A. I have no knowledge of what she cost to rebuild.

The following papers were ordered to be appended to the testimony of this witness:

CONSTRUCTOR'S DEPARTMENT,
Navy-Yard, Kittery, Me., September 29, 1874.

Commodore ANDREW BRYSON, U. S. N.,
Commandant:

SIR: In obedience to the bureau's order of the 21st instant, I have made a strict and careful examination of the condition of the United States steamer Enterprise, and respectfully report, viz:

The vessel was launched on the 23d of June last, and has been laying alongside the wharf since then, as well protected from the weather as was possible under the circumstances. She will require to complete her for sea the following-named work:

Vessel to be docked, bottom seams hardened in and filled up, graved and coppered. Two threads of oakum to be put in above the copper line, one thread in the batteries, two threads in the main-deck, one in each of the others. Seams to be puttied and two coats of paint outside and inboard. The cabin, ward-room, and steerages to be glassed over. The spars and boats to have three coats of paint. Poop-deck to be puttied and painted. Spars to be made as per plan and fitted complete. Spare spars and boat-spars to be made and fitted complete. Four torpedo spars to be made and fitted; also the torpedo fittings for the launch. All the blocks required either for rigging or outfit; one composition counter-knee; magazine rods and casings for same; awning-bands on masts; fore and main stay-bolts; fore and main-top mast stay-bolts; fore and main storm stay-bolts; fore-top gallant and royal stay bolts; flying martingale stay-bolt; jib and flying-jib guy-bolts; martingale back-rope bolts; bolts for anchor lashings; eye-bolts for leaders under sails; rods for leaders around masts: stay-sail sheet bolts; top-sail halyard bolts; eye-bolts in hatch-bars; shot and shell racks where required; shot and shell cranes, where required; fore and main jack-bolts. Eye-bolts over magazines and shell-room hatches; eye-bolts for spanker-bolts; bag-rack rods; boring for holding down bolts, fastening of engine, keelsons, and shaft-bearings; eye-bolts in deck and combings around masts; hause and scupper plugs; stowing of spare anchor: gratings fitted in bread and sail room, magazines, and shell-rooms; foot-plate on bow-chock; brass in wake of ladders to several decks; rollers on bowsprit-bitts; head-stanes; eye-bolts for cat and fish-fall leaders; composition rudder-chains, and eye-bolts for same: eye-bolts for lashings in channels; one complete set of pump-gear; iron stanchions and rail for the head; mortise and sheave top-sail sheet-bitts; steering-gear, fitted complete; dead-eyes, hearts and bull's eyes to make and strap; grab-rods on the side of the vessel, and rods on side steps; securing pivot-gun track, putting in centers, &c; putting on breast pieces for broadside-guns: pump-brakes, capstan-bars &c., to stow; bath-tubs to be fitted under forecastle, as per plan; iron stand and one head-tank for scuttle-butt and connections with batters; mooring chocks for bridle-ports; ports, shutters cut for guns, and bucklers made where required; four iron mooring-cleats on main deck; shifting-boards in hammock-nettings: securing of hammock-cloths; putting in powder-scuttles and pipes for foul-air

pumps; lockets for marines' hats; water-closet and wash-stand fitted in sick bay; air-ports wrenches, and stowing of same; two anchor-shoes; fishes for masts and yards, (iron;) hatch-battens; hatch-combings, fitted to batten down, (iron;) combings; all pantries to be fitted with wine-glass racks and cup-hooks.

Following boats built and fitted complete: Launch, 28′ x 7′ 10¾″ x 3′ 2″; first cutter, 26′ x 6′ 8½″ x 2′ 3½″; second and third cutters, 24′ x 6′ 2¼″ x 2′ 3½″; waist boat, 27′ x 5′ 8″ x 2′ 2½″; dinghy, 18′ x 4′ 9½″ x 1′ 9½″; shot and shell racks made and fitted; carpenter's work in connection with putting up coal-bunkers; Lewis bolts wherever required; work of putting in place and securing shoe, posts, jacket and rudder; docking and coppering of the ship; torpedo-fittings, per regulation; boxing of pumps in the hold; lift and force pumps, with all necessary connections to tanks, galley, and scuttle-butt; two head-pumps and necessary connections, complete; forecastle and quarter-deck scuppers; scuppers in hammock-nettings; tanks and connections in water-closets; three channel-pumps and connections; one wash-deck, pumps and connections; ventilation through cabin to be made and put in; four pump-tops to be made; side-ladders and sentry-walks to be made and fitted.

Boxing of all lead pipes; closets to confine mess-chests; steering-wheel to make and wheel-ropes to case; musket-rack and belt-pins for marines; halyard-racks, hose and hawser reels, complete; carpenter's work-bench and tool-chest; bureau, wash-stand, and toilet-rack for each state-room; spring bottom in each berth; sideboard and extension-table in wash-room; sideboard and extension-table in cabin; writing-table, book-case, sofa, settle and silver-ware chest in cabin; extension-table for warrant officers; extension-table for engineers; extension-table for midshipmen; hanging-tables for ship's cook; desk for paymaster, ship's writer, marine officer, and captain's clerk; mess, top, channel, boat, arm, and turpentine chests; water-closet and bath-room to finish in the cabin; bulk-heads of magazine and shell-room to be covered with iron; four oil-tanks to make: shell-room flood-cock; transom seat and cushions in after cabin; moldings over all cabin-windows; cornice around mizzen-mast in cabin; boarding-pike racks on mainmast; all door-sills to be covered with brass; cabin deck to be sheathed; new gratings and ladders to be made, (the present ones land in the hatch-cover below gratings made by the mile and sawed off as required;) gratings for bridle-ports; one composition hatch to be made and put in place; composition pin board and pins for mizzen-mast, and composition hawse sail for leaders; port shutters made and hung; breeching, side, and training bolts, all to be made; hatch bars, iron and copper; hawse, pipes, shutters, and plugs; hammock-hooks, to be made and put in; brass canopy rail to cabin and wardroom hatches, iron to all others; coal scuttles to be put in; sets ot boat davits, to be made and fitted complete; crutch stanchions for swinging-boom; iron-awning stanchion aft; iron cleats where required, ship's bells and fittings, breeching-bolt pins, running-light shades and stanchions; rabbeting for and making and hanging port shutters, brass and tack bumpkins, stanchions and sail around on poop and top-gallant forecastle, pin-rails and fair leads for head-sheets, awning-stanchions, fitted complete; cat-heads to be made and put in; bill-boards, life-buoy, one and one-half sets capstan-bars, chain-trippers, complete; making and stowing tank; making rigging-rack and putting up iron hangers for stowage in hold; making and putting in all necessary cleats, cavils, and mooring-chocks, wedging-masts, all the cooperage to make and paint with chocks for stowing casks; bolts for yard and stay-tackle fall; bolts for mast-rope leaders; eye-bolts for leaders for main top-mast and main gallant stay-sail sheets; bolt in check-knees for hooking cat backs; bolts for rudder pendant stops; bolts for wicker pumps, bolts for bowsprit shrouds and bobstay link, bolts for foreyard tackle, bolts for leaders for boat's falls, coats for masts and bowsprit armory to be fitted; chronometer-box for navigator; book-case in paymaster's room; tar-tank to be secured in hold, boat davit stretches, trailboards to be put in, shifting sail in pivot ports, engineer's store-room to be furnished, table and drawers for yeoman's room, mess-table for petty officers, ash-shutes to cut in side of vessel; cot-frames to make; spare and other oars, and boat-hooks; fitting for head-light; scuppers between magazine and passage in bulk-head; iron pipe to be cased in magazine; iron fastening in magazine to be cased up; rods in prison to confine prisoners, rollers in sail-room doors, lower rims to put in chain pipes.

for supplies furnished at United States navy-yard, at Washington, D. C., from December 1, 1875, *to March* 1, 1875.

KITTERY, ME., *March* 17, 1876.

T. D. WILSON sworn and examined.

By the CHAIRMAN:

Q. What is your profession?—A. I am a naval constructor of the United States.

Q. How long have you been in the service of the United States as naval constructor?—A. My commission is dated July 1, 1873.

Q. How long had you been assistant naval constructor before you were promoted to constructor?—A. Since May 17, 1866.

Q. How long have you been in the Government employ?—A. I have been in the Government employ from 1858 up to the present time.

Q. In what yards have you been on duty?—A. I have been on duty at the navy-yard at Pensacola, from Pensacola to Philadelphia, from Philadelphia to the naval school as instructor in naval architecture, from the Naval Academy to the Washington yard.

Q. How long have you been on duty in the Kittery yard?—A. Since June 13, 1874.

Q. Were you here during the building of any portion of the steamer Enterprise?—A. I was here at the launching of the vessel for the first time. The work under the second contract has since been commenced.

Q. In what capacity were you then serving?—A. Naval constructor of the yard.

Q. When did you make this yard your residence?—A. About four weeks after I reported here.

Q. Were you present when Mr. Hanscom came here to see about the contract for building that vessel?—A. I was not. I did not know anything about the yard until I arrived here, the day the Enterprise was launched. That is the first connection I had with the Enterprise.

Q. While you were here, do you know whether or not the facilities of the yard were given to Mr. Griffiths in carrying out his contract with the Government?—A. They were, as far as our means would permit. That is, when I speak of "means," I mean with the money that we had at our command.

Q. Did you have material all the time such as he wanted?—A. The material was always on hand, but a portion of the labor, which under the contract we were to furnish, could not be furnished at certain times, on account of other work. For instance, the Marion's work was going on. We gave them all the facilities we could for the time being, but we had orders from the Department to do the Marion's work by a certain date, which delayed the Enterprise's work a little.

Q. That was on the second contract?—A. It was.

Q. Was Mr. Griffiths, the old man, often absent from the work on that vessel?—A. Yes, sir; he was frequently absent for weeks at a time.

Q. Who was the foreman who attended to the business for him?—A. Wm. F. Noyes.

Q. Do you know of any alterations that were made in the original plans for the building of that vessel?—A. Yes, sir; the quarter-galleries were left off, for one thing.

Q. How much would it have cost if they had been put on?—A. I should say in the neighborhood of $1,100.

Q. Is that the only change that you know of? Was the galvanizing of the iron left off?—A. I can't say positively in relation to the galvanizing. I have understood that Mr. Griffiths was to do the galvanizing, and the Government did it for him.

Q. What was that worth?—A. Not being here at the time, and not knowing what was done, I cannot give you any estimate of it. I will ascertain what it cost from the office records. About $568.

Q. Did you sign any of the bills on the contract ship?—A. I did.

Q. By whose order?—A. By order of the chief naval constructor, Mr. Hanscom.

Q. How many of those bills did you sign?—A. The only bill that I signed on the first contract was the bill for extra work, which I did by order of Mr. Hanscom. (Copy furnished committee.)

Q. Were you consulted to know whether that extra work had been performed as claimed?—A. No, sir. The original of the bills for extra work was made and signed by Mr. Hanscom and he directed me to have the duplicate and triplicate made and sign them; he certified to me that the bills were correct in all respects. I signed, and so did the commandant on this assurance. An indorsement in red ink to this effect was put on the copy retained in the naval constructor's office. (See copy furnished committee.)

Q. Were you consulted to know whether any damage had been done to Mr. Griffiths by the Government?—A. No, sir.

Q. The bill was just handed to you and you were required to sign it?—A. Yes, sir. The certificate which I gave committee reads as follows:

"I hereby certify that the annexed bill is a true copy of the bill made in this office; that the indorsement in 'red' was placed on it by my order, at the time the bills were ordered made, as I knew nothing of any extra work being done, not being the constructor when the vessel was built. I signed the bill by direction of the chief naval constructor, after he had made and signed the original, at the navy-yard, Kittery, Maine; and I explained to the

commandant of the yard at the time that I knew nothing of any extra work, but made the bills according to order from Mr. Hanscom, and signed after him, the commandant signing after me.

"NAVY-YARD, ———, 187 .

"The public exigencies required the immediate services mentioned in this bill, and as there was not time to advertise for proposals, they were properly obtained by open purchase; and the same is approved for the sum of ——— dollars ——— cents.

"A. BRYSON,
"*Commandant.*"

Q. Did you make out the reservation-bill?—A. No, sir; Mr. Hichborn made the reservation-bill.

Q. Do you consider that the work was completed in accordance with the terms of the first contract?—A. It was not, in my opinion.

Q. What particulars can you mention?—A. Well, the heaviest items were the boat-davits, complete in all respects, galvanizing, quarter-galleries, and coppering.

Q. Did you funish any list of the items required to finish the work previous to the giving out of the $25,000 contract?—A. Yes, sir; I did. Mr. Hichborn was my assistant at the time.

Q. Was that submitted to Commodore Howell?—A. No, sir; that was submitted to Commodore Bryson, who was then commandant here, and by him furnished to the chief of the bureau, in obedience to the bureau's orders, dated September 21, 1874.

Q. Did Commodore Bryson write a letter to Mr. Hanscom, stating that the ship was not complete?—A. Commodore Howell was the one who wrote that letter. That was before she was launched. All the evidence I have in relation to that, was from conversation with naval constructor Hichborn.

Q. How much labor was required to finish the work, according to your estimate?—A. Forty-three thousand six hundred and forty-one dollars was required to finish the ship, complete in all respects, ready for sea, on that day, September 29, 1874.

Q. Do you know whether any deduction was made in favor of the Government for leaving off those quarter-galleries?—A. None, to my knowledge.

Q. What would it have cost to put on the quarter-galleries?—A. About $1,100.

Q. Who did the galvanizing for the Enterprise?—A. The Government, so I am informed.

Q. At about what cost?—A. Galvanizing work, about $568, as taken from office records.

Q. Was the Government compensated for it?—A. Not to my knowledge. There is work still remaining on the Enterprise, that will have to be changed, and it was so reported on the first contract.

Q. What work was that?—A. The ladders are made to land on the hatches instead of on the combings, and the gratings are not made as required by the inspector. And there is an item which is not mentioned in the constructor's estimate of work, which was afterward ascertained to be wrong. All of the berths in the state-rooms, in the ward-room will have to be taken out. They were not properly placed in there.

Q. What will be the cost of making all those changes?—A. If not done by the contractor and at his expense, it will cost the Government about $300.

Q. Did the Government furnish the material to launch the ship?—A. They did.

Q. To whom did the launching-ways belong, to the Government or to the contractor?—A. To the Government, but the Government had to make them a new set of bilge-ways to satisfy the contractor.

Q. Do you know whether the Government coppered the shoe of the vessel or not?—A. They did.

Q. What was that worth?—A. About $50.

Q. In your opinion, did the first contract cover the coppering of the ship on the part of the contractor?—A. I never read the first contract, and I cannot say. I should presume that it did. I should say that if the hull was to be completed, it did.* The contract reads: "and all other work necessary for the completion of the hull of said vessel, except blacksmith work, which is not included in this contract." I should say from an examination of the specifications that it did.

Q. Do you know at whose expense the vessel was afterward coppered?—A. I do, sir.

Q. Whose?—A. At the expense of the Government, under the terms of the $25,000 contract, excepting the bilge-keels, which were coppered by the naval constructor's men.

Q. If it was coppered under the second contract, the Government would have paid twice for the coppering of the vessel?—A. Exactly, sir.

Q. Do you know of any reason why that bill for extras should have been made out?—A. I do not, sir. The order to make it out being given me by the chief of the bureau, my superior officer, I complied with the order, and ordered the red-ink indorsement placed on my office-copy.

Q. Were you consulted in regard to it by Mr. Hanscom?—A. No, sir.

Q. Was any inspection of that vessel made by any officer of the Government required to make it, to see whether those extra charges were right or not?—A. Not to my knowledge.

Q. Do you know whether there was any examination made by any person to see whether any extra work was performed?—A. I do not. I only know that Mr. Hanscom stated it was correct.

Q. The first you knew of it was when Mr. Hanscom brought you the paper, already made out and signed by himself?—A. Yes, sir; and ordered me to make out duplicate and triplicate copies and sign them.

Q. Was it not the official duty of the inspector to have inspected that vessel and made his report before any of those extra charges should have been paid?—A. It was, and I presumed it had been done. I asked the question of Mr. Hanscom whether this bill was a correct one, and he signified to me that the bill was correct, and as evidence of that, that he had signed the bill, and wished me to make out the others. I was called away from the launch of the Essex to make those bills.

Q. If those bills had not been made out and the debt of the Government on that contract paid, it would have been your duty as constructor to have reported on the condition of the ship before they were paid, would it not?—A. I considered that the final payment and the reservation-bill having been made on that ship, per bureau's order of June 19, 1874, the duty of the superintendent on the part of the Government had ceased, so far as the first contract was concerned.

Q. But if that had not been done, would it not have been proper for you before that was done to have reported to your chief that the vessel was completed in accordance with the contract?—A. It would have been, had I been asked the question, and I presume the superintendent on the part of the Government, Mr. Webb or Mr. Hichborn, had they been asked, would have also made the same report, that the vessel was not complete in accordance with that first contract.

Q. Would not the proper way have been for Mr. Griffiths to have reported that his vessel was finished in accordance with the terms of his contract, and then for Mr. Hanscom to have ordered an examination to see whether that fact was true or not?—A. The proper way, in my opinion, to have proceeded in that matter would have been this: the vessel having been reported by the contractor as completed, the chief of the bureau should have communicated with the commandant of the yard, and he, with the naval constructor, requesting to be informed whether the contractor had completed his work in all respects, and whether anything remained to be done before the final payment and reservation-bill was made. The fact of that final payment and reservation-bill having been made by the direction of the bureau absolved the naval constructor from any further responsibility on the part of the Government.

Q. Were you called upon at any time by Mr. Hanscom to know if that bill was correct?—A. I was not.

Q. Do you know any reason why you were not consulted?—A. I do not.

Q. Were you not the proper person to have been inquired of to know whether that extra bill was correct or not?—A. I do not think I was. I think the inspectors of the vessel, Constructors Hichborn and Webb, were the proper persons. The responsible man was Mr. Webb, but Mr. Hichborn was the direct inspector under him.

Q. Is the inspector an officer of higher grade than the constructor?—A. No, sir; there was a constructor and assistant constructor stationed here during the building of the Enter-

* Contract was produced by the chairman.

prise. While the naval constructor superintended the work, the assistant naval constructor had the direct superintendence of it under his order. They were both Government inspectors on the vessel.

Q. You made an estimate of the labor and material required to complete that ship?—A. I did.

Q. Where is it?—A. You have been furnished with a copy of it by Mr. Hichborn.

Q. How much is it?—A. Total for material, $22,029; labor, $43,641; total, $65,670.

Q. That is, to complete her for sea?—A. Complete her ready for sea, in all respects, as far as the Bureau of Construction is concerned.

Q. Do you consider that a fair estimate?—A. I consider it a liberal estimate.

Q. Have you seen the second contract given to Mr. Griffiths to complete this ship?—A. I have.

Q. Are you familiar with the second contract?—A. I am.

Q. Is it your opinion that that contract bound Mr. Griffiths to complete that vessel in every respect for sea?—A. It did not.

Q. Were the spars included in it, according to your construction?—A. They were not.

Q. Is that the only exception that you now think of?—A. I can give you the whole of them.

Q. How did the quality of the work on the Enterprise compare with that on the Essex?—It was in favor of the Essex.

Q. Why was it better on the Essex?—A. No contract-work that ever I have seen done for the Government has been equal to that done by mechanics working by the day's work for the Government. The mechanics in the navy-yard are required to furnish the best work possible, and are not limited in the finish they put upon the work, while it is to the interest of the contractor to do as little as he possibly can, and make as much as he can out of the job.

Q. Do you know whether bilge-keels were placed on the Enterprise?—A. They were.

Q. Do you know why they were placed there?—A. They were placed there to carry out some pet idea of Mr. Griffiths.

Q. By whose order were they placed there?—A. Chief of the Bureau of Construction and Repair.

Q. Do you know what Mr. Griffiths received for launching that vessel?—A. I do.

Q. How much was it?—A. Two thousand dollars.

Q. In your opinion, does the completion of the hull of a vessel require it to be delivered in the water or on the stocks, according to that contract?—A. I cannot say "according to that contract," but I should say that a vessel, when completed, could not be delivered over to her owners until she was launched.

Q. That contract says "for the completion of the hull of the vessel."—A. I think there would be a chance for the contractor, according to the reading of that contract, to get out of it.

Q. What amount would it have cost the Government to launch the vessel, after having done what the Government did for the contractor?—A. She could have been launched for about $800.

Q. The Government received her in the water, did they?—A. The Government received her the moment she was placed in the water.

Q. Who placed the anchors and cables to stop her?—A. This work was done by the Government; so I am informed.

Q. Was the launching at the risk of the Government?—A. I cannot say; I think it was.

Q. What portion of her launching did Mr. Griffiths do?—A. I cannot answer. I reported for duty at Kittery the day the vessel was launched.

Q. Did the Government make all the launching wedges?—A. I am told they did.

Q. And sawed the material for blocking?—A. I am told they did.

Q. Did the contract-work on that vessel interfere with the Government work on the Essex?—A. I should say it did, very much.

Q. Do you know of any work which was done for the Essex that was furnished to the Enterprise?—A. I was told by the superintendent and foreman of the Government that they did so.

Q. Do you know by whose order it was done?—A. I do not.

Q. Do you know whether Constructor Webb was disposed to give all the facilities of the yard to Mr. Griffiths?—A. Knowing the gentleman as well as I do, I should say that he was.

Q. Have you been called on to inspect different articles received in the construction department?—A. I have, sir.

Q. Did you find the materials of good quality that you have been called on to inspect?—A. Sometimes good, sometimes bad.

Q. Have the articles that you have found bad been rejected by you?—A. They have.

Q. Have they ever been received in the yard after having been rejected by you, in other departments?—A. I cannot say. I do not think they have.

Q. You do not know of anything that the constructor's department has rejected that has been received in any of the other departments?—A. No, sir.

Q. How do the prices paid for lumber and other materials compare with outside prices here?—A. I have no means of ascertaining that. The prices as a general thing are either fixed by regulation, that is, for the knees, by the bureau, or else they are given to the lowest bidder by the purchasing paymaster.

Q. Has the live-oak delivered at this yard been suitable for ship purposes?—A. Yes, sir.

Q. Have you enough to build one ship now?—A. I should say there was almost if not quite enough of the kind required to build two vessels of the Benicia class complete, and portions of several other frames.

Q. What is your opinion of the bending-machine at Boston?—A. I think it is of very little use to the Government.

Q. What is your opinion as to the advantages or disadvantages that the contractor had over the Government in building that ship? Could the Government have done it as well and as cheaply as he did?—A. I think they could.

Q. Could they have done it cheaper and better?—A. I think they could.

Q. Do you know of any advertisements having been made for the second or third contracts?—A. I know of none.

Q. With whom were those contracts made?—John W. Griffiths.

Q. No proposals were invited from any other persons, as far as you know, for those contracts?—A. None that I know of.

Q. Do you know whether or not in all contests between the constructors here about that vessel with the contractor, the chief of the bureau decided with the contractor?—A. I have understood that he did in several cases; but Mr. Webb or Mr. Hichborn could answer that better.

Q. Do you know what is the relative price of lumber furnished here in this yard compared with the prices outside the yard?—A. I do not.

Q. Do you know whether they are higher or lower?—A. No, sir. I had nothing to do with the prices, they being fixed by the purchasing paymaster under the bids called for, or ordered in by the chief of the bureau at a fixed price. The live-oak received in this yard since I have been here was generally received at a fixed price.

Q. Do you know of any timber that has been received at this yard without having been required by requisition by these bureaus?—A. I don't recollect of any at the present time.

Q. Do you know of any material coming here that you did not know anything about until it came?—A. I do. There was a quantity of live-oak timber sent here by a contractor by the name of Swift.

Q. Where is it?—A. The greater portion of it is stored in the Franklin ship-house.

Q. Is it in your wet-docks or under cover?—A. A small portion of it is in the upper part of the wet-dock, and the remainder, the larger part, in the Franklin ship-house, under cover.

Q. Does the Government charge Mr. Swift any storage for his timber?—A. I do not know that it does.

Q. How many cargoes were there of it?—A. To the best of my knowledge, three.

Q. Has any of it ever been received by orders from the chief of the bureau?—A. None at all. It was ordered to be landed and taken care of.

Q. Do you know of any timber which came here in that way that the parties who landed it took away again?—A. There has been timber rejected which has been taken away from here since I have been here, and there is a small quantity of rejected timber now on the yard that has not been taken away.

Q. The Government has used none of this timber of Mr. Swift's?—A. None at all; it is in the Franklin ship-house and wet-dock, measured and marked in such a way that we know all about it. It cannot be used until received and paid for.

Q. Will not that timber be increasing in value all the time?—A. Certainly. The better seasoned, the more durable and valuable it becomes.

Q. Then, if that timber is required by the Government in the course of two or three years, will they not have to pay an additional price to get it?—A. I should not consent to pay any additional price without I was ordered. I know of no price having been fixed upon it yet.

Q. That would between the contractor and Mr. Hanscom?—A. That would be between the contractor and the department outside.

Q. It will certainly be more valuable?—A. It will be more valuable, beyond a doubt.

Q. The timber is thoroughly protected at the Government's expense?—A. Yes, sir; at the Government's expense. One thing I would like to say. That timber was stored at the expense of the contractor. It was unloaded from the vessel and transported to the ship-house at his expense.

Q. But further than that he has had no expense?—A. He has had no expense.

Q. I believe you have made an estimate of all the expense of the labor performed by the Government in the building of the Enterprise on the first contract; can you furnish us that now?—A. I can give it to you now, sir. Labor performed by the Government on the Enterprise previous to the second contract, $34,694.94.

Q. Now, can you give me the cost of the labor on the Essex up to the same stage of completion?—A. Not up to the same stage of completion, because the vessels were not completed alike in all respects.

Q. Can you not make an estimate from a point where the comparison would be exact?—A. I cannot do that, because, when the Essex left for Boston, she was not quite as near completed as the Enterprise, but a very large amount of finished and unfinished wood and iron work, also composition, was placed on board and sent with her; had this work all been finished and in place the vessel would have been, in my opinion, nearly, if not quite, as far advanced as the Enterprise.

Q. Can you show what the Essex cost up to the time she was sent to Boston for labor?—A. The cost for labor was $95,730.61, and on the Enterprise, $87,404.12.

Q. Are you allowed to select all your mechanics?—A. I am not, as a large number of men are ordered here by the bureau or Department.

Q. Why are these men sent by the bureau or Department? Do they not allow you to select your own men?—A. A large number of the men are sent here, as I stated before, while the men employed by the contractor are all selected workmen.

Q. Are the men all skillful mechanics who are sent here?—A. No, sir; not by any means.

Q. What is the main consideration in sending them here?—A. That I cannot say.

Q. It is not skill?—A. It is not, judging from the abilities of many of the men sent here.

Q. Do you know whether it is political considerations or not?—A. I should say it was. I will say this, that, could the constructor have the right to select his men the same as a contractor does, the Government work could be done a good deal better and much cheaper than any contractor can do it.

Q. If the Government would return to the ten-hour system and worked skilled workmen?—A. I think the eight-hour system is well enough, if the men are skillful mechanics and work faithfully eight hours. No contractor can do the Government work as well or as reasonable as it can be done in our navy-yards, where we have all the tools and appliances, and which on the Enterprise the contractor had the benefit of without any remuneration to the Government.

By Mr. JONES:

Q. The Essex left here before you came?—A. No, sir; I launched her.

Q. Do you not consider the Essex a better ship than the Enterprise?—A. Yes, sir; it is a better-built ship; a better-finished ship.

Q. How much more would you give for the Essex than for the Enterprise, if you were to buy her for the Government?—A. I would give as much for her when she left here as I would for the Enterprise.

Q. You consider that the Essex was worth more money to the Government than the Enterprise?—A. Yes, sir; when she left here.

Q. How much more?—A. I would give $5,000 more for the Essex, if I were to buy her for myself, in the condition in which she was when she left here, than I would for the Enterprise, on account of the better-finished work and better character in many respects.

Q. The way it was done?—A. Yes, sir; a contractor working on a contract job will put as little labor on his work in putting it together and finishing it as he possibly can, as he is desirous of making all the money he can out of the job; while the reputation of the naval constructor is at stake if he permits poor work to be done, and he requires of his employés the best work they are able to do.

By Mr. BURLEIGH:

Q. Will you state for what amount of money you would undertake to build the hull of a ship like the Enterprise, provided you could have the choice of men in all departments and have the same facilities in all respects that Mr. Griffiths has had and is guaranteed?—A. I would undertake and guarantee to do the work, *hull complete*, for $40,000, providing I was furnished with all the labor by the Government that has been furnished to Mr. Griffiths, and would give them a better-finished ship.

By the CHAIRMAN:

Q. Do you think that the contract made with Mr. Griffiths for $46,200 to build the hull of that ship, with what Mr. Hanscom relieved him from doing, was an extravagant price for what he did, or not?—A. Had the contract been fulfilled, as I think was the intention originally, it would not have been very extravagant.

Q. Then, as the contract was completed, or as the work was done, not in completion of the contract, but as it was done in pursuance of the orders of Mr. Hanscom, what is your judgment?—A. As it was done, with the facilities of the yard afforded by the Government, and the amount of work from which he was relieved, I consider it was an exorbitant price.

Q. Are any of those eight sloops of war that were authorized by the act of February, 1873, completed?—A. Yes, sir.

Q. What is your opinion of those that are completed?—A. I have no knowledge to base an answer on. I know the Huron and the Alert are completed; they are iron vessels.

Q. What is their estimate in the Navy?—A. I do not consider that they would rank very high as vessels of war.

Q. Do you know about these annual lettings; whether a small amount of such things as are required here on the yard are advertised for in your annual letting, or whether the whole

amount that is wanted is advertised for?—A. When we receive an order for making up our schedules for the fiscal year, we are generally allowed a certain sum of money. The schedule must not exceed that sum. Consequently, we ask for such articles as we deem most essential to the interests of the Government, basing what we ask for on the amount allowed by the bureau.

Q. And that is for the year?—A. For the year.

Q. How much of that is let out by annual lettings?—A. The whole of that is contracted for.

Q. By annual lettings or by open contract?—A. By annual lettings.

Q. The whole of it?—A. The whole of it. That is, they call for proposals, and bids are rendered and opened at the bureau, for such as the bureau approves of. The bureau does not always approve of what we ask for.

Q. Does not the bureau cut you down largely, and only let out by advertisement a small portion of what you ask for?—A. Sometimes articles that we have asked for in our annual estimates are stricken off and other articles placed in.

Q. Then are they not afterward supplied by open purchase?—A. If we have based our estimate upon the fact that we require those articles for doing the work during the fiscal year, and they are stricken off and other articles are placed in, then we are compelled to make an open-purchase requisition to cover them.

Q. The practice is what I am after. When you make an estimate here for your supplies for the year, and it is sent to the bureau, do they not cut down your estimates and only issue proposals for very small amounts?—A. I can only speak of one case, which, I think, occurred last year, when certain articles were stricken off and $50,000 cubic feet of live-oak added.

Q. Was that advertised for?—A. That was advertised for in place of such articles as we had asked for, but I understand was not awarded to any one. For instance, we might think that we needed machinery more than building-materials, and put in an item for machinery, and the bureau might strike out that item for machinery and put in something else. Then, if we wanted to use that machinery, we should have to buy it upon requisitions. There is no other way to get it.

Q. Is not a larger amount furnished in this yard by open purchase than by annual lettings?—A. I should say not.

Q. Do you know of any abuses of any kind in the naval service here or elsewhere that you can bring to our attention?—A. When a man is employed or sent here and is found to be deficient in mechanical skill, and is discharged on that account, I think it is wrong for the Department to send him back.

Q. Do they do those things?—A. It has been done.

Q. On what ground do they send him back?—A. They do not give us any reason for it.

Q. Do you know what their reason is?—A. I presume it is because his political friends have importuned the Department to do it.

Q. Do you know anything about the alleged abuse of taking on a large number of hands for political purposes just before election and discharging them after the election? Has such a practice prevailed to any extent since you have been on the yard?—A. I should answer that question in this way: that there have been instances where a larger amount of work has been ordered to be completed sooner, or hurried, and it was necessary to take on more men in order to comply with the order. Whether that was the intention of the Department I cannot say. The work was ordered and the men were necessary to do the work.

Q. Could not that work have been done just as well some months before election?—A. It could in many instances, and in others it could not.

Q. Does the Department at Washington order an extra amount of labor employed just before election, or are larger prices paid then, and are such laborers required to vote a particular ticket, or anything of that sort?—A. No more is paid for mechanical or other labor at or before election times than any other time. I have no knowledge as to how men are expected to vote.

Q. Have you any written communications from the Secretary of the Navy or chief of any bureau on the subject I have mentioned?—A. No, sir.

Q. Has the Secretary of the Navy or any chief of bureau at any time determined the number of men you must employ? Have they telegraphed or written to you to employ so many men in your bureau?—A. Not in my time, that I have any recollection of.

Q. Do you know that they have written to any bureau here to that effect?—A. I do not.

Q. Have they named the particular persons that you must employ?—A. Orders are frequently sent here naming persons to be employed.

Q. Do you know whether they ever set apart or transfer any funds for work to be done from one appropriation to another?—A. I do not.

Q. Have you been ordered to take back men that you have discharged for cause, and have you done so?—A. I have been ordered to take back a man named F. L. Marks, who had been discharged for cause, and discharged for causes which would involve a court of inquiry, and that court was held by order of the commandant of the yard, and under the direction of officers in the yard. He was discharged and afterward re-employed by commandant's order.

Q. Do you know of any officer or employé of the Navy who has given any consideration in money or property, or the representative of either, for any position or for any benefit to be derived?—A. I do not.

time has been spent at the Naval School; consequently I have not as much knowledge on that subject as some other constructors have had; but it has been done in one case since I have been stationed at this yard, as before cited.

Q. The old bills have been destroyed, and new ones made out?—A. Yes, sir.

Q. Dated forward, in the current year?—A. Yes, sir.

Q. Are the bills you are incurring now being paid, or are they held back for want of money?—A. I can't answer that question.

Q. Do you know how much money is to your credit in your bureau?—A. I have no means of knowing.

Q. When they set apart the money for your bureau, whom do they inform of it; the purchasing-paymaster?—A. There is no one informed. When there is a sufficient amount of money to meet all the requirements of the service, no special allôtment is made for each month; but when the funds have run short, they have frequently called upon us to know how much money would we require to do the work then ordered for that month. That estimate is made and submitted to the paymaster, and a requisition made for it. If the bureau sees fit to approve of it, they so notify him, and he draws for the money. Frequently we are bound down by the bureau to a certain sum, not to be exceeded during the month.

Q. Do you owe any debts now in your bureau?—A. I can't answer that question.

Q. How long will it be before the Essex and Enterprise will be ready to go to sea?—A. I can only speak of the Enterprise. If I was allowed sufficient money to give the contractors the amount of work they require to complete their ship under the specifications, and to do the work I shall be obliged to do on the part of the Government, the ship could be got ready for sea in two months; working as they are now, it will not be ready in six months. Although not entirely completed, the engine and boilers are in the ship. They were built at Hartford, by Woodruff & Beach; they have since failed, and now the thing is in the hands of their assignees.

Q. Could you not have built them as well here?—A. I think that question could be answered more satisfactorily by the chief engineer of the yard.

Q. Why were they not built here?—A. I cannot say why they were not built here.

Q. Do you know anything about the breaking up of the Virginia at Boston?—A. Nothing more than that a portion of her has been broken up.

Q. Do you know anything about the sale of gun-carriages at the Boston navy-yard?—A. I do not.

Q. Was there any advertisement, or competition in any way, invited for the completion of the Enterprise?—A. None to my knowledge.

Q. Was there any competition invited in any way for the building of the spars?—A. None to my knowledge.

Q. Look at the paper which I hand to you, submitted by the constructor at the Kittery navy-yard, embracing the things necessary to be done, and tell me, from them, the cost thereof to complete the Enterprise?—A. The total cost is, for material, $22,029; and for labor, $43,641; making a total of $65,670.

Q. In either instance, the Government completing the vessel or the contractor completing the vessel, the material would be furnished by the Government, would it not?—A. In either case

Q. Then the contract with Mr. Griffiths is for what comes under the technical term of "labor?"—A. Yes, sir.

KITTERY, ME., *March* 18, 1876.

Constructor T. D. WILSON recalled.

By the CHAIRMAN.

Question. Look back to a lot of iron rejected by "Yards and Docks" and afterward purchased, in accordance with the orders of the Bureau of Construction, of David Babcock & Co., of New York. How much does it amount to?—A. That was rejected by "Yards and Docks" as not coming up to their schedule, as they called for Norway iron, while it was good English iron, and well worth the price paid for it by Bureau of Construction, $5,826.35, and was required for use.

Q. Did you make an estimate of the amount necessary to complete the Enterprise ready for sea after Mr. Griffiths' first contract?—A. I did; that was the one you alluded to before you asked about this iron of Babcock & Co.

Q. How much was that estimate?—A. I shall have to ask you to say whether you mean for labor or material.

Q. For labor.—A. For labor it was $43,641.

Q. How much has been or is to be, by the terms of those two contracts, paid to Mr. Griffiths on his second and third contracts, on that estimate?—A. $31,500. That is what he is to be paid.

Q. How much is then is left for the Government to do to complete that vessel ready

for sea, after the payment to Mr. Griffiths of the $31,500 shall have been completed?—A. $21,883.

Q. Adding what the Government pays Mr. Griffiths in his second and third contracts, with the amount required to be performed by the Government to complete the Enterprise ready for sea, what is the total to be expended by the Government to complete that vessel ready for sea?—A. $56,383.

Q. How much greater is that amount than your estimates for her completion by the Government after Mr. Griffiths' first contract?—A. $12,742.

Q. Will the Government have to expend that much more to complete the vessel for sea by reason of the contracts with Mr. Griffiths than she would have done if she had done the work herself?—A. She will.

Q. How much of the work embraced in Mr. Griffiths' second contract ought to have been done by him in his first contract?—A. About two-thirds, in my opinion. That is, two-thirds of $18,758, that it was estimated this work would cost the Government to do it. It is about $12,500.

Q. What was the estimated cost of doing the same work by the Government that was contracted to Mr. Griffiths in his second contract of $25,000?—A. $18,758.

Q. How much was the cost to the Government of both labor and material for building the Essex up to the time of her removal to the Boston navy-yard?—A. For labor, $95,730.61; for material, $86,997.95—total, $182,728.56.

Q. How much money has been expended by the Government and by Mr. Griffiths on the Enterprise to the present time, in labor?—A. Paid and to be paid in contract and bills to Mr. Griffiths, $83,700 on the Enterprise; labor by Government employés to March, 1876, $47,190.35, to assist in completing the vessel.

Q. What amount of labor on the part of the Government yet remains to be done before the vessel is completed for sea?—A. A very large amount; but I cannot state accurately.

Q. Can a perfect statement of the cost of each of those ships, the Enterprise and the Essex, be now made?—A. It cannot.

Q. When, then, can that be done?—A. When they are complete in all respects for sea.

Q. Do you mean when there is no more work to be done on the vessels?—A. Yes, sir; that would cover it, when they are complete in all respects and ready for sea.

Q. Has any contract been made with Mr. Griffiths to build the spars of the Enterprise? If so, what?—A. Yes; a contract for $6.500.

Q. Will you please attach a copy of the contract to your testimony?—A. I will furnish a copy. (Copy attached.)

Q. After said contracts was the commandant ordered by Mr. Hanscom to put in operation a saw-mill, or other machinery necessary to facilitate the work on the same?—A. He was by order of the bureau, dated October 4, 1875. In order to carry out that order it was necessary to take on an engineer and fireman and the necessary operatives to run the mill.

Q. Could you give an estimate of the cost of all that?—A. I could give you the actual cost of it in a day or two, about $61.56.

Q. At what cost was that supplied?—A. I will furnish a statement of that cost: $61.56.

Q. Was Mr. Griffiths relieved from any part of that contract by order of Chief Constructor Hanscom?—A. He was.

Q. Of what portion was he relieved?—A. Block-makers' work, shelving of the spars.

Q. Did you consider that the work he was relieved from belonged properly to his contract?—A. I did, and so stated to Mr. Griffiths.

Q. What do you estimate the cost of that work to be of which he was relieved by Mr. Hanscom?—A. I should say about $50.

Q. Did you require Mr. Griffiths to do that work before you were ordered by Chief Constructor Hanscom that he was not required by his contract to do it?—A. I told Mr Griffiths verbally in my office that I considered that it was part and parcel of his contract. He objected to doing it, and stated that he would refer it to Mr. Hanscom, and subsequent to that an order was received relieving him from it.

By Mr. JONES:

Q. After you made the estimate to complete the Enterprise, did you add any per cent. to your estimate?—A. We never make an estimate without adding a percentage for contingencies.

Q. In your estimate of expenditures, do you consider that it was sufficient to cover all expenses?—A. I do.

Q. Can you give us a statement of the amount of material that was carried away on the steamer Essex to the Charlestown navy-yard? Was that material to be used in the completion of the vessel or the construction of the vessel?—A. It was. It was in a partially-finished condition.

(Copy of schedule of materials sent with Essex to Boston attached.)

Q. With the machinery now in the Enterprise, what speed will she make?—A. With the engine she has and six bilge-keels on the vessel, I believe she will never make more than 8 knots. Take off the bilge-keels and she will make 10 or 11.

NAVY-YARD, PORTSMOUTH, N. H., *October* 29, 1874.

Invoice of articles shipped by Theodore D. Wilson, Naval Constructor, United States Navy, on board the United States steamer Essex, bound for navy-yard, Boston, and consigned to the commandant there.

Fore and main:

34 chain heads; 34 bottoms of chains; 16 channel stay heads; 16 bottom stays; 16 arms for stays; 4 heads for topgallant back-stays; 4 buttons for topgallant back-stays;

Mizzen:

10 chain heads; 10 bottoms for chains; 4 channel stay heads and 4 arms; 4 bottoms for ame; 44 ring-bolts for chain and channel stays; 72 chain and preventer bolts.

Fore, main, and mizzen:

54 staples and plates for chain and channel stays; 44 preventer plates; 20 knees for channels; 38 double-eye bolts; 38 train tackle-eye bolts; 207 hammock hooks; 80 port hooks and 80 eyes for same; 95 ring-bolts for ports and 2 large stanchions; 43 stanchion feet for poop and forecastle decks; 22 hatch rings; 225 rivets for hammock stanchions; 2 bolts and huts for bobstay plates; 1 clasp and 2 eyes for flying-jib boom; 2 pump standards, straps and keys; 2 pump brakes with keys complete; 6 pump connections; 21 breeching-bolts; 158 eye-bolts; 25 ring-bolts; 54 bolts for channel stay arms, for main and mizzen; 4 water-closets; 2 water-closet bends; 13 port-light linings; 8 sea-cock couplings; 21 port-light drips; — channels complete; 2 pieces bow chocks; between-deck stanchions, partly done; fife rail and stanchions, partly done; pin rail, partly done; bowsprit, finished; jib-boom, unfinished; jib-boom, flying, unfinished; 52 sections for ward-room and steerage, completed except putting in banisters, (which are shipped in box;) all cabin sections partially completed; plank for cabin and wardroom cornice, partially worked; 3,500 feet 1⅛ inch bulk-head plank, finished; 3,000 feet 1¾ inch bulk-head plank, finished; 250 feet hammock rail sheath boards, finished; 15 pieces G. cleats, finished; 22 oak stanchions, finished; head and gangway boards, finished; 1 sky-light, finished, except glazing; 1 sky-light, unfinished; poles with ward-room, steerage and cabin sections marked; plan board of wardroom, steerage, and cabin cornice; 4 sets main pump boxes; 6 pieces main pump pipe; 4 bulk-head gates; 1 brass bitt; 4 bitt heads; 20 pieces for main pumps; 6 stanchions for sky-light; 6 corner pieces for bitts; 20 corner pieces for channels; 8 stanchion lockets; 2 caps for bitt-heads; 16 pieces for shifting rail; 2 ventilators; 1 force-pump; 2 cast-iron bitts; 1 set forgings for pump; 3 slide bolts; 2 magazine overflows; 2 deck pipes; 2 pipe covers; 28 brass bolts; 1 belaying-pin.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, September 27, 1875.

SIR: Your letter of the 23d instant, in reply to the bureau's letter of the 30th ultimo, has been received, and your offer therein made to make and fit complete the spars of the United States ship Enterprise, now at the Portsmouth yard, for the sum of six thousand five hundred dollars, ($6,500,) the work to be done by you to include all spar-makers', blacksmiths', iron-platers', and painters' work required, and to be to the entire satisfaction of the bureau, is hereby accepted.

The iron and other materials required for doing the work will be furnished by the Government, as needed, and the usual facilities of the yard allowed you.

Payments will be made as the work progresses, upon bills in triplicate, approved by the commandant of the Portsmouth yard.

Respectfully, your obedient servant,

I. HANSCOM,
Chief of Bureau.

JOHN W. GRIFFITHS, Esq.,
Portsmouth, N. H.

KITTERY, ME., *March* 17, 1876.

PHILIP HICHBORN sworn and examined.

By the CHAIRMAN:

Question. What is your occupation?—Answer. I am naval constructor in the United States Navy.

Q. How long have you been in the employ of the Government?—A. Since I was sixteen years of age—twenty-one years.

Q. Were you in the service of the Government before you were naval constructor?—A. Yes, sir.

Q. In what position?—A. I served my time with the Government as an apprentice.

Q. Did you hold the position of assistant naval constructor before you were appointed constructor?—A. Yes, sir.

Q. How long were you in that position?—A. I was six years as assistant constructor.

Q. At what yards have you been located in your official capacity?—A. I have been at the Boston navy-yard, Mare Island navy-yard, Kittery navy-yard, League Island navy-yard.

Q. How long were you at the Kittery navy-yard?—A. Nearly six years.

Q. During the time while you were here was the hull of the Enterprise sloop-of-war undertaken to be built?—A. Yes, sir.

The CHIRMAN. During that time the following act was passed:

"AN ACT to authorize the construction of eight steam vessels of war, and for other purposes.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the Secretary of the Navy be authorized to construct eight steam vessels of war, with auxiliary sail-power, and of such class or classes as, in his judgment, will best subserve the demands of the service, each carrying six or more guns of large caliber; the hulls to be built of iron or wood, as the Secretary may determine: *Provided*, That the aggregate tonnage of the whole number shall not exceed eight thousand tons, and that the cost of building the same shall not exceed three million two hundred thousand dollars: *And provided*, That four of said vessels shall be built in whole or in part, in private yards, upon contract with the lowest responsible bidder therefor, upon public competition and proposals, due notice thereof being given by advertisement, upon models, specifications, and drawings furnished by the Navy Department and under its direction and supervision, if, upon full examination and consideration the same shall be deemed practicable by the Secretary of the Navy; or the hulls of any portion of said vessels may be built upon private contract in the Government yards upon like proposals, models, specifications, drawings, and supervision, and upon like examination and consideration, the Government in either case furnishing such materials as may be deemed practicable by the Secretary of the Navy.

"SEC. 2. That neither of said vessels shall be commenced until full and complete models, specifications, and drawings shall be made for its construction in all its parts. And after such models and drawings are approved by the proper authority they shall not be changed in any respect when the cost will exceed one hundred dollars, except upon the recommendation of a board of survey composed of not less than five officers of the Navy, and approved by the Secretary of the Navy; and if changes are thus made, the actual cost of and damage caused by such change shall be estimated by such board of survey; and the terms of the contract shall provide that the contractors shall be bound by the estimate of said board as to the amount of increased or diminished compensation they are to receive, if any, in consequence of any such changes.

"Approved February 10, 1873."

Proposals for building sloop of war at Kittery navy-yard.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
July 30, 1873.

Proposals will be received at this bureau until 12 o'clock m., on the 1st day of September next, from builders or mechanics qualified to do the work, for the raising, framing, and ribboning, planking from keel to rail, ceiling, including keelsons, clamps, spirketting, and battery, to rail, putting in decks, including all bitts, &c., putting on main and hammock rails, channels and chains, building store-rooms, magazines, and lockers, joiner-work inside and out, calking and scraping, building quarter-galleries and setting head, and painting complete of a sloop of war of about 640 tons. The materials, tools, and facilities for doing the work will be furnished by the Government. The Chief of the Bureau of Construction and Repair will be at the Kittery navy-yard on Wednesday, the 20th of August next, and, in connection with the naval constructor of that yard, will meet persons desiring to make proposals for the work above mentioned, and will give all necessary explanations concerning the work to be done, and in regard to the character of the materials, tools, and facilities to be furnished by the Government. Plans and specifications may be seen and examined by applying to the commandant of the Kittery navy-yard after August 1, 1873.

Q. Before the work was begun on the Enterprise, were complete models, specifications, and drawings made of its construction, in all its parts by the Navy Department?—A. I have not the means of knowing that, sir. Portions of the plans were sent here.

By Mr. BURLEIGH:

Q. Is there anything unreasonable or impracticable in that law relating to contracting for the building of such vessels?—A. Not that I know of.

Q. Does not that law allow large discretion to the Secretary of the Navy, and leave him to build such ships as in his judgment are required at the present day?—A. I should say it did.

Q. In wooden vessels is not speed, with such long-range guns as a vessel will carry, to be desired, and are such vessels of war what the country believes we require?—A. I consider those two important elements.

By the CHAIRMAN:

Q. When did you come to Kittery?—A. I came here in June, 1870.

Q. When did you leave here?—A. I left here in November, 1875.

Q. Were you present when Mr. Hanscom came here to meet the ship-builders who were likely to bid for the building of those vessels which it was proposed to build here?—A. Yes, sir.

Q. While he was here on the yard, was the Secretary of the Navy with him?—A. Not to my knowledge.

Q. Was Mr. Griffiths with him?—A. Yes, sir.

Q. Who was here to receive information from him; who met him here?—A. Mr. Fernald, a ship-builder in Portsmouth, Mr. McMichael, and Mr. Griffiths.

Q. How long did Mr. Hanscom remain in the yard?—A. I judge about three hours.

Q. Who was he with when he was here, mostly?—A. Most of the time he was with Mr. Trickey.

Q. He wasn't a ship-builder, was he?—A. No, sir.

Q. What led him to his society, when he came here to confer with ship-builders?—A. I don't know, sir.

Q. With whom did you last see him on that occasion?—A. Mr. Trickey.

Q. At what time were you appointed inspector of the Enterprise?—A. I was officially appointed December 24, 1873.

Q. The contract is dated September 18, 1873.—A. During the interval I had more or less business in the ship all the time.

Q. At what time did Mr. Griffiths commence building the hull of that ship under his contract?—A. I should judge it was about October, 1873.

Q. Were he furnished with material by the Government all the time as he wanted it?—A. To the best of my knowledge he was.

Q. Were there any delays occasioned to him or his hands by reason of the Government not having the necessary material to work up into the ship?—A. Only those delays that naturally occur in any work. You sometimes find that you want a thing which you don't have at hand, and you have to hunt it up.

Q. It was in the yard, was it not?—A. I think at one time we ran short of the proper size of copper.

Q. Did he notify you that he would want that before the time when he wanted to use it, and did you have it here on the ground by the time he found it necessary?—A. He didn't notify me. He might have notified the constructor. I was assistant constructor, and in any business transactions he went more particularly to the constructor than to me.

Q. That was Mr. Webb?—A. Yes, sir.

Q. Do you know of his discharging any hands or stopping his work during any of these temporary delays?—A. No, sir.

Q. They were all here at work all the time?—A. Yes, sir; I have to judge of that from observation. I didn't keep the time.

Q. How do you account for the difference in the cost of the material used in the Essex and the Enterprise?—A. There are several reasons. One would be the improper use of material by the contractors, the waste of material so to speak. Another would be that the Government economized in the selection of material, having used material that was taken from another ship. The Illinois was torn to pieces in that same house, and the beams, knees, and such articles were carefully saved for the purpose, and under orders from the bureau to be used a second time, and Mr. Webb instructed me in tearing the old ship to pieces to save those things so that they might be used again. They were carefully taken down, and instead of sawing them and destroying them, they were put one side in one of the timber-sheds, and saved for that purpose.

Q. In working up the material that the Government furnished Mr. Griffiths he was not as careful as the Government was with its own material, was he?—A. No, sir.

Q. Did he have the selection of the best material for his ship?—A. He had the best there was in this yard.

Q. In case of any collision between the interests of the Government in carrying on the work here and his interests, wasn't the preference always given to Mr. Griffiths?—A. Always. Mr. Webb so instructed me repeatedly.

Q. How do you account for the difference in the cost of building those vessels?—A. I have no knowledge that there is *any* difference in the cost.

Q. You don't know that there is any difference between them?—A. I gave you an opinion that I don't think there is *any* great difference.

Q. In the cost of labor?—A. No, sir.

Q. Were the facilities of the yard given to the contractor in accordance with the terms of that contract in building the hull of that vessel?—A. To the best of my knowledge, they were.

Q. You are familiar with Mr. Griffiths' contract, have seen it and read it?—A. I have read it.

Q. Was he a competent man and qualified to do that work?—A. I should say he was competent enough to do that work.

Q. Did you assist him any way about the work?—A. Not Mr. Griffiths in particular. I did his foreman.

Q. I mean did you assist him or those working for him?—A. Yes, sir.

Q. Did Mr. Griffiths superintend his work, or did some body else do it?—A. Mr. Hallenbeck, his foreman, superintended the work.

Q. Was Mr. Griffiths on the yard all the time, or here frequently or unfrequently, or constantly?—A. He was not here constantly.

Q. Mr. Hallenbeck was here all the time?—A. Mr. Hallenbeck was here all the time, and our dealings were principally with Mr. Hallenbeck.

Q. With whom did you consult principally about the work, Mr. Griffiths or Mr. Hallenbeck?—A. Mr. Hallenbeck.

Q. Is he living or dead?—A. I understand he is dead.

Q. Was Mr. Griffiths often absent from the work?—A. Yes, sir.

Q. What alterations were made in the original plans for doing that work?—A. There were two or three alterations made.

Q. What were they?—A. One was an alteration of a hatch on the berth-deck of the ship; another was an alteration in the arrangement of the rooms on the berth-deck; another was an alteration on the forecastle-deck. That is all that I remember just now.

Q. Were any of those alterations to the advantage of Mr. Griffiths, or otherwise?—A. One of them was to his advantage.

Q. How much to his advantage in money, do you think?—A. I shall have to speak from memory—say $90.

Q. How much were the other alterations to the advantage of the Government, if they were?—A. I put them down in my book at the time. The forecastle-deck clamps were to the expense of Mr. Griffiths, $35. Alteration made in the fireman's hatch, on the berth-deck, $30; that was the actual expense. I kept the run of the men who were doing the work; the material we furnished; that was no expense to him.

Q. So that, on the whole, the alterations resulted to his advantage?—A. Yes, sir.

Q. Do you know whether he put on the quarter-galleries or not?—A. He did not.

Q. What would it have cost him to have put on those quarter-galleries?—A. I will have to approximate it as nearly as I can—$1,200 to finish them complete, the work that was required of him by the contract.

Q. Then there was the galvanizing of the wrought and cast iron. He contracts to do all the practicable galvanizing of wrought or cast iron; was that done by him?—A. That was done by the Government.

Q. It was not done by Mr. Griffiths?—A. No, sir.

Q. What would it have cost him to have done that?—A. These things I will have to give from memory, as nearly as I can.

Q. Did not the Government have this labor charged?—A. I think there is an account of that in the constructor's office. I believe there is a bill made out for that.

Q. About what is it?—A. It wouldn't be far from $900.

Q. Now, is there anything else in this contract that you know of that Mr. Griffiths didn't perform according to his stipulations?—A. Yes, sir; there are a number of things. In the building of the Enterprise there were constantly arguments arising between the contractor, myself, and the naval constructor as to what work he was to do; he claiming that he was not to do certain things. In consultation with the constructor and on referring to the contract, we decided that he was to do those things—that the contract read so. Many times Mr. Webb, the constructor, went up and conferred with the commandant of the station, Commodore Howell. They would read over the contract together, and they would decide that the contractor had those things to do, but he failed to do them, and there was a large amount of work remained undone, and Mr. Webb gave me an order to make out a list of such things as I thought the contractor ought to do, keeping in view the contract all the time, and he said that he would do the same thing. He made out his list and I made out mine. We compared them together, and there was very little difference; but upon the final settlement we both agreed on a list of things that the contractor should do, as he understood the contract, and as I understood it. He said that he understood that Mr. Hanscom was to be here in a few days, and we would refer this matter to Mr. Hanscom and get his decision upon it. The list was shown to Mr. Hanscom, and what his decision as to the list was I don't know exactly, but I know that afterward Mr. Griffiths prepared a list, and had a conversation with Mr. Hanscom with regard to it, and Mr. Hanscom marked on that list what Mr. Griffiths

was to do and what the Government was to do. Mr. Webb informed me that that was the chief's (Mr. Hanscom's) decision, and I took it down in my book, which I have here. Some of the things that we decided should be done by the contractor, Mr. Hanscom decided that it belonged to the Government to do.

Q. Now, will you give the list of things that you and Mr. Webb agreed the contractor should do to complete his contract?—A. The quarter-galleries were left off, that is, neither the contractor nor the Government was to do anything about them. Mr. Hanscom decided that no quarter-galleries were to be put on by the Government or the contractor either. They were to be left off the vessel. Cut-water by the contractor, carving by the Government.

By Mr. BURLEIGH:

Q. Does that cover any moldings?—A. No, sir.

By the CHAIRMAN:

Q. Won't you give us the list of the work which you and the constructor agreed that the contractor ought to do according to his contract?

A. Quarter-galleries, cut-water, carving aft stern-posts, shoe and rudder, mizzen-mast stop, engine-kelson, stanchions, iron stanchions, iron coaming, oak chocks on poop and forecastle-decks, capstan and fittings, chain-pipe stoppers, top-sail sheet-bits, towing-bits, cat-heads, castings on stem, channel-stays, chains, mooring-shackles, fore and main pumps, scuppers, port-shutters, hammock-rails and nettings, hawse-pipes, stanchions on forecastle and poop, sea-steps, ladders and gratings, scuttles for coal, coppering and shoe, air-ports, ventilating-pipes, steering-wheel, magazine and shell-room, hammock-hook, sail and bread-rooms, ring and eye bolts in chain lockers, galley-platform, water-closets, canopies over hatches, shot-racks, spar-frame, swinging-boom, irons on channels, iron stanchions, boat davits and fittings, scupper-blocks and chain chocks, warping chocks for bridle-ports, plumber's work, joiner-work, painting, ventilators under main-rail, cleats for mess-chests on berth-decks, rods for clothes-bags, iron on bulkhead of magazines and shell-rooms, gun-tackle and breeching-bolts, train-tackle bolts, torpedo-fittings, chain-chocks, chocks on main-rai for boats, hold fitted for hawsers and gear, reels for hose and hawsers, gang-ways to be covered with brass, channel-chests, bumpkins for main-brace, side-chocks to sheave leaded and fit, cavils and cleets, chocks to holes for tiller-ropes, eye-bolts and Lewis-bolts, eye-bolts for head-sheets, eye-bolts for tacks and studding-sail gear, boom-crutch for anchor-boom, bill-boards and fittings, iron warping-chocks, eye-bolts outside for sheet-chain, wood-work for coal-bunkers, capstan and anchor-bars, life-buoys, light-boxes, hatch-bar, wood and iron, deck-lights and ventilators, boat-chocks, pin-rail for head-sheets, tin over the galley, ash-shoot, bowsprit hole to be cut and leaded, rollers against bowsprit bits for chain, castings for Jacob's ladders.

Q. I understand that those articles Mr. Griffiths insisted were not embraced in his contract?—A. No, sir; he didn't insist that all of those were not in his contract. That was what remained, in our opinion, for him to do. That was what we claimed he ought to do, and there was a difference of opinion, and we made out the list. The following items Mr. Webb informed me that Mr. Hanscom had decided that Mr. Griffiths was not bound to do under the contract: Carving, capstan and fittings, fife-rails, pin-rails, coppering steering-wheel, canopies over hatches, shot-racks, spar-frame, awning-stanchions, cleets for mess-chests on berth-decks, rods for clothes-bags, torpedo-fittings, chain-chocks, chocks on main-rail for boats, hole fitted for hawser and gear, reels for hose and hawsers, channel-chests, chocks for tiller-ropes, eye-bolts for head-sheets, tacks and studding-sail gear, boom-crutch for anchor-boom, eye-bolts outside for sheet-chains, capstan, and anchor-bars, life-buoys, light-boxes, rollers against bowsprit bits for chains.

Q. Mr. Hanscom decided that certain things Mr. Griffiths was to do, and certain things he was not bound to do. Did he do what Mr. Hanscom decided he must do under the first contract?—A. No, sir.

Q. Give us the items that he didn't do that Mr. Hanscom decided he was to do.—A. Small stanchions, iron stanchions in the hold of the ship, chain-pipe stoppers, catheads, main and fore pumps, port-shutters, stanchions on forecastle and poop, scuttles for coal, swinging-boom, iron on channels, boat davits and fittings, scupper-plugs and chain chocks, two-tenths of the plumber-work, three-tenths of the joiner-work, one-tenth of the painting, iron on bulkheads, magazines and shell-rooms, gun-tackle and breeching-bolts, train-tackle bolts, gangways to be covered with brass, bumpkins for main-braces, cavils and cleets, eye-bolts and Lewis-bolts, bill-boards and fittings, iron warping-chocks, wood-work for coal bunkers, ash-shoots, and many other small jobs.

Q. Now, will you give us what the cost of that labor would have been if it had been performed?—A. I can only give an approximate estimate—$2,500.

Q. What would it have cost him to have complied with his contract?—A. As in the other case, I can only approximate. I should say $5,800.

Q. Take Mr. Griffith's contract, and give us, if you can, an approximate estimate of the value of the exemptions made in the contractor's favor by the chief of bureau.—A. I should say about $6,000. I prefer to speak within bounds all the time.

By Mr. BURLEIGH:

Q. What did you make up your mind would be the value of putting the copper on her?—A. I think it could be put on for about five or six hundred dollars. I think there is no doubt about that.

By the CHAIRMAN:

Q. Did you sign any bills on that contract-ship?—A. I did.

Q. Did you sign all of them?—A. No, sir; I signed four of them; I signed the seventh payment, the seventeenth payment, the reservation-bill, and the launching-bill.

Q. By whose order did you sign those?—A. By order of the commandant of the yard.

Q. Do you know whether there was an order from the chief to him to have those bills signed?—A. Yes, sir; he sent it down to me.

Q. Mr. Hanscom had ordered him to have them signed?—A. Yes, sir.

Q. Did the Secretary's name appear on those papers?—A. I never saw the Secretary's name on them.

Q. Did you ever see the Secretary on the yard?—A. O, yes. sir.

Q. Was he here when Mr. Hanscom first came here?—A. That I can't say.

Q. Was he here with Mr. Griffiths at any time?—A. Not to my knowledge.

Q. Was he here several times during the building of that ship?—A. He was here during the time the ship was building, but whether it was several times or not, I can't say.

Q. You never saw him here in company with Mr. Griffiths?—A. No, sir; I saw him here socially. I would see him with the commodore.

Q. You wouldn't have signed those bills because the contract was not completed unless you had been ordered to do so, would you?—A. No, sir.

Q. Did you furnish the list you have been talking about here, which you and Mr. Webb agreed upon, to Mr. Griffiths?—A. I don't know that I furnished it to him. I furnished it to Commodore Howell.

Q. Did Commodore Howell make any report of it to anybody?—A. He wrote a letter to the Department, and read it to me.

Q. Did he indorse your views about it?—A. Yes, sir; and added more to it, he said, from his own observation.

Q. Was that a private or an official letter?—A. That I can't say, sir. It was written off-hand.

Q. Did you understand that that contract required Mr. Griffiths to deliver that vessel in the water?—A. Yes, sir.

Q. Is it not the universal custom among ship-builders to deliver their vessels overboard?—A. That is as I understand it.

Q. Did you ever know a ship-builder to deliver his vessel to a person on the blocks?—A. I am not familiar with outside work. I can't say about that. I have been entirely in the employ of the Government the most of my life.

Q. Was it according to your interpretation of the contract, and that of Mr. Webb, that the vessel ought to have been delivered in the water?—A. I think we both understood it so.

Q. Then the $2,000 that was paid for launching the ship was $2,000 more than he ought to have been paid under the contract?—A. Yes, sir; I should say so.

Q. Who put the ways under her?—A. The Government hauled them under with the cattle.

Q. You got out new ways, didn't you?—A. The upper ways were made new.

Q. And the hands around the yard assisted in that work?—A. Yes, sir.

Q Now, after all that was done, how much more would it have cost the Government to have launched that vessel?—A. About eight hundred dollars.

By Mr. BURLEIGH:

Q. Do you think that the services of Mr. Griffiths and his men in launching that vessel were worth $800 outside of what the Government did?—A. I can't tell exactly how high a price he paid his men, or how many he had there.

Q. He didn't have more than 15 or 20, did he?—A. He would have to have a few more than that.

Q. Could he have spent more than three hundred days' work on launching that ship?—A. If you put the question to me if I think that he spent three hundred days on that work, I don't think he did.

Q. Did it take twenty-five men twelve days to get ready for launching?—A. I don't think it did.

By the CHAIRMAN:

Q. Mr. Griffiths has rendered a bill for extra work as follows: "Extra engine kelson, $225;" do you know anything about such a thing as that? Was that extra work?—A. No, sir; it isn't extra work.

Q. "Damages to planks, $250;" do you know anything about any such thing as that? Did the Government damage his planks $250 worth?—A. He had no plank there.

Q. Therefore that is not a proper charge he has made there?—A. No, sir.

Q. "Extra molding outside, $150;" is that a proper charge?—A. No, sir.

Q. Then he brings a charge for thirteen days' demurrage, at $35 a day, $455; is that a proper charge?—A. No, sir.

Q. "Seventeen days' demurrage at $35 per day, $595;" is that a proper charge?—A. No, sir.

Q. "Forty-six days' demurrage, at $35 per day, $1,610;" is that a proper charge?—A. No, sir.

Q. "Seven days' demurrage, at $35 per day, $245;" is that a proper charge?—A. No. sir.

Q. Making an aggregate of $5,250 for demurrage, and $625 for extra work, or a total of $5,875. Do you say that that is a proper charge, and he is entitled to that extra pay?—A. That is not a proper charge.

Q. Had he any right to make a charge against the Government either for extra work done on that vessel, or for damages inflicted on him by reason of not furnishing him with material?—A. No, sir.

Q. Was Mr. Griffiths' foreman a competent man, a qualified man for his business?—A. Mentally he was qualified, physically he was not.

Q. A man ought to have physical as well as mental qualifications to discharge those duties, had he not?—A. Certainly.

Q. Was there any deduction made in favor of the Government by reason of the quarter galleries having been left off?—A. None that I ever knew or heard of.

Q. Who did the galvanizing for the Enterprise?—A. The Government.

Q. Was the Government compensated for it?—A. Not that I ever knew of.

Q. You said that the alterations made on the berth-deck were in favor of whom?—A. In favor of the contractor, in one case.

Q. Was the contractor obliged at any time to reduce his force on account of the Government not furnishing material for him to work on?—A. Not to my knowledge.

Q. Did he proceed with the work as fast as it was possible?—A. I should not say he did.

Q. Do you know of any particular case where he could have proceeded faster?—A. Yes, sir.

Q. Well, name it.—A. He could have put the decks in faster, and the knees, and built the cut-water faster.

Q. Then, if the Government had been behind in furnishing materials, he still could have kept his hands engaged on this other business which you have spoken of?—A. Yes, sir.

Q. Did he cause the Government any delay in building the Government vessel, the Essex?—A. Yes, sir.

Q. Mention some instances.—A. In the getting out of our deck-plank, in the planing and molding of our knees, and lots of miscellaneous work that we would naturally do with the tools. When he was using them we had no other alternative but to stand still until he got through.

By Mr. BURLEIGH:

Q. Were the knees molded by the tools?—A. We planed them on the planer and sawed them with the saw; what we call molding. We have got a saw that will saw any shape and any bevel.

By the CHAIRMAN:

Q. Did you change any of the work on account of its being improperly done?—A. Yes, sir.

Q. What was it?—A. Several of the wale planks, one of the bottom planks, and four knees, I think, were changed.

Q. Have you got an estimate of the cost of all the work that was performed by the Government in building that ship?—A. Constructor Wilson has it.

By Mr. BURLEIGH:

Q. Was that kept along day by day?—A. Yes, sir.

By the CHAIRMAN:

Q. Was the painting complete on the Enterprise?—A. No, sir; I have said that one-tenth of it was left.

Q. Was that one-tenth performed by the Government?—A. No, sir; it remained unfinished.

Q. Who mixed the paints for them? Did any of your people assist in doing that?—A. Yes, sir; it was done under the supervision of our foreman painter.

Q. He mixed the paints for them?—A. Yes, sir.

Q. Who made the water-closets for the contractor?—A. The Government.

Q. Was the dead-wood properly bolted on the vessel?—A. No, sir.

Q. Was there any deduction made for that?—A. No, sir.

Q. Why was it not properly bolted?—A. He didn't bore the holes correctly.

Q. Did you assist them to make patterns for their iron-work?—A. Yes, sir; for the iron-stanchions in the hold.

Q. Who placed the capstan and fittings of the ship?—A. The Government.

Q. Was it the duty of the contractor to do that?—A. Yes, sir.

Q. Why did the Government do it?—A. The ship had got to be launched, and after she went into the water she had got to come to anchor. He put us in such a position that we were obliged to put the capstan in, because the minute she was in the water she was in our hands, according to the contract, and we did it for our own security.

Q. Do you know where the alteration of that list was submitted to your chief?—A. In a drawing-room car between here and Boston.

Q. By Mr. Griffiths?—A. Yes, sir.

Q. Did Mr. Hanscom make out this list and send it by Mr. Griffiths to you?—A. So Mr. Webb informed me.

Q. Who else was on that trip to Boston with those gentlemen?—A. Mr. Trickey. Those are the three I recollect particularly.

Q. Mr. Trickey, Mr. Griffiths, and Mr. Hanscom?—A. Yes, sir; I am not so certain about Mr. Trickey as I am about the other two.

Q. Where was she afterward coppered?—A. She was coppered on the second contract.

Q. Wasn't all this work executed under the second contract?—A. Yes, sir.

Q. This exceptional work that ought to have gone on the first contract?—A. Most of it.

Q At what expense to the Government did you put the main pumps into the ship?—A. That comes under the same head, you know, as putting the capstan in. The Government requires us, when we launch a ship, to have a pump in her. She had got to be launched, and there was no pump in her, and it fell upon the Government to put a pump in.

By Mr. BURLEIGH:

Q. Why had she got to be launched?—A. I don't know why she had got to be launched. There was no necessity for launching her.

Q. Did Mr. Griffiths say it didn't belong to him to put the pumps in?—A. He didn't put them in. I can't speak from memory whether we had any discussion about that or not.

Q. Don't you think that pumps belong to the hull of a ship?—A. O, yes, sir.

Q. You put them into your list?—A. Mr. Webb in our list conceded that.

Q. Doesn't the capstan, and putting it in, belong to the hull of a ship?—A. Yes, sir.

By the CHAIRMAN:

Q. Who placed the anchors and cables to stop the vessel when she was launched?—A. The Government.

Q. Did the Government receive her in the water?—A. Yes, sir.

Q. Was the launching at the Government's risk?—A. That I don't think was specified.

Q. Did the Government make all the launching wedges?—A. Yes, sir.

Q. And saw the material for blocking?—A. Yes, sir.

Q. Why did you saw it off?—A. He wouldn't receive it in any other way.

Q. Do you know of anything that was got out for the Essex, that was given to the contractor for the Enterprise?—A. The cants that were got out for the Government ship were given to the contract ship. That was so he should have no cause for complaint.

Q. Were the constructor, Mr. Webb, and yourself, and all the other officers here, disposed to give Mr. Griffiths all the facilities they could in the performance of his work?—A. Yes, sir.

Q. And you assisted him personally, or his hands, whenever he called on you?—A. In all cases.

Q. Do you know of a bill of $4,000, that was paid Mr. Griffiths?—A. I know of it; yes, sir.

Q Had you anything to do with it?—A. No, sir.

Q. You were here at that time?—A. Yes, sir.

Q. Why was that bill paid?—A. I don't know.

Q. Do you know by what authority it was made?—A. The constructor informed me by authority of the chief of bureau, Mr. Hanscom.

By Mr. BURLEIGH:

Q. Were you consulted at any time between the interview between Mr. Griffiths and Mr. Hanscom, and the time this bill for $4,000 was made out, in regard to any extras on the ship?—A. No, sir.

Q. Or in regard to any demurrage?—A. No, sir.

By the CHAIRMAN:

Q. Was there any survey or inspection of that ship before it was received on the firs contract?—A. Not to my knowledge.

Q. Do you know any reason why that bill should have been made?—A. I don't know any reason.

Q. Were you consulted in regard to it, or was Mr. Webb, or any of your officers here?—A. Not to my knowledge.

Q. Was any examination made by the Government officers in order to ascertain if any extra work was performed?—A. Not to my knowledge.

Q. Neither in regard to the demurrage, damages, or extra work?—A. No, sir.

Q. Were you not at that time the inspector?—A. Yes, sir.

Q. It would have been your duty to make that examination, and report if it had been so required?—A. I so consider it.

Q. Did you intend to inspect that vessel and report the contract performed or not performed?—A. I should have inspected her.

Q. The contract was performed by the Government, and all the payments made, and that relieved you from any inspection?—A. That ended it. There was nothing to be said after that.

Q. Were you called upon to know if this account was correct by Mr. Hanscom?—A. No, sir.

Q. Did he call upon Mr. Webb, as far as you know?—A. Mr. Webb was not here.

Q. Did he call in Mr. Wilson?—A. That I can't say.

Q. Were you not the proper person to consult in regard to it?—A. I so considered—one of the proper persons.

Q. And the constructor another?—A. I should say so.

Q. Why were you not consulted, if you know any reason?—A. I don't know any reason.

Q. You don't know, then, why you were not consulted?—A. No, sir.

Q. Have you ever seen an estimate for the labor and material to complete this ship by Constructor Wilson?—A. Yes, sir.

Q. Did you consider it a fair estimate?—A. I did.

Q. Have you seen the second contract given to Mr. Griffiths to complete the ship?—A. Yes, sir.

Q. Should not most of that work have been done by him on the first contract?—A. Yes, sir.

Q. How did the quality of the work on the Enterprise compare with the Essex?—A. Not so good.

Q. In what way was the work on the Essex better?—A. The joints of the work were better and more carefully put together, and more properly bolted.

Q. The hull was better after it was done?—A. Yes, sir.

Q. What do you think was the difference between the two? If you had been going to buy the two hulls for the Government as an agent, what difference would you have given in favor of the Essex?—A. I should be willing to give for the Essex in preference to the Enterprise from $6,000 to $8,000 more.

Q. At the same stage of completion?—A. Yes, sir; we did our work altogether different from them.

Q. What were the bilge-keels placed on the enterprise for?—A. I don't know, sir, any reasons, except to satisfy a notion of Mr. Griffiths.

Q. By whose order were they placed on her?—A. I understood from Constructor Wilson, by order of the chief, Mr. Hanscom.

Q. Have you ever been called upon to inspect the different articles received in the construction department?—A. I was called upon to inspect all they recived in construction.

Q. Were they of good quality?—A. On our own authority we accepted nothing but good articles.

Q. Have any articles ever been received after they have been rejected?—A. I only recollect one case in particular, at this moment.

Q. What is that?—A. That was a case of some whiting that Mr. Webb and myself and the foreman painter rejected.

Q. Was it received after that?—A. Yes, sir.

Q. Under whose order?—A. An order from the Department.

Q. From Mr. Hanscom?—A. It was from him.

Q. In whose favor was that order? Who was to deliver that whiting?—A. I don't recollect the names of the parties. Our books will show.

Q. Do you remember the amount of it?—A. It was about one thousand pounds.

Q. Do you remember when this was?—A. It was about three years ago, I should say.

Q. Can you tell me how the prices paid for lumber and material at this yard compared with outside prices at Portsmouth, Kittery, and around in the country?—A. To the best of my knowledge, the prices are high.

Q. How much higher than they are in Portsmouth?—A. From 10 to 15 per cent.

Q. Do you know of any material rejected by your Construction Bureau that has been received by either of the departments here?—A. I don't think of any now, sir.

Q. Has the live oak delivered at this yard been suitable for shipping purposes, all of it?—A. I should say most of it could be used.

Q. Why would the Government buy some that could not be used at all? Would that not be thrown out when you came to inspect it, and found that it wasn't suitable for ship-building?—A. It might be good timber, but not exactly suitable for ship-building.

Q. You don't buy any other live-oak timber here except for ship-building?—A. What I mean by that is, that regular timber for ship-building, most of it would be crooked timber; a great portion of this was straight.

Q. Then how would you use it?—A. I shall have to give a little explanation to answer

that. It would be good timber, and would be valuable if you built ships enough to use it. Every ship requires a certain amount of straight timber, and a certain amount of crooked timber. While it might be good timber and useful timber, it might not be just what we might require.

Q. Do you think that, upon an accurate and close inspection of the timber here, if the interests of the Government were properly consulted, a good deal of this live-oak timber would be rejected, or would any of it be?—A. Yes, sir.

Q. Do you know anything about the bending-machine?—A. I have seen it.

Q. What do you think about it as a ship-building factor?—A. I don't think it amounts to anything.

Q. If this machine were a proper thing to be used in ship-building, just as live oak, white oak, pine, and all those things, what would the thing have been worth?—A. It is a patented article, and that is a pretty hard question to answer. They will charge what they please. When you come down to what it will cost to make it, I can't tell you what it would cost to make it.

Q. About what do you think it would cost to make it?—A. That is a business I am not familiar with. I can only give you an opinion on that.

Q. Well, give me your opinion.—A. Making the patterns and building the iron-work, I should say would cost from $50,000 to $70,000.

Q. What is the Government doing with that machine now? Is it not abandoned?—A. The last time I saw it they were operating it.

Q. When was that?—A. I think about September, 1875.

Q. The Government was operating it?—A. Yes, sir; bending timber for some iron-clads.

By Mr. BURLEIGH:

Q. White-oak timber, or live-oak timber?—A. White-oak timber. They were proposing to cover the bottom of an iron-clad with white-oak timber—sheathe her outside.

Q. Could not that timber have been as readily bent in the steam-box?—A. No, sir. My opinion about the machine is formed from occasional visits to the yard. We were there as a board of naval constructors to see it work.

By Mr. JONES:

Q. What was their opinion of it?—A. I found no constructor in favor of it, from social conversation with them.

Q. How much does the Enterprise lack now of being complete?—A. Constructor Wilson can give you that information better than I can.

By Mr. BURLEIGH:

Q. How long have you known Mr. Griffiths, the old gentleman?—A. The first I knew of him was at Boston when he was putting in the bending-machine. That was the first time I was introduced to him. I had known of him for several years.

Q. Known of him as what—what was his occupation?—A. As building the Pawnee at the Philadelphia navy-yard for the Government.

Q. Is that the only contract you ever knew him to have from the Government?—A. That is all I recollect now.

Q. Did you read the proposals that were advertised for the contract on this ship?—A. Yes, sir.

Q. Do you know whether the contract given out was in accordance with the proposals?—A. I never made a comparison of that kind.

By the CHAIRMAN:

Q. Do you know of any advertisement for proposals to finish the vessel?—A. No, sir; the first I knew was advertised: that was in the newspaper.

Q. Did you ever make any estimate of what it would cost to complete the vessel from the closing of the first contract?—A. No, sir. Constructor Wilson did.

Q. You don't know by whose order he made it?—A. I judge by the order of the chief, Mr. Hanscom.

Q. How much more will the vessel cost, taking into consideration what is paid Mr. Griffiths on his contract to complete the hull and the spars, than if the Government had done all the work?—A. I cannot answer that without reference to books in the constructor's office. Constructor Wilson can answer that better, I think.

Q. How much of this work is the Government called upon to do in assisting the contractor to complete the vessel?—A. The resident constructor can best answer that question.

Q. How does contract-work compare with work done by the men employed by the Government in the yard by day's work?—A. It isn't so good.

Q. Do you know of any work under the second contract that should have been done under the first; and, if so, what?—A. One composition counter-knee, magazine-rods and casing of same, fore and main stay bolts, fore and main storm stay bolts, foretop-gallant and royal stay bolts, flying martingale stay bolts, jib and flying-jib guy bolts, martingale back-rope bolts, ring-bolts for lashing anchors, topsail-sheet bolts, topsail-halyard bolts,

eyebolts in hatch-bars, fore and main tack bolts, eyebolts over magazine and shell-room hatches, eyebolts for spanker-sheets, brass to be put on in wake of ladders to the poop and top-gallant-forecastle decks, one complete set of pump-gear, iron stanchions and rail in the head, bath-tubs to be fitted under forecastle as per plan, two mooring-chocks forward, of wood, to be fitted in the bridle-ports, port-shutters cut for guns and fitted with fearnaught and port bucklers where required, carpenters' work in connection with coal-bunkers, Lewis bolts and boxes put in place, all the necessary work in connection with the fitting and securing of the shoe, stern-post, rudder, and jacket, forecastle and quarter-deck scuppers, scuppers in hammock-nettings, fitting tanks and connection in water-closets, ventilator through cabin to be put in, water-closet and bath-room to finish in the cabin, put in the tub, bowls, and all the necessary fittings; bulk-heads of magazines and shell-rooms to be covered in the hold with galvanized iron, door-sills in cabin, wardroom, and steerages to be covered with brass, port-shutters made and hung, with rings and bolts on, and hooks complete; breeching, side, and train tackle, bolts to be put in hatch-bars, copper and iron to fit, coal-scuttles to be put in as per plan, five sets of boat-davits to be fitted complete, two to be fitted with cradles to stow boats in the waist, iron cleats where required; rabbeting for and making and hanging all the port-shutters, main-brace and fore-tack bumpkins, and all the fittings connected therewith; forecastle-rail, and stanchions on front of poop, bits and cat-heads to be completely fitted, bill-bars completely fitted, cavils and mooring-chocks, bolts for yard and stay-tackle falls, bolts for ladders for the fore and main topmast, fore and main top-gallant studding-sail halyards, bolts for leaders on masts, ropes, eyebolts for leaders for main topmast and main top-gallant studding-sail sheets, bolts in cheek-knees to hook on cat-falls, bolts for rudder-pendant stops, bolts for receiving whisker-jumpers, bolts for stay and tackles, ash-chutes to be cut in side of ship, bolts in topsail-sheet bits for stoppers.

Q. How much do you estimate that work will cost?—A. The resident constructor can best give you that. I do not care to estimate on his work.

Q. Is there any check on the timber-inspector, or any way to detect any fraudulent entries that he may make in his books?—A. I do not know of any. There was no check on the timber-inspector's account. The routine of keeping the accounts has been changed within the last three months. He had everything in his own hands, and balances his own books, and I should say there was no check on him. He received and expended himself.

Q. His bills do not have to go for approval to anybody else, so that there are not two persons keeping the same accounts?—A. No, sir. The bills for material have always to be signed by the constructor, the quantity delivered.

Q. While you were here, did you know of timber being received in this navy-yard that had not been required by requisition from your constructor, ordered here by the chief of bureau at Washington?—A. There was timber often landed that we did not know anything about until it came; we would afterward get orders from the Department to receive it.

Q. Who were the persons who delivered it here?—A. The principal contractors delivering timber while I was here were Trickey & Jewett, Bigler & Swift. Those were the larger dealers.

Q. Were you ever ordered to receive any timber that you did not want?—A. I don't recollect anything of the kind.

Q. Do you know whether the contractors were paid exorbitant prices at any time?—A. No, sir.

Q. Do you know of any officer in the Navy who has received any fees or commissions, or any presents of money, or property, or the representative of either, for the discharge of his official duties, in any way?—A. No, sir; I do not.

Q. Do you know of any officer of the Government who is interested in any contracts in the Navy?—A. No, sir.

Q. Do you know any abuses in the Navy that you could report to the Government for correction?—A. No, sir; I don't know of any.

Q. Do you know whether, while you were here, persons were employed in this yard for political considerations?—A. I do not know that they were; we always had work whenever men were employed.

Q. Do you know whether that work was given to men in consideration that they were to vote a particular ticket?—A. I had nothing to do with hiring men.

Q. Do you know whether anybody else, who did have the hiring of them, exacted of them a pledge, in consideration of giving them work, that they would vote a certain ticket?—A. Not of my own knowledge. I have heard such reports.

Q. Did you ever know the men in the yard to be collected together at any election and marched in solid phalanx to the voting-precincts to deposit their ballots?—A. No, sir; I never knew anything of that kind. They would not submit to it.

By Mr. JONES:

Q. Do you know of anything else in regard to the Enterprise where the requirements of the contract were not carried out?—A. No, sir; I think you have covered that ground pretty well.

By the CHAIRMAN;

Q. Can you give the committee any information in regard to abuses in the Navy, here or

elsewhere, that may be corrected?—A. I do not know that I can state anything more than I have.

Q. Do you know whether there was a board of naval officers appointed, in accordance with the law, to report on the Enterprise, and say whether any extra work had been done, whether the contract had been complied with, or whether any change should be made in it?—A. Not to my knowledge.

Q. If any such board had been appointed, you would have known it, would you not?—A. Yes, sir.

Q. In accordance with the terms of this second contract, was it or not the duty of Mr. Griffiths to finish that vessel for sea, spars and all?—A. I do not understand that the spars would be included; we made a very pointed distinction between the hull and spars.

Q. Would you say a vessel was complete in all respects without any spars?—A. As far as the hull is concerned.

Q. You do not think that under this second contract he was bound to put in masts and spars?—A. No, sir; from the reading of that contract, I should not consider that he was.

By Mr. BURLEIGH:

Q. Do you think that the work in the second contract should have been done under the first?—A. I think I have so stated; there may be an item or two not covered by the first contract, but, generally, I should say the work should have been done under the first contract.

Q. The law says that the work shall be done to the satisfaction of the inspector. Who appointed you to take charge of the inspection of this vessel?—A. I was ordered verbally, December 24, 1873, to act as inspector, by Constructor Webb, who informed me that it was Mr. Hanscom's order.

Q. That you should specially attend to that vessel during her construction?—A. Yes, sir.

Q. And you did so until the last moment?—A. Yes, sir. Then I have a written order December 19, 1874, appointing me, by order of the bureau. superintendent, under the direction of Constructor Wilson.

Q. Do you know of any other circumstances attending the building of this vessel that would give the committee any information?—A. No, sir; I think you have gone over the whole ground.

KITTERY, ME., *March* 18, 1876.

Constructor PHILIP HICHBORN recalled.

By the CHAIRMAN:

Question. Did you examine the estimate prepared by Mr. Wilson of the amount necessary to be expended by the Government to complete the Enterprise ready for sea after Mr. Griffiths' first contract?—Answer. Yes, sir: I did.

Q. When did you make that examination? Did you make it when the estimate was made?—A. I assisted Constructor Wilson in making it at the time it was made.

Q. How much was that estimate?—A. September, 1874, was the time the estimate was made. The amount of it was, for labor, $43,641.

Q. How much then was paid, or to be paid, to Mr. Griffiths on his second and third contracts for labor on the Enterprise, by the terms of his second and third contracts?—A. $31,500.

Q. How much then was left for the Government to do to complete the vessel for sea, after the amount was paid to Mr. Griffiths as stipulated?—A. $24,883.

Q. Adding what the Government paid to Mr. Griffiths, and is to pay him by the terms of the second and third contracts, to the amount required to be expended by the Government to complete the vessel for sea, what is the total that will have been expended by the Government to complete the vessel for sea?—A. It will be $56,383.

Q. How much greater is that amount than your estimate for her completion by the Government after Mr. Griffiths' first contract?—A. $12,742.

Q. Will the Government have to expend that much more to complete the vessel for sea, by reason of the contracts with Mr. Griffiths, than if it had done the work itself?—A. Yes, sir.

Q. How much of the work embraced in Mr. Griffiths' second contract ought to have been done by him in his second contract?—A. I answered that yesterday at a certain amount; but after examination of the figures again, I would say that I wish to make a further calculation before I answer. When I revise my testimony I will put it in.

Q. What was the estimated cost of doing the same work by the Government that was contracted to Mr. Griffiths in his second contract of $25,000?—A. $18,758.

Q How much was the cost to the Government of both labor and material in building the Essex, up to the time of her removal to the Boston navy-yard?—A. That can be better furnished by the resident constructor.

Q. How much money has been expended by the Government and by Mr. Griffiths on the Enterprise, up to the present, for labor?—A. The resident constructor can furnish that information best.

Q. Can a perfect statement of the cost of each of those vessels be now made?—A. No, sir.

Q. When, then, can that be done?—A. When the two vessels are ready for sea, with officers and crew on board.

Q. Have you examined the third contract with Mr. Griffiths for building the spars of the Enterprise?—A. I have.

Q. Do you consider that the work he was relieved from by Chief Constructor Hanscom belonged properly to his contract?—A. Yes, sir; I do.

Q. At the time of the removal of the Essex to Boston, can you state what was her relative state of completion, compared with that of the Enterprise, her sister-vessel?—A. Yes, sir; I can.

Q. Please give the explanation of the difference between those vessels now. Explain to the committee the relative difference, and the reasons for the difference, in the cost of the vessels Essex and Enterprise, at the time of the Essex leaving the yard.—A. All completed work on the Enterprise was on board and into place. On the Essex there was a large amount of work, consisting of iron, bulkheads, joiner-work, furniture, &c., in an incomplete state and charged to her, which was placed on board of her and sent in the ship to Boston, (as per inventory.)

Q. Would or would not work done by the employés of the Government cost more than work done by employés by contract, and why?—A. Government performs its labor better, and pays the same price for eight hours that contractors pay for ten and eleven hours.

Q. Could you perform the work cheaper and better if you had the complete selection of your employés?—A. Yes, sir; without a doubt.

Q. Are you consulted in regard to the selection of the employés in your Department?—A. At League Island, my present station, I am not.

Q. Were you, or was the naval constructor, to your knowledge, permitted to have the entire control and selection of his employés at this yard when you were here?—A. Neither Mr. Webb nor myself were allowed the entire selection.

Q. Who selected a large portion of these men?—A. A large portion were ordered here by the Navy Department, which the letters on file in this Department will show.

Q. As far as your knowledge extends, were these employés selected on account of their skill as workmen, or on account of political influences? Can you state of your own knowledge whether the employés of this yard are political supporters of the administration?—A. I cannot answer a question of that kind.

KITTERY, ME., *March* 15, 1876.

WILLIAM F. NOYES sworn and examined.

By the CHAIRMAN:

Question. Mr. Noyes, state if you were engaged in any capacity in the navy-yard during the building of the steamer Enterprise, and, if so, in what capacity?—Answer. Yes, sir; I was here, as foreman of shipwrights, during the building of the Enterprise, until within a few days of her launching. I think about the 1st of June I was removed, and the vessel was launched somewhere about the middle of June.

Q. You are familiar with the work done by Mr. Griffiths and his hands, I suppose, and with that done by the Government in its shops, I suppose? You knew what was going on?—A. I can't say I was very familiar with his part of the work, because I think, with three exceptions, until the day she was launched, I was not in the ship-house after the ship was set up—that is to say, after the frames were set up.

Q. Where were you at work?—A. I worked for the Government in the yard.

Q. Do you know whether the Government, by declining to deliver material, or not having the ability to deliver material, to Mr. Griffiths, delayed him in the building of his vessel?—A. I can't say that I know that fact; I know we have been delayed more or less always. We couldn't help being delayed.

Q. You mean the Government have?—A. I mean the Government. I speak of the Government just as I was there; for instance, we might be waiting to plank a ship, and not have plank-stock in the yard, and we might have to get that; then there are special cases where it requires long lengths of timber, perhaps, and it is sometimes very difficult to get it.

Q. Would all your hands have to stop work then, or would you go to work on some other part of the vessel?—A. O, no, sir; I never intended to let my men lie idle.

Q. Do you know whether Mr. Griffiths was delayed on account of not having timber furnished by the Government?—A. I don't know but there might have been some slight delay in the planking of the ship.

Q. How much delay would that be in the labor?—A. If you have a gang planking, it is a little difficult to take them off; that is a specialty. The way I understand the thing—I am not not certain of it—but the way I have always understood it, the planking was a subcontract, and he had to deliver the material. I will say this, that, so far forth as I was able, I delivered the material to him just as fast as I could. I can say, further, that I superintended the cutting of every single plank in that ship for her ceiling, and saw it delivered and piled up in the ship-house, myself.

Q. That was the Enterprise when she was being built?—A. Yes, sir.

Q. The Government was bound to furnish the material, and you have gone on and worked out the planks to put in her?—A. That was not the understanding conveyed to me. The understanding I had was that we were to select this material and deliver it at the ship-house.

Q. Saw it out and deliver it?—A. Yes, sir; I do not mean that this timber was ready to be put into the ship, but it was sawed out of the log.

Q. If a three-foot piece was wanted, if you had a piece 15 feet long, you would have to saw it off, and send it to him?—A. No, sir; I don't mean that. I mean like this: the timber comes here in "plank-stock," we call it, in logs, and then we cut it to dimensions; for instance, it will take so many streaks of five-inch plank, and so many streaks of six-inch plank. By "streaks," I mean enough to go around the ship, and so many three or four inch, as the case may be; and we cut to dimensions, and we calculate about how many planks it will take for a streak. We have the specifications showing how many streaks of plank the ship should have outside and in, and we go according to that.

Q. You mean you cut those out with a saw?—A. Yes, sir; we cut them with a saw.

Q. You said that there was very likely some little delay about laying that plank; how many hands would be delayed by that? In case you did not have it ready, how many hands would be stopped until you could get it ready—one hand two or three days, or one hand for a day?—A. O, if we delayed him at all on the planking, it would delay his whole gang more or less. Well, they could be at work; still they would have to work at a disadvantage. I can't say how many days. I should not want to give any answer as to that. I don't know as we delayed him one moment, only what I have understood.

By Mr. BURLEIGH:

Q. Provided there was a delay of his whole gang one day, or two or three days, or even a week, would he pay them for that time?—A. It was jobbed out, as I understood it, a subcontract.

Q. Would the contractor have paid them for day's work if they did not work?—A. I shall have to answer you in this way: I will suppose there is this plank to go on one side of a ship. Now, then, all material is not good: you cannot depend upon working in every plank you get out. There may be a defect in the plank. If there is a slight defect, if there is a shake in the plank, or a rotten place, or worm-holes in the plank, the labor is lost, and you have got to get a duplicate of that.

Q. Don't get outside of my question. Provided there was a delay on account of the Government not furnishing the material to work with, is it customary in the yard, or in Portsmouth, in delays of that kind, for the men's pay to go on?—A. That I can't answer.

By the CHAIRMAN:

Q. How long before you could supply the place of that worm-eaten plank so that his work could go on?—A. That would be owing to circumstances. It would depend upon where the plank went. If it was a short plank we could get it pretty quick. Provided the mill was running, (which it was at that time,) we could put a log into the mill, and you know it would not take but a very short time to get a plank out; but we would do it as quick as we could. I never knew a vessel of war where we did not have as much delay as he had, and sometimes a great deal more.

Q. Now, up and down the river, and in the navy-yard, where men are at work by the day, is it not a customary thing, if something runs short, or the weather comes on bad, or something of that kind, to knock off work and the men lose the time?—A. I presume so. I never worked outside on this river in my life.

Q. Is it not always done in the yard?—A. It is not always the case here, because we have houses to work in, and we make all fine weather.

Q. If there is no work to be done, or no money, you send off the men until you get it, don't you?—A. I should not mark them up for that day.

Q. If there is no work they do not come the next day?—A. No, sir.

Q. When there is work you send for them and pay them? You do not pay them when there is no work?—A. No, sir.

Q. Do you believe Mr. Griffiths paid his men when they did not work?—A. It is not hardly natural to suppose that he would. I heard it reported myself around the yard that Mr. Griffiths was not getting what he asked for—what he demanded—but I did the best I could for him, and my orders from the naval constructor were not to allow Mr. Griffiths to be delayed at all, if it was possible to avoid it; for this reason: He said if there was any delay, Mr. Griffiths, he supposed, could present a bill for damages and collect it, and my orders were explicitly not to allow any delay if it could possibly be helped.

By the CHAIRMAN:

Q. Did he state to you that he had been delayed?—A. No, sir; not to my recollection.

By Mr. JONES:

Q. Was it not detrimental to your other ship?—A. Very much so.

Q. You would have got it along faster and cheaper if you had not had this ship-building here, would you not?—A. I have had to do a great deal of work for the Enterprise, when I should have had my time for the other ship.

Q. Was the plank prepared at the mill, and, if so, was it done by the Government's help, ready to put right on?—A. O, no, sir; they were sawed out.

Q. Did you prepare a good deal of the timber, knees, and such things as that—plane them, and fix them, and cut them out?—A. Yes, sir; I presume we wrought to shape every knee that is in that ship.

Q. You mean the Government's hands wrought them to shape?—A. It was done by machinery; with the operatives who operate the machinery.

Q. He was to have the "facilities of the yard," but, if I understand you, he not only had the use of the machinery, but the work was done by the Government help?—A. That, I understood, was the "facilities of the yard."

By the CHAIRMAN:

Q. How long was that ship being built?—A. I think that Mr. Griffiths came here some time during the month of September, and the ship was launched the ensuing June.

Q. Now, from the time he commenced until the time that the ship was launched, he charges for one hundred and fifty days' delay; was he delayed to that extent?—A. Let me set you right on one thing. I was foreman of shipwrights; that only embraced one department. I can't say that he might not have been delayed all around in the other departments. I only speak of the wood-work. This claim is for delays in furnishing him labor. I will state, further, with regard to furnishing material and our exertions to help him, we had some sharp timbers, such as we use forward and aft. They were much larger than was necessary for the ship, but Mr. Webb said as we had not the smaller material in the yard, and as there might be a delay in getting it from Boston, or wherever they would have to get it, I would be obliged to cut the larger timber for him. Likewise his keelsons and dead-wood were almost all taken out of larger timber; that was necessary. Of course that would add to the cost of the material that went into the ship.

By Mr. BURLEIGH:

Q. Could they not, by culling it, get smaller timber?—A. No, sir; it had been culled too much.

Q. You worked it down to the suitable size?—A. I put it into the saw-mill and sawed down the slabs, and put it into the planer and planed it down to the proper thickness, and sent it to the ship-house.

Q. You said that you understood that the labor that operated those machines was embraced in the "facilities of the yard," and that he had a right to that labor?—A. That is the way I understood it.

Q. Not only the machines, but the men employed in working them?—A. Most assuredly.

Q. Was the work done for him when he wanted it?—A. Yes, sir; if the Government was at work on machinery here, you couldn't have two set of men operating that same machinery. I superintended the selecting of every stick of timber that there is in the frame of that ship, and Charles Dickson and Jacob Remick and another man, ex-quarterman there, was in the yard; and it was all, or nearly all—everything that the machinery would cut was cut by machinery.

Q. And the Government found the men to do it?—A. Yes, sir.

Q. And it was carried to the ship-house and piled up ready for his men to use?—A. Yes, ir.

By the CHAIRMAN:

Q. Now, I want to ask this question: Do you know of any delay caused the contractor in building the Enterprise by the constructor?—A. No, sir, I do not, and I will repeat my answer again, that my orders were always to furnish everything.

By Mr. BURLEIGH:

Q. And you did so?—A. I did so, just as far as I could and as soon as I could.

Q. There was no want of plank; it did not give out so but what you had something to give him that was suitable?—A. I can't say about that; we always gave him some plank, but, as I said before, I did not examine the ship. I was not in the ship, and I cannot tell about the length of the plank he wanted, and if we had a plank six inches short it would spoil the plank.

Q. Do you know of Mr. Griffiths being charged with receiving any timber that he did not receive for the Enterprise?—A. No, sir; I had nothing to do with measuring the timber.

Q. He was not charged with any timber that was sent to somebody else?—A. Not to my knowledge.

By Mr. JONES:

Q. You were speaking about the plank. Did any one line the plank for planing before it went to the mill?—A. No; I superintended that myself.

Q. Mr. Griffiths did not do that?—A. Mr. Griffiths did not do that to my knowledge, because I had the general supervision of the sawyer all that time, and I had men there to do it directly, or I was there to see to it myself.

Q. Charles Dickson worked for the Government?—A. Yes, sir.

Q. Did Charles Dickson, while employed by the Government, with the men under his charge, perform any labor upon the Enterprise?—A. Not on the ship after she was raised. Mr. Dixon done work on the ship just previous to her launching, on what work I am not able to say, as Mr. Hichborn had charge of that work. He molded the cants forward and aft. One set of cants was cut out by the Government men with ax and adz for the Essex, but there came an order from somebody, I can't tell you who, and they were turned over to the Enterprise. They made a demand for them, and, to avoid delay, they were turned over to them.* Mr. Dickson could tell you about that better than I can.

By the CHAIRMAN:

Q. Do you know, or have you any information, of any material or labor having been charged to the Enterprise which did not belong to that vessel, if rightly charged?—A. I don't know one dollar, nor one cent.

Q. Nor do you know of any delay, except what you have heard?—A. Only what I have heard. I don't know it.

KITTERY, ME., *March* 16, 1876.

Testimony of WILLIAM F. NOYES continued.

By Mr. BURLEIGH:

Q. Were you employed from the commencement of the Enterprise here?—A. I was employed from the commencement of the ship, sir. I was employed in the yard—but not in an official capacity all of the time—I think until within about two weeks or ten days of her launching. Yesterday, in my examination, I supposed that everything that was said had a tendency toward what was done to the ship before the launching.

Q. You were in a measure detailed to get the timber, as I understood from yesterday's examination.—A. It was the duty of the foreman shipwright, and I was foreman; or that was my orders from the constructor, to prepare, as far as I could, the stock and the material for that ship, *i. e.*, in my department, so far as I could, by the use of machinery and the operatives for running the same.

Q. I want you to describe what was done to the timber for the blocks, the keel, and the keelson, the frame, the ceiling, the planking, the beams, the knees, the decks, and the rails, by the men employed and paid by the Government. Describe, in the first place, in regard to the laying of the blocks, and where they were at the time you commenced on the ship—what was done by the Government in aiding you to get them.—A. Well, Mr. Burleigh, of course you will have to allow me some little time to think about this. I cannot answer readily. I am under oath. I should not want to testify here without some chance to see my evidence afterward.

Q. We will let you have the evidence to revise it.—A. This was some time ago, and while this work was done I had no idea of being called to testify about it. The first thing you want to know, I believe, is about the blocking for the keel. I may not get the whole of it; but part of it was blocking that came from under the Illinois.

Q. Was it delivered to him?—A. Yes, sir; Mr. Webb and myself, with Mr. Hallenbeck, selected the keel-blocking.

Q. Was it delivered to him in the places so that he could set it up most conveniently?—A. I cannot answer that question whether that was delivered by the Government men or not.

Q. The Government teams hauled it?—A. Yes, sir; and delivered it where they wanted it, at the ship-house. If not, they alone were to blame. They had a team and a gang of men to go with that team.

Q. Now in regard to the keel.—A. The keel, Mr. Burleigh, I had taken out of the dock myself. I know it was done by Government teams and men. I think there is an order here on the yard, but I am not certain about the official order. I think there is an order that their stock is to be delivered to them, though I cannot say positively. But I had an order that I must deliver this material; that I received from the constructor. It was a verbal order, of course. I went to the dock and selected the keel-pieces myself; marked them; had some laborers go there with me and put ropes to them, with buoys, so that when the tide came we could find the sticks. Then we took them with the scows to the shore and hauled them up to the mill with Government teams, sided them to the proper thickness, planed them, rough-cut the scarfs—cutting down within two or three inches. We would cut it enough to see

* These timbers were delivered and laid two weeks, more or less, in the ship-house before they were used.

whether it was good and sound or not; they would have to be cut in their regular order somewhat. It was to see that the material was fit for the purpose. When I got pieces enough, according to the dimensions, I had them hauled to the ship-house, and they were put on the west side of the Franklin ship-house.

Q. Was it in the position that they were to be laid in on the blocks?—A. I would not say that that was so, for this reason, that in getting these pieces we had to get them as we could find them. They had a team detailed for them all the time; the aft ends all were marked so there should be no mistake by teamsters.

Q. Now in regard to the frame.—A. The frame I selected with my quarterman. I had the supervision of both frames.

Q. You had the molds and draughts?—A. When we got for one frame we also got for the other. When we got one stick we got the four, provided we could find them at the same time. I was particular about that.

Q. That is what you call "selecting frame," is it not?—A. Yes, sir. The Essex frame and the Enterprise frame we got out together. There could be no particle of difference in the getting out of those square frames, so far as the Government was concerned.

Q. Did the Government do as much work on one as on the other?—A. Yes, sir; wherever machinery would do it.

By Mr. JONES:

Q. And the Government found the labor to run all the machines?—A. I of course had it sided with the saw and planer, and then we molded the timber. Jacob Remick was the man that molded the timber square frames, and Charles E. C. Dixon molded the cants for both ships. The Marion was on the stocks, and of course we had not the chance to work on our timber so quick. I had quite a number of men in the yard. In order to facilitate the work, and give the Government so much work for so many men, I put the men to work getting out the after cants of the Essex with the ax. During the building of her Mr. Griffiths ascertained that those were out, and called on Mr. Webb for them, and Mr. Webb gave me an order to turn them over to Mr. Griffiths, and I did so. It was the timber that has no floor-timber on it. The object of his getting them, as Mr. Webb told me at the time, was that they had asked for them, and that there might not be timber in the yard to fill all the cants for them, and he wished to avoid any delay and prevent demurrage. That was the testimony that he gave me.

Q. Have you got through with the frame?—A. I will say that where the timber could not be got out by machinery, *i. e.*, got out with the saw, the timber was given to them to haul to the ship-house.

Q. What did you do with the stem-pieces?—A. We planed them.

Q. Did you saw them by the molds?—A. No, sir; that was heavier than any machinery we had could do.

Q. Did you cut them to the proper thickness?—A. As far as we could do it with machinery.

Q. How with the knees?—A. We might have sawed the stem-knee; but I do not remember. I would not want to swear to it.

Q. But all the other knees you did?—A. The knees of the deck we did.

Q. Then all he had to do to this frame was that when you delivered it to him he had to put it in place?—A. No, sir; that is not all. Timber is cut somewhat over-length, you know. They have to break joints. [Illustrating with a diagram.] Now they had to cut the ends of these timbers by the molds. Of course we could not square them all up ready to go right together. Then they had to put a dowel in the butts for that joint, into each one and three dowels in each scarf, and the bolts passed through those dowels, and in every butt there is a dowel, or should have been if they had done their duty. I have no reason to dispute but what they did on that.

Q. Then what they had to do was to put them together and fasten them?—A. They had to saw the butts, cut the timber to length, dowel and fasten them.

Q. Now you come to the keelson.—A. Yes, sir. The keelson we sided in the mill, planed in the mill, three sides of it.

Q. And delivered it?—A. Yes, sir; delivered it at the ship-house. I would not say now, without reflection, whether I superintended the delivering of it or not, or ordered it delivered. I would not say. They had teams to deliver it; but I superintended the cutting of the material to its shape. I cannot say now whether after shoving it out of the mill I took the men and hauled it there, or whether they took the team and hauled it there.

Q. Now the ceiling. There were a good many thick streaks?—A. A good many thick plank; but different from a merchantman.

Q. Then the inside flooring and ceiling, how was that?—A. We cut the plank from the log. The timber was near the mill, and we cut the plank from the log. I made a little calculation about how many plank it would take for a streak, and ascertained by the number of streaks there would be (which I learned from the plan and specifications) what I supposed would be enough to ceil the ship. It might be more and might be less. Of course they would have to pay for what they used.

Q. Did you line those plank to be sawed?—A. No, sir; it did not require them lined to be sawed. I superintended the cutting of the logs for the ceiling, inasmuch as when there

was a log went into the mill, if I was near by, I would take a piece of chalk, and chalk down on the ends, and make a figure of what they should make of it; so far as that. But it does not require any snapping of the line on the stick, only in exceptional cases.

Q. When did you line the timber for them?—A. When it was necessary to save the Government timber I would line the timber for them.

Q. Supposing there was a piece that did not go into the Enterprise, where would that stick go to?—A. I could not tell whether the log was charged or the plank. If the log was charged, it would show more feet, of course, than if the plank was charged. But I presume if the plank was charged there was just money enough put into the plank to cover the expense of the log.

Q. That is simply supposition on your part?—A. Yes, sir; I don't know that.

Q. Now, the outside planking and the inside planking were the same?—A. No, sir.

Q. Did you plane the inside planking?—A. No, sir; not below the gun-deck. But let me say again, that perhaps what I would call inside planking, perhaps you might not. You perhaps would call everything that was put upon the ship inside or outside planking, while we have it by another name. That which goes from the water-way up to the port-sill, we call spirketing. That on the inside we call battery-plank, and that which goes on the outside we call bulwarks. That comes above the main wale, or above the port sill, we will call it. We did plane the battery-plank.

Q. Didn't you plane everything above the gun-deck?—A. I would not want to answer that question now, because I cannot say that we did or did not. We planed battery-plank, but I don't remember about the bulwarks. We planed everything they asked to have planed which came to my knowledge.

Q. Did Mr. Griffiths plane any plank?—A. Not to my knowledge.

Q. What planing was done you planed for him in the mill?—[No answer.]

Q. Go on with your story.—A. The planing part is planed to a thickness, but that does not finish the ship. All of this planking is graduated. There are no two planks of a thickness from the port-sill up.

Q. While you would plane one edge, that would give you a guide to use the edge with?—A. After all that, the man has got to dress it after it is on the ship, and there is always more or less trimming to be done to it.

Q. Was everything planed above the berth-deck that Mr. Griffiths desired should be planed?—A. Everything that could be done that he desired—that could be done with the tools—I did to my knowledge. I merely obeyed orders.

Q. Was the side of the ship, from the berth-deck up, planed in every instance, as far as you know?—A. In every instance where Mr. Griffiths desired it; yes, sir.

Q. Now in regard to the outside planking; you sawed out the plank for him and planed it?—A. I don't think there was any outside planking planed except above the port-sill. Above the port-sill he had everything planed that he desired. If not, it is beyond my knowledge.

Q. That covers the bulwarks, rail and all?—A. Yes, sir.

By the CHAIRMAN:

Q. Everything that was planed in that vessel was planed by the Government?—A. So far as machinery would do the work.

Q. Now, in regard to the beams.—A. I selected the material for the beams, and I took that which was the nearest to the mill, and marked the length of the beams and the number, myself, and had them sawed and sided with the planers; *i. e.* planed to the proper thickness, according to the dimensions.

Q. Were there any moldings on those beams?—A. No, sir.

Q. Has there any been put on by Mr. Griffiths?—A. Nothing, only around on the bottom of the beam. That is all—the corners cut off on the bottom.

Q. They of course were hauled to the ship by the Government teams, the same as the others were?—A. Yes, sir; before being hauled to the ship they were hauled to the saw to be molded and shaped. The beams after being sided the straight way—what could be done with the planer and circular saw—were then carried to what we call the futtock-mill, and there molded to the curve; and there we have a saw that saws irregular and crooked; the same as we saw out the frames, and there would be the beams cut to shape, ready for the joiner to go on and cut the corner and smooth the side.

Q. Now, in regard to the knees—both the horizontal and the hanging knees.—A. The knees came here in a large lot, and were put just beyond the saw a short distance, and all set up upon the end. Mr. Hallenback, the foreman for Mr. Griffiths at the time, went there with his men and selected such knees as would fill the mold. Those knees were taken to the mill—to what we call the knee-planer—sided with the planer to the proper thickness, and then Mr. Hallenback or his men molded the knee in the proper place. It was put upon the table by Government men and sawed into shape.

Q. Sawed into shape according to the mold?—A. They could not do otherwise if they were allowed to use the tools at all.

Q. After the sawing did you plane them?—A. No, sir; they were planed to a thickness previously. At the bottom side of the knee they would have to be smoothed off.

Q. Was that the case with all the knees?—A. Yes, sir; just the same.

Q. You planed them?—A. Planed them and sawed them to their mold. They selected the knees from the pile.

Q. Now, in regard to the decks and deck-planking?—A. The deck-planking was delivered to them. I cannot tell you all about the decks. I cannot say whether their berth-deck was white pine or not. If it was, of course Mr. Locke can tell you all about that. My impression is that he had to cut a large lot of deck-plank from the log; but I will not say for certain, because at the time I had to do the best that I could.

Q. The deck-plank were hauled to the mill by the Government teams and there planed, and from there hauled by the Government teams to the ship again? They were planed there by the Government tools?—A. Yes, sir, the Government furnishing two men.

Q. And from there they were hauled, by the Government teams, to the ship?—A. Yes, sir; they handling the plank.

Q. In regard to the joiner-work. Do you know how that was managed?—A. The joiner-work I had nothing to do with at all.

Q. Who did?—A. Mr. James W. Brooks.

Q. Now, at the time that that ship was being built, were or were not the Government teams harnessed or yoked, and at all times in readiness to haul to the ship or from the ship to the mill any material that they might want with which to build the Enterprise?—A. That I cannot say.

Q. Do you know, or do you not know, that the teams of the Government were at the mill, standing still, sometimes, and at the shop, standing still at times, waiting for orders from Mr. Griffiths to do his work?—A. I have no doubt that that was the case.

Q. Don't you know that it was so?—A. Well, if I was called upon to state dates I could not swear to it.

Q. I don't ask you for dates, but at times. You don't know that it was so at all the times, of course.—A. I know that we always furnished them with the teams. That was the constructor's orders. When they wanted it they had a team all the time. When they had the teams they used them to put material at the ship in a handy place where they wanted it—where it would be handy to put it on board.

Q. The teams could haul the material as near to where they wanted to use it as they could in any other place?—A. I should say so; yes, sir.

Q. Was it understood that "facilities of the yard" meant not only the tools but the men employed by the Government to work or use them?—A. Yes, sir; that was my understanding.

Q. On all occasions and all tools?—A. Yes, sir; I will not say "all tools." What I mean is "all machinery tools."

Q. They had the use of the Government men?—A. Yes, sir.

Q. Now, did they have the preference of the tools or not?—A. That was the order, I think.

Q. Was there any case that came under your knowledge and observation where the Government was at work on its own work, and the demand came for something to do for the Enterprise, that they gave work out to be set aside partially finished, and the Enterprise work put upon the tools?—A. At the time we were building the Essex, and getting the Marion ready to launch, it could not be otherwise, if there were two separate gangs of men at work, they to have the preference if they brought anything to do that they said they must have to-day. If we wanted the tools ever so much, they had the use of the tools.

Q. Did it ever come to so much, so that you moved things that were in process partially finished out of the way to give them a chance to use the tools?—A. I think in planing knees and in sawing knees we did.

Q. Do you know whether there was any charge made by the Government for these men operating the tools while they were at work on material that was going into the Enterprise, charge made to Mr. Griffiths?—A. I never heard of any charge being made to Mr. Griffiths. Let me explain a little. The Government in every case charged the men, and what they were working on. The quartermen's books will all show that. Every quarterman that has a gang of men at work for him has to specify on that book what they are doing. For instance, I have a gang of men and am quarterman. I have ten men faying knees, while my book shows from day to day just what I am doing with those men.

Q. If they were planing knees for the Essex it would say so?—A. Yes, sir; "planing knees for sloop No. 1," or "No. 2."

Q. So that the foreman kept the work separately?—A. Everything in connection with the Essex and the Enterprise, so far as the Government is concerned, can be found in the office.

Q. Then you don't know of your own knowledge that the time of these men, while they were at work with the tools on the Enterprise, was or was not charged to Mr. Griffiths?—A. No, sir; the charge at the time was "to sloop No. 1," or "sloop No. 2," charged to the Government; and the explanation of what they were doing will show on the books that so many men were working on sloop No. 1 or sloop No. 2.

Q. What was sloop No. 2?—A. The Enterprise.

Q. You don't know whether those building the Enterprise paid the Government for the

men that used the tools while they were at work on their material?—A. No, sir: I don't know.

Q. That is a point on which we should ask the constructor?—A. Yes, sir; I have no means of knowing.

By the CHAIRMAN:

Q. I want you to state now, in making an estimate, as you are familiar with all that work, and were familiar with it while it was being done, what proportion of the labor in building the hull of the Enterprise was performed by the United States Government.—A. All the cost is in the office. You can get it by calling on the naval constructor, just the dollar and cents of what was performed by the Government, every day and every hour. I could not give you an estimate without taking a good while, and overhauling all the books.

By Mr. BURLEIGH:

Q. Did you know about the blacksmith's work?—A. It was done by the Government; not by contract. The Government did the whole of the blacksmith work.

Q. Did the Government teams haul the blacksmith work from the blacksmith-shop to the ship?—A. Yes, sir. They had men detailed for that purpose, and they used the teams whenever they wanted them—not material.

By Mr. JONES:

Q. Didn't the Government furnish the machinery and facilities of the yard to Mr. Griffiths, and men to operate the same, at the expense of the Government, for the Enterprise?—A. So far as I know and can call to mind at this time, I don't know of anything that could be done by machinery in my department but what was done for him, the Government operatives operating the machinery.

Q And, you understood it, at the Government expense?—A. And I understood it at the Government expense.

Q. All that was done for the Enterprise?—A. Yes, sir.

WASHINGTON, D. C., *March* 14, 1876.

Commodore D. McN. FAIRFAX sworn and examined.

By Mr. HARRIS:

Q. I will call your attention to the first question, [referring to a circular letter.] Does there exist any abuse or fraud in the rank and staff of the active-list of the Navy?—A. I know of nothing in relation to that.

Q. Your attention is called to the mode and extent of examination of officers for promotion, and especially whether any necessity exists for raising the standard of merit in officers who may be examined for promotion to the grade of commanders, captains, commodores, and admirals.—A. The great difficulty of raising the tone of the service has been in utter disregard of the law, in regard to the fitness of several men for promotion. What I complain of in the service is that they promote men without being properly and morally examined. Therefore, the tone of the service, and the standard of merit, is not as high as it would be were the morals of the officers properly examined.

Q. Under the law?—A. Yes, under the law.

Q. And you only seek a strict compliance with the law?—A. Yes. Commander John M. Quackenbush is on the register of 1876. He is under suspension by a court-martial, and was dismissed from the service for the most scandalous conduct; and during his dismissal from the service a promotion was made to fill the vacancy. He was afterward restored to the service without an act of Congress, which is in violation of the law. It strikes right at every officer in the service. We may have anybody put over our heads just in that way.

By the CHAIRMAN:

Q. State whether, in that instance, the proceedings of the court-martial were approved?—A. He was out of the service, and promotion was made. It must necessarily have been approved. He is a son-in-law of Dr. Howe, of Boston. He has great political influence. He said when he came back from Europe that he was going to put him back into the service.

Q. What Howe was that?—A. I can't say about that; but through political influence the Secretary was induced to do this thing. He can't restore an officer, once dismissed from the service by a sentence of a court-martial, without an act of Congress. Alfred Hopkins stands on the register of 1875 as lieutenant-commander. His original entrance in the service was in 1851. For some reason or other unknown to me—political, I suppose—he was recommended by the board, and, without any act of Congress, he was placed up to 43 on the list of commanders. There are ninety commanders, and he was advanced to 43. That was more than they did in war times. This man, it was said, hadn't behaved prop-

erly before the enemy. Now, the Secretary, in putting him back on the active-list, failed to put him back exactly where he belonged. His number would have been 32 on the list. There are eleven officers whom they hadn't, for some reason or other, seen fit to place him over. From their records—they being very nice officers—I presume they had some consideration for them. His advancement without an act of Congress strikes a blow at the service, and discourages us who have no blemish at all upon our records. I say, therefore, if that thing was nicely observed, to examine into the morals of an officer, and go by the law strictly, there would be no trouble.

Q. Do you know anything about the cases of officers upon the retired-list—William L. Hanscom and Paymaster Belknap?—A. I don't know of my own observation. I only know they were dismissed from the service in consequence of irregularity. William L. Hanscom was forced out of the service on account of his conduct at the Boston navy-yard and Philadelphia navy-yard, and was re-instated.

Q. You don't know in what manner he was re-instated?—A. No, sir. There was considerable opposition by Admiral Porter and others.

Q. Do you know anything about Belknap?—A. No more than that he was dismissed for improper use of moneys.

By Mr. HARRIS:

Q. Was he dismissed or retired?—A. He was dismissed. He was obliged to leave the service. There is an abuse existing of placing persons on the retired-list, who have some imaginary or fancy or trifling claim for services during the war. There is a case, a very singular one—I can't understand it myself—of Lieutenant-Commander Bassett, on the retired-list. He is on this register of 1876 [referring to the register] as lieutenant-commander. I didn't know that he had been advanced so much as that. He is a master on the list of 1875. I am not aware that there is any legislation that could make him a lieutenant-commander. He first appeared as a mate, was finally advanced as a master, and here, on this list, [referring to list,] he is a lieutenant-commander.

Q. What do you think about Congress interfering in this matter?—A. I have heard members of Congress, and republicans too, tell Mr. Robeson, if he would cut off the supernumeraries at our navy-yards and have some fixed rules governing the yards, they would be very much obliged to him. If there were no places for their constituents, they would be able to say to them, there is no place for you. I have many friends on both sides, and have heard sentiments expressed from different ones that they would rather have the Secretary be like old Gideon Welles. Though he had some peculiarities, he was a remarkably honest man, and you never could get him to swerve from the bounds that would affect the service materially, or affect an individual that was in the service.

Q. What is your present position?—A. Commodore. I have been thirty-nine years in the service.

By Mr. ROBBINS:

Q. Are you in active service?—A. Yes. I am fifty-three years old the 10th of last March I entered when fourteen.

By Mr. HARRIS:

Q. What are the abuses in the navy-yards, if you know?—A. One is that Naval constructors, Chiefs of Bureau of Construction, and chief engineers, have under this system of bureaus, to decide the character of ships to be built, and the style of engine-boilers, without consulting those who have to handle the ship, and to fight the ship, and who represent the countryry abroad. There has also been, I am sorry to say, since I have known anything about navy-yards, more or less interference, by politicians, in the management and employment of men, and the management of navy-yards. There has never been quite so much abuse as there has been within the last eight years, since Mr. Robeson has assumed charge of the Navy Department.

Q. What are those abuses?—A. The unnecessary number of men employed prior to elections.

Q. Is that a matter within your own personal observation?—A. Yes, sir; at the Kittery navy-yard. I was there two years, and have witnessed the constant interference on the part of Mr. Hanscom, in discharging and employing men. He often took on worthless men instead of good men. I have an impression that Mr. Robeson, being a very indolent man, and not attending to his duties, has allowed abuses through these bureaus. There are good, honest men in the navy-yards that cannot give information, in consequence of their not being acquainted with the books; instances of material having been received when it ought to have been rejected.

By the CHAIRMAN:

Q. What year were you commandant of the Kittery navy-yard?—A. I was executive of the yard in 1869, three years from the 15th of September, 1869.

Ir. HARRIS:

ou have charge of any other yard?—A. At the Boston navy-yard, at the New and Philadelphia yard.

e CHAIRMAN:

t to ask you, while you were at the Portsmouth yard, if the Marion was re-
Yes, sir.
el was laid there while you were there?—A. Yes, sir. There was no board of
l. There might have been some conversation between Hanscom and the Secre-
hington here. I don't believe here was any board here. There was nothing at
uth yard whatever.
view of making it specific, I ask you if, in the case of the Marion, such a
contemplated in section 1538 of the Revised Statutes was organized at the
-yard?—A. No, sir; there was no board convened at all.
hat knowledge or information have you in regard to the rebuilding or repairing
alia?—A. She was a receiving-ship at Portsmouth, and was taken to Boston;
Vandalia was laid at the Boston navy-yard.
ou any recollection now as to the cost of the new Marion?—A I have not.
at the Kittery yard, wasn't the Enterprise being built by a contractor of the
ment?—A. Yes, sir. She wasn't completed while I was there.
happen to know anything in relation to the way contractors were favored or
n their dealings with the Department?—A. That is only by hearsay.
happen to know, while you were at the Kittery yard, that purchases were made,
he Secretary of the Navy, outside and independent of the annual contract?—
member from time to time there were things purchased, articles used in ships,
rchased by private contractors. I can say only in a general way that the require-
he law was not always observed.
know of any other abuses at the navy-yards, or frauds committed other than
ve mentioned?—A. I have only a general idea; that material delivered at the
as not been subjected to the requirements under the contract, has either been
allowed to lie at the yard very much to our inconvenience, occupying
eful and valuable ground in the yard.
know of anything like a combination among parties who are contractors
ernment or purchasers from the Government?—A. Yes; in the sale of ships
Delaware and the Macedonian and the Severn. They were all advertised to
t the same time. There was a ring formed to prevent the vessels from going
ng like their value. In the case of the Severn, the estimated value of the old iron
tion was about $47,000. She went off at $22,100, I think.
hat sale confirmed?—A. I was going to tell you. The Delaware was bid off
n of money than the Severn. Her sale was approved of; but, for some reason,
delay in the approving of the sale of the Severn. Finally, the parties that pur-
at Philadelphia, wrote to me to know the reason why the sale of the vessel
roved. I had, before this, sent to the Chief of the Bureau of Construction—
ation from a party in New London, who offered several thousand dollars more
en paid for the Severn, this party being cognizant of a ring being formed, and
in his letter. When the letter came from the party who had bought the Severn,
o the Secretary of the Navy, and wrote on this letter that I forwarded to the
Bureau of Construction the terms offered by this party in New London. I re-
der from the Secretary of the Navy to inform the parties that bid for it at Phila-
they hadn't approved of the sale, which I did. The vessel is now there on our

e higher bid was not accepted?—A. That higher bid was not accepted—two
sand dollars more.
u know anything about the exchange of old iron, bartering it in any way for
I know of it, but not directly. At the Portsmouth yard the Illinois was broken
and boilers were sold at private sale as old iron.
remember that at Kittery a large quantity of plating was forwarded and never
he vessel?—A. There was a large quantity of 4½ or 4¼ inch plating. The Mas-
had been on the stock, and had been rotting for years. I had taken great care to
on prepared with red leading, and it was good when I left there.
s not used on the Massachusetts?—A. No, sir.
you any knowledge that that iron was sold at private sale or exchanged with
?—A. I have only heard that.
whom did you obtain your information?—A. I received it from one of the officers.
that this iron has been removed from the yard.
ou know anything of a contract or agreement between the Navy Department and
to exchange three tons of navy iron for one ton of wrought iron?—A. No, sir.
ou know of any other instance of a private sale of public property?—A. I can't
y instance.
ou know of anything in the management of open purchases by paymasters?—A.

That goes back to an instance that I do know about, of a paymaster paying over and above the market-price for stores and equipments.

Q. Has that been within the last six years?—A. No. I suppose it is somewhere about eight or nine years since that happened.

Q. In the delivery of coal how is it?—A. It may be that frauds are committed upon the Government—false measurements or inferior quality. Without knowing from whence the coal would come at Kittery, there was a good deal of coal there that had been delivered under contract, and was a very inferior quality of coal. At different times there was a considerable complaint made as to the character of the coal. That has been frequently the case at the yard.

Q. Outside of the abuses and frauds which we have already spoken of, do you know of any others existing in the general or special service, connected with the Navy Department?—A. There is a matter that occurred at the Boston yard some time in the summer of 1873. There was a large number of men taken on prior to the election to work on the Virginia, a very sound old ship, having never been launched; and under pretense to make room on her ways for another ship, she was, in a measure, destroyed. She was so sound they found a great deal of difficulty to cut her up. She would have made a very fine receiving-ship, to take the place of the Ohio.

Q. Did they commence her destruction?—A. Yes; cut a hole through her bilge. They employed a large number of men to do this thing.

Q. Was she a live-oak ship?—A. Yes. She would have made a receiving-ship that would have lasted one hundred years probably—fifty, at least.

Q. Has the Ohio been subsequently destroyed?—A. She is no longer a receiving-ship. It is necessary to make very great repairs upon her. They have substituted the Wabash.

Q. Are there any other instances?—A. There is one great abuse that exists in our Navy, in regard to the service stores and equipments, and all kinds of clothing for the use of the ships and men at foreign stations; lumbering up our storehouses; and in many instances the stores being condemned very soon after they reached the station. There has been no care about such things; and oftentimes things could be purchased much cheaper than they can be sent

By Mr. ROBBINS:

Q. Do you allude to our foreign stations?—A. Yes; wherever we have storehouses on foreign stations.

Q. What remedy would you suggest for that?—A. Whenever we can purchase on foreign stations, it would be more economical so to do—to buy in the open market. Provisions can be bought abroad on most of our stations much cheaper than you can send them.

(Here the witness was requested to take with him a number of written questions, to be answered in the same manner and to be returned on the following day.)

WASHINGTON, D. C., *March* 15, 1876.

Commodore FAIRFAX recalled.

By the CHAIRMAN:

Question. I desire to ask you this morning, in reference to the discharge of any clerks or employés in the navy-yard who were subsequently taken on by direction of the Navy Department. Do you know of any such instances?—Answer. While I was at the Portsmouth navy-yard there was an effort made to reduce the supernumeraries of the yard. It was suggested to the Secretary of the Navy that a good deal of expense could be saved by discharging certain unnecessary clerks in the yard. The Secretary authorized it to be done, with the understanding that it should go through all the yards, New York, Philadelphia, and elsewhere. We only proceeded as far as the discharging of supernumeraries in the yards, taking in Portsmouth yard, amounting to several thousand dollars a year—probably nine or ten thousand dollars in that one branch. Then there were a few inquiries—political—about it. As I was instrumental in bringing this thing about, I came very near losing my position as the executive officer of the yard. I used what political influence I had to stave it off. I had Morrill and Cragin against me; they told the Secretary of the Navy that it couldn't be done. Dr. Wentworth, he was a practicing physician in Kittery; he held a position through Mr. Hamlin for political services, and during the war. He came to me and said he had been appointed to this position, with the understanding that there was nothing to do. It was a $1,500 position. He practiced medicine, and I know he was scarcely able to do duty. I told the civil engineer of the yard, Mr. Chandler, that I required him to keep his clerks with him; and this brought about this statement of Dr. Wentworth. He was discharged, and for a time remained out of the yard, but afterward re-appointed, and continued in the yard, not having anything more than nominal duties. He had his brother, at $4 per day, to attend to the duty.

Q. He was discharged?—A. Yes, sir.

Q. There was no necessity for the office?—A. No, sir.

Q. Was he afterward taken on?—A. Yes, sir. He came back about the time I left. When I left there they were all put back.

By Mr. HARRIS:

Q. By whose orders was Dr. Wentworth restored?—A. He was restored, I presume, by an order of the Bureau of Yards and Docks.

Q. Do you know of any other instance of an unnecessary officer being employed?—A. I can't remember them all, except an $1,800 clerkship. There was a man who was appointed to fill the place of this person that was discharged. He wrote me to inquire what the duties were. I told him there were none. He said he would accept the office. He was a republican. He wouldn't come unless there were some duties attached to the office. After that I don't know who took the office.

Q. What year was that reduction made in the yards?—A. That was somewhere about the latter part of 1871 or 1872—about the closing up of my third year at the station. It may have been the early part of 1872.

Q. Did Dr. Wentworth perform the duties that were assigned him?—A. Nominally he did. The civil engineer of the yard was in charge of his office in the yard.

Q. He was superior to him?—A. Yes; he had supervision of the whole. He seemed to regard him (Dr. Wentworth) in the light of a supernumerary, and when he was not there he never took him to task.

Q. Do you know whether he kept up that clerical duty?—A. Yes, sir.

Q. Do you know in point of fact that he did perform the duties assigned to him?—A. He only had supervision of the work that his brother was attending to. He had his brother employed, and he did the work that properly belonged to Dr. Wentworth.

By the CHAIRMAN:

Q. Who paid his brother?—A. The Government; $4.50 per day. Dr. Wentworth's salary was $1,500.

By Mr. HARRIS:

Q. Dr. Wentworth was a salaried officer?—A. Yes, sir.

Q. Who is this Wentworth?—A. He was a general by brevet during the war. He left his practice and went into the Army, and was wounded. He was one of those strong friends, and he worked for Mr. Hamlin, and by his energy and influence helped Mr. Hamlin to obtain his position as Senator. He was a very warm advocate of Mr. Hamlin. Mr. Hamlin thought he ought to have it because he had been in the Army.

Q. Are you giving your opinion?—A. This was Mr. Wentworth's—that Mr. Hamlin had him appointed because he said he would have nothing to do.

Q. Was Wentworth a candidate for Congress at that time?—A. I think he was. He tried twice for the nomination, but didn't get it.

By the CHAIRMAN:

Q. What vessels in the United States Navy have been rebuilt or built under the name of repairs?—A. The Monongahela was entirely rebuilt while I was at the Portsmouth navy-yard. The Shenandoah at Boston was entirely rebuilt while I was at the Portsmouth navy-yard. She was a new vessel I mean. The Quinnebaug, she is repairing at Philadelphia now. She has been very expensively repaired. I couldn't say that she has been rebuilt. She has been undergoing repairs for a long while. The Swatara, she was rebuilt. The Galena, she was an iron vessel. The Vandalia has been rebuilt. The Marion has been rebuilt. The Kearsarge at California; that vessel has been expensively repaired. I can't say that she has been entirely rebuilt. The Tallapoosa was rebuilt at Baltimore, and since then she has had a great many alterations made in her in consequence of the indifferent way that work was done at Baltimore, which cost the Government a great deal of money. She was used as a dispatch-boat to run along the coast to carry stores from one navy-yard to another. The Miantonomoh, she is an iron-clad, what is called a monitor; she is being entirely rebuilt at Chester Monadnock, at Mare Island, Terror of Philadelphia, Camanche at Mare Island. There is a good many of these vessels that I can't separate now.

Q. Isn't the Nipsic being torn to pieces, and rebuilt at the Washington navy-yard?—A. It is the present style of things to take up a vessel and entirely reconstruct her and rebuild her.

By Mr. HARRIS:

Q. Those iron-clad monitors, do you understand that the turrets are not to go on board again?—A. The turrets will unquestionably, where they have not been battered. Those vessels were never in fire, and of course they will go back.

KITTERY NAVY-YARD, *May* 16, 1874.

SIR: The undersigned respectfully submits the following proposal to launch the steam sloop for which he obligated himself in a contract to build.

To launch the vessel, the material to be furnished and hauled to the ship-house as required, and the officials of the yard to take the care and charge of the vessel as soon as afloat, for the sum of $2,000.

Your obedient servant, JOHN W. GRIFFITHS.

ISAIAH HANSCOM, Esq.,
Chief of Bureau of Construction and Repair.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, May 16, 1874.

SIR: Your offer of this date, to launch the sloop of war building by you in the Kittery navy-yard for the sum of $2,000, the materials to be furnished and hauled to the ship-house as required, and the officers of the yard to take care and charge of the vessel as soon as afloat, is hereby accepted.

Respectfully, &c.,

I. HANSCOM,
Chief of Bureau.

JNO. W. GRIFFITHS,
Portsmouth, N. H.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, June 25, 1874.

SIR: Inclosed please find the following bills approved in triplicate, payable by the paymaster at Portsmouth, N. H.:

For the eighteenth payment, being the last under contract for building the Enterprise	$1,559 38
For reservations withheld from eighteen payments	2,309 99
For launching sloop of war Enterprise	2,000 00
	5,869 37

Respectfully, &c.,

I. HANSCOM,
Chief of Bureau.

J. W. GRIFFITHS,
Portsmouth, N. H.

BROOKLYN, *June* 16, 1874.

DEAR SIR: May I respectfully ask that, having completed the hull of the United States steamer Enterprise under my first contract, as far as may be, until the vessel is docked and the castings made, and having launched the vessel under the second contract, that the amount of contract balance be paid at Portsmouth, as the former payments have been, which stand as follows:

Balance	$1,654 00
Reserve	2,310 00
Launching	2,000 00
	5,964 00

The remainder, being compensation for demurrage and extra work, $5,926, will be a sufficient guarantee that the remainder of the work will be executed as soon as castings are ready and the vessel is docked.

Respectfully submitted by your obedient servant,

JOHN W. GRIFFITHS.

ISAIAH HANSCOM, Esq.,
Chief of Bureau of Construction and Repair.

PORTSMOUTH, N. H., *November* 20, 1874.

SIR: The Enterprise having been built to the satisfaction of the bureau, under the superintendence of Assistant Constructor Philip Hichborn, I would respectfully ask that no change be made during her progress to completion.

Your obedient servant,

JOHN W. GRIFFITHS.

ISAIAH HANSCOM, Esq.,
Chief of Bureau of Construction and Repair.

PORTSMOUTH, N. H., *November* 14, 1874.

SIR: Your letter of the 12th instant, qualifying the proposals of the undersigned, under date of August 31, 1874, to continue the work on the United States steamer Enterprise to completion, excepting only the blacksmiths', platers', and coppersmiths' work, together with the masts, spars, blocks, and boats, the materials and facilities of the yard to be furnished as required, for the sum of $25,000, has been duly received, and is hereby accepted by the undersigned.

Your obedient servant,

JOHN W. GRIFFITHS.

ISAIAH HANSCOM, Esq.,
Chief of Bureau of Construction and Repair.

PORTSMOUTH, N. H., *May* 28, 1874.

SIR: The undersigned submits the following proposal to copper the steam screw sloop, built by him in the Kittery navy-yard, when the vessel shall have been placed in dock. To have the material and facilities of the yard furnished as required, for the sum of $1,800.

Respectfully submitted by your obedient servant,

JOHN W. GRIFFITHS.

ISAIAH HANSCOM, Esq.,
Chief of Bureau of Construction and Repair.

KITTERY, ME., *March* 16, 1876.

JAMES W. BROOKS sworn and examined.

By Mr. BURLEIGH:

Question. Were you foreman carpenter on the yard during the time that Mr. Griffiths was at work building the Enterprise?—Answer. I was foreman-joiner, sir.

Q. You were here during the time that he was building the Enterprise?—A. Yes, sir.

Q. Will you state to the committee what you did to the material put into the Enterprise; what was done in the joiner-work to assist him?—A. I did all that could be done by the machinery on the yard—planing, sawing, matching boards, sticking molds, planing deck-planks, turning, &c.

Q. You did not bead the bulwarks outside?—A. No, sir; no beads stuck except on the rail.

Q. Didn't you bead any of your state-rooms below?—A. That was done by hand. He did that. We planed the bulk-heads.

Q. Would you plane and match them?—A. We planed and matched them.

Q. Did he have the windows to build?—A. I think there were four cabin windows that belonged in his contract.

Q. What did you do to them?—A. I am not positive that we did anything. That is crooked stuff. You cannot work that on machinery. But we might perhaps do the mortising and tenoning. We got out the frames.

Q. Did you bead it?—A. On this crooked work all we could do was to jig it out to the molds.

Q. Could you not plane two sides of it?—A. It is not only sweeping, but beveling. You cannot plane it. It had to be worked by hand; we did all the crooked work that could be done with the jig-saw.

Q. Are there in the state-rooms in the main cabin any means of ventilation except the doors?—A. There is a light in the main cabin, a small sash.

Q. Are there any stanchions up and down there?—A. There are banisters in ward-room sections.

Q. Who turned those?—A. I did it with my force. I did everything of that sort that could be done with the machinery that we had.

Q. Which is the most work, to get those things out or to set them up?—A. It is the most work to get them out.

Q. You did more work than he did?—A. Yes, sir, that part of it; speaking now of the banisters.

Q. What about the doors?—A. We did all the planing, all the mortising, all the tenoning.

Q. To mortise you would have to saw them out to size?—A. Yes, sir.

Q. His work would be to put them together after it was fitted?—A. Yes, sir; his work would be to put on the bevels, strike for the rails and the widths, &c.

Q. Was your work more or less than his, on the doors?—A. Well, just about one-half.

Q. What other parts of the ship did you then have to work upon; to make anything anywhere equal to one-half more?—A. Well, it is more than one-half of the work to plane the stuff in *all* the work on the ship. It was not so much work to plane out some of the stuff by machinery as it would have been to put it up after it was got out; but it would have been more work to plane it by hand, a great deal.

Q. What is your idea of the joiner-work on the whole ship, whether most of the work in the ship was done by the tools, or most of it done by his men?—A. O, most of it done by his men, take the ship through.

Q. Do you mean on joiner-work?—A. Yes, sir.

Q. On the planing up of the hull?—A. We did nothing except planing the deck plank.

Q. Were the deck-plank jointed?—A. No, sir.

Q. Were they got out to a joint, or so that he would not have to joint them?—A. No, sir. He had to joint them.

Q. What did he have to do to them?—A. They diminished the streak with the ax, and jointed it up with the hand-plane.

Q. Did you do that before or after this work was done?—A. We did it before. We planed two sides, dressed them down to a uniform thickness.

Q. Well, the berths in the cabin, plump-boards, and matching of top slats, who got those out?—A. We did what part of it we could—everything that could be done by machinery.

Q. Was your part the largest part of that?—A. No, sir; I think not.

Q. What would he have to do with berth-slats?—A. The bottom of the berths is solid wood. There is a case of drawers under the berth. They made it. We planed the boards and matched them.

Q. Did you saw them to dimensions?—A. No, sir; they are all of different widths, except the front; that we framed and mortised. We ran it through the saw and he would have to joint it up by hand.

Q. Now will you state any other part of the joiner-work?—A. No, sir; that is all.

Q. Does what I have asked cover the whole?—A. My statement is that we did all that could be done by machinery. That covers the whole.

Q. State some jobs where you have done more than half of the work; any that you have not gone over.—A. Well, I don't know as I can, any particular job.

Q. Are there any sky-lights on that vessel?—A. Yes, sir.

Q. What about those?—A. Well we did what we could of those. I don't remember that there was more than one sky-light made. There was a sky-light over the engine-hatch that they made.

Q. Did they make it entirely?—A. No, sir; we did the same work there as on the other, planed the stuff out and molded the sash.

Q. Did you saw the top at proper length?—A. No, sir; they furnished the boards, and we ran them through the planer and jointed them.

Q. Didn't you have anything to do with the sides?—A. Yes, sir: with the mortising and tenoning. There is no frame but just the posts—sash cut out between the posts.

Q. You got out the wood-work for that?—A. Yes, sir; planed and matched it. One end of that sky-light is circular. The half around that of course they worked out themselves.

Q. Is there a top-gallant forecastle?—A. Yes, sir.

Q. Is there any joiner-work under that?—A. Yes, sir; bath-room and water-closet. We got out the doors for that.

Q. Are there any chicken-coops on board of her?—A. No, sir; I don't think we manufactured any "stores." Chicken-coops go under the head of "ship's stores." I don't think they completed anything of that sort. We did everything that could be done by machinery and the facilities that we had in the yard here. I and my men did everything that could be done in the joiner-work, which was my department.

Q. Are not your facilities better than those of any yard?—A. I don't think they are quite as good as those of some yards. We had the tools and used them for that.

Q. Did you use them for that in preference to your own work?—A. Yes, sir.

Q. Laid your work aside to do their work?—A. Yes, sir; when necessary; those were the orders I had, that they were to have the preference in all cases.

Q. How many men did Mr. Griffiths have employed on that vessel?—A. I could not tell. The out-board joiner-work he sublet, to plane up the ship, and all that comes under the head of out-board joiner-work. Mr. Jones was subcontractor for the joiner-work.

Q. Where does Mr. Jones live?—A. He lives, I think, in East Boston.

Q. Now tell me any other subcontractor that you know.—A. There was a man that did the calking, named Dinsmore, on the second contract. I don't know how it was on the first. I don't know whether he did the calking in the first place or not.

Q. Now, do you know any other subcontractor under him, besides Mr. Dinsmore and Mr. Jones?—A. No, sir; not on this last contract.

Q. In the first contract?—A. I don't know that there was any that I know. I could not tell you.

Q. In regard to the quarter-galleries there is a good deal of joiner-work about those, is there not?—A. Yes, sir.

Q. They are very expensive to put on a ship?—A. Yes, sir.

Q. Do you know what the expense would be of putting them on a ship?—A. No, sir.

Q. How much, for a rough estimate, for labor in the joiner-work? The difference between having them in the ship and not having them, building them as she is?—A. I should say, for a guess, that it would make $300 difference in the joiner-work.

Q. Would that cover the lights?—A. There are only two lights of glass.

Q. Was it $300 for both sides?—A. Yes, sir.

Q. $150 on each side?—A. Yes, sir.

Q. Would you contract to do joiner-work for that sum on them?—A. I think I should be willing to.

Q. Inside and out?—A. Yes, sir.

Q. Do you know any other joiner-work belonging to Mr. Griffiths to do that was left off, besides these, that he did not do?—A. No, sir; I don't know of anything now. I believe, though, that there were some of the ladders that he did not complete in this first contract, side-ladders; but I don't know that I am positive in regard to that.

Q. Did he complete the between-deck ladders?—A. He made some ladders. I think his last contract included new ladders. The first ladders he made were not suitable.

Q. Was there any other thing besides the ladders that he made under the first contract that was condemned, that had to be made over under the second contract?—A. I think the gratings were condemned.

Q. Were there gratings over each hatch, lower and upper deck?—A. No, sir; only on the upper deck.

Q. Who built the galley?—A. Bureau of Equipment furnish it.

Q. Didn't that come under his contract for joiner-work?—A. There is no joiner-work to be done on the galley, I think.

Q. Was that all made by the carpenters?—A. All the wood-work is just the platform on which it sits. It is not housed in. The galley sets out open. It is not covered—it is all open. It is just merely a platform to set it on.

Q. Is the stern of this ship sheathed without pine outside?—A. No, sir.

Q. Not on the rail?—A. The hammock-rail is sheathed inside and out.

Q. You got those hammock-rails out of the proper width and planed them, and you stuck a bead on them, didn't you, by machinery?—A. No, sir.

Q. After you left them they were all ready to lay except beading, were they not?—A. I don't think we had anything to do with beveling them. Their bevel-work was sawed at the futtock mill. But the hammock-sheathing, of course, we did. We planed and matched the boards.

Q. You did all the work to the hammock-sheathing except putting it up?—A. Yes, sir.

Q. That was three-fourths of that work?—A. No, sir; it was not half of it. The front is paneled. That they had to do by hand. They had to put it up. We got out the moldings.

Q. The moldings were a considerable part of it, were they not?—A. No, sir; I should think not.

Q. You made the style and the moldings?—A. We planed it out. That is not mortised together. It is cut in between the two rails. He put in the moldings. We did not go aboard of the ship to do any work.

Q. But you got it all ready to go aboard the ship?—A. Yes, sir.

Q. And did all that could be done of it by machinery before it was put up?—A. Yes, sir.

Q. You were foreman of the joiners during the building of the Enterprise. Did you ever know of any material or labor having been charged to the Enterprise which was not carried to it and used by it?—A. No, sir.

WASHINGTON, *February* 29, 1876.

Commodore JOHN C. HOWELL sworn and examined.

By the CHAIRMAN:

Question. Please state your rank.—Answer. Commodore in the Navy of the United States; at present, chief of the Bureau of Yards and Docks.

Q. Previous to your assignment to your present position where were you stationed?—A. At the Portsmouth navy-yard.

Q. How long were you there?—A. Two years, in command.

Q. During the time that you were at Portsmouth, how many of the eight sloops of war authorized by the act of February 10, 1873, were constructed, in whole or in part?—A. Two; the Enterprise and the Essex.

Q. Which was built by the Government and which by the contractor?—A. The Essex was partly built by the Government while I was there; the Enterprise wholly by the contractor, Mr. Griffiths.

Q. State what privileges that contractor had in the selection of material and labor?—A. He had a great many privileges. A copy of the contract was sent to me, but it is impossible

for me to give in detail exactly what he had. His timber was furnished him—a great deal that was gotten out by Mr. Webb, who was the constructor of the yard at the time. He had the right to reject it if he did not think it was proper for the ship. I think that he did reject one or two pieces of planking after it was put in; he did not think it was good; he objected to it as knotty, or something of that kind. He had the run of the work-shops, and, if my recollection serves me, he had the preference in the work-shops over the Government work.

Q. Under the orders of the bureau, did the navy-yard, in its management, defer to the contractor?—A. Mr. Webb, (who is constructor at the Washington navy-yard,) under whose supervision the Enterprise was built, could give you in detail all those statements. I, as commandant of the navy-yard, shut up in my office from nine until three, cannot pretend to recollect a great deal about it. My impression, however, is that Mr. Griffiths had the preference in the work-shops over Mr. Webb, who was building the Essex at the same time. We were ordered to give him every facility.

Q. And he availed himself of it, so far as you know, to the full extent of the orders?—A. I am very confident he did.

Q. And in cases of appeals taken by him from any order or attempted control of the constructor, you decided in Mr. Griffiths's favor, did you not?—A. No, sir; I decided against him whenever I possibly could.

Q. Why so?—A. Because it annoyed me, in the first place, to have a ship built within the navy-yard. I did not think it was a good place to build a ship. I changed my mind a little afterward. But in many of those cases the matter was referred to the chief of the bureau, who decided against me.

Q. Do you know of any obstacle whatever being thrown in the way of M. Griffiths' carrying forward his contract with the Government?—A. I certainly do not.

Q. Either upon your part or upon the part of any other officer or employé at the navy-yard at that time?—A. I am certain that I never threw any obstacle in his way, further than to hold him to the very strictest terms of the contract. That I determined to do, and did do, so far as I could. The case was occasionally represented to the chief of the Bureau of Construction, who, possibly, was more liberal in his views than I was, and the cases were generally decided against me. I know of no obstacle having been thrown in his way; I have no recollection of any. I don't think that Mr. Webb, the constructor, was very much attached to Mr. Griffiths, but he is a very honest man, in my opinion, a very good man, and I do not think he would throw any obstacle in Mr. Griffiths' way, purposely, or that he would endeavor to delay him in the building of his ship. Some things it is possible Mr. Griffiths thought he ought to have, the use of some machinery, possibly, which Mr. Webb was using, and he may very possibly have been delayed in that way a little; but I doubt it. I have no recollection of it; I cannot call any instance to mind.

Q. As to the control of labor, or the control of teams whenever necessary, how was it?—A. To the best of my knowledge and belief, he had them whenever it was necessary, all that could be furnished him.

Q. Within your knowledge did not Mr. Griffiths exceed that, and require it when it was not necessary?—A. I don't recollect. If it had ever come to me, he certainly would have been stopped right there. I don't reccollect any such case having been reported to me; possibly it may have been; this was three years ago.

Q. Can you state from your recollection how many, if any, surveys or inspections were had of that ship built by him, with a view of determining the value or cost of any alterations or changes made by you or under your order?—A. The only thing that I recollect was that I went on board with Mr. Hanscom and went over the ship with him, and I suggested that the quarter-galleries should be left off. I showed him how impossible it would be for a sick man to crawl down into this place, and for a stout man like myself it was impossible. I suggested that they were cumbrous on a small ship like that, and that they were exceedingly inconvenient at all times, especially when a man was ill. I also suggested to him that of course as those were left off, whatever they were to cost beyond the cost of placing the arrangements inside, ought to be deducted from the contract-price.

Q. That charge, instead of adding to the contract anything to be paid by the Government, should have been deducted from his proposal?—A. Decidedly.

Q. Any other change or alteration?—A. Possibly, some little modification in the arrangements of the cabin, but nothing that should have cost anything.

Q. Do you know whether the change suggested by you was made or not?—A. No, sir; I left too soon to know of it.

Q. Do you know anything about the mode or manner in which the account was kept of the materials and labor supplied by the Government?—A. All kept by Mr. Webb, who, at the end of whatever time had been agreed upon that payment should be made, brought me a certificate that so much of the ship was finished—that so much labor had been performed upon her, and that so much upon the contract was then due Mr. Griffiths.

Q. Did this account show the amount of expenditure he made from the labor and material owned by the Government?—A. No, sir; only the gross sum in money due was shown. Mr. Webb, however, has, or had, a minute account of every bolt and every plank and every frame and every piece of timber put in the ship. That did not come under me. That was his specialty. He kept all those accounts; I simply signed the bills.

Q. Who controls the taking on and the discharging of employés at the navy-yard? Is it the commandant, or any officer connected with the yard, or is it the head of the bureau here?—A. The men are supposed to be recommended by the foreman of each department, to the head of that department in the yard, to the constructor, the civil engineer, the chief engineer, the equipment officer, and so on. If the head of the department approves the selection of the men and their number, a list is made out and presented to the commandant for his signature. The commandant may object; he has that power; but it would not be well at all times for him to object, because they might say, when they were asked, why is not this work done? "the commandant would not allow us a sufficient number of men; he would not allow us the men that we wanted." Therefore the commandant very generally, unless there is some man upon the list known to him to be incompetent, or a bad man, approves the list and the men are taken on. That is the theory.

Q. How far does the practice conform to that?—A. It depends a good deal upon the time of year.

Q. What has that to do with it?—A. Well, the elections take place at a certain time of the year.

Q. Does an election tend to diminish or to increase the number of laborers in the yards? —A. In my experience I have found it rather to increase them.

Q. Is that a fact at the Portsmouth navy-yard?—A. It was, upon occasion.

Q. What occasion was that?—A. Upon my word, I don't know. It was some election there in 1873 and '74, probably. I recollect that a number of men were taken on just before the election; I have forgotten exactly how many. I also recollect that forty of them voted the democratic ticket the next day. There was a mistake, apparently.

Q. Do you remember in what proportion they were taken on at that time?—I think 100 men were taken on.

Q. How long before the election?—A. Three or four days.

Q. Under what kind of order were they taken on; the recommendation of any committee or any outside parties, and, if so, whose?—A. I forget. There was an order of some sort, of course, or they would not have been taken on; whether it came from the chief of the Bureau of Construction or not I do not know. Those orders generally did come from him.

Q. Was it to take on a specific number of men?—A. I think the order was worded somewhat in this way: "One hundred men will be required for work on" some ship or other, "and you are authorized to take them on." The men were taken on, and, as I said, forty of them voted the other way. They worked honestly and faithfully while they were there.

Q. How many days were they kept in the yard?—A. I should say about ten or twelve or fourteen days.

By Mr. JONES:

Q. Were there not a great many more employed in 1873 and '74, previous to the election? —A. That was the instance that made the impression upon me; it has always been done. It was done twenty years ago; it is done now; it will be done always, unless you can pass some law to stop it, and I don't know whether you can do that.

Q. Was your attention called to the residences of the laborers or employés taken on in September, for instance, at Portsmouth, N. H., as to whether they lived in the State of Maine?—A. I have an idea that it was very much that way. I have a recollection that it was in that way. I don't know the month exactly. I know that at one time the majority of the men we got were from New Hampshire, and at another time the majority of the men were from Maine. The elections came on shortly afterward. There is no doubt about that.

Q. Do you remember the names of the vessels upon which these men were employed, or what was the alleged necessity for their employment?—A. I think the Monongahela was one, and I think we were breaking up a ship there, which actually did require quite a number of men.

By Mr. JONES:

Q. Hauled up, probably, for the occasion?—A. I don't know about that. She was hauled up.

By the CHAIRMAN:

Q. Was the work completed?—A. Yes, sir.

Q. In those ten days?—A. O, no; but the men worked honestly while they were there; for that is my business. The work was pushed on during that time, but then at the end of that time the money would be somewhat short in that department and the men would have to be discharged.

Q. The number of laborers taken on in the yard is determined by the amount of money set apart by the head of the bureau here?—A. Yes, sir; he controls the number of men that shall be taken on. We are informed generally, at the first of the month, exactly how much money we shall have to spend that month for labor alone. Then we can make our calculations as to how much labor can be employed during that month or how many men can be taken on. Sometimes it is $20,000 for the month; sometimes $5,000.

Q. Do you know of instances in which orders originating here have been given to officers of the yard directing them to make requisitions for laborers or employés?—A. I have no recollection of such a case in my experience.

Q. Do you know of instances wherein it has been done with reference to purchases of timber or other materials required at the yard?—A. Not to my recollection, in the Portsmouth navy-yard, or in any navy-yard that I ever commanded.

Q. Do you know whether it is a fact?—A. I have heard something of the sort, but where I don't know. I know that there were a number of knees taken in at the Philadelphia navy-yard—at least I was so informed by Commodore Preble, who, I think, stated the same thing here. That is the only thing of the kind that I have any knowledge of even by hearsay.

Q. Do you know anything about some controversy at the Portsmouth navy-yard with the head of the bureau, or with the contractor, about some knees at that yard, either live-oak or white oak?—A. During my administration of the yard was it?

Q. I think so.—A. I won't say that it did not occur, but I do not recollect it. But there at the yard is all my correspondence; if I only had my books here I could tell you very readily.

Q. Did you have any controversy with the contractor about the delivery of timber, lumber, or material of any description, and conduct any correspondence in regard thereto with the head of the bureau?—A. I do not know. I don't recollect. I know that a very large quantity of timber was landed at the navy-yard, very much to my annoyance as commandant, because it filled up the yard, and I didn't know where to put it; but whether I wrote any letters about it or not I am unable to say.

Q. At the time it reached the yard were you advised, or was it the fact, that any contract existed for its delivery at that place?—A. It is possible that some live-oak timber arrived there without my having been notified that it was to arrive, and without any copy of the contract having been submitted to me. In fact, I think all the live-oak timber was sent there. The vessel simply arrived alongside and they said that the timber was for the navy-yard, and asked permission to discharge it. I suppose that I must have written to the chief of the bureau for authority to unload the vessel, and the order must have been given, or, of course, I would not have taken it.

Q. Who was delivering that timber?—A. I do not know.

Q. Was it not Mr. Swift?—A. I really don't know. He is a man that delivers timber at the Boston yard. I know that by hearsay; but what that man's name was I haven't the least recollection.

Q. Do you remember Trickey & Jewett?—A. Very well.

Q. Do you remember their delivering any timber at that yard and without any notice to you of any contract?—A. I know of their delivering timbers there, quantities of it; but under what circumstances I really cannot tell.

Q. Who were the principal contractors or parties delivering timber at the Portsmouth yard while you were in command?—A. Trickey & Jewett for pine lumber and piles, and all that sort of thing; but who the other parties were I don't recollect.

Q. I ask your opinion as to the necessity for the quantity of timber delivered by these parties in that yard.—A. An excellent argument is made in the Secretary's report upon that subject, and the Chief of the Bureau of Construction I have heard talk sensibly and well about it. At the beginning of the war our live-oak timber had been very much reduced by the ships that had been built, and there was no possibility after that of getting any more of it. Our ships, therefore, were necessarily built of green timber—white oak. The action of heat upon the knees rotted them very much and very rapidly, and in the course of a very few years ships that cost a million dollars were worthless—they would not hold together. Some of them were sold for $40,000 apiece, engines and all. Mr. Hanscom claims that this taught him a lesson, and that he determined that the country should not be caught in that way again. If my recollection serves me, he says that he has on hand now only enough live-oak to build thirty-five ships, and that he could use up, in the event of a war with a foreign country when it would be necessary to build ships rapidly, all the live-oak now in all the navy-yards in one year.

Q. I suppose that by your repetition of that argument, you mean to give it your concurrence?—A. Yes, sir; I think I do. Whether it was proper at this time to expend so much upon the purchase of live-oak, and whether it should not have been purchased in smaller quantities and the purchase extended through more years, I am not prepared to say.

Q. Looking to the facilities of the Government in its yards, its wet docks, and its other means to preserve the timber, is it not an unnecessary and useless waste of the public money?—A. I do not think I would be justified in saying that it is.

Q. Does not the live-oak, if not first put in wet basins and then afterward properly protected by timber-sheds, take what is termed the dry-rot?—A. I believe it does, or, at all events, it is injured in some way; the sun splits it.

Q. Within your own observation is not that occurring?—A. It is.

Q. In the face of that fact, how is it that the Government does not suffer losses?—A. The Government, in all probability, will suffer some loss from the want of protection to the timber. The want of protection is caused by the want of an appropriation to build timber-sheds.

Q. Ought not an executive officer to be controlled by the appropriation that he has, and not by the one he thinks he ought to have?—A. I think so, decidedly.

Q. And in view of the fact that appropriations have not been made for the multiplication of wet docks and proper timber-sheds, ought not, in common prudence, the executive officer to look to this fact in protecting the interests of the Government?—A. I think I should have done so.

Q. Do you know of any instance where property belonging to individuals has been stored in the yards of the Government?—A. Furniture for officers, do you mean?

Q. Timber or anything else.—A. I recollect nothing of that kind in Portsmouth. I think, although I am not at all positive, that some timber of some kind was stored at the Portsmouth navy-yard, landed there, pending negotiations for its purchase. I have simply an indistinct recollection of it. I don't know whose timber that was.

Q. Looking to the means of taking care of timber, as they existed at the Portsmouth yard, I ask you if there has not been an unnecessary accumulation of timber at that point beyond the means of the Government to take care of it properly?—A. There is a very large wet basin at Portsmouth, where, at high water, the timber is almost entirely covered, or it could be so arranged in that dock that it would be covered. As I was about leaving the yard I suggested the propriety of building ways by which the timber could be launched into the middle of the dock, and that a heavy pair of shears—one of these swinging cranes—on a large scow should be built, in order that the timber might be distributed throughout that dock. I think there was sufficient capacity in that dock to hold all the live-oak at the Portsmouth yard received during the time I commanded there. It was not all in when I left. On the contrary, there was a large accumulation in the yard.

Q. And in that exposed condition subject to decay?—A. Subject to injury of some sort, at all events.

Q. Do you know of any instances in which clerks or writers have been taken on at that yard without the requirement of the officer there, and at the instance or by the order of the bureau here?—A. I am unable to mention names, but I know that I was under the impression that more clerks were employed in the Bureau of Construction than were necessary to perform the work, and I recommended the discharge of one or two, at all events.

Q. Do you know of instances where workmen have been taken on or discharged at the yard at the instance of politicians?—A. I do, sir.

Q. How often has that occurred?—A. I should be unable to say.

Q. That was during the time that you were commandant at the yard?—A. During the period of time that I was commandant at the yard, which was since 1870.

Q. By whose orders was that done?—A. The orders generally came, I think, from the Bureau of Construction—I will not be positive—by direction of the Department.

Q. I call your attention to the time when there was a meeting in your office in which the subject was talked over and arranged how many men should be taken on from one State and how many from another. Do you recollect such a meeting?—A. I may have heard it talked over, but I never gave an order to take a man on in the navy-yard at Portsmouth, to the best of my recollection, while I was there, except by order of superior authority. It is a thing that I avoided. I wanted to keep my hands clean, and I have kept them clean.

Q. I am aware of that; but I call your attention to such a meeting, at which, if I am correctly informed, Mr. Hanscom and some politicians were present.—A. I used to hear those matters talked over very often.

Q. Do you recollect such a meeting of two or three parties, politicians, in which the number of men to be taken on from Portsmouth and the number to be taken on from the State of Maine was determined?—A. I don't recall it to mind. I will not say that it did not happen.

Q. Do you remember any instance wherein the name of a party was borne upon the payroll of that yard who did not perform service in the yard?—A. Do you mean one that performed no service at all?

Q. No service, or half service, or any evasion of the full requirement of the law?—A. No, sir; I do not. If you know the name, possibly I might tell you more about it. I know the orders were exceedingly stringent that everybody should perform their duties.

Q. Do you know anything of parties being employed and paid for labor for which they were not fitted or skilled?—A. I have heard of such things in the yard, but those men were there generally for a very short time, and the matter was not brought to my notice, or they should not have staid there a moment. But not until after they were discharged was I cognizant of it at all.

Q. Do you know of any party having been discharged from the yard for any shortcomings or offense of any kind and afterward being taken back to the yard?—A. I do.

Q. What was the name of the party, for what was he discharged, and how did he come to get back?—A. There was a captain of the watch, I don't recollect his name, whom I had been dissatisfied with for a long time. He apparently had strong friends, and although there were a great many rumors about him, yet there was nothing that I could get hold of to justify me in discharging him, and I made it a point never to discharge any man unless I could prove that he had been behaving badly. One of the workmen was passing into his

boat at the wharf with something under his arm. The sentry stopped him. This man according to the sentry's account, rather got between him and the man who had whatever it was under his arm, taking it out of the yard against orders, but the sentry caught the man and took it away from him, (it was only a trifle,) and reported the watchman for interfering with him instead of assisting him. He reported it to the major of marines, who reported it to me, and I discharged the man on the spot. He was in the Bureau of Yards and Docks, of which I, as commandant, had particular control. Some time afterward he came back. I will not say that it was while I was at the navy-yard, but I know that he came back as captain of ship-keepers, at a higher rate of pay. I have forgotten the man's name.

Q. Do you know by whose orders he came back?—A. I think by the order of Mr. Hascom, under whose bureau ship-keepers are.

Q. Do you know of any other instance of a discharged man being put back?—A. Yes, sir. There was a man who had been acting as engine-driver of one of the stationary engines in the yard, (the machinist I think they call him,) whose character was not good at Portsmouth—who was offensive to the men under his charge, and whom, for some neglect of duty, I have forgotten now what it was, I discharged. Shortly afterward I was directed by the chief of the bureau to take him back in another capacity, and I did not do it. I pigeonholed the letter and kept it there for some months, when I got another order to take him back, which I thought it more prudent to obey, and did.

Q. Do you know of any other instance?—A. I don't recall any other.

Q. About that time was there a disappearance of a large amount of copper, and was the watchman that you first spoke of implicated, in your judgment, in the disappearance of the copper?—A. No, sir; I don't think that was the case. He was implicated in the disappearance of the box of glass, not of the copper. Every man implicated, in my own mind, in the disappearance of that large amount of copper I dismissed on the spot. I think there were three or four of them, but I don't think any watchman was concerned in that. If my recollection serves me there was a teamster, a laborer employed in the engine-house, and, possibly, one or two others.

Q. Have you any knowledge or information as to whether those copper-thieves have been employed at the yard since that time?—A. I don't know. They were not employed while I was there. If I am not mistaken, one of those fellows did get back while I was there, under an assumed name, and in another bureau; but he was not there more than two or three days before he was turned out and ejected from the yard. I think he went into the Bureau of Steam Engineering,

Q. You have no information derived from any of the officers of the yard that that same man afterward got back into the yard?—A. No; I have no recollection of it. I can hardly conceive it possible. I doubt if it did occur.

Q. A large amount of copper disappeared, did it not?—A. It was impossible for us to tell. We knew how much copper we had lost, but it had evidently extended over a series of years. It was old copper taken from the bottoms of ships—copper that had been taken off in breaking up ships—old pieces of copper that it would have been necessary to remelt before they could have been used, but valuable, of course—worth so much a pound. When we discovered that it was being stolen, I had it all carefully weighed, and the amount that we found there and the amount on the books of the construction department differed very materially—some thousand pounds, I think. How long that had been going on nobody could tell.

Q. The facts upon which you acted in the dismissal of this captain of the watch, and in the other instance, you reported, did you not?—A. I suppose I did. I think I must have done so. It is customary to do it.

Q. Since your removal from that yard you have been connected with the Bureau of Yards and Docks?—A. Yes, sir.

Q. State what connection you had with the removal of property from the Philadelphia navy-yard to League Island.—A. It would be rather a long story. I was told by the Secretary of the Navy to remove the Philadelphia navy-yard, everything in it, the houses and all the property that could be moved, to League Island. A contract was made with Mr. Rice, after due advertising, he being the lowest bidder, to remove all the buildings, and he was given something more than a month to do it in. It was a practical impossibility, as it proved to be; but in two months he managed to get down to League Island certainly very much the larger quantity of bricks, and window-frames, and everything pertaining to a house, and in view of the necessary detention that he had in the yard, the terms of the contract were not strictly insisted upon. That is, by the terms if he did not do it he was to forfeit $15,000; but we could not give him the buildings at the time he wanted them, when he was ready to pull them down, because we were doing work upon the ships there. The contract-price was paid him at the end of the time, and, I think, justly and properly paid him. The man did his best; he did everything that could be done under the circumstances. It was all right to pay him. When I was told that all these stores were to be moved—I think it was in August, at the time I was acting Secretary of the Navy—I wrote to the Secretary and got permission from him to issue a circular to the bureau, stating that each bureau would be held responsible for the moving of its own stores to League Island; that

it must be finished by such a date, and that the Bureau of Yards and Docks would re-imburse them for any expense they might be at. I then took charge of the moving of my own bureau, through, of course, the officers attached to the navy-yard, and did it with the men belonging to the Department of Yards and Docks, and I got everything down in time. In order to accommodate the large quantity of stores, I caused to be built at League Island a number of wooden sheds of rough boards, made weather-proof, and particular sheds or houses to contain the stores. With the other contracts made by the other officers I had nothing to do. I simply, when they present their bills, will examine them closely, and, if I think they are all right and correspond with the expenses that were kept account of at the Philadelphia navy-yard, we will pay them; and, by law, they will be paid out of the purchase-money of the Philadelphia navy-yard.

Q. Did you make a contract with Mr. Nathaniel McKay?—A. I am under the impression that the only contract (and that was not a contract but simply an agreement) with Mr. McKay was to furnish the labor for flooring the small ship-house, amounting to $2.400. It was wanted at once in order that we might put stores in it. I have no recollection of any other contract with him. That was an agreement. He was on the spot; he had his men all there, so that in the great hurry we took what means we had to accomplish what was needed.

Q. Do you know of a contract with Mr. McKay to move any of the buildings?—A. I know from hearsay.

Q. Does not that properly belong to your bureau?—A. Under this circular it was so arranged that each bureau did its own work, in order to distribute the work.

Q. That was the removal of its own stores?—A. Yes, sir.

Q. Was it expressed so as to include the removal of the buildings occupied by them?—A. I doubt if it was. I was very glad for them to do it. I didn't want to remove the ship-houses—I didn't think we needed them there—but I was only one man, and there were others opposed to me. I did not want to remove the buildings. I thought the yard would have brought more with the buildings.

Q. Were not the orders from the Secretary for the removal of the buildings, and the limited time allowed, and the effect of the removal, prejudicial to the interests of the Government?—A. Well, sir, that is rather a strong expression. The gentlemen who advocated it I honestly think believed it would be for the best interests of the Government to do as they did. I did not agree with them, but I am not prepared to say that it was prejudicial to the interests of the Government.

Q. If longer time had been allowed to contractors to remove the buildings it could have been done for a less sum of money?—A. I don't think there is any doubt about it. I wanted them to commence removing the navy-yard in April, immediately after the passage of the law; but there were difficulties in the way. It was a hasty, not properly considered, movement.

Q. Supposing that there was no necessity upon the part of the Government to make the sale, and no positive injunction upon any officer of the Government to make it, ought not longer time to have been given for the removal of the property?—A. Undoubtedly; yes.

Q. Taking the time of the actual sale and the claim made by the purchaser that he should have the materials then on hand that were legally to be considered as fixtures, did not the Government lose in that operation?—A. Yes; but not to any great amount.

Q. Do you know whether any injury resulted to the Government from the haste in tearing down the property and in its removal?—A. There is no doubt that if more time had been taken less injury would have resulted to the bricks, to the slate, to the window-frames, to the roof, and to the tin on the buildings. The Government, of course, suffered to the extent of the value of the broken bricks, and it was necessary in the time given; it was impossible to pull them down safely.

Q. Can you give the date at which the Secretary of the Navy instructed you to contract for the removal of the buildings?—A. I can send it to you, but I cannot give it to you. It was either in October or November, certainly. It must have been in October, because the man had November and until the 2d of December, and then his time was further increased until the 2d of January, the date at which the yard had to be given up; it must have been in October.

Q. Was it not contemporaneous with the advertisement and the sale of the property?—A. Shortly after, I think.

Q. And the date fixed for the removal of the property was the date of the sale of the property?—A. Yes, sir; that was the contract.

Q. And the extension of time was from the date of the sale to the day of delivery?—A. Yes, sir.

Q. To what extent was the property of the Government at the Philadelphia navy-yard sold?—A. I cannot tell you, but I can furnish you with it so far as my bureau is concerned; of course I have no means of knowing anything about the other bureaus. There were no private sales to my knowledge. They were auction sales or cash sales, of course, the proceeds of which, no doubt, were returned to the Treasury.

Q. Do you remember the names of the contractors?—A. Mr. Nathaniel McKay and Mr. Rice are the only two that I recollect, and although I never was very favorably impressed with McKay, and once turned him out of my office, I think there are very strong doubts

whether, if he had not been there, that navy-yard could have been removed. I never saw such a man in my life. He is something like what Sidney Smith said Mr. Webster was, "a steam-engine in trousers."

Q. Do you know of any false bidding connected with the sale and removal of any of the property there?—A. I know only from hearsay, from Commodore Preble, that McKay had made a bid, and I think that an agreement had been made with him, when the son of Mr. Rice said that he could do the work for nearly half-price. Mr. McKay was so informed, and the agreement was annulled, and he was forced to do the work at the same price that Mr. Rice said he would do it at; but that was not connected in any way with my bureau.

Q. Do you know of an instance where two parties bid for a job, one of whom obtained it, and afterward the other bidder, who was unsuccessful, came in and did the work?—A. I don't recollect it; but nothing of that sort would surprise me. I think it is a very common thing.

Q. Do you know anything about the bureau connected with the Department making purchases in excess of the requirement of the service, or of articles not asked for by the several bureaus?—A. No, sir.

Q. Do you know of no instance in which the Secretary of the Navy has made purchases of articles not asked for by any of the bureaus?—A. I have no knowledge, sir, of any such occurrence.

Q. Have you any information on that point of which the committee may avail themselves?—A. I have no information upon the subject.

Q. Has the Secretary of the Navy diverted, by his order, money appropriated for the Bureau of Yards and Docks?—A. The Secretary of the Navy has taken from the Treasury money appropriated to the use of the Bureau of Yards and Docks; but what use the Secretary of the Navy has made of that money I am entirely unaware.

Q. When was that taken?—A. When the first payment, or the whole payment, of the money for the sale of the Philadelphia navy-yard was placed in the Treasury, one of the clerks in my bureau went to the Treasury to see how it stood. Three hundred and one thousand dollars were placed on one side of the sheet, and the remainder, $32,000 and something over, on the other side. To the credit of the bureau stood the $32,000; and for what purpose the $301,000 was intended by the Secretary I don't know. The Secretary of the Navy may pay it back to the bureau. I don't know what he intends, and it is not my business to inquire.

Q. In the act of Congress which directed the sale of the Philadelphia navy-yard, the direction in which the proceeds should go was specifically stated?—A. It was. I asked some questions about it of the Chief of the Bureau of Construction, and it was supposed that the majority of this money would go against the moving of the ship-houses, and all expenses connected with the sale of the navy-yard, which were very large, advertising, lawyers' fees, and other matters of that sort. That is all I know about it.

Q. This occurred during the month of January last?—A. Whenever it was paid in; I think during January.

Q. Is not your information derived from official intercourse that that money has been paid to contractors with the Bureau of Construction?—A. No, sir. The Bureau of Construction sent me a bill for $270,000 for its share of moving the navy-yard. I objected to the bill, and sent it back for particulars. I have never yet received the particulars.

Q. You cannot tell, then, what use was made of the proceeds of the sale of the Philadelphia navy-yard?—A. I cannot, unless it was devoted to that purpose.

Q. I understand you that you have got no bill of particulars up to this time?—A. I have no bill of particulars up to this time from the Bureau of Construction, and I refused to approve it without that bill. I went in to see Mr. Hanscom. I said that I thought the bill was very large, and he told me no; that he did not think so; that as a consequence of the order to move the Philadelphia navy-yard, he was obliged to repair and launch a vessel called the Antietam, which was properly chargeable to my bureau, because she was to be used as an equipment storehouse, and therefore that my bureau was saved the necessity of building a storehouse, at all events for the present. I did not agree wtth that.

Q. Do you know any other instance of the diversion of the funds appropriated to your bureau?—A. Nothing, to my recollection, unless the building of a hospital at Pensacola, which was a necessity, and in the propriety of which I agreed entirely with the Secretary. It cannot be called a diversion of funds. Mine was the only bureau that had any money. It was a matter of necessity, a matter of humanity, that a hospital should be there. It did not come properly under my bureau; but as I had saved up my money, I had the money to do it. The yellow-fever season was approaching, and the hospital was required, and it was built at a cost of $19,000. That was during the last fiscal year.

Q. Do you know anything of paying old claims out of a current year's appropriation?—A. I really don't know. I don't recollect of any instance.

Q. Don't the books of your bureau show the payment of a claim to a gentleman of the name of Hungerford of $75,000?—A. That is a long time ago, I fancy, if there is anything of that sort—long before I came to the bureau. My notice has been attracted by a charge of $75,000 on my books. I never knew what it meant. It was long before my day, and I don't know anything about it, and I don't believe that my clerks know anything about it.

Q. You know nothing about the circumstances of that payment?—A. Nothing in the world except that the sum of $75,000 was taken. Where it went to I don't know. Indeed, it was none of my business. I think it was a remainder over from a former year—money not expended. I think that must have been four or five years ago.

Q. Please get the precise date of it and furnish it to the committee, with whatever is upon your books in regard to it.—A. Yes, sir.

Q. What is the amount of existing liabilities against your bureau?—A. We are now working in the back channel, at an expense of about $500 a day, deepening the channel and getting a sufficient quantity of soil in the proper place to build houses for the officers. It is under a contract with the American Dredging Company. We are building foundations for houses, also under contract. I suppose that $20,000 would cover all the claims against the bureau that are now in existence; which I have money enough to pay.

Q. And your ordinary expenses to the close of the fiscal year?—A. And my ordinary expenses to the close of the fiscal year.

Q. Do you know anything of the floating-debt of existing liabilities of any of the other bureaus?—A. I am very happy to say that I do not.

Q. Do you know anything of the appropriation made for the eight sloops of war and how it was used?—A. Nothing in the world.

Q. Do you know anything of sending funds to the house of Jay Cooke, McCulloch & Co.?—A. Only what the newspapers have stated.

Q. Do you know, from the books of your office, whether any part of that fund deposited with Jay Cooke, McCulloch & Co., was taken from the money appropriated for the Bureau of Yards and Docks?—A. I think not. It occurred before I came into the bureau, at all events; but I think not.

Q. Do you know anything about the reasons existing for the location of the chief of the bureau of Provisions and Clothing in London?—A. No, sir; I never could understand it.

Q. How often are you called in to consult with the other chiefs of bureaus and the Secretary of the Navy in regard to the rebuilding of old vessels?—A. Never, sir.

Q. You have never been consulted with as to the wisdom or policy of that course?—A. Never, sir.

Q. How often have you been called in and consulted with in regard to the sale of vessels?—A. Never.

Q. How often have you been called in and consulted with, with the chiefs of the other bureaus, in regard to any policy of the Navy Department?—A. Probably two or three times since I have been in charge of the bureau.

Q. What do you know in regard to the system of open purchases, as pursued by the heads of the bureaus and the Secretary of the Navy?—A. I only know about my own bureau. In my own case the requisitions are generally small. When we have the opportunity of advertising, if it is for any large amount, we invariably advertise, although it is a very bitter pill sometimes, for the expenses are very heavy. The open-purchase requisitions, when they are under a thousand dollars, are simply sent to the commandant, approved by the bureau. In the first place, the requisition comes from the commandant to the bureau. The bureau approves it or scratches some of it out, and then sends it back approved. It then goes to the purchasing paymaster. The theory is that the purchasing paymaster sends around to a half-dozen well known firms in the line of the requisition. The theory is that he sends to regular dealers. He selects the lowest bid. He goes and sees the article first, and sees if it is as good as the others of higher price. He then selects the article and sends it to the navy-yard, where it is inspected. It is reported upon then by the inspector, whoever he may be—generally the head of the department in the yard. The bill is then made out, with their names attached; the article having been received, inspected, and found to be good. The commandant approves it; makes the bill out against the bureau; it is sent to the bureau; the bureau approves it; the draft is then drawn on the Secretary of the Navy, and it is sent to the purchasing paymaster.

Q. That is the theory; what is the practice?—A. That is utterly impossible for me to say; but I will tell you what I think should be the practice: That a purchasing paymaster, when he receives a requisition approved, should, by his messenger, send to at least six persons dealing in that article, who should make bids in duplicate, over their own signatures, which should be sealed up and sent to the paymaster. The paymaster selects the lowest, as he is bound by law to do, and he attaches to the bills, when they go to the commandant, a duplicate of those bids, so that the commandant can also examine them, and they can be filed in his office for future reference. I think it would work well. He should not be confined to any six firms; but every week, for instance, when he receives the requisitions, he should select six more firms, (in the large cities where it is possible to do so,) in order that any of those six firms that he might have a preference for might not be able to form a ring in the matter. I think this could be done, and I think it is possible we should save money by it.

Q. That is a good suggestion; but give the reasons for the suggestion.—A. That I am unprepared to state. You cannot accuse a man of doing what you don't know he has done; at least, I cannot.

Q. Do you know of any instances in which purchases have been made or ordered by the

Secretary of the Navy without the usual proposals and contract?—A. None that I recollect in my bureau, and none that I have any official knowledge of in any other bureau.

Q. Have you any knowledge or information in regard to the purchase of vessels by the Secretary of the Navy without authority of law and out of current appropriations?—A. The only vessel in my mind just now that was bought by the Secretary, was the Despatch. She was bought during the Cuban flurry, which, I think, was two years ago. She was bought, as I understand, as a dispatch-boat; she was very fast, and I understand that she was bought very much below her original cost.

Q. Do you know anything of a little vessel bought at Philadelphia?—A. Yes; I would hardly class that as a vessel—a sort of a fancy launch. She was bought probably two or three years ago. She was used by the constructor at the Philadelphia navy-yard. I think the price was eight or nine thousand dollars.

Q. Do you know of any work given to parties outside of any of the yards which could have been done as well inside of the yard?—A. That is a very comprehensive question. I think we can do better work in the navy-yard than anybody outside can. It may cost a little more, because, in the first place, outside people work ten hours and the navy-yard people only work eight. It is my impression that a little steamer called the Phlox is being repaired by outside parties; the Tallapoosa was repaired in Baltimore.

Q. Was not the material got ready for the purpose of repairing the Talapoosa in the navy-yard here at Washington?—A. I have no certain knowledge of it; I have heard that it was, partially; I don't know to what extent.

Q. Who is repairing the Phlox?—A. I don't know, sir.

Q. Has there not grown up within your observation a set of men termed middle-men, with no particular occupation except that of navy contractors, within the last few years?—A. I ather suspect that those middle-men have existed for the last thirty years. There always will be those people about the Department. You cannot get rid of them. My experience here has been only sixteen months.

Q. Is Mr. S. P. Brown in any regular business?—A. I think not; I know nothing of his affairs. I think he is a middle-man—a purveying contractor.

Q. What of A. H. Brown, his son?—A. I don't know that he is in any business except that of picking up a contract whenever he can.

Q. What of George P. Goff?—A. I only know him as a very pleasant gentleman, like young men that I saw occasionally about the bureau. I don't think I ever had any business with him.

Q. Do you know Mr. Cattell, the ex-Senator?—A. I do.

Q. What regular business is he in now?—A. I only know from hearsay, that he is a flour-merchant in Philadelphia.

Q. Do you know whether he is a member of the firm of Noblitt & Brown?—A. No, sir; I have heard frequently of that firm, and I have heard him connected with the firm, but I have no knowledge of the fact.

Q. That is the general report, is it not?—A. I have heard it so stated.

Q. Noblitt & Brown obtain a large number of contracts with the Navy Department in various bureaus, do they not?—A. They fill a great number of requisitions generally, I think, open-purchase requisitions. My bureau, since I have been there, to my recollection, has made no contract with Noblitt & Brown, but their names appear on a great many open-purchase bills for articles furnished, amounting, generally, to a few hundred dollars a requisition—articles furnished to the Philadelphia navy-yard, bought by Mr. Russell.

Q. How long has he been stationed at Philadelphia?—A. He has been there since I have been at the head of the Bureau of Yards and Docks, and was there previously. I think I have heard that he has been there four years, but I am not certain.

Q. Do you know of any instance or have you any information of any instance in which fee or commission or reward or gift was made to any person connected with the naval service, with the view of influencing a contract, or such thing done after a contract was completed?—A. I never have, sir, I am happy to say.

Q. You have no such information?—A. I have no information. If such a thing were done, I fancy that the gentleman who was the recipient of the gift, or whatever it might have been, would have kept it very sacredly to himself. I never have heard of it.

Q. Do you know anything about a payment made for the captured steamer Louisville?—A. No.

Q. Or the Clara Dolson?—A. No; I never have heard the name or the circumstances before.

Q. Is there an inspector of paints at the navy-yard in Washington or at the department?—A. I think not. I think he was discharged.

Q. When?—A. Probably two months ago.

Q. Since this Congress commenced?—A. Either immediately before or shortly after.

Q. Was there any use for him at all?—A. The commandant of the navy-yard told me that he was an expert in paints, and that he took great pleasure in his business, (I think he was something of a chemist, besides,) and that he was, to a certain degree, useful at times; but I cannot honestly say that I think there was any necessity for an inspector of paints.

Q. What was the salary he was receiving?—A. My impression is that it was $5 a day. I am not certain about that.

Q. Do you know of any other instance of useless employés, clerks, writers, or any other name by which they may be injected into the public service?—A. I cannot give instances. I can only state generally, and I give it as the opinion of one man only. I have known of instances where I think an unnecessary number of clerks or writers was employed.

Q. Owing to the bureau system being carried into the navy-yards, with more or less independence in each, and the multiplication of officers and rooms, with a separate responsibility, so to speak, instead of placing it upon the commandant, is not the expense of the different yards largely added to?—A. Undoubtedly; but it saves, in my judgment, in material and in facility for transacting business, much more than it costs. That is my honest belief, from my experience at the navy-yard at Portsmouth, N. H.

Q. Just now, is there any officer connected with the yards under a bonded responsibility to the Government?—A. I think of none but the paymaster, who is always a bonded officer.

Q. But who has no charge of material?—A. No, sir.

Q. Prior to the war there was a bonded officer, was there not; the naval storekeeper?—A. It is my impression that the storekeeper, at that time appointed from civil life, was a bonded officer. I will not say how much their bonds were worth.

Q. What is your opinion of the material of the Navy, at present, for war purposes?—A. I think that the wooden ships as destroyers of an enemy's commerce, so far as their hulls and sailing qualities are concerned, are equal to any ships of the same class in the world, and probably superior. I cannot say quite so much in reference to their engines and boilers. I don't think they compare with either the French or the English. The iron-clads for coast-defense against an enemy not carrying very heavy guns, are valuable vessels. I think they are entirely unfit to go to sea, and I think that against the ordnance of France, England, Germany, Italy, and possibly Spain, they are good for nothing. You will find another officer to tell you they will whip any vessel in the world; but that is my opinion.

Q. In speed and armament, then, you would say that we were deficient?—A. Undoubtedly.

Q. What is your opinion as to the eight sloops-of-war now in course of construction?—A. I think the models of the wooden ships that I have seen are as good as those of any other nation in the world. They are a small vessel, intended more for breaking up an enemy's commerce than for attacking forts, or, of course, fighting iron-clads. The iron vessels are almost beneath contempt; that is my judgment; they go eight knots, when thirteen knots, at all events, should have been accomplished by them. Their boilers are of such a type that when you put on sail to increase the speed, the ship rolls heavily, or, if the wind is abeam it causes the ship to heel very much, and their boilers become so many powder-magazines, except that the danger is greater. There is a mistake made in the boilers of those vessels, in my judgment. I am not an expert in such matters and my opinion is formed from the opinions of officers who command the ships; from what they have told me. I don't know it of my own knowledge, but I believe it. The mistake was made in the type of boiler, and in building so many boilers of the same type without having first tried one set particularly. The bottoms of iron ships, as you know, get very foul, and they require to be docked every six months, at least, in order to preserve any speed at all. A shot striking an iron ship not only makes a jagged hole that it seems impossible to stop, but it tears away the whole plate from its fastenings, and there is nothing to prevent the ship going down. You cannot stop such a hole as that. That was the case with the Hatteras, for instance. I would never build an iron ship unless it was to be very heavily plated, as the English build theirs, and the guns now have got so far ahead of the plating that a ship can carry and swim, that I anticipate at no very distant day possibly that few iron-clads will be built; that they will come back to the old yard-arm and yard-arm business, except in machines intended for the protection of harbors, or coasters not intended to go to sea.

Q. Do you think there ought to be a change in the policy of the Government in the constructing of different types of vessels from those eight sloops? In other words, what say you to this policy indicated by your last answer—thorough preparation for our coast-defense and a return to the wooden vessel of speed, carrying improved armament?—A. Yes, sir; I think that is right. I am very much in favor also of what I think will be the vessel of the future, the steam-ram. I think that among great nations who have great navies, nations such as those of England, France, and such as Germany is getting, in fleet-actions, the fleet which has the fastest and the most impregnable ram (with the bravest men on board) will certainly win the fight; and I think that rams will also tend to drive off the ocean those enormous and expensive iron-clads that England and Germany are now building. That was exemplified the other day in the Bristol Channel, where a slight touch from one iron-clad with her spur sank another iron-clad in the course of half an hour.

Q. Do you know anything of the diversion by the Secretary of the Navy of the funds appropriated for the building of the eight sloops of war to any other purpose?—A. No, sir, I do not. That was before I came into the bureau.

Q. But you were in command at Portsmouth during the Virginius affair; at that time, to your knowledge, were not the funds appropriated for the building of the eight sloops of war diverted to the fitting or repairing of vessels for the alleged emergency?—A. I had no means of knowing. We were given so much money a month; where it came from there were no means of our knowing.

Q. You had no directions to take from one fund and charge to another?—A. No, not that I ever neard of; *I* had no such directions, certainly. That would come from the Chief of the Bureau of Construction, if at all.

By Mr. DANFORD:

Q. What, in your judgment, is the true policy of this Government in building vessels; to build them in our own navy-yards, superintended by our own workmen, or to put them out to contract?—A. Well, sir, as an old Navy officer, I can have but one answer to that question. I believe that a ship built inside of a navy-yard will be a better ship when first built, and will last longer, and give more satisfaction in every way than a ship built outside of a navy-yard.

Q. She will be the cheaper ship, although she will cost more money?—A. Yes, sir; I don't think there is any doubt about it.

Q. Of the two vessels built at the Portsmouth navy-yard when you were commandant there, one was built by contract, the other in the yard?—A. Yes, sir.

Q. Your feeling naturally was with the one that was being built in the yard?—A. Decidedly so—strongly.

By the CHAIRMAN:

Q. Do you know anything about patent articles bought by the Secretary of the Navy and made use of?—A. Nothing officially; I only know what I heard Mr. Wood say, that he told you, and that was something in relation to Mr. Wiard; something for use on a boiler. I don't know that the Secretary of the Navy bought them; I know that they were purchased, whether by the Secretary or Mr. Wood I don't know.

Q.. Do you know of any timber being received at the yard, or in your bureau, in any way, which had been previously rejected?—A. I have no recollection of it.

Q. No instance of that kind occurred within your bureau?—A. O, no.

Answer to questions relating to contracts.

[Revised Statutes of the United States.—Extracts from laws in reference to contracts.]

Advertisements for proposals.—March 2, 1861.—SEC. 3709.—All purchases and contracts for supplies or services, in any of the departments of the Government, except for personal services, shall be made by advertising a sufficient time previously for proposals respecting the same, when the public exigencies do not require the immediate delivery of the articles, or performance of the service. When immediate delivery or performance is required by the public exigency, the articles or service required may be procured by open purchase or contract at the places and in the manner in which such articles are usually bought and sold, or such services engaged between individuals.

Naval supplies to be furnished by contract.—March 3, 1843; *September* 28, 1850; *August* 5, 1854, *and April* 17, 1866.—SEC. 3718.—All provisions, clothing, hemp, and other materials of every name and nature, for the use of the Navy, and the transportation thereof, when time will permit, shall be furnished by contract by the lowest bidder, as follows: In the case of provisions, clothing, hemp, and other materials, the Secretary of the Navy shall advertise, once a week for at least four weeks, in one or more of the principal papers published in the place where such articles are to be furnished, for sealed proposals for furnishing the same, or the whole of any particular classes thereof, specifying the classes of materials and referring bidders to the several chiefs of bureaus, who will furnish them with printed schedules, giving a full description of each and every article, with dates of delivery, and so forth. In the case of transportation of such articles, he shall advertise for a period of not less than five days. All such proposals shall be kept sealed until the day specified in such advertisement for opening the same, when they shall be opened by or under the direction of the officer making such advertisement, in the presence of at least two persons. The person offering to furnish any class of such articles, and giving satisfactory security for the performance thereof, under a forfeiture not exceeding twice the contract-price in case of failure, shall receive a contract for furnishing the same.

Guarantee of bid.—August 10, 1846.—SEC. 3719.—Every proposal for naval supplies invited by the Secretary of the Navy, under the preceding section, shall be accompanied by a written guarantee, signed by one or more responsible persons, to the effect that he or they undertake that the bidder, if his bid is accepted, will, at such time as may be prescribed by the Secretary of the Navy, give bond, with good and sufficient sureties, to furnish the supplies proposed; and no proposal shall be considered unless accompanied by such guarantees. If, after the acceptance of a proposal, and the notification thereof to the bidder, he fails to give such bond within the time prescribed by the Secretary of the Navy, the Secretary shall proceed to contract with some other person for furnishing the supplies, and shall forthwith cause the difference between the amount contained in the proposal so guaranteed

and the amount for which he may have contracted for furnishing the supplies for the whole period of the proposal, to be charged up against the bidder and his guarantor; and the same may be immediately recovered by the United States, for the use of the Navy Department, in an action of debt against either or all of such persons.

Record of bid and report to Congress.—March 3, 1843.—SEC. 3720.—All such proposals for naval supplies shall be preserved and recorded, and reported by the Secretary of the Navy to Congress at the commencement of every regular session. The report shall contain a schedule embracing the offers and classes, indicating such as have been accepted. In case of a failure to supply the articles or to perform the work by the person entering into such contract, he and his sureties shall be liable for the forfeiture specified in such contract as liquidated damages, to be sued for in the name of the United States.

What bids may be rejected.—March 3, 1863.—SEC. 3722.—The chief of any bureau of the Navy Department, in contracting for naval supplies, shall be at liberty to reject the offer of any person who, as principal or surety, has been a defaulter in any previous contract with the Navy Department. Parties who have made default as principals or sureties in any former contract shall not be received as sureties on other contracts, nor shall the copartners of any firm be received as sureties for such firm or for each other; nor in contracts with the same bureau shall one contractor be received as surety for another.

Every contract shall require the delivery of a specified quantity, and no bids having nominal or fictitious prices shall be considered. If more than one bid be offered by any one party by or in the name of his or their clerk, partner, or other person, all such bids may be rejected; and no person shall be received as a contractor who is not a manufacturer of, or regular dealer in, the articles which he offers to supply. All persons offering bids shall have the right to be present when the bids are opened and inspect the same.

Rejection of excessive bids.—July 4, 1864.—SEC. 3724.—Where articles are advertised and bid for in classes, and in the judgment of the Secretary of the Navy any one or more articles appear to be bid for at excessive or unreasonable prices, exceeding ten per centum above their fair market-value, he shall be authorized to reject such bid.

Home manufactures to be preferred.—September 28, 1850.—SEC. 3728.—The Secretary of the Navy, in making contracts and purchases of articles for naval purposes, shall give the preference, all other things, including price and quality, being equal, to articles of the growth, production, and manufacture of the United States. In purchasing fuel for the Navy, or for naval stations and yards, the Secretary of the Navy shall have power to discriminate and purchase, in such manner as he may deem proper, that kind of fuel which is best adapted to the purpose for which it is to be used.

Relinquishment of reservations on deliveries.—June 17, 1844.—SEC. 3730.—The Secretary of the Navy may relinquish and pay all reservations of ten per centum upon deliveries made under contracts with the Navy Department, where these reservations have arisen and the contracts have been afterwards extended, or where the contracts have been completed after the time of delivery, by and with the consent of the Department, or where the contracts have been dissolved by the like consent, or have been terminated, or an extension thereof has been prevented by operation of law, where no injury has been sustained by the public service.

Contracts limited to one year.—July 15, 1870.—SEC. 3735.—It shall not be lawful for any of the Executive Departments to make contracts for stationery or other supplies for a longer term than one year from the time the contract is made.

The foregoing extracts show the laws in reference to the method by which materials for the Navy Department and its bureaus are to be procured; and it is suggested that these laws are defective, incomplete, and not mandatory.

SEC. 3709 provides that "all purchases and contracts for supplies in any of the Departments of the Government shall be made by advertising a sufficient time previously for proposals, when the public exigencies do not require the immediate delivery of the articles; and when immediate delivery is required they may be procured by open purchase in the manner in which such articles are usually bought and sold."

The first provision of this section is that the purchases or contracts shall be made by "advertising a sufficient time, when the public exigencies of the service do not require the immediate delivery of the article." Now, who is to determine what is a "sufficient time?" Certainly the head of the Department; and he may say one day, one week, or month, or a longer time, and the cost of the advertisements may exceed the cost of the articles, for there is no limit. Again, who is to decide whether "the public exigencies require the immediate delivery" or not? Certainly the head of the Department, and he may decide that, in all cases, immediate delivery is required by the public exigencies, and thus throw all purchases for labor or materials into "open purchase or contract in the manner in which such articles are usually bought and sold." And what is the manner in which such articles are bought and sold? Why, the purchaser buys from whomever he pleases, and on the terms which he considers most favorable. Thus this law may be made inoperative so far as the production of any good effect is concerned.

SEC. 3718 prescribes that all articles shall be furnished by the lowest bidder, and describes the manner in which contracts shall be made; and it requires, when the time will permit, that advertisements shall be issued "once a week for at least four weeks, in one or more of

the principal papers published in the place where such articles are to be furnished," &c., and that printed schedules, giving a full description of each and every article, with dates of delivery, shall be furnished bidders. The proposals shall be kept sealed until the day specified, when they shall be opened, &c. The person offering to furnish any class of such articles and giving satisfactory security shall receive the contract.

The exact compliance with this section operates very disadvantageously to this bureau, because all appropriations for improvements at navy-yards are special, and it cannot be known what particular kinds and quantities of materials will be required until the appropriations are actually made. Now, in case of long sessions, our appropriations are rarely made before the first of July, and sometimes much later.

The first step is to notify the different navy-yards of the allotments, and to call for schedules of materials required. The preparation of these schedules requires at least one month; they are sent to the bureau for revision, and then to the Public Printer, as required by law. The printing of these schedules requires at least one month, and frequently a longer time. The law then requires an advertisement of four weeks, so that after the appropriations are made, at least three months are consumed before contracts are made, and another month will pass before any considerable quantity of building-materials are delivered; thus four months are consumed, and we are not prepared, in years of long sessions, to commence active operations in constructing large works until about the first of November, after the best part of the working-season is past. The only mode of avoiding this difficulty under the law is to take advantage of the clause "when time will permit," and make all purchases in open market, which would seem to be at variance with the spirit of the law.

SEC. 3719 prescribes the form of guarantee required and the mode of making the contracts, and that if the accepted bidder shall fail to give the required bond, "the Secretary shall proceed to contract with some other person for furnishing the supplies," and shall charge the difference between the first bid and the actual cost against the bidder and his guarantors, which difference may be recovered by the United States in an action of debt against the parties. The section appears vague and indefinite; it does not specify who that "other person" shall be—whether it shall be the next lowest bidder, the highest bidder, an intermediate bidder, or some other party. It is suggested that the law should specify to whom the contract should be given.

SECTIONS 3720, 3722, 3724, 3728, 3730, and 3735 are enforced.

It is suggested that, for the purpose of expediting the public business and enforcing economy in the expenditure for advertising, the time for advertising be reduced to ten days; that the advertisements be confined to the two papers having the largest circulation at the place of the yard where the goods are to be delivered, and that the advertisements shall be issued five alternate days in such papers, and that payment shall not be made for advertisements in any other papers.

If the process of work at the Government Printing-Office be such as to delay the printing of schedules for annual supplies, the Department be allowed to have them printed at some private establishment. If the lowest bidder is known to be unreliable and his prices are below the market value, allow the Department to select from other bidders one known to be reliable and responsible, and whose prices are reasonable.

When an open-purchase requisition is made upon the Department or any of its bureaus, and the total estimated cost of the articles exceeds $1,000, it shall be sent to the nearest purchasing paymaster, whose duty it shall be to advertise for proposals in two papers having the largest circulation for six days—three times in each paper—the advertisement to state the kinds of articles required without going into details, and the bidders to be referred to the navy-yard or pay-office for information. If we were near enough to the millenium, I would suggest that the papers should be of opposite politics, that everybody should have a fair chance of seeing the advertisement and of bidding. If we were obliged to advertise for every article costing $500, or less, in all the papers which consider they have a right to Government patronage, I do not hesitate to say that the advertising might cost more than the articles advertised. I sincerely hope that all advertising, except for some great work of national interest, may be confined to two papers of largest circulation in the city in which the navy-yard is situated.

Very respectfully, your obedient servant,

J. C. HOWELL,
Chief of Bureau.

HON. W. C. WHITTHORNE,
Chairman Naval Committee House of Representatives.

KITTERY, ME., *March* 15, 1876.

JONATHAN YOUNG sworn and examined.

By the CHAIRMAN:

Question. What is your office, and what duty are you performing?—Answer. I am captain in the United States Navy. I am performing the duties of captain of the yard.

Q. How long have you been here?—A. I have been attached to this yard since the 25th of March, 1874.

Q. Are you acquainted with the manner of the employment of laborers on this yard?—A. Yes, sir; so far as the general routine is concerned, making requisitions for laborers, &c.

Q. When labor is wanted how is it procured?—A. When labor is wanted, a requisition is made out by the head of the department requiring it, and approved by the commandant.

Q. And then he sends it where?—A. He approves it, and sends it back to the department, and the men are taken on.

Q. Without any authority from Washington?—A. Always on authority from Washington, of course.

Q. Where does it originate? For instance, the Bureau of Construction wants labor, does it make a requisition for it, which is approved by the commandant, and then is it forwarded to Washington, and does the bureau there authorize the employment of the labor?—A. Not unless it is some unusual employment. In the ordinary course, if they want two or three laborers, a requisition is made out by the head of the department, approved by the commandant, and then the head of the department employs the men; but where any unusual force is required, it is referred to the bureau in order that they may provide the amount of money that is to be appropriated for the payment of the men, and the bureau approves or disapproves as they see fit.

Q. Since you have been here do you know of any cases where persons have been employed by the bureau at Washington without being asked for here?—A. Yes, sir; several. I cannot particularize, but there are on the files in the commandant's office, orders which have come from the chief of the bureau to take on men.

Q. Do such orders come more frequently before election than at any other time?—A. I don't know that they do. It is almost a weekly occurrence, that an order comes from the chief of the bureau to take on so and so.

Q. Why does the order come from Washington? Why do they send you orders to take on laborers when you have not asked for them?—A. That I don't know. I only know we get the order, and we have to obey it.

Q. Do you know of any person drawing pay in this navy-yard who performs no service here?—A. No, sir, I don't.

Q. Do you know of any person who is on two pay-rolls, drawing pay from two different departments, for instance?—A. No, sir, I don't.

Q. Do you know of any abuses of any kind in the naval service, here or elsewhere?—A. Well, there are a great many abuses that have crept in during the last few years. In the first place, the officers of the yard have almost entirely lost control of the yard; they are controlled entirely by the bureaus in Washington. In many instances irregularities come to the notice of the commandant and other officers of the yard; the thing is referred to Washington, and very generally they are not supported as they should be. In matters that seem to them right and proper, and calculated to economize and to run the yard for the best interests of the Government, they are more frequently overruled than sustained in their decisions. For instance, a contractor comes to a yard and wants to put on certain things; the officer of the department may object to them on the ground that they do not come up to the contract. It is a frequent occurrence that contractors, when they find that their goods are to be complained of as not of proper quality, make the threat that they will go to Washington and have it fixed up, and sometimes they make the threat that they will have that officer detached, and sent away from the yard, leading him to believe that he holds his position at their dictation. Then it frequently happens that after things are rejected absolutely, an order comes to receive them. I think you will find that that has occurred at this yard; I know it has at others, and to such an extent that it places an officer in a very uncomfortable position. For instance, there has not been a naval constructor here for some years who has felt perfectly safe in his position, and felt that he could do the right and honest thing and not suffer by so doing. Why? Because he would incense some contractor or influential person, and he dreads his influence. There was one engineer turned out of the Boston yard when I was there, merely because he would not do as those men required him to do. So he said.

By Mr. JONES:

Q. Don't the officers stand more in fear of what we may call the politicians than they do of the contractors?—A. O, the contractors do their work through them. Of course the contractors can do little of themselves. I say this has crept in the last few years, and it takes away from the independence of the officers. Of course they begin to argue with themselves thus: "I have a family; I have gone to the expense of moving to the yard, settling down, &c. Now so and so threatens to have me detached unless I do something

that he wants me to do. It is in violation of my conscience," &c. A man has got to be very strong-minded to say, "I will do so and so; you may do just as you please; you may send me out of this yard to-morrow, if you please, but I will do what I think right."

Q. How will the contractor carry out his threat?—A. He will go to Washington and see some Senator, or Representative, and tell him that this officer is a very disagreeable fellow, is not liked by the people round, and is standing in the way of duties to be performed; or that he is a coarse or ill-natured man. Then they will go to the Secretary of the Navy; the Secretary hears only one side of it, and the consequence is that that officer is detached. If he asks the reason why, he will hear from the Department, "You are not the right kind of a man to get along there; you are too unreasonable," and statements of that kind, or receive no explanation. The complaint may be true in some cases, but in many it is not. Now, knowing this, it is nothing unusual to hear a man say, "Well, I am going to do what I think right; I don't care if they send me out to-morrow."

Q. If a man stands by the Government, up and down, in trying to do his duty, he does it at the peril of being removed?—A. Yes, sir, and it is felt throughout the whole Navy.

Q. Do you know of any instance where men who have endeavored faithfully to discharge their duty, and reported some abuse or something of that kind, have been ordered to sea?—A. I cannot particularize, but I know that a great many instances of that kind have occurred. I know that officers have been detached from yards after being there only a short time, and nothing against them at all. If you tried them by court-martial to-morrow, you could not prove that they were anything but honorable, upright, conscientious officers. But still, as they say, they don't suit.

Q. Are the same influences brought to bear on the employment of persons in the yard as laborers?—A. Yes, sir. The foreman is very careful; he does nothing that will incur the displeasure of people of influence outside. He is very careful, and very much afraid of doing it. For instance, if I had an order to-morrow to discharge part of my force, in addition to my duties as captain of the yard—I am equipment-officer—I will send down to the foreman sail-maker, for instance, and tell him, "I want to discharge four of your men:" directing him to keep the best men, men who have performed valuable service, giving the preference, according to law, to those who have served in the Army and Navy, provided other things are equal. Well, he is exceedingly nervous about it. I send for him and talk with him about it; he don't like to recommend; he would rather leave it to me, and all that sort of thing. I know the reason why. The man whose place he took was a splendid foreman, and is now the leader. He, the present foreman, is afraid somebody will get his place. So there is an uncertainty about it. They do not know how long they will remain there. It is no matter how excellent they are, they are not sure from one month to the other, or from one day to the other, that they are going to remain.

Q. Has it been customary for the Department, for political reasons, to remove skillful mechanics and others, and put in unskillful ones, that they may serve political ends by it?—A. That has been done, but I cannot say that it is purely for political ends

Q. Have you had skillful laborers removed and unskillful ones put in their places?—A. O, yes, sir.

Q. And you have to submit to it?—A. Yes, sir, we have to submit.

Q. You do not feel that you could safely say to the Department at Washington, "This is detrimental to the public service?"—A. An officer would incur the risk of getting into bad odor if he did, and might be detached from the yard.

Q. I say you do not feel safe in doing it?—A. No, sir, we do not feel safe.

Q. Do you know of any persons being employed in this yard with the understanding that they are to vote a particular ticket, or use their influence for its success?—A. I don't know.

Q. Have you heard any of them say so?—A. I have heard men say so, of course.

Q. You have heard men who were employed here say so?—A. I have heard so, and that is the general impression.

By the CHAIRMAN:

Q. Do you know any officer or employé of the Government who has given any consideration in money or property, or the representative of either, for any position, or any benefit to be derived thereby?—A. No, sir, I don't. Nothing of the kind has come under my observation.

Q. Do you know any contractor, or other person not connected with the Navy, who has given any money or property, or the representative of either, to any person connected with the Navy for the procurement of any contract or other benefit from the Government?—A. No, sir.

Q. Do you know of any person connected with the Government who has received any money or property, or present, for the procurement of any office, or any contract, or any benefit to any one connected with the naval service, either as officer, contractor or employé?—A. Nothing of that kind has ever come under my observation.

Q. Have you ever heard a person make any admissions of that kind—that he had given so and so, to get thus and so?—A. No. I never have, of my own knowledge.

Q. Do you know of the fraudulent or improper removal of any of the arms, munitions, or

material for ship-building—tools, or property of any kind, belonging to the Government?—A. Nothing that I can say is fraudulent. There are things which I consider improper. For instance, the breaking up of this fine-engine. There was an order to build one of those large steam-sloops, the Illinois, during the latter part of the war, to take the place of the Alabama. She was to catch anything, and be able to run away from anything. Well, after the war, she was found to be rotten, just as this iron-clad is—built of white-oak timber—and they determined to break her up. There was an engine contracted for, and paid for, which cost about $300,000—a magnificent engine. It was an engine which, if you put it into the Lancaster, if they are going to rebuild her, would make her a much finer and faster ship, and more efficient in every way, than she can be with the old engine in her. They had, at the same time, the engine of the iron-clad Massachusetts; and in order to protect them they went to the expense of putting a building over them, securing them perfectly from the weather and from any any deterioration. They remained there until a few months ago, when a board of steam-engineers came on from Washington, authorized to inspect all these yards, and report all material on hand, &c., and recommend that it be sold or retained. They looked at that engine, and recommended that it be sold for old iron, and it was sold, to whom I do not know. Of course, the yard, as usual, afforded the facilities for removing it; that is, one of the yard-teams were used—I do not know that the yard-teams were not charged—and certain men. They hauled it off and broke it to pieces.

Q. Did the Government people break it?—A. No, sir; their own people broke it.

Q. It was sold?—A. Yes, sir; it was sold.

Q. At private sale?—A. Yes, sir; I understand at private sale.

Q. Do you know what it brought?—A. I have no idea. They say it brought half a cent a pound or quarter of a cent a pound, or something of that sort. It was broken up, carted down to the wharf, and two schooners came and they took off part of it and left the rest. The crank is now down on the end of the wharf, and the shafting lies outside the house from which it was taken, uncalled for. A good deal of the iron is still here and may never be called for.

Q. Was it all broken up or only a portion of it?—A. A portion of it was broken, a portion taken away intact. For instance, there was a pump and a donkey-engine combined. I suppose it cost $1,500 or $2,000. That was put on board the schooner just as it was taken out of the house, and sent to Boston intact.

Q. Were the cylinders broken up?—A. The cylinders were broken up.

Q. Do you remember who purchased that engine?—A. I don't know. The steam-engineer can inform you. Now, the trouble is this: They have thrown aside those engines and have adopted the compound-engine in the service. The latter is an experiment, and it is not settled to-day whether those engines will remain in the Navy six months or two years longer. They are high-pressure; they carry seventy or eighty pounds of steam, and in an engagement if one of those boilers should be perforated with a shot it would ruin the ship, and create terrible havoc in the fire and engine rooms. They do very well in a merchant-ship.

Q. Who has recommended the adoption of those compound-engines?—A. Mr. Wood, engineer-in-chief.

Q. Did he report in favor of the destruction of this old engine?—A. Yes, sir; he is engineer-in-chief, and it all goes through him and is done with his approval. But you would find very few engineers stationed at the yards who would approve of it.

Q. What would it cost to build an engine of equal power?—A. It would cost about $300,000.

Q. If it was one of those compound-engines would it be as good?—A. I don't think it would for a vessel of war. For naval purposes, I would rather have one old direct-acting engine than a compound-engine.

Q. It had never been used—never been in the hull of a vessel?—A. No, sir.

By Mr. BURLEIGH:

Q. What became of the engine of the Massachusetts?—A. It is in the house. The same house covered both of them. They took out one engine and broke it up; the other remains there.

Q. Were they not both alike?—A. No, sir, they were not. The Massachusetts has a double-screw; but they were very much the same—direct-action engines, not compound.

Q. What was the weight of that engine, probably?—A. I have no idea, sir. Well, there was not an officer in this yard who did not feel heart-sick when he saw that magnificent engine broken up. Mr. Macomb went round here like a wild man, so to speak, for two or three days. But he couldn't do anything.

By Mr. JONES:

Q. By whom are these compound-engines made?—A. Woodward & Co. They failed, and have been struggling along trying to get an engine for this Enterprise.

Q. Do you think that the hull of the Illinois was in such condition that it could not be repaired?—A. O, yes, sir; she wasn't worth launching; they tore her all down.

Q. What did they do with the timbers?—A. I think some of them were utilized in the yard, the deck-planking, &c. The balance was sawed up and used for wood about the yard.

Q. When was the engine broken up?—A. The engine was broken up within the last five or six months.

Q. The Illinois was torn down two or three years ago?—A. Four years ago she was torn down, in the Franklin ship-house.

Q. Do you know anything about the breaking up of the Ohio?—A. No, sir; I had command of her just before I came here, and she was all right then, but very rotten and worthless. A very singular thing occurred at the Boston yard, which I thought a great shame at the time: there was a lot of men taken into the yard, and I don't think there was anything particular for them to do; so they set them at work breaking up the Virginia, a line-of-battle ship that was on the stocks. She was built of live-oak timber, and was as sound as the first day that the timber was put into her.

Q. Where and when was that done?—A. At Boston, in the summer of 1873. She was exactly the same kind of ship that the Ohio was.

Q. How long had she been in the service?—A. She had never been launched; she was built and planked, all ready for launching, or nearly so.

Q. And then they tore her up?—A. Yes, sir; they put those men at work, sawed her in sections, and broke her up, partly only. The work stopped all at once; the excuse for breaking her up was that they wanted the room in the ship-house to build another ship; they put on about four hundred men, and worked on her until they got down to the orlop deck, when the men were discharged, and the work ceased; there the ship stands to-day, occupying as much room in the ship-house as she did before they commenced to break her up.

Q. That was done just before an election in Massachusetts, wasn't it?—A. Yes, sir; so I was informed.

Q. The cause of the sudden discharge of all those men and the stoppage of work was the passing of the election?—A. I can't say; I did not go to the yard until November, after the ship had been cut to pieces, but the officers of the yard said so; that was the report. I don't know whether that was so or not.

By Mr. BURLEIGH:

Q. Do you remember when the Virginia was constructed?—A. She was constructed fifty or sixty years ago, but the Government had plenty of ships of her class afloat, and they kept her there waiting to launch her when she was needed. The introduction of steam in the Navy, and the change in models, placed her out of date as a cruising vessel, but she was just the ship to launch to take the place of the Ohio, which was rotten and worthless, while she was perfectly sound, and would have been useful for the next twenty or thirty years. She was built of live-oak, and was a magnificent vessel.

Q. Could they not have built a new ship for the money that it would have cost to fit her up?—A. No, sir; they did not want to fit her up for a cruising vessel; she would not have answered for that at all; but for the same money it cost to tear her to pieces, or a little more, they could have launched her, and put her in place of the Ohio

Q. Have you not plenty of ships for those purposes?—A. No, sir; on a receiving-ship you sometimes have 1,500 or 2,000 men, and the modern-built ships are not so good as ships of the Virginia class.

Q. Would not the Lancaster be a very good ship for that?—A. No, sir; she would not hold the same number of men; if you put seven, eight, or nine hundred men on board of her she would be crowded; the Virginia would take 1,500 or 2,000 men on board, and have made them very comfortable.

Q. There had never been any engines put in her?—A. No, sir; she was a sailing-ship, one of the old-fashioned line-of-battle ships.

By the CHAIRMAN:

Q. Now tell us if you know anything about the removal of any copper from the navy-yard.—A. I know of nothing; copper has been removed from the yard by authority, but not while I have been here. I know nothing in this relation that amounts to anything; once in a while a man is caught taking small pieces of copper out of the yard, and of course he is discharged.

Q. Have any of those things ever affected any of the officers of the yard? Have they ever been engaged in anything of that sort or in complicity with the thief?—A. No, sir; I have never heard of any such case. There is one man, who is now captain of ship-keepers, who was implicated in a case of copper-theft—quite a large amount of copper was taken out of the yard. But that occurred before I came here; he was then "captain of the watch," by appointment from the Department, in the place of Josiah Keen; was discharged for gross neglect of duty, and was soon after ordered to be taken on as "captain of ship-keepers."

Q. A better position than he had before?—A. Better than he had before.

Q. What was that man's name?—A. Randall. He is now captain of ship-keepers; he was captain of the watch. When I came here Commodore Howell spoke to me about him, and said his character was disreputable, &c., everybody was talking about it, and he would be very glad to get him out of the yard. Some time after, a report was made to me by a marine officer that a man had been pushed past the sentry at the dry-dock landing who was carry-

ing out of the yard things he had no business with; he had them about his person and in his dinner-kettle. Mr. Randall was standing alongside and never attempted to assist the sentry or apprehend the man, but let him go, and allowed him and others to curse and abuse the sentry.

By Mr. JONES:

Q. Did not the sentry call on him for assistance?—A. He called on him to assist him, but he did not do it. When this was brought to my notice I investigated it thoroughly. The man himself, Randall, acknowledged that it was so, but said he did not think he had any business to interfere. I asked him what he was here for? If a man was committing theft and carrying things out of the yard, if it was not his place to arrest him and hold him until the matter could be investigated? He said, "No, he did not think it was." I reported the whole thing to Commodore Howell, and he reported to the Department, and the man was discharged. I thought that was the end of it, but not long after an order came from the chief of construction to take Mr. Randall on as captain of ship-keepers at $3.50 a day, and he was so taken on.

Q. From whom did the order come?—A. From Mr Hanscom, chief of bureau.

Q. Was the record of his dismissal in the Department?—A. All these papers were sent on. Commodore Howell, I think, sent on all the papers in regard to this investigation, &c., and called the attention of the Bureau of Yards and Docks to the matter. I know Commodore Howell did; still, he was taken on as captain of ship-keepers. He comes at nine in the morning and goes away at five in the afternoon. He is here when we do not care about him particularly, but the most important part of the time he is away in Portsmouth.

By Mr. BURLEIGH:

Q. That is the case now?—A. That is the case now. It looks as though there was no necessity for it.

Q. Do you know through whose influence he was returned here?—A. I have no idea.

Q. Did you ever hear him say?—A. No, sir; but I have heard it was through a Mr. Rider, in Portsmouth. They get influence in Portsmouth, you know, and that influences certain parties in Washington.

Q. Do you know who are the certain parties there who were influenced by the parties here?—A. No, sir; that is a thing that is spoken of, but is one I cannot explain. But the man is here at $3.50 a day, when I do not see that there is any necessity for it, because he is here during that part of the day when there is no occasion for his being here, and at night the captain of the watch has got to take his duties and give orders to the ship-keepers, which he did before Mr. Randall was appointed. There has never been a captain of the ship-keepers but once before, and that was some years ago, when we had a great many ships here and a great many ship-keepers.

Q. Do you remember what portion of this engine was broken up? Was it the wrought-iron or the cast-iron part?—A. All the cast-iron part of it, except the donkey-engine and pump was broken up, as far as I know. The wrought-iron part, I think, was carried off about as it was. They could not very well break that up. They have left a great deal of it. There are two shafts alongside of the house from which the engine was taken. Then there is one down at the end of the wharf. That was carried down and remains there. I don't know but that is all.

By Mr. JONES:

Q. Who carted it to the vessel, and put it on board; the Government or the parties who purchased the engine?—A. The parties who purchased it, I believe they paid for a portion of it, but they had some assistance.

Q. Have you had any sheathing copper condemned and sold since you have been here?—A. Not to my knowledge.

Q. Now tell us if you know about the removal of any iron from the navy-yard.—A. The plating for the iron-clad Massachusetts was removed, and it was said that it was sent to John Roach, on the Delaware River, to be rolled over; for what purpose I don't know.

Q. Do you know under what agreement he got it from here?—A. No, sir.

Q. Were there not some iron plates that never had been used on any vessel sold and removed?—A. All of that which was taken away had never been used at all.

Q. New iron, was it not?—A. New iron, just as it came here.

Q. Do you know anything about the building of the steamer Enterprise by Mr. Griffiths?—A. That contract was given and was completed, or nearly so, when I came here. I came in March, and she was launched some time in July or along there.

Q. That is, her hull?—A. Yes, sir; Mr. Griffiths had the contract to build her, with the facilities of the yard. His people had full swing of the yard; they did as they pleased; and whenever a question came up between Mr. Griffiths and the commandant it was always decided against the latter, as Commandant Howell told me. He told me that there was not a single question which he had referred to the bureau that the bureau did not decide against him. Mr. Griffiths had the preference under all circumstances. If there was a piece of work on a lathe, and he wanted something put in, our men had to take out their work and do his. Then everything had to be carted; he used all the teams in the yard.

All this timber was sawed out, carted, and placed right where he could pick it up and put it on the ship.

Q. Was he furnished with everything in accordance with the contract?—A. Yes, sir, everything; and as we considered, a great deal more. He demanded office-room, demanded stationery, demanded things that no one ever dreamed of, and they were furnished him, by order of the bureau. Commandant Howell wrote quite a long communication to the bureau, and mentioned all these things, and hoped the bureau would settle it, and stop these unusual and extraordinary demands. But the bureau decided in Mr. Griffiths's favor, and it had to be done.

Q. Mr. Griffiths was supplied with all of the materials, I believe?—A. Yes, sir.

Q The Government performed its part of the contract faithfully?—A. Yes, sir.

Q. He had the selection of all the lumber, timber, and everything?—A. Yes, sir: so much so that there was a letter received here from the bureau not very long ago, inquiring why it was that the Enterprise cost between twenty and thirty thousand dollars more for materials than her sister ship the Essex, built in the ship-house on the opposite side of the yard. The only way we could account for it was that Mr. Griffiths's men had full swing in the yard. If they wanted a stick forty feet long and found one sixty feet long, they sawed it off and scattered the pieces about as they pleased. That is the way the constructor accounts for the material costing so much.

Q. Did Mr. Griffiths have to wait and discharge his hands on account of the non-supply of materials to build his ship?—A. Not that I know of.

Q. Did he have to wait for plank, &c.?—A. Not to my knowledge.

Q. They were going ahead with the work all the time?—A. All the time as far as I know.

By Mr. BURLEIGH:

Q. Were you here all the time?—A. I mean since I came. You know I came in March, and she was launched in the summer.

Q. While you were here you knew about the daily transactions on that ship?—A. I knew generally what they were doing. I have no knowledge of his being detained at all. Since the Government shut down here he has all the facilities of the shops. The Government has been running all the shops at expense, whereas if it had not been for him they would have had them all shut up. The coal cost a good deal, and then there is the wear and tear of machinery, and the pay of the men who have to be there to look out for them.

Q. He has had the use of the Government shops to work in and the Government tools to work with?—A. Yes, sir.

Q. Have any of the hands employed by the Government given him any assistance recently in doing any labor under the contract for making the spars?—A. I don't know that they have. There was great complaint on the part of the constructor when he came here that he had to furnish so much labor in wheeling lumber and other things for him. He said the Government was doing a very important part of the work. That is what they have all said. Mr. Webb complained of it bitterly. Mr. Wilson complained when he first came here of Mr. Griffiths' exactions, &c., and I believe has continued to do so. He made a contract then for building those spars complete, and went on and never said a word about anything until he got along pretty near the end of it, when he made up his mind that he was not to put the sheaves or anything of that kind into the spars. It did not belong to him; it belonged to the blockmaker. He had refused to make and place the jackstays, &c., on the yards, because that belonged to equipment; but his contract was to furnish those spars complete. They are not complete until the sheaves are in, the jackstays, dogs, &c., are on them. That was the understanding, but still I cannot say anything about it, because the contract was not signed by the Chief of the Bureau of Equipment, and I cannot dispute that point with him. But he insisted upon it that it was not his place to put in those sheaves, &c., and referred to the bureau, and the bureau decided that the Government was to do it.

Q. Were you at the launch of the Enterprise?—A. I was launched on her.

Q. Were any of the Government men at work upon her aiding to launch her?—A. There were a good many around—the ship-house was full—and I am pretty sure they did.

By the CHAIRMAN:

Q. The Government got all the material and everything ready for launching her?—A. Everything.

Q. What did Mr. Griffiths do?—A. All I could see that he did was to put some blocks under her. The ways were all hauled there, and there was nothing for him to do but to place them, wedge her up, and let her go. That was all he did. I don't suppose it cost him $500. Mr. Hichborn said it could not have cost over $500, if it cost that. He said that was a very liberal allowance, and Mr. Griffiths got $2,000. Mr. McKay, at Boston, got $4,000 for launching his ship, and it did not cost any more than this ship here.

Q. From the Government?—A. Yes, sir; so it was reported to me. We could have launched the ship at much less cost, and when a ship is to be launched you cannot keep the men at work. They were there anyhow.

By Mr. BURLEIGH:

Q Were there not a hundred men in the employ of the Government assisting in launching that ship?—A. I suppose there were, but I cannot say for certain, because I was on board of the ship, and attending to other things. But the men were all around there seeing the ship go off, and it seemed to me entirely unnecessary to let Mr. Griffiths launch her, and pay him $2,000 for it.

Q. Did you ever hear Mr. Griffiths say there was an understanding between him and Mr. Hanscom that he was to get the contract for building that ship?—A. No, sir; I never heard him say so.

Q. In those controversies which arose between him and the constructor, in which the constructor and commandant were overruled by the Department, did you ever hear him say that there was an understanding between him and the bureau at Washington about those things?—A. No, sir; I never heard him say so. There was some question came up about the constructor, and I heard his son say that he was not going to fool with the constructor or anybody else; he was going on to Washington and have it settled there. That was his son, John W. Griffiths, jr.

Q. Do you know anything about the removal of the Essex around to Boston, and why it was?—A. That was always a mystery to us; we never could tell. The impression was that it was because there was an uncomfortable comparison between the two ships, the Enterprise and the Essex.

Q. They were to be built in rivalry?—A. Yes, sir; that was the understanding. The Essex was to be built by the Government, and the Enterprise was to be built by Mr. Griffiths. It was a question which could do it the cheapest, and the Essex was far ahead of the Enterprise. She was a better-built ship in every way, and she did not cost so much for material by $30,000, as the letter to which I have referred from the bureau says there was great pride in the yard, to see if they could not build a ship cheaper and better than Mr. Griffiths could in his way, and it became so glaring that the ship was ordered to Boston. That is the understanding of it. We never have heard any other reason given.

Q. What time was it ordered away; was it not just before the election in Massachusetts?—A. No, sir; I don't know that there was any election coming off about that time.

Q. She was taken out of the hands of the Government, taken around there, and then let out under a private contract?—A. Yes, sir.

By Mr. JONES:

Q. Is there any question in your mind that she could have been completed for sea better, and at smaller expense here, than it could have been done outside of the yard?—A. I have no doubt of it at all, because we had every facility for doing it here, and it could have been done just as well as by sending her off.

Q. If she was going to be finished by contract, could it not have been done here as well as at Boston?—A. Yes, sir; just as well.

Q. Do you know of any timber being shipped from this yard to Boston to put on her?—A. No, sir.

Q. Has any timber or material been moved from this yard to the Boston yard within the last two or three years?—A. Not to my knowledge; nothing more than the usual stores we send by the ship that plies along the coast. All her sails are being made here, and her boats, &c. The equipment department is making her sails, and the constructor is making her boats. None of them have been shipped so far that I know of. I have an indistinct recollection that some things were sent, but nothing in the shape of timber, or anything of that kind.

Q. You don't know of any lumber being shipped from there marked "McKay?"—A. No, sir.

Q. Do you know of any person using the labor or property of the United States for the use and benefit of any other than the Government?—A. I don't know that I do, sir; I don't recollect anything of the kind. Of course, we have loaned things here out of the yard, and they have been used and returned, but nothing that is wrong that I know of in that respect.

Q. Do you know of any other iron or copper being removed, except in the two cases you have mentioned, without being sold at public sale?—A. I don't know of any other.

Q. About how much of that iron was there that was sent to Roach; how many schooner-loads?—A. I did not keep the run of them. There were three or four; three that I know of.

Q. State whether you know of there being large amounts of timber and lumber delivered here at the Kittery yard without the knowledge of the officers until its arrival.—A. O, yes; I think there were two or three loads came that the constructor knew nothing at all about. They were from other contractors, possibly, that he had not heard of. They were invariably declined until reference was made to the bureau to know if they should be received, and in some cases it took a long time before the thing was settled.

Q. Then orders would come for you to receive it?—A. Yes, sir.

Q. Do you remember who delivered that lumber?—A. I do not, sir; but Trickey & Jewett have been delivering lumber in this yard ever since I have been here under contract.

Q. Do you know anything about any false bidding, straw-bidding, or combinations among bidders or dealers to suppress competition?—A. No, sir; I do not. We had an auction sale at the yard not long ago, when there was a great deal of that done, and such things are done at every auction sale. There are certain rings formed, and they will not allow any one outside to bid. I think that is a great abuse of these auctions in the yard. I would not sell anything that could possibly be utilized here. For instance, there is a great pile of scrap-iron that might be utilized by the Government, and valuable in every respect; it is advertised to be sold at auction, and parties here in Portsmouth form a ring, and agree to pay an eighth or a fourth of a cent a pound, and divide it up, and they will not bid against each other, nor allow anybody else to bid. That is done; the iron is sold, and then the Government has to go and buy new material for everything that is made. There is a great abuse. Half the time the amount received does not pay the expense of advertising, the auctioneer, &c. But that is a mere error of judgment. I suppose the Government does not mean anything actually wrong.

Q. Is there room in your wet basin to take care of all your live-oak timber, and is it so taken care of?—A. I think almost all of it is in, perhaps all. There is very little out of any consequence.

Q. Who is your timber-inspector?—A. Mr. Locke, I believe, is his name.

Q. Do you know by whose influence he was appointed?—A. I do not.

Q. Do you know what his salary is?—A. I do not.

Q. What duty does he perform?—A. He simply inspects all timber coming into the yard, to see that there is the proper number of feet, whether it is sound, &c., and he marks it.

Q. How long has it been since you have had any timber delivered in the yard?—A. We have not had any timber delivered in the yard for several months.

Q. His pay still runs on?—A. He is suspended now, I think. His name is still on the rolls, but I don't think he receives any pay now.

Q. What office does Dr. Wentworth hold in your yard?—A. He was employed as general inspector.

Q. What does he inspect?—A. He inspects the stores that come in in the different departments. For instance, if I wanted a lot of canvas, or anything of that kind, in equipment, I would make the requisition; it would be approved in Washington, and ordered to be purchased at open purchase in Portsmouth; and the things we purchased would be sent over here, and Dr. Wentworth would inspect them, pronounce them of proper quality, &c., make his certificate, and then they would be paid for.

Q. How often have his services been required during the last year?—A. That is hard to say. In my department, I don't think over two dozen times.

Q. Do you know of persons being employed on the yard by the influence of parties outside of the yard, in order that they might collect their debt from their wages?—A. I have known instances of this kind: People have come into the yard and complained that men owed them money, and they wanted to collect it; and the commandant has told them he has nothing to do with the affairs of the men outside the yard.

Q. What is the character of the lumber that is purchased here? Is it of the best quality, or of the kind called "promiscuous?"—A. I am not a naval constructor, and of course cannot be considered an expert, but so far as I see the live-oak timber that comes into this yard, I think there is a great deal of it that would not do to go into the frame of a ship. I think if the constructor had been the inspector, and had been held personally responsible, he would have rejected a great deal of the timber as not proper timber to go into a ship. That is not curved timber. There is a great deal straight, a great deal very small, and a great deal very large, and if you were to build a ship now, you would have to drag out all the timber in the wet dock, and would not get timber enough then to build more than one or two ships. After you had completed them, there would not be much left that would be of any service. I have heard the workmen speak of the same thing, and other persons in the yard have spoken of it. But then no one could say anything. The commandant had no business to interfere with it.

Q. It is the generally received opinion now among naval constructors, and men well posted in ship-building, that ships ought to be built out of live-oak, is it not?—A. Yes, sir.

Q. If ships are to be built out of live-oak, is there any necessity for bending machines to bend the timber?—A. Not if you get proper live-oak.

Q. Ought a ship to be built with bent timber?—A. I think not. I certainly would not build a ship in that way if I had my way. I think that, for the money we spend on that live-oak timber, we ought to have splendid timber, and of the proper quality to build ships with.

Q. Is it not the custom here to advertise for a small amount of stores whenever required by annual lettings, and then during the year to purchase by open purchase a large amount, to supply the wants of the service?—A. Yes, sir.

By Mr. JONES:

Q. Where does the requisition for the open purchase come from—from the purchasing paymaster in town or from the heads of the bureaus?—A. The purchases are generally made by open purchase, and the bureau approves.

By Mr. BURLEIGH:

Q. Who does the purchasing?—A. The paymaster over in town; the purchasing paymaster he is called. It is the understanding that, before he makes a purchase of that kind, he informs the principal merchants, through advertisements in the papers; or, if it is not a sufficient amount to warrant that, he will send each one a note, stating that he is going to purchase certain articles, and giving them a chance to bid. The understanding is, that they make their bids, and he gives it to the man who makes the lowest bid. But I do not think that system is a good one at all.

By the CHAIRMAN:

Q. It is open to abuses?—A. Open to abuses. The paymaster, if he is perfectly honest, will do the thing exactly right, but if not, there is a large margin.

Q. They may make "corners" on him, may they not? If he wants to buy groceries, for instance, the dealers in town may get together and fix their own price?—A. That is one thing. Then another thing is, where he is purchasing for all the departments, he does not know the proper value of the articles, and cannot look into those things closely enough to know whether he pays more or less than an article is worth, and sometimes we do not get our things as economically as we might. If purchases are to be made by open purchase, it would be much better to let the heads of the departments select their articles, and buy them where they can get them cheapest, and make them responsible; and then, if they find that more has been paid for an article than is proper, come down on the head of the department for it.

Q. Do you know whether any bills are ever carried over from one fiscal year and paid out of the appropriations for the next succeeding year?—A. I know that is the general impression, and I think the correspondence will pretty generally show that, particularly in the case of contracts, the bills of contractors have to remain over until the next year. The pay of the Navy is another thing we are very uncertain about. The latter part of the fiscal year, we never know whether we are going to be paid. We may be two or three months sometimes without a cent of pay.

Q. Why is that?—A. No one knows. No one knows where the money goes. It is used probably, for the Navy. There is a certain amount appropriated annually for the pay of the Navy, and it is intended to be sufficient to pay every officer and man in it; but if you take that money and use it for any other department, of course there is a deficiency, and the officers and men and their families have to suffer for it.

Q. Do you know of any instance where that has been done; where an appropriation has been transferred from one department to another?—A. I know from correspondents at Washington, &c., that that has been done for the last year or two. Officers have spoken about it. It is common talk that $100,000 was taken out of Medicine and Surgery; the appropriation to that department is not very large, and consequently, as Dr. Cleborne said the other day, they could not get necessaries for the sick; that there was no money in the bureau at all. They suddenly shut down on the Bureau of Docks and Yards and Equipment, and stopped half or quarter of the work they were doing, because the money was all gone, although they had been boasting, but a little while before, that they were very comfortably off. Those officers could not tell where that money went.

Q. In such cases, are not the bills made anew, so as to appear as of the current year? For instance, suppose the appropriation is exhausted, and the funds must come from the appropriation for the ensuing year, are not those bills dated forward, and carried forward into the next year?—A. Yes, sir. There is correspondence in relation to such a case, where certain bills had to be rewritten and made out in that way. I don't know whether that occurred in Steam-Engineering or Construction, but I am pretty sure it did occur.

Q. When the appropriation for the current year is exhausted, what do you do to carry on the different bureaus here? Do you issue certificates of indebtedness? For instance, if you want to employ some labor or buy some stores, where it is necessary to use some money, what do you do?—A. We don't do anything, unless there is an understanding with the merchants or others that they will furnish the articles with the understanding that the bureau will pay them when they get the money. We do not go on and get what we require. We make a requisition, and if the bureau approves, they instruct the paymaster to make the purchase.

Q. Suppose the Bureau of Steam-Engineering wants to do something that it is thought necessary to do, and there is no money, does the head of that department in the yard get what he wants and give a certificate of indebtedness to the party of whom he purchases?—A. No, sir, he cannot do it. He simply makes out a requisition for those things, and the bureau will reply, if they have no money, "we have no money." It is not allowed, and that is the end of it.

Q. What would you do, suppose your supplies gave out? You must feed your men. How would you get the food?—A. If an emergency of that kind comes, we would have to get it. We would have to feed the men. I suppose we should give receipts for it. But I don't know that any such case has ever occurred.

Q. You would give a certificate of indebtedness for the amount?—A. Yes, sir; which would be paid when we got the money. That is a case I never knew of, but if it came up,

and I was commander of the ship, if the men were out of provisions, I would get them, of course, if I gave my own receipt. Of course an officer would be upheld in anything like that; but not unless it was an extreme case, unless he could show that life and death depended upon it.

Q. You think that these bureaus, when they get out of money, simply shut down and discharge all hands?—A. That is it. But it would be a great deal better if we could stop all these transfers of money from one bureau to another. I think it would be better for the Government, and better for those people in and about the departments.

By Mr. JONES:

Q. Don't you think that the cause of some of these departments or bureaus running short of funds is on account of so much being bought by open purchase by the heads of departments; I will say, for instance, the head of the Bureau of Construction and Repair?—A. I have no doubt that a great deal of money is spent in that way, and by giving contracts to people. Their personal feelings are worked upon, friendship, &c., and they go beyond their means in giving contracts where there is really probably not much necessity for it; we could wait a while longer until we got the money. It is the prodigal way that they have gotten into in these bureaus of spending money. They have become spendthrifts—that is the trouble.

Q. Instead of keeping it for the purpose for which it was appropriated?—A. Yes, sir.

Q. Do you know of any steam-boilers that have been broken up or that are now being broken up?—A. There are some being broken up alongside of the ship-house. They are perfectly good boilers.

Q. Do you think that it was good judgment to break them up?—A. I certainly should not break them up if I had my way. We may want to have them in a ship very soon. They might have been kept until we are certain about these compound engines, instead of breaking them up and selling them for old iron.

Q. If the compound engines do not work, those boilers would be just what you want?—A. Just what we want. I think it would have been better to wait a little while until that question is settled.

Q. Were not those boilers made expressly for those engines that have been broken up?—A. Yes, sir; but they could be used with other engines direct acting

Q. Are they breaking up more than one?—A. I don't know how far they are going. They have broken up three now. There are ten or fifteen lying there.

Q. I suppose the commandant got an order to break them up?—A. I suppose he did. The order must be in the hands of the steam engineer or the commodore. There must be something to warrant their doing this work.

Q. You say you are captain of the yard, and you are at the head of the equipment department?—A. Yes, sir.

Q. Have you ever been called upon by outside parties, or by the heads of other departments, to require men when in your judgment there was no necessity for such requisition or request?—A. I never have in my own department, but that has occurred in other departments. We have a small force of riggers and sail-makers, &c., and they remain here from year to year. There is very seldom any change, unless some of them are sick, or go away; then we take others in their places.

Q. Was not Mr. Noyes foreman of sail-makers here?—A. He was; and displaced. That occurred before I came here. They (outside influence) displaced Mr. Noyes, and put another man in his place. He was foreman sail-maker and a very excellent man, but he was displaced and Mr. Lovell was taken on. The equipment officer was very much exercised about it; he thought it was a great shame, and I believe some representations were made to the commandant in regard to it. I do not know that, however, of my own knowledge. But that is the only instance I know of in Equipment; in fact, I had forgotten that. But Mr. Lovell is an excellent man. The Government did not lose anything by that.

Q. Mr. Noyes is at work here just the same?—A. Mr. Noyes's pay is reduced, of course, from that of foreman to leading man. We retained him, and he is a very excellent man. They are both first-rate men.

Q. The change was not detrimental to the service?—A. No, sir; I don't know that it was.

Q. You say you know of other bureaus where there are such abuses. What one?—A. Yes, sir; in Construction Mr. Wm. F. Noyes was foreman of shipwrights here for years, and he was a very excellent man, very highly thought of by everybody in the yard. He was displaced, and Mr. Fernald was taken on in his place. The constructor, Mr. Wilson, was very much exercised about it, and considered it a great shame, and in order to retain Mr. Noyes, they offered him a quarterman's position, and he held that for a while, until Mr. Griffiths gave him the position of foreman on the Enterprise, January, 1875. These things were looked upon as very hard. A foreman, a man who will make his way in this yard and shows himself an excellent man and a capable workman, and has the confidence of all the officers, does not feel from day to day that he is safe. An order may come from Washington tomorrow to displace him and put somebody else on.

By Mr. BURLEIGH:

Q. Is this Mr. Fernald who took his place an efficient man?—A. I believe he is, although there are a great many things that Mr. Noyes has learned by being here for years that a man cannot pick up coming right into it; particularly in the shipwrights' department.

Q. Had not Mr. Fernald been a quarterman under Mr. Noyes?—A. Yes, sir: he (Mr. Noyes) had been here a good many years. I do not know how long he had been here, only from Mr. Wilson's representations. It was considered very detrimental at the time. Mr. Fernald, I believe, is a very good man, and I think has given satisfaction. I do not think the Government has lost anything by the change particularly; I speak of it only as showing that a man does not feel that he is safe in his position.

By the CHAIRMAN:

Q. Were there any gun-carriages sold at the Boston navy-yard while you were there?—A. There were none sold while I was there that I know of, and I only know what has been told me by a person who came down here from the Boston yard. It seemed to be a ridiculous transaction. They sold some gun-carriages to parties in Chelsea for $3 apiece, and the Government were to deliver them; and I was told (of course it may be an absurd story) that it cost $9 apiece to deliver them.

Q. Did you hear to whom they were sold?—A. I did not.

Q. What was the object in selling them?—A. It was to get clear of them. They could have broken them up in the yard or set fire to them and burned them. We tried that some years ago. When I was here on ordnance duty, we had a lot of gun-carriages to sell, and some parties came over to bid on them. They expected to get them for $2 or $3 apiece, but the foreman of the gun-carriage makers, Mr. Williams, thought he would head them off, and so he bid on them, and some of them were sold for $7, $8, and $10 apiece, and some brought as high as $20 and $30. They have a great deal of composition in them. He broke them up himself. That was under Commodore Pennock.

By Mr. BURLEIGH:

Q. Is there not considerable brass-work about those carriages?—A. Yes, sir; and composition. Some of them were very valuable.

Q. Was this composition so worn out that it would not be suitable to put on new carriages?—A. It could be worked up again. It was quite good.

By the CHAIRMAN:

Q. Do you know anything of any copper having been sold from this yard, and then bought back again?—A. No, sir.

Q. Has the Government bought any copper since you have been here?—A. No, sir; not that I know of.

Q. Who would be likely to know about that?—A. Mr. Wilson, the constructor.

Q. What relationship exists between Mr. Fernald and the chief of the Bureau of Construction?—A. I don't know. I have been told he is his brother-in-law or nephew.

Q. You have a Mr. Hanscom here in the yard, also?—A. We have a carpenter in the Navy by the name of Hanscom.

Q. What relation is he to the chief of bureau?—A. I don't know that he is any relation; I never heard. The connections of Mr. Hanscom and Mrs. Hanscom are very numerous. Mr. Hanscom, the carpenter, has been here ever since I have been here.

Q. What duty does he perform in the yard?—A. For a long time he had nothing more than nominal duty to perform. He had returned from sea, and they placed him in one of the departments as a sort of assistant. Lately the commodore has placed him in the civil-engineering department, as an assistant to the civil engineer. In fact, he is the working man. If we want anything done, we send for Mr. Hanscom; we do not send for Mr. Chandler. When little things are required to be done, of course we try to do it through Mr. Chandler; but Mr. Hanscom is the man who attends to all of it.

By Mr. BURLEIGH:

Q. Is there not a great deal of favoritism in the yard by the foreman and other influential men? Do they not have their favorites among the laborers?—A. O, yes; I think there is.

Q. And some men cannot get on the yard however good they may be?—A. That is the impression.

Q. And others, who are worthless, can get on when men are required?—A. That is the impression.

By Mr. JONES:

Q. I want to ask you in regard to your civil engineer. Do you think it is for the interest of the service and the Government to have a civil engineer placed upon each navy-yard?—A. As it is now, I think it would be better if we had none at all.

Q. Why do you want one at any time?—A. I don't know that we do; but if we could have thoroughly skillful men—men who could build a dock or store-house, or a house in the yard, or anything of that kind, provided we wanted them, it would be different. But even then he might be here in the yard for months or years and have nothing of that kind to do.

Q. Could you not get all those plans and specifications from the heads of the departments, and could not your constructor, if anything came under the repair of yards and docks, superintend it, and could not the masonry be looked after by the boss masons?—A. O, yes. It could be done just as well without civil engineers as with, and perhaps better, because they sometimes rather impede the work—stand in the way. We have to treat them with some consideration, of course, and there is a great deal that comes under the civil engineer that he cannot attend to and has nothing to do with. For instance: Take a gang of laborers in the yard. He cannot go around and attend to them, and it naturally falls under the working officers of the yard; and you do not like to go to his men and order them to level off a piece of ground, or anything of that kind; and it continually keeps you on your Ps and Qs, as it were, to try to keep things straight and not create bad feeling.

By Mr. BURLEIGH:

Q. That is, the captain of the yard and the civil engineer are likely to come in conflict?—A. All the time. The captain of the yard has to do with keeping things in order, and do all that kind of work. He has his men, and goes around and directs everything.

By Mr. JONES:

Q. Don't you think it would be quite a saving to the Government if they should abolish the office of civil engineer in the yards and put his duties upon the captain of the yard; and if there were any buildings to be erected let the proper bureau attend to it?—A. It would undoubtedly be a great saving to the Government; and if a building was to be put up requiring extraordinary skill in the architect, we could go outside and employ such a man.

Q. You have plenty of men in the yard who could draw the plans of any building that was wanted, have you not?—A. We have. If we had really efficient men as civil engineers, who understood their business, there might be some excuse made for continuing the office; but they have let civil engineering run down at the heel. They have appointed anybody and everybody to the office—people who could not do anything in that line outside. They have had half a dozen men in the New York yard who knew nothing about civil engineering. The yards and docks have been under the direction of either the executive officer of the yard or of the commandant. He is the responsible head; so that Mr. Chandler can do nothing unless it is with the sanction of the commandant. The executive officer used to have it, but Mr. Chandler complained that the executive officer was not responsible, and all that sort of thing, and they got up a great talk. Mr. Chandler worked with the steam-engineer and constructor, and they threatened to have Captain Fairfax turned out of the yard; and at last there was so much talk about it, Mr. Chandler claiming that he was civil engineer, and had a right to attend to all these things, that the bureau placed him under the charge of the commandant. Of course it gives him (the commandant) extra duties to attend to. That is, he attends to the office, and I attend to the duties outside, and things have gone on very smoothly. I have never had any trouble with Mr. Chandler. When I first came here he misunderstood about my duties, and I just explained them to him quietly and plainly, and we have got along very well. I have always tried to treat him courteously in everything, but he seems like a fifth wheel to a coach—a useless expenditure of money, without any real benefit to the Government, because it seems to me that the others could carry on the duty in addition to their own.

Q. Without the expense of his corps, you think?—A. I think so.

By the CHAIRMAN:

Q. Can any of the clerks, writers, inspectors, or employés on the yard be dispensed with without detriment to the public service?—A. I have no doubt that there are some who could be dispensed with. In fact, we have cut things down here pretty close now. There were several discharged some months ago, by order of the Bureau of Construction. If the number is kept down to what we have now, I don't know as we could spare any.

Q. How many clerks have you, and what work do they do?—A. As captain of the yard, I have a clerk. He attends to all the correspondence of my office, receives all bills, and audits them; has the general supervision and inspection of them. He takes the place of the chief accountant that we had in this yard some time ago. Then in equipment I have a clerk, a store-keeper, a writer, and a laborer in the store.

Q. You say you could not dispense with any of them?—A. No, not very well.

Q. What does your writer do?—A. The writer assists the store-keeper, and then he works about the store. He does a great deal of manual labor. He cleans up. We have a great many stores coming in. We have cooking-vessels, crockery, glass-ware, and everything of that kind. They all come in, and they all have to be cleaned. This man is very constantly employed. When he is not assisting the store-keeper, or making up the quarterly monthly, or weekly returns, he is at work about the store, cleaning up, getting things right, laying out stores, receiving them, &c

Q. Do you think the inspector of timber and the other inspectors might be dropped, and that the heads of the bureaus would do the work better?—A. I do not know that these inspectors could be very well dispensed with, because they have to be there from morning until night. For instance, we are unloading a vessel.

Q. But you have not taken any timber for a long time, have you?—A. Then they are sus-

pended, or should be. There is no necessity for keeping them unless they have something to do. That should rest with the heads of departments.

Q. Receiving timber is so very exceptional, could not that inspection be performed by the constructor?—A. One of his foremen might do that, or one of his clerks might do it. But it is necessary to have some one at the vessel to inspect every stick that is taken out, and mark it, or see that it is marked properly. Of course the constructor could not be there; he would be attending to his other duties about the yard.

Q. What are his duties now? You are not building any ships here?—A. He has nothing particular to do now that I know of. In fact, his whole department is shut up. But there might be a time when he would be very busy in building ships, and there might be a great deal of work going on, and then he could detail any one of his clerks, or his foreman, or one of his men, to attend to that business.

By Mr. JONES:

Q. As a general thing the inspectors of timber are put in by contractors, or through their influence, are they not?—A. No, sir; not here. I have heard of that in other yards, but I do not think there has been anything of that kind here.

Q. What did this man know about timber before he was made inspector on this yard? He never sawed a board, or drove a nail, did he?—A. I don't know, I must say, about that. I only know that nothing of that kind has come to my knowledge. That is, I don't know that any man has been put on by contractors, or anybody else outside. I don't know but the constructor has selected him as the best man, and put him on. Possibly the constructor did not have the selection of the inspector. I think it very likely you will find that men of that kind have been appointed by the bureau. It is not uncommon to receive letters from the bureau to take on so and so, without our knowing whether he is a good man or not He may be a good man, and he may not; but they do not leave it to the discretion of the constructor.

By the CHAIRMAN:

Q. You were saying that Mr. Griffiths had the use of all the facilities of the yard, the teams, tools, lathes, planers, &c. Who furnished the men to run these things?—A. While we are shut down, he has to furnish them; but while we were running the yard, the men running the machinery attended to it. I don't think there was any charge made against him.

Q. You furnished the men to get out the material for the ship?—A. Yes, sir. I believe those abuses crept in under what they call "the facilities of the yard."

Q. It is not "facilities" when you furnish labor?—A. To some extent. Of course I do not speak positively about this. I do not know that the time of any man has been charged when he has been at work on a machine while contract-work was being done. I do not know that the contractor has paid for anything of that kind.

KITTERY, ME., *March* 15, 1876.

DAVID B. MACOMB sworn and examined.

By the CHAIRMAN:

Q. You were not here at the time of the building of the Enterprise under the first contract?—A. No, sir; she was commenced before I came here.

Q. When did you come here?—A. I reported for duty as inspector of machinery afloat, on the 10th of October, 1873, I think it was, and have been here ever since as inspector of machinery afloat and chief engineer of the yard.

Q. That was at about the time the building of the Enterprise was commenced?—A. No, sir; she was well under way.

Q. The contract is dated the 18th of September, 1873.—A. That is about the time I reported for duty. I think my orders are dated on the 4th of October, 1873.

Q. They were working on her in 1873?—A. Yes, sir; they were working on her, of course; I was at the launch.

Q. Were the hands employed all the time?—A. Yes, sir; I think so.

Q. Did the Government keep Mr. Griffiths furnished with material, &c.?—A. To the best of my knowledge they did. It did not come under my supervision exactly.

Q. Do you remember of any time when the hands stopped work on her?—A. No, sir; I don't think I remember any time when they were stopped, but that does not come exactly under my department. They might have stopped at some time and I not have known it, especially in that part of the yard. That is the constructor's matter.

Q. Do you know anything about the tearing down of the steamer Illinois here?—A. No, sir; that was done before I came here. She was in the same ship-house that the Enterprise was built in, and therefore she must have been torn down before the Enterprise was set up.

Q. Do you know anything of the breaking up of the engine that was built to put in her?—A. I do. I got my orders from the commandant. I think I can show copies of them.

Q. From whom did he get the orders, do you know?—A. He got the orders from the Chief of the Bureau of Steam-Engineering, Mr. Wood, by the direction of the Department.

Q. What were the orders?—A. I almost know them by heart. His orders were, by direction of the Navy Department, to deliver to the Providence Steam-Engine Company what was called the 60 x 36 engines which were intended for the Illinois, and two boilers of the 46 x 46 size, and the two old boilers of the Nantasket. The 46½ x 50 boilers were new boilers belonging to the Massachusetts. The orders were to reserve the four best, and to deliver such other old material as we might have no present or prospective use for in the department. The orders were to put those boilers under the shears for them, and to give them the usual facilities for taking the material out of the way; to weigh the copper, composition, cast iron, steel, and wrought iron separately, and return the number of pounds of each to the Department when completed." Those were my orders.

By Mr. JONES:

Q. Were they not all new?—A. The boilers belonging to the Massachusetts were all new.

Q. Are any of the boilers that you are now cutting up old?—A. Yes, sir; the Nantasket's boilers are old; both of these have been cut up, or nearly so. They (the material) are still in the yard. Also, the shaves of the Peoria.

Q. Your orders were to return the weights to the Department?—A. To make return to the Bureau of Steam-Engineering, returning the amount of each separately, which we have not done yet, because it has not all been taken away.

Q. All that material was sold to those parties?—A. It was disposed of by the Navy Department. The order says, "which the bureau has disposed of."

Q. What did that engine cost?—A. I think the engine and boilers cost in the neighborhood of $400,000—the engine, boilers, and everything complete.

Q. That included pumps and the small stationary engine, did it not?—A. Everything complete. There were some pumps; there was no stationary engine with it.

Q. Was there not a little donkey engine?—A. Those were what we called pumps—two Sewall's pumps. I reserved one of those.

Q. They had never been used?—A. No, sir; because I put it in the house in 1868.

Q. Is some of that material on the yard now?—A. Yes, sir.

Q. What part of it?—A. All the shafting, every bit of it.

Q. What part has been removed by these parties?—A. Almost all of it. All the cast iron, all the composition, and all the copper piping. In fact I rather think all except the shafting. The boilers had been used in Government vessels. They had been used in three ships. We had eight boilers and used two pairs in each vessel. A great many of the appurtenances belonging to those boilers I retained, as the order said to deliver those engines and said nothing about the appurtenances. That pump I had a prospective use for and retained it, and I am going to put it on board the Lancaster. The Providence Steam-Engine Company are breaking up the boilers of the Nantasket, and one which was intended for the iron-clad Massachusetts.

Q. Is that by order of the Department?—A. Yes, sir; that is included in this same order. Therefore I have not sent on the amount of the material, because it says "when completed you will inform the bureau, stating the number of pounds of copper, composition, &c."

By Mr. BURLEIGH:

Q. Do you know whether the sale of this material was advertised or not?—A. I don't know whether it was or not. It says "so recommended by the board."

By the CHAIRMAN:

Q. Will you state again the exact number of those boilers?—A. There were eight altogether—six in the Massachusetts. Only two of the Massachusetts boilers were to be delivered, four to be retained.

"NAVY DEPARTMENT,
"BUREAU OF STEAM-ENGINEERING,
"*Washington, D. C., May* 11, 1875.

"SIR: By direction of the Hon. Secretary of the Navy the bureau has satisfactorily disposed of the material in the yard under your command which was examined and so recommended by the board of which Chief Engineer Stewart was the senior member, to the Providence Steam-Engine Company, as follows: One pair 60 x 36 engines, intended for the Illinois, with all the parts and fixtures therewith belonging that may now be in the yard. Two boilers intended for the Massachusetts (46½ x 50) reserving the four best for the vessel. Two boilers removed from the Nantasket; shafting &c., removed from the Peoria. About 20 tons old scrap from the Plymouth's boilers. Please direct that the above, together with such old parts of machinery, wrought iron, and composition, as may be on hand and for which there is no present or prospective use for purposes of this bureau, be placed under the derrick on the wharf, and the usual facilities of the yard offered to the purchaser to

facilitate the removal of the same. A careful account will be taken of each kind of material delivered, under the following heads, viz.: Cast iron, wrought iron, copper, and composition, and the weight of each sent to the bureau.

"Respectfully,

"WM. W. W. WOOD.
"*Chief of Bureau.*

"Commodore A. BRYSON, U. S. N.
"*Commandant Navy-Yard, Portsmouth, N. H.*"

Q. Were the boilers of the Nantasket good for anything more than old iron?—A. Yes, sir. They could have been used, because they were only about half worn out. They would have been fair boilers to put on board a ship, because we built them in the yard, and I think we can build better work in the yard than they can outside.

Q. Have you got the amount of that material?—A. Yes, sir; I have the amount as far as it has been delivered; what remains here, of course, I have not got, because I weigh it as I deliver it; and a very careful weighing it is, too, of the composition, cast iron, or whatever it is. The order says "reserving four." I have picked out, of course, the four best, making two pair. One of the other two is cut up or very nearly cut up; the other one is intact; has not been touched. The Nantasket boilers are cut up or very nearly so, and the agent of the company has been written to to send a schooner here to take the material away, because it is cumbering up the yard.

Q. The four boilers from the Massachusetts still remain the property of the Government?—A. Undoubtedly. They are new boilers. The other one remains the same way, although the company can have it according to this order.

Q. Was not that engine designed to be put into the Illinois, a first-class vessel, to run down the Alabama? Was she not being built for the purpose of catching the Alabama?—A. No, sir; I think not. The Illinois, the Severn, the Contoocook, the Delaware, the California, and quite a number of vessels of the same class had the same kind of engines, what was called the 60 x 36 engines, designed by Chief Engineer Isherwood, then chief of bureau.

Q. It was a good engine, was it not?—A. Undoubtedly. I have had experience with them on two ships, and they were very fine engines; they worked well. They seem to want to discredit what is called "simple engines," and want to put in compound engines. That seems to be the fashion.

Q. Which do you think the best?—A. I have my preference. I think I would rather have a simple engine.

Q. Is not that the preference of nearly all engineers?—A. I would not say that, because there is a difference of opinion about it. In England they use a good many compound engines and a good many simple engines.

Q. You don't know what the Government got for those boilers?—A. No, sir.

By Mr. BURLEIGH:

Q. Don't you know that the fastest vessels in the French navy do not use compound engines?—A. I know some do and some do not. Some of the fastest vessels have compound engines and some simple engines. The fastest vessel we ever had, the fastest vessel that ever floated on the ocean, had a simple engine.

Q. What was the object in tearing up the Illinois?—A. I believe she was rotten, like the Massachusetts. I did not see her, but that is what I understood.

By the CHAIRMAN:

Q. Do you know anything about any iron that has been removed from here?—A. Not officially. But I know that the plate-iron for the Massachusetts was removed from here by order of the Bureau of Construction, I think.

Q. Where was that removed to?—A. That I don't know.

Q. Do you know who has got it?—A. No, sir; I don't know. That comes in the constructor's department.

Q. Do you know anything about the breaking up of any gun-carriages at the Charlestown navy-yard?—A. No, sir; I never was stationed there.

Q. Do you know anything about the tearing down of the Virginia at that navy-yard?—A. Not of my own knowledge. Nothing more than hearing it was being done, or something of that kind.

By Mr. BURLEIGH:

Q. What are your facilities for building here? What class engines and vessels could you build?—A. We have facilities for building almost any size of vessel, and we have the machinery to build a first-class sloop of war.

Q. Boilers and engines?—A. Boilers and engines. We built the boilers here for the Plymouth, and that set of boilers is as pretty a set of boilers as ever were put into a vessel. She went to sea in October, 1875.

Q. How large a ship is that?—A. 1,100 or 1,200 tons, new measurement; probably 2,300 old measurement.

Q. Could you build any larger ship if you were ordered to?—A. Yes, sir; we can build boilers for any size ship, or any kind of engine, compound or simple.

Q. Are you limited in the size of your engines?—A. Not in the work on the boiler, because you may say that it is piecework; it is put together in pieces; but we have not the facilities, probably, for building an engine for a first-class frigate; we could for a first-class sloop of war.

Q. Have you the tools for building such an engine?—A. We have the tools, but not the facilities or the shop-room for building such an engine for a frigate. We have a planer here that cost over $24,000. There is not a finer planer in the United States.

Q. You could very handily build engines for sloops of war?—A. Yes, sir.

Q In regard to an iron ship, provided the frames were brought here, would you be able to put it together?—A. We could easily do that, because that is like boiler-work—put together in pieces.

Q. Do you think you could do that as cheaply here as they could at Chester?—A. I think so. I will qualify that. The iron-district of Pennsylvania is right there, and the cost of transportation, especially in the winter time, would be greater here, as they would get a great deal of their iron from Baltimore, Philadelphia, Phœnixville, and all around those large rolling-mills. Of course transportation would be less to Chester than here.

Q. But if you were going to build an iron-clad here, and the boilers, pumps, and all those things, would it not be cheaper to keep your machinery here and send there for the iron, than to take your machinery there?—A. I think so. We have got the tools, and why not use them here? The transportation of the iron, of course, would be the principal cost.

Q. Would there be trouble in getting any amount of labor that you might want here for that purpose if it was known you wanted it?—A. No, sir; in a little time. In fact, when I first came here in October, 1873, I came here as inspector of machinery afloat, and there was an order for building boilers for the Plymouth. It was not carried out promptly for want of men at first: they had a few men: and I went to Boston two or three times myself, and wrote to some parties in New York, and to some in Boston, Portland, and Manchester, and in a very short time I got all the men I wanted. Probably I did not get, you may say, quickly the thorough mechanics that I would have had if I had had steady employment for them, because they were scattered all around.

Q. Do you know anything about the facilities for doing work in the Brooklyn yard, New York?—A. Yes, sir; I believe they are very great.

Q. Do you know about the facilities for getting iron-work done at New Market, Manchester, Lowell, Portland, and various points within forty miles from this place that are very easily accessible?—A. They have greater facilities in Portland than anywhere else north for machinery-work.

Q. What do you know about New Market?—A. They have pretty good facilities ther . They have facilities there for building boilers and locomotive work. They have very good founderies there. At Manchester they have pretty good facilities.

Q. Did you ever think, that taking Portland, Great Falls, New Market, Dover, Manchester, Concord, and Lowell, to go no further, and putting them together, they would excel the facilities that you could get in New York City?—A. No, sir; I should not think they would, from the fact that there is a population in and around New York of a million people. There is another city within ninety-six miles of it that has half a million more, that is unequaled anywhere outside of New York for facilities for doing machine-work. I mean Philadelphia.

Q. In New York City there is not so much machinery-work done as in the places I have mentioned, is there?—A. I know there is plenty of small work done all around in those places, but what is the character and class of the machinery? Do you mean agricultural machinery, or anything?

Q. I mean steam-engines for large ships?—A. If there was a demand for that kind of work, New York would excel any other place that I know of, except Philadelphia. They have large shops and large tools, which I have seen. There are the Novelty Works, the Fulton Works, the Morgan Works, and Cold Spring, up the river—all those immense shops. We could put the whole navy-yard into some of them.

Q. You have been to Manchester?—A. I was up there at the agricultural fair a year ago. I generally try to attend those things. They have very large facilities there. That is the reason why I said we could get plenty of men. I never had any difficulty in getting men around our own neighborhood. I think when I came here they had about twelve or fourteen boiler-makers picking away on boilers. I didn't like that kind of work, because I push things when I do work, and put in considerable work myself. I asked the chief engineer, "Aren't you going to get some men?" "Yes, if they come along." I said, "That is not the way to do work;" so I wrote to Portland, Manchester, and other places.

Q. If you had an order to build half a dozen ships of war, don't you think you could get the facilities here to build them without going to New York?—A. If they had the same order there, we could beat them, because we could get the facilities. We could have our own people here. If they had no work there, and we were doing work here, we should draw from them, because men would go wherever they could get work.

Q. If they had an order for half a dozen sloops of war in New York, and you had an or-

der for half a dozen sloops of war, you could build them with the facilities you have here as soon as they could?—A. I think we could, although New York is a big place and has better facilities than we have around here to do work, large work especially. I would undertake to build an engine here 60 by 36, or like the Lancaster's, but not an engine for a large frigate like the Wampanoag. We would have to send to Philadelphia for the shafts for the engine, or to Baltimore, or Bridgewater, Mass., or up to Phœnixville. There is where nearly all the large shafting is made.

Q. The shaft of that large engine is not broken up?—A. No, sir. The crank and other shafts are lying ready to be taken off the dock. They are of the best material and the best workmanship.

By Mr. JONES:

Q. You have been here since the Enterprise was first started?—A. Since about that time.

Q. Has not the contractor always had the facilities of your shop whenever he wanted them?—A. Every facility; and not only that, but he has had the facility of my experience, because that I consider Government property, and I give it to them. He has had every facility he possibly could have.

Q. Has there been any detention on the part of the Government?—A. No, sir; I will take my oath of that.

Q. When he has wanted anything done on a lathe, for instance, you have let him have it?—A. He has had every facility, and has had the preference. He has used up our tools. There has been no detention. In fact, I requested the bureau to give me $200 or $250, and employed three or four men to put in some tubs, and put up some piping to connect with them, so as to get out of his way, that he might not be able to say that he was delayed by our work.

Q. Have you charged him for whatever labor has been done for him in your department?—A. I have charged him for material. The labor part he pays for himself. I do not charge it to him, but the material we find or let him have. I had an order at first to let him have such material from our store as he wanted, and he was to return it in kind; or, if he did not, to charge it when his contract was completed, to be deducted from his final payment. I think there is $29,000 now due him from the Government, which he says I can sign when I see fit; but I do not choose to see fit.

Q. That is, when his contract is completed?—A. That is, when his contract is completed; so I construe it. When his contract is completed, and the vessel accepted by the board of engineers.

Q. Then whatever he has had in your department will be deducted from that?—A. I return, in my semi-monthly report, the articles, with the dollars and cents, the invoice-prices, taken from our books, of every pound of material and every gallon that he gets.

Q. What it cost the Government?—A. Exactly what it cost the Government. Every ton of coal is charged exactly at the invoice-price that the Government contracted for it.

Q. Are you doing all the work in your shop on the engine and boilers, or is he?—A. He is doing it.

Q. Were the engine and boilers put in by contract?—A. They were put in by contract. I think the contract was $185,000 for the engines and boilers, complete in all respects.

Q. In that ship?—A. Yes, sir.

Q. That was a separate contract, wasn't it?—A. Yes, sir. That is a different man from the builder. The builder does not have anything to do with the engine more than to put in what is called the usual appointments or facilities for the engineer when he wants woodwork done. I have nothing whatever to do with Mr. Griffiths, the builder of the hull; do not know him at all officially in the contract. The contractors for the engine and boilers were Woodruff & Co.; now, Blodgett & Clapp, the sureties of Woodruff & Co., who have failed.

Q. Are you getting as good work on the Enterprise, and all the pipes and fittings, as you would if you did it yourself?—A. I try to. I must say I don't think we were. Of course we are furnishing the greater part of the material now used, and are making them put in the best material; but so far as regards the work, he has the overseeing of it, and that is a different thing, you know, from inspection. He has his agent or foreman working with his men, and he tells them to do thus and so. No matter how sharp I may follow him up, still there may be some things that will not be quite as good as if I had them done myself in our own shop; yet they would pass inspection, and be good.

Q. Did you make any estimate on those boilers and engines?—A. No, sir.

Q. Did anybody besides Mr. Wood, who made the estimates?—A. A board appointed by the Navy Department undoubtedly did.

Q. You do not know what those estimates were?—A. I do not know. All I know is that the contract was for $185,000 for all these ships, the Essex, the Adams, the Enterprise, and all that class.

Q. The eight sloops of war?—A. Yes, sir.

Q. Were they all built by this same concern?—A. No, sir; they were not. This is the only one built by this concern. This is really a simon-pure contract ship, because she is built, hull and everything else, by contractors; machinery, boilers, and stores and everything

built and put in ready for a cruising-vessel, for $185,000. That is what I understand; I have not seen the contract.

By Mr. BURLEIGH:

Q. Do you know enough in relation to it to pass any judgment whether it was cheap or not?—A. Certainly, sir; that is my profession.

Q. Do you think the Government could have done it for less money than the contract was, and better?—A. Done it better.

Q. Do you think they could have done it for the same money?—A. I think they could have done it for the same money, and better. It stands to reason that a man is not going to work for nothing.

By Mr. JONES:

Q. When you were here before, you were at the head of your department?—A. Yes, sir.

Q. Suppose you had an order to do a certain amount of work, and required a certain number of men; did you make a requisition for so many men, or did an order come from the Department for you to take on so many men?—A. Sometimes one and sometimes the other. It would come to me in this way: Having a certain amount of work to do, we were allowed so much money to spend each month. Of course we would take on so many men to do that work, not exceeding that amount. Sometimes more in one department than another. If we got the work ahead in one department, the foundery, for instance, I would throw off some of those men and take on more machinists: that is my plan in doing work. If the machinists got a little ahead of the boiler-work, I would throw off some of the machinists and take on more boiler-workers, so as to keep within the $6,000 a month, or $5,000, as the case might be. I hardly remember, except in individual cases, where the bureau has specified to take on men.

Q. I understand that the reason why these eight sloops of war were contracted out to be built was on account of abuses. Now, the question is, have you had the selection of your help when you have taken them on?—A. As a general thing, I have, except, as I say, in individual cases.

Q. You have made your own selections?—A. I have made my own selections. When I had a great deal of work to do, if I wanted twenty boiler-makers, a man would come and say, "I am a boiler-maker." "Where have you worked?" I would give him a kind of preliminary examination, either myself or my foreman. I would tell my foreman, "I want to hurry that part of the work up." "Well, sir, I must have a few men." "Very good; I want you to take on some first-class men; how many men will you want?" "Well, I want so many first-class men, so many second-class men, and so many helpers." Of course they all go together; it would not do to hire all first-class men and use them as helpers; that is, I do not do work in that way. My foreman would make the selections and hand them to me, especially when we were doing a large amount of work; but when we are doing a small amount of work, I have got so I know every man about the place here, and I always give them the preference, working for the interest of the Government, or intending to.

Q. Have you examined the machinery in the Enterprise?—A. I have.

Q. Is that machinery of the best quality?—A. Yes, sir.

Q. With the machinery now in the Enterprise what speed will she make?—A. I think her maximum speed will not be above ten knots per hour.

Q. What effect will the six bilge-keels on the Enterprise have on her speed?—A. Retard it about two or two and a half knots per hour.

Q. Leaving off the bilge-keels, could you have built the machinery in the yard to give her a greater rate of speed; and how much per hour?—A. Yes, sir; we could; as much as fifteen knots per hour.

Q. Was the Essex, built by the Government, constructed with bilge-keels?—A. No, sir.

Q. With the machinery in the Essex, what will be her speed, in your opinion?—A. Her maximum speed, I think, will be twelve knots.

Mr. WILSON. (Answer to question 3.) I don't believe that the Enterprise will make more than eight knots per hour.

Mr. HICHBORN. (Answer to question 3.) I think she will make between eight and nine knots per hour.

KITTERY, ME., *March* 16, 1876.

Commander SULLIVAN DORR AMES sworn and examined.

By the CHAIRMAN.

Question. We want to ask you if you have any suggestions, as head of your departments, to make to our committee touching any abuses that you know in the Navy, or anything that is calculated to be for the efficiency of the Navy.—A. In my departments, sir, I know of nothing. I am perfectly green as to navy-yards; I have been here only three months. There are no abuses either in the ordnance or navigation departments at this yard. I have both of those departments. There cannot be, because the expenses of both of them are not

over $500 a month, employés and all, and few stores are bought: almost everything come from Washington. I think the whole amount of open purchases we have made in navigation for the past four years does not amount to $400. We are all supplied from Washington I think there is only one thing that any ordnance officer feels it necessary to suggest, and that is the necessity of rifled ordnance for the Navy, or the necessity, in other words, of keeping up with the day.

Q. Are you thoroughly acquainted with the engine business? Do you understand this contest between the "compound engine" and the "simple engine?"—A. Not technically, because the engineers are not agreed upon it themselves. The question, as I understand it, is between the economy of the "compound" over the other; in other words, that a man-of-war may get more miles with the same amount of coal with the "compound engine" at same speed than she can with the ordinary engine. Personally, without having any technical knowledge, I do not have the slightest faith in the new style of engine. I think it is an addition of complication, without the slightest advantage in economy. That which would be economy in a merchant-ship, plying across the ocean every eight or nine days at full speed, has not the slightest application to a man-of-war, which during a whole year might not be three weeks under steam. A Navy vessel does some sailing without steam, and lies by in port a good while. "A man-of-war," as has been said, "is never perfectly useless to the country except when she is at sea. The instant she gets at sea she is cut off from communication with the world." Of course that is not altogether so; but it is partially so. The great trouble with our engine department is that we are substituting, apparently, a number of high-pressure small boilers for the old-fashioned low-pressure boiler. In other words, we put into vessels ten or more powder-magazines, any one of which blowing up will blow up the whole thing; whereas, with the ordinary low-pressure boiler, such a disaster would only result in the death or wounding of a few people, but could not endanger the ship to any great extent. In other words it is the difference between 25 pounds of pressure and 70; and I think that this substitution is a very hazardous experiment in case of war. What may be useful under 20 inches of armor may not be useful under 8 inches of wood. The English have not adopted the compound engine without experiment. I don't know how deep they are going into it, but they are experimenting a great deal, and have also been trying it in the merchant service for some time. I have heard our engineers greatly differ on these subjects.

Q. You would not think that experiment had gone so far as to justify the Government in destroying all the old engines?—A. O, no, sir. They tell me that an engine was broken up in this yard which cost $300,000, which was sold at half a cent a pound as old iron. I should say that it might have been sold for more money. And the boilers which are being broken up here I think are all good boilers. I would rather have them in my ship than the new boilers. I would rather have 25 pounds pressure than 70, if I am not to be protected by armor. I think that would be the reasoning of any man that has ever been in war. I think it is best not to have the magazine at the front.

Q. Now what do they do with your old guns and anchors?—A. The anchors belong to equipment. Navigation is a very small department, and simply has charge of nautical instruments, stationery, flags, lights, books, &c.

Q. These anchors are all made here for vessels that have been built here?—A. Anchors are made at Washington. When a vessel comes from sea her anchors are put in the park here and examined to see if they are cracked or broken. They are sent out in other ships as long as they are useful.

Q. They never sell those?—A. No, sir; never while they are serviceable.

Q. How is it with guns?—A. With guns, since I have been here, none have been sold. If we sell guns, it is after they have passed through their number of fires and are not useful. That has been done since the war. It will probably come to you in my report.

Q. Do you know of any material having been sold from the yard in your department?—A. There has been a good deal sold from the ordnance, quite a large amount, that is, comparatively speaking. I will have that report, of course, made. The sales are old ammunition and old-pattern arms condemned and not used any more in the service.

Q. How do you sell those?—A. I think they are sold by the bureau, by advertisement; and we were notified as to what had been sold from our yard. I don't think there has been any sale here. I shipped the last lot about a month or two ago.

Q. How large was it?—A. I don't recollect the amount of it. It was all packed before I arrived, I have got, of course, all the papers about it, and I shipped it to the address ordered. It had already been sold; but it was stuff that was of no value.

Q. Do you know what the price of it was?—A. Yes, sir; the papers in my office will show what it was sold for. The paymaster showed me a receipt for some carbines sold for 60 cents apiece, sent away from here. They are probably worth more than that, but you cannot get it. You are subject to a "ring" in selling arms. If you put up old arms for sale you have no competition. In any sale of old arms you are subject to the bids of a very few people.

Q. Have you been stationed on other yards?—A. Only at Boston, for six months in 1869–70, and at the Naval Academy for three years. I have been at sea for over ten years of my service, and have not been at shore-stations, except the Naval Academy, a great deal. In fact, we younger officers do not have a chance to be much at navy-yards.

KITTERY, ME., *March* 16, 1876.

Mr. ——— PUTNAM sworn and examined.

By the CHAIRMAN:

Question. Have you at any time been purchasing paymaster here?—Answer. Yes, sir.

Q. What is your office now?—A. Paymaster of the yard.

Q. When were you purchasing paymaster here?—A. It was four years ago this July that I left the office there.

Q. Well, now, how would you manage, as purchasing paymaster, about obtaining supplies? Would you get some of them by advertisement, make the estimate, and some of them be bought by advertisement?—A. Yes, sir.

Q. After that would some be bought by open purchase?—A. Yes, sir.

Q. How would that happen?—A. When there would not be enough by advertisement.

Q. Then they would send on a requisition here for more supplies?—A. Yes, sir; sometimes they would say that the supply was for immediate use, and they would not advertise. It was the bureau at Washington.

Q. Would you be left to negotiate the prices and everything to the best advantage?—A. Yes, sir.

Q. Were the prices or not fixed at any time by the bureau at Washington—what you would have to pay?—A. No, sir; the estimates would be put on the requisitions here.

Q. Didn't Mr. Hanscom sometimes fix the prices that you were to give for articles?—A. No, sir.

Q. Were the prices fixed by Constructor Hanscom for lumber delivered by Trickey & Jewett at any time?—A. No, sir; I think not.

Q. How did the prices paid Messrs. Trickey & Jewett for lumber compare with the prices in the market here at Portsmouth?—A. Well, we generally tried to get them at market-rates. The paymaster would ascertain as near as he could. The paymaster would be likely to be cheated as well as anybody else in business transactions. Sometimes I think I purchased articles lower than the market-rates, and sometimes perhaps it went higher.

Q. In no instance, then, were the prices fixed on anything that you purchased, by the bureau at Washington—by Mr. Hanscom?—A. No, sir.

By Mr. JONES:

Q. I would ask you: while you were here was the most of the material bought by open purchase or by contract?—A. Well, sir, I could not hardly tell you that. I think there was a great deal of contract material; but I remember an instance in Yards and Docks where Admiral Rodgers used to find that he used to buy his coal by contract in the summer time, and the contractors would not furnish it; and in the winter season they would be without coal here, and the paymaster would have to buy the coal. There would be no coal in the yard here; and I think that bureau came to the conclusion that it would be better to buy the coal here right on the yard. I think I purchased from Mr. Walker at one time quite a quantity of coal for Yards and Docks.

Q. In your office, the last of the bills that came to you was for timber and materials that you bought by open purchase, and by orders from the bureau, was it not?—A. Yes, sir.

Q. Do you know, with regard to that proportion that was paid by you, whether they were materials furnished that were bought by irregular bidding or by the chiefs of the different bureaus?—A. Well, sir, I would not know anything about the contract except for the bills.

Q. You would not know whether it came by order from the chiefs of the different bureaus, or whether it was done by a bid to furnish?—A. I could not tell about that. If the bureau bought, I would not know whether it was a contract or whether it was bought right out.

Q. If the bureau bought, it would come through your office, would it not?—A. Yes, sir; it might and might not. If he bought of a merchant in New York, he might say, "I would rather have these bills payable in New York, by the paymaster there."

By the CHAIRMAN:

Q. Do you know of any abuses committed in the navy-yard here?—A. No, sir; not of my personal knowledge, I do not; I have only been here four or five months.

Q. Do you know of persons being employed here from political considerations rather than for the benefit of the service?—A. No, sir; I have none in my office. That is all that I can say.

Q. Do you know of any assessments made on either employés or officers of the Government here for political purposes?—A. No, sir.

Q. Do you know whether the Department at Washington orders an extra amount of labor to be employed just before pending elections in Maine or New Hampshire?—A. No, sir; I do not. There was a large force on this summer, but they were at work on the Marion, to get her to sea. After they got her to sea, they discharged them.

Q. Do you know of any officer or employé of the navy-yard who has been given any consideration in money or property, or the representative of either, by any person, for the deriving of a benefit from the Government for such person?—A. No, sir.

Q. Do you know any contractor who has given any consideration in money or property, or the representative of either, to any officer of the Government by way of influencing contracts or obtaining benefits from the Government, or anything of that kind?—A. No, sir.

Q. Do you know any person connected with the Government who has been given any consideration in money, property, or the representative of either, for the obtaining of benefits from the Government?—A. No, sir.

Q. Do you know of any fraudulent or improper removal of any Government property from the Government yard?—A. No, sir; I do not.

KITTERY, ME., *March* 16, 1876

——— LOCKE sworn and examined.

By the CHAIRMAN:

Question. You are a timber-inspector?—Answer. Yes, sir.

Q. How long have you been acting in that capacity?—A. I think since July, 1870; previous to that, deputy inspector.

Q. Through whose influence and recommendation were you appointed timber-inspector?—A. As timber-inspector, by the assistance of Mr. Cragin; as deputy, in 1864, by the late Admiral Pierson, commandant of the yard at that time.

Q. Have any parties ever paid you any money for passing their material in the yard?—A. No, sir.

Q. Do you know whether the Ida Lewis ever put any timber on the yard?—A. Yes, sir.

Q. Who were the contractors?—A. Mr. Bigelow.

Q. Do you know how much timber?—A. No, sir.

Q. What was the quality?—A. To my recollection, it was first quality.

Q. Was it live-oak knees?—A. It was live-oak timber.

Q. Was it the best quality of live-oak?—A. As far as my memory serves me.

Q. Where is that now? Is it in the wet basin?—A. Well, I think some of it has been used in the construction of the Marion and the Enterprise and other vessels.

Q. Did any party ever offer to pay you any money to increase the amount of lumber that their vessel actually carried?—A. No, sir.

Q. No one ever offered to pay you anything?—A. No, sir.

Q. Nor ever did pay you anything?—A. No, sir.

Q. Do you know how much live-oak timber has been received in this yard for the last three years?—A. I do not.

Q. Do you know what is the average price that has been paid for it by the Government?—A. I don't know as I can recollect.

Q. Do you know whether Messrs. Trickey & Jewett furnished one hundred thousand feet of pine lumber on requisition about October 28, 1874, and at what price?—A. I can't remember now, sir.

Q. Was not that rather an unusual amount to come on the yard at one time?—A. Yes, sir; an unusual amount.

Q. Would you not have recollected it if it had taken place?—A. I should think I should.

Q. It was not all received at one time probably?—A. No, sir; I don't remember that.

Q. You remember such an amount of lumber at one time?—A. No, sir.

Q. Would you not have remembered it if you had received it?—A. I should think I should.

Q. The books will show?—A. Yes, sir.

Q. Do you know by what authority that lumber was received—whether you were ordered to receive it from Washington?—A. I don't recollect.

Q. Suppose that fact existed—that there was one hundred thousand feet received—whose books would show it?—A. The books in the constructor's office would show it.

By Mr. JONES:

Q. When did that lumber come in?—A. I don't remember of seeing it.

Q. You did not keep any memorandum-book or anything of that kind?—A. O, yes, sir; I keep memorandum-books and all the entries. But I understood you to inquire about the authority, &c.

Q. Do you know anything about the price of that or any other lumber?—A. No, sir. There was no price ever fixed with me.

Q. You don't know anything about what the quality was?—A. That particular lot I don't remember anything about.

Q. Could you tell what particular proportion of that lot, or any other, was first, second, or third class?—A. No, sir; I cannot tell that.

Q. Do you know whether the Government knees, live-oak, delivered by Trickey & Jewett, have been in accordance with Government regulations?—A. Well, sir, if I understand the question, they have as a whole. There have been rejections, of course—material rejected and taken away.

Q. How long have you been on the yard, did you say?—A. I was a deputy inspector appointed in 1864, the 29th of June.

Q. I understood you to say that you had books showing all the timber that you had received from different parties?—A. Yes, sir.

Q. And the qualities?—A. Yes, sir.

Q. Do you know when the different contractors have delivered timber here on account of their contract with the Government?—A. Only by the record.

Q Of course you are notified how much you are to take; you are notified that there are certain lots coming in different schooners?—A. Yes, sir; when there is a contract.

Q. Do you know whether there has been more timber sent here by those contractors than what the actual bid was for, or not?—A. Well, I do not.

Q. I mean, providing I bid for 25,000 feet of timber, do you know whether, if I should send 50,000 feet or 75,000 feet, it would be taken?—A. I think there has been cases where there has been an excess.

Q. Have there not been cases where there has been a large excess?—A. I think there have.

Q. What have you done with it?—A. It has been landed in the yards.

Q. Whom do you receive your orders from?—A. Through the constructor.

Q. I understand you to say that there has been a large excess of timber delivered here beyond the orders to the parties who have delivered it?—A. I cannot say large excesses.

Q. Do you know whether there have been cargoes of timber delivered to this yard that have not been sold by the Government?—A. Yes, sir; there have been cases where it has been landed here and has not been sold. I could not say how many.

Q. Who delivered it?—A. I think there has been some delivered by Mr. Swift. I don't know of any one else. I am not certain about that exactly; but it was by Mr. Swift.

Q. Has not that timber been afterward used by the Government? Has any of that timber ever been taken away that has been delivered here that has not been contracted for?—A. Not to my knowledge. It has not been received. There is one lot here that has not been received.

Q. The balance of it has been received and used, has it not?—A. No, sir; it has not been received.

Q. Of that that has come here without being ordered or bought by contract, there has not any been received, you say?—A. Not that I know of.

Q. Do you know of any that has been taken away?—A. No, sir.

Q. You say you know of a lot of it that has been received?—A. It has been landed on the yard. It is here on the yard now.

Q. How many cargoes are there here?—A. I don't know how many. There are a small number; two or three, perhaps.

Q. Have you two or three cargoes here on the yard now?—A. I guess there are. I don't know the number; three or four cargoes, for aught I know.

Q. Was it measured? Have ever you surveyed that timber?—A. It was all measured as it came out of the vessel. It has to be measured as it comes out of the vessel.

Q. Do your books show that fact?—A. The memorandum shows it.

Q. You can get from your books an accurate answer to that question?—A. Yes, sir.

Mr. JONES. We want your books.

By Mr. BURLEIGH:

Q. Have you any knowledge of any cargoes of timber being brought here previous to orders, and received, where negotiations have been carried on at Washington to get a permit to have them received after lying here several days, and where the same cargoes have been received by orders from Washington?—A. If I understand that question fully, I should think that was the case.

Q. I mean cargoes of timber brought here and not landed until after negotiations had been had at Washington, and after negotiations had been perfected they were allowed to be landed and received by you?—A. Yes, sir; it was landed after negotiations.

Q. How many cargoes have laid here in that way, where there was detention on the vessels until you could find out from Washington whether they were received or not?—A. Well, I don't know how many there were.

Q. Should you say there had been several?—A. This is entirely from memory, of course. I cannot say whether this permission was given for this timber to be landed before they came to the yard or not.

Q. I asked you whether there were orders to receive it, and it was not received until negotiations had been carried on at Washington, and after a time orders came here to receive it, and the vessels lay here under detention several days?—A. Yes, sir; that is my impression; that, I believe, to be the fact.

Q. How many cases of that kind?—A. There was one in particular. I cannot recollect the vessel's name. It was one with this lot of live-oak timber. It lay here some little time.

Q. I refer now to timber afterward landed and used on the yard—not timber that lies here now.—A. Well, I don't know but there was one lot.

Q. What was that?—A. That was a lot of live-oak timber. She lay here some little time.

Q. How long was it?—A. Well, she must have laid here a few weeks. I don't know exactly the time.

Q. Afterward that timber was landed and used?—A. Well, portions of it were used, and portions of it rejected.

Q. It belongs to the Government?—A. Yes, sir.

Q. How large a proportion of it was rejected?—A. Well, I can't remember the amount.

Q. What became of the rejected portion?—A. It is piled up and lies out by the basins there.

Q. Don't you know of a portion of a cargo of knees brought around here that it was said by the commodore there was no use for, and negotiations were carried on without landing them for some time?—A. Yes, sir; there was a lot. I don't know what the commodore remarked about it.

Q. You know they lay here for some time and afterward were received?—A. Yes, sir.

Q. Do you know about those knees?—A. Yes, sir.

Q. What do you know about them? Tell the committee as to their quality, and whether they were desirable.—A. They were not up to the standard.

Q. Did you ever hear that they were condemned in some other yard?—A. No, sir; I never heard that they were condemned in any other yard, that I remember of.

Q. Was it not common rumor on the yard?—A. If it was it did not come to my ears.

Q. Of what quality were they?—A. Th y were not up to the standard. This lot was white oak.

Q. Don't you know of a lot of hackmatack knees brought here in some similar way?—A. Yes, sir: there was a small lot of hackmatack.

Q. Was there not trouble about them, and did not they lay here until there were negotiations at Washington?—A. Yes, sir; there was a lot of hackmatack and white oak.

Q. Now, just tax your memory for something else besides one cargo of white-oak timber, which lay here several days before being landed.—A. This lot of knees that I speak of, the oak and hackmatack, were different cargoes.

Q. Now, you have not stated in regard to quality, and whether they were desirable for the use of the navy-yard.—A. I myself personally rejected a large portion of them. I did not receive them myself, and then there were negotiations pending, and they were bought at what they were supposed to be worth.

Q. How do you know that?—A. That was the understanding. That was the order, if I understood it.

Q. Do you know what the supposed price was?—A. I have forgotten now.

Q. You did know the price?—A. Yes, sir.

Q. Do you think they paid a full price for them?—A. No, sir; they did not. They were not up to the standard, and they bought them at a reduced price.

Q. Did they get them at a very reduced price, according to their quality?—A. Well, it was so intended.

Q. Who sent those knees here?—A. Mr. John Trickey sent the white-oak knees.

Q. Who sent the hackmatack?—A. It was the same. Jewett and Trickey were in company at the time.

Q. Can't you think of any other cargo that lay here until there came an order from the Department?—A. I don't know that I can at this time.

Q. Don't you know that the live-oak that has been used to put in the dock was in the same condition that those cargoes were—*i. e.*, that they lay here for some time before the commandant would receive them?—A. Not of the live oak, sir.

Q. The only cargoes of live-oak that have come here that have been put in the dock were cargoes that were at once landed as soon as they came, and were inspected by you?—A. Yes, sir.

Q. Was it in every instance?—A. Yes, sir; as they were landed they were inspected.

Q. I don't want to know about what is in the yard now, but about a cargo or cargoes of live-oak that came here, and there was a question about receiving them, and after a while were received and taken care of by the Government.—A. No, sir; I don't recollect anything of that kind.

Q. Every cargo of live-oak that there has been any question about is here on the yard now, and not been accepted by the Government?—A. Yes, sir; that is it, as far as I remember.

By Mr. JONES:

Q. You know that since the time in 1864 that you have been here as timber-inspector whether there has not been a number of cargoes of timber sent here to this yard, alongside of your wharf, which were not contracted for, and which have laid here a number of days until orders have come from the Department at Washington to receive them?—A. Well, I can't say.

Q. Will your books show you that? You must have a very short memory if you cannot tell whether there has only been one cargo or whether there have been five, six, seven, or eight.—A. These three are all that have ever laid waiting for orders from Washington to land.

Q. Those three you inspected when they were landed, didn't you?—A. Yes, sir; we have to do that in order to keep our business agoing.

Q. Now, these three cargoes have been used by the Government since that time, have they not?—A. One of them has not been touched. That is the cargo of live-oak of Mr. Swift's that lay over there. That never has been touched. There have possibly a few pieces of the other been used—of the white oak. I mean the projecting pieces. There were three cargoes that lay awaiting permission to land.

Q. Did the Government purchase them before they gave permission to use them?—A. Yes, sir.

Q. I understand that you say that none of the live-oak that there was any question about has been used?—A. Yes, sir; that is it.

Q. But the three cargoes—one of live-oak, and one of hackmatack, and the other of white-oak knees—those have been used, or portions of them, by the Government?—A. Yes, sir; portions of all three of those cargoes are rejected, and now lie here rejected.

Q. How much, should you say, of each cargo was rejected?—A. Perhaps fifty or sixty of the white oak, and perhaps thirty of the hackmatack, and of the white-oak timber, (the others are promiscuous;) in round numbers perhaps two or three thousand feet.

Q. Who owns this rejected property to-day?—A. It it either the firm of Trickey & Jewett, or else they are separated, and it is one of them. To my knowledge and belief, the Government does not own it at the present day. I think part of that was rejected.

Q. How long since those hackmatack knees have been here?—A. Well, since some time last summer.

Q. Don't you remember further about it—about a cargo of hackmatack knees coming here four or five years ago, under the same circumstances?—A. I don't.

Q. Not of white-oak knees?—A. I do not. I don't remember about any, four or five years ago.

Q. Nor cargoes of timber previous to last year?—A. No, sir; I don't remember it.

Q. All this timber came previous to last year?—A. Yes, sir.

Q. You don't know of anything coming here previous to last year but what was really contracted for by the Government?—A. Not that I can remember of.

By the CHAIRMAN:

Q. In all these cases, where timber is brought here and landed, where it has not been purchased, the Government always subsequently takes it and uses it, does it not? Has any of it been removed by private parties before it has been purchased by the Government?—A. All of the rejected material——

Q. [Interrupting.] Here is now a cargo of live-oak that belongs to Mr. Swift; that is lying here to be used by the Government some time, is it not?—A. Our rules are—and they are carried out rigidly— never to cut a stick unless it belongs to the Government.

Q. But the Government always does purchase, in some way or other, all the lumber landed on the yard?—A. No, sir.

Q. Does it send any of it away?—A. Yes, sir; it does. At one time I remember their sending away at least one full cargo and rejecting some of the others.

Q. How long has this live-oak been lying here?—A. It will be twelve months next summer.

Q. Is it under any sort of cover?—A. No, sir; it is in the wet basin.

Q. Is it in with the Government timber?—A. Yes, sir.

Q. It cannot be distinguished from it?—A. Yes, sir; I could tell every piece of it, and I have it registered and marked in such a way that I can tell it.

Q. Does the Government permit the wet basins built here for the Government to be used for the preservation of timber for private individuals? Were you authorized to put that lumber in the wet basin as well as put it in the yard?—A. I don't know where that order came from.

Q. You were ordered to it put in the wet basin?—A. I was not ordered in the premises. It was hauled up there and put in there.

Q. What is the value of that cargo?—A. Really, I could not say.

Q. Will your books show just what there was in that cargo, and what kind it was, and what quality?—A. Yes, sir.

Q. Do you know that it is Mr. Swift's property to-day?—A. Well, sir, to the best of my knowledge and belief, it is.

Q. Is it not an unusual circumstance for the Government to take care of other people's property in this way? Has that ever been done before with a cargo of live-oak timber? Have you ever put any other cargoes in the basin received in the same way?—A. No, sir; not that I remember of. There has been a good deal of business, and I have had to look after the delivery as well as the receipt. I have had an assistant deliver it when it was used.

Q. How much more will that lumber be worth in the course of the next two years than it is now, if kept in the wet basin?—A. I have not thought of that before.

Q. It is worth more, is it not?—A. Well, sir, it is seasoned; it is curing.

Q. Live-oak that has been in the wet basin three years is of more value than live-oak fresh from the mill, is it not?—A. Yes, sir.

Q. How much more?—A. I don't know as I ever thought of it before.

Q. Don't you know how much difference the Government makes in purchasing green timber and seasoned timber? What would be the difference provided the Government wanted it for immediate use?—A. My impression is that it is worth a good deal more if it has been in the dock and cured; what per cent. I cannot say.

Q. It would be quite as much as the interest upon the value of the timber, would it not?—A. I should say that it would. It is for the interest of the owner to get it seasoned.

Q. Would it be for the interest of the Government to keep the plank and season it, and then pay the contractor a higher price for it after it was seasoned?—A. No, sir; I don't think it would.

By Mr. BURLEIGH:

Q. Can you tell when the first cargo came here that you have been receiving lately from Mr. Swift, or any other parties, and when the first of that timber was put in the wet dock; that is, can you tell how long any of that timber lay here out of the dock on the yard?—A. I cannot give the exact dates from memory. There was some of it that lay exposed some little time.

Q. How much?—A. I should say there was for some two months a suspension of the force, and there was not force enough to take care of it.

Q. Didn't it lie here more than a year?—A. Possibly. I am not quite certain that it lay more than a year, that which lay the longest. When we resumed we took that which lay the longest and handled it over.

Q. Was not that oak that had been piled up a year received in the same condition that Mr. Swift's was?—A. No, sir; I don't think it was.

Q. You never have understood it so, have you?—A. No, sir; I never have understood it so. That is the only lot landed in that way; that for Mr. Swift.

Q. Since you have been inspector here has there not been a great deal of rejected timber that afterwards you have had orders to receive at a less price?—A. No, sir; not a great deal. There have been cases where some of it has been received.

By the CHAIRMAN:

Q. You say you are here in charge of timber, and timber-inspec'or; when they were building the hull of the Enterprise did you ever charge any timber or lumber to the Enterprise that was not furnished to it?—A. No, sir.

Q. Did you ever overcharge any lumber; that is, if you furnished 10 feet, charged 20?—A. No, sir.

Q. You made no overcharge?—A. No, sir.

Q. You simply charged for timber delivered to that vessel?—A. Yes, sir.

Q. The same as you did to the Essex?—A. Yes, sir.

Q. If the timber was larger or longer and was cut for the Enterprise, would you charge the whole of the stick to the Enterprise that they cut it from?—A. I carried out the rules of the yard in that respect. The rules are, if a stick is cut to charge to the object.

Q. Was there any considerable timber cut in that way for the Enterprise that they did not use the whole of it?—A. Well, I can't remember that there was.

Q. Did or did not the Enterprise have as good as there was on the yard?—A. They did.

Q. Did they have the best, or of the best?—A. They fared the same as the rest, to the best of my knowledge and belief.

Q. Provided they sent for timber both at the same time, which did you give the preference to?—A. Well, I had assistants enough to attend to both as a general thing.

KITTERY, ME., *March* 16, 1876.

Mr. ——— JEWETT sworn and examined.

By the CHAIRMAN:

Question. You have been contractor with the Government to deliver timber for some time?—Answer. Yes, sir.

Q. How long have you been contractor?—A. Fourteen or fifteen years.

Q. How do you obtain your contracts—by bid, or by open contract with the Government?—A. Both ways.

Q. Which do you supply the most by—by the open purchase, or by the bid?—A. Well, during the war the great bulk of it was by open purchase.

Q. How is it now, since the war?—A. I should think, by contract; I don't know.

Q. What sort of timber have you been furnishing?—A. Oak timber chiefly; or lumber generally.

Q. Is it white oak, or do you furnish some live-oak too?—A. No, sir; I never have anything to do with live-oak.

Q. You supply pine, also?—A. Yes, sir.

Q. What do they give you for white pine, what for lumber, and what for timber?—A.

Well, white-pine lumber is in numbers of one, two, and three; No. 1 white-pine lumber is worth $75 to $80 or $90, has been at various different years; No. 2 is worth $60 to $75. This is dry, seasoned lumber.

Q. That is in the stock, uncut, is it?—A. No, sir; it is manufactured.

Q. How much is it?—A. No. 1 ranges from $70 to $90; No. 2, perhaps ten or fifteen dollars less than No. 1. There is very little difference in No. 1 and No. 2. No. 3 is a coarse lumber, such as we produce in our country.

Q. What is about the current price for lumber outside of the yard?—A. Well, I am giving you the market price here; you have to have some margin for profit.

Q. How much do you give for it?—A. That depends upon circumstances. We buy it as well as we can, and sell it as well as we can.

Q. What would lumber cost you, such as you would sell at $70 a thousand?—A. Well, we ought to get $5 or $10 a thousand on it.

Q. Do you know of any person who has given any consideration in money or property, or the representative of either, to any officer of the Government, by way of influencing contracts, or anything of that kind?—A. I do not, sir.

Q. Do you know any person who has been given any commission or portion of the profit to assist in procuring contracts?—A. I do not, sir. I certainly have never done it myself.

Q. Do you know whether in a certain suit at Boston, in which you and your partner were parties, the books of your concern showed that there was a thousand dollars paid by you to Isaiah Hanscom?—A. No, sir.

Q. Did you ever pay him any money?—A. No, sir.

Q. You never gave him any interest in any contract that you had with the Government?—A. No, sir.

Q. Your books do not show anything of that sort?—A. No, sir; not to my knowledge.

Q. Who has kept the books of your concern?—A. Mr. Moses Paul, I should think, was the bookkeeper for four or five years past.

Q. Do you know of any outstanding liabilities of the Government to naval contractors now?—A. Well, nothing to me.

Q. Do you know of anything to any other contractor?—A. No, sir; I don't know of it.

Q. Have you heard any other contractor say that the Government was indebted to him or that he had any claims upon the Government for any supplies furnished?—A. No, sir. I don't know but Mr. Trickey may have. I have not been partner with Mr. Trickey but for a year and a half. The Government, I believe, owe me nothing.

Q. Do you know anything about any of these bureaus, when they get out of funds, carrying an account forward from one year to another, and getting the funds out of the appropriation for the ensuing year?—A. I think I may have had an instance of that sort.

Q. In that case would they change the dates of the account?—A. I think so. I think I have had bills remade.

Q. Have they done anything of that sort lately, do you remember?—A. My impression is, that it may have been done last year. I don't know of any other instance, but there may have been other instances.

Q. Has there been any instance this year?—A. No, sir.

Q. They still pay you for what they get now?—A. Very little, if anything.

Q. I understand you to say that they do not owe you anything?—A. There may be a bill of a hundred or two hundred dollars.

Q. Do you know of any naval contractor being paid out of any proceeds of the sale of the Philadelphia navy-yard?—A. No, sir.

Q. You know nothing on that subject?—A. No, sir.

Q. Did you state what you had delivered the timber for to the Government? I want to get just the prices. Now commence with the timber, and state the different grades, and what they give you.—A. I could not state definitely. You ask me the price of certain lumber ranging at different periods. The same thing will vary at different periods. No. 1 lumber I think I have sold at $75 to $90. No. 2 lumber I should think at $60 to $75. I don't know. There may have been some cases of $80. No. 3 lumber I have sold as low as $25 and I have got perhaps as high as $35 or $30 for it.

Q. Does not the size and length have something to do with it?—A. Yes, sir; very much. That applies to timber. Speaking now of dry lumber, there are specific lengths of dimension-stuff that alter the prices very much. For instance, timber twenty-five, thirty, and forty feet long would be worth very much more than ordinary lengths of the same quality of timber.

By Mr. JONES:

Q. Do I understand you that this lumber that ranges from $25 to $90 a thousand is dry lumber? Is it boards and plank?—A. Yes, sir; various thicknesses, running from one inch to four or five inches thick. The highest grade is western lumber.

Q. Would it be promiscuous stuff?—A. Yes, sir. And then there is another class of timber, specific sticks of long lengths, that is not at all governed by that price. No. 1 lumber is clear lumber; No. 2 is subject to knots within four or five feet of each other; No. 3 is our merchantable country boards that we saw about the country here. Nos. 2 and 3 is western lumber.

›n there have been any bids for that lumber has there been any combination by
s here in Portsmouth with you?—A. No, sir.
e are no outside parties in the lumber business here who have had a commission
. O no, sir; I have had nothing to do with anybody else.
you tell us whether there are combinations between the contractors to stifle com-
whether, whenever there are contracts to be let out, a number of them get together
d otherwise bid against each other?—A. No, sir. We all try to take care of our-
all those things. We don't mean to do anything very wicked about it, however.
usiness, and I generally try to take care of my business pretty well.
r do you account for it that you have been contractor so long, when it depended
:hances about making the lowest bids?—A. I will take what your colleague, Mr.
d about me when I first came in here, as affording an answer to that question, viz:
ıtty clever fellow. I think I have done the business here to the satisfaction of
on in the yard. I don't think there is a man, from the commandant to the menial
ut what would do me a favor at any time. I try to take pretty good care to make
reasonable. There is a pretty uniform price for our commodity.
can you tell us about what proportion of the contracts that you have had since
ɔu have obtained by the annual letting?—A. I have never attempted any contracts
except for the Kittery yard.
r many contracts have you got by regular course of annual letting?—A. I guess I
the majority of them usually.
e you supplied any lumber or timber here at the yard by contract with Mr. Hans-
ırties at Washington, without its having been advertised for or demanded?—A. I
ıad any contracts with him.
r contracts have been through the regular channels?—A. Yes, sir.
ɔm would that come through?—A. Through the purchasing-paymaster. A requi-
ıade for the article, and that is sent to the purchasing-paymaster.
t is by the open purchase?—A. Yes, sir.
ɜn it is not by the open purchase, then they let it out?—A. That is done at the an-
ıg in Washington once a year.
you bid at those?—A. Yes, sir.
n when those are exhausted, the balance is by open purchase, and then you make
with the paymaster?—A. Yes, sir.
r, you think it is over half of the contracts that you get by the bidding at Wash-
he annual letting?—A. I should think so, since the war.
ı talking about since the war. When you have made your bids at the annual
ıve you ever known that the Government would require at this station any more
e year than your annual bid was?—A. No, sir; never. And if I did, years ago,
: war, perhaps, or in the early stages of the war, I think there was a rule of this
the successful bidder at the annual lettings was supposed to have the privilege of
g any balance that might be wanted, at the same rate. That used to be the rule
ad anything to do with it.
t not the rule now?—A. No, sir; I don't understand it so.
vided at the annual letting you should make a bid of ten or twenty thousand dol-
certain kind of lumber, have you not been in the habit of putting more than that
yard and letting it lie here, or of a lower grade, for which you thought there would
ɜn purchase?—A. No, sir. We have sometimes had a surplus. It has come by
and there has been a surplus. They are not authorized to receive above 5 or 10
above the contract. I have sometimes had a surplus of a small amount, and fre-
ıad a small surplus of some kind of timber upon the yard.
you have to get an order from the chief to have it delivered—to have it delivered
n your contract?—A. If the excess did not exceed 5 or 10 per cent., the constructor
ld take the liberty of receiving it.
ve there not been times when you have had a good deal more than that excess,
u have had an order from the chief to let you deliver it in the yard?—A. There
e been such instances; but I don't recollect of any.
e never paid Mr. Adams any per cent. for commissions?—A. No, sir. I think some
may have had an account with Mr. Adams out of some special contract. I don't
at I ever gave him a commission for anything. I don't think I did.
ɔu said that you fellows calculated to take care of yourselves. Has there not been
ırstanding, when you bid, for these open purchases?—A. There may have been in
stances. I don't remember, however, of the instances.
Whoever got the contract, have not the rest had a share in the profit?—A. No, sir; I
collect any instance of that kind. No, sir; I should say not. It might be that I
ave done Mr. Adams some service, in return for service he might have rendered me.
to his having an interest in the thing, I don't think there ever could be a case of
rt.
t these annual lettings they always let to lowest bidders?—A. Yes, sir.
ɔu have got contracts for the last ten or fifteen years?—A. No, sir; I got more or
them. There might be a dozen or twenty classes, and I get one or two or three
. Here is a class of oak timber, and a class of pine timber, and a class of oak plank.

Q. The class you bid on, don't you get?—A. I bid on all of them, and lose some of them, and some of them I get.

Q. You don't lose on all you bid on?—A. No, sir; not by any means.

Q. Did you or Mr. Trickey furnish the frame for the Tallapoosa, at the yard?—A. I think Mr. Trickey had an order for some timber, and I was interested there with him.

Q. Did you and Mr. Trickey furnish any of the timber that built that vessel at Baltimore?—A. No, sir.

Q. Do you know who did furnish that?—A. No, sir: I do not.

Q. Do you know how that timber was bought?—A. I don't know anything about it.

Q. Do you know anything about the improper removal of any Government property from the navy-yard by anybody?—A. No, sir.

Q. Now in regard to the timber-inspector here. How long has he been timber-inspector here?—A. Well, I shall say seven or eight years. In the beginning of the war, in 1861, Mr. Bennett was timber-inspector, and I think Mr. Lockie sometime, said to be an assistant of his.

Q. Who got Mr. Lockie's appointment?—A. I don't know; I have always understood that he was a member of the legislature at the time of Mr. Cragin's re-election, and the probability is that it was through his influence. All I know is that he is a very good fellow.

Q. Right in the same line, do you know whether Dr. Wentworth, who holds some position in your State here, is, or not, general inspector here?—A. He was. I understood that he resigned some months ago.

Q. He was two or three months ago?—A. Yes, sir.

Q. How long did he serve?—A. Two or three years.

Q. At the same time that he was inspector here, was he a member of the legislature of Maine?—A. He was a member last winter and the winter before, I should think two winters.

Q. And at the same time was inspector here?—A. I should think he was.

Q. Who procured him his appointment?—A. I have no knowledge about it.

Q. Was there not some Senator elected from Maine, the same as there was from New Hampshire?—A. I should think likely.

Q. Was there not a Senator elected from Maine while the doctor was in the legislature from Maine?—A. I should think there was a Senator elected a year ago.

Q. Was that when he was there?—A. Yes, sir.

Q. What Senator was it?—A. My friend Burlingame knows all about that. It was Mr. Hamlin, I think.

PORTSMOUTH, N. H., *March* 16, 1876.

AMBROSE J. CLARK sworn and examined.

By Mr. BURLEIGH:

Question. What is your position here, sir?—Answer. Purchasing-paymaster.

Q. That is, you pay for all purchases?—A. I do the purchasing.

Q. Under requisitions made from this yard?—A. Yes, sir.

Q. Any other yard?—A. No, sir.

Q. State, if you please, what the form is of the order for purchasing, and the forms through which bills go before you pay them.—A. The department or bureau at the yard make their requisition upon me for stores, and I then purchase them on that requisition.

Q. How do you purchase them?—A. By either sending out for bids, or, where only small amounts are required, buying them in the market, at the lowest price.

Q. What proportion of your purchases is made by bids, and what proportion in the market?—A. If any large amount is wanted, that is, anything over a few hundred dollars, I always send out to the different business men and get their bids, and I give the order for the goods to the lowest bidder.

Q. You do not advertise in the papers?—A. Where the amount is over a thousand dollars, I do.

Q. You advertise that in all cases?—A. I have never had a case of over a thousand dollars since I have been here.

Q. You send out notices to the dealers in the line of goods that you want to purchase, and they send in bids?—A. Certainly. For instance, I get a requisition to-day, and send out an invitation for bids, and give them two or three days, as it happens, to reply, and at the end of that time I give the order for the goods to the man who makes the lowest bid.

Q. Then what becomes of the goods?—A. The bill is sent with the goods by the party who furnishes them, they are inspected by the chief of the department at the yard requiring the goods, and then the bills are made out at the yard and signed by the inspector as having been received, and then they come to me and I certify as to the price.

Q. Does the commandant sign those bills?—A. After they go from me. He is the last one who signs them. The bill is then complete, and the commandant sends it over to me, and I make my requisition on the bureau in Washington, sending a triplicate bill. All bills are made in triplicate. The triplicate bill goes to Washington, and there they examine it;

and, if it is satisfactory, they pass the amount to my credit and inform me that so much is passed by that bureau, and in time I get a check for it, and then the bill is paid.

Q. Are you buying many goods at the present time?—A. No, sir; very few.

Q. Have you bought any goods, for which you have sent on the bills, that you have not received orders to pay?—A. Yes, sir.

Q. To what amount?—A. I should think a thousand dollars would cover them all.

Q. Over what space of time is that?—A. I have one in steam-engineering running back to the 21st of December.

Q. Do you remember what the amount of that bill is?—A. It is about $400, I think.

Q. Is that the largest bill you have unpaid?—A. That is the largest one I have drawn for, yes, sir, in any purchases of mine; and that is not one bill either; that embraces some three or four bills. I get a lot of bills and hold on to them say for a week, and then require for the whole, sending triplicates, and drawing for the whole amount.

Q. Did you expect the money soon when you sent that bill?—A. I calculate to get the money in about ten days.

Q. You expected, when you sent that bill, that it would be paid in ten days?—A. Yes, sir: that is the time we usually allow.

Q. Have you sent other bills since?—A. Yes, sir; I have sent other bills.

Q. Have you received pay for those?—A. Yes, sir; a good many of them; but I have not received or disbursed any money in steam-engineering since the first day of January, this year. A good many bills have gone on.

Q. What other departments have you purchased for?—A. All of them.

Q. What other departments are behind?—A. They are all of them behind. They always are a few days behind. They run from ten to fifteen and twenty days.

Q. Are any of the departments behind over a month, except steam-engineering?—A. I think not.

Q. The rest have been paid up as you expected?—A. Yes, sir. There is one bill under "construction," $1,500, for Mr. Griffiths, the contractor on the Enterprise. That bill was drawn sometime in December, in construction. They have paid everything except that. I have not received the money for that.

Q. Do you remember what that bill was for?—A. It was for work on the Enterprise—not any purchase of mine. It was a bill sent here by the bureau, and I drew for it.

Q. The bills of Mr. Griffiths, previous to that date, were all paid?—A. Yes, sir; about the time this was required for I paid $5,000 on two bills of $2,500 each.

Q. Has Mr. Griffiths had any bills since that time?—A. No, sir; all he is back is $1,500.

Q. And that was the first of December?—A. I think it was in December; I won't be positive about the date.

Q. Those two cover about all that is back—steam-engineering and construction?—A. Yes, sir.

By the CHAIRMAN:

Q. Will your books show the amount you pay on annual lettings?—A. No, sir; they will not.

Q. Will they show the amount of purchases made under orders originating with the constructor at the yard?—A. Yes, sir.

Q. Will you furnish the committee with the amounts paid out under the annual lettings, the amounts originating with the departments at the yard, and the amounts paid on orders from Washington?—A. Yes, sir.

Q. Have any bills, approved for timber or other things in one fiscal year, been ordered to be destroyed and new ones issued by the Department at Washington?—A. That I do not know: I can tell only by the bills that come from the bureau or navy-yard.

Q. You would not know anything about it, except that the new bills would come to you, and you would have to pay them?—A. No, sir. I draw for all my money under the present year.

Q. Can you tell how much of the money appropriated for this year has been expended?—A. Yes, sir; I can give you the moneys I have received and disbursed, and the balance on hand.

Q. The point is, a certain amount of money is appropriated for the year, and we want to know how nearly that is exhausted?—A. All I can give you is what I have received and expended and what I have on hand.

Q. Will you state the amount of money you have paid out from July 1, 1875, to date?—A. Between the 19th day of July, 1875, and the 30th day of September of the same year I received $4,764 to pay bills of the fiscal year ending June 30, 1875, and disbursed the same amount under appropriation of that year. For the fiscal year 1875-'76, I have received $99,505.42, and disbursed $96,605.12; leaving a balance on hand, $2,900.30.

By Mr. BURLEIGH:

Q. Mr. Clark, you were at one time paymaster at New York?—A. Yes, sir.

Q. Purchasing-paymaster?—A. No, sir; paymaster of the receiving-ship Vermont, at the navy-yard there.

Q. What was your clerk's name at that time?—A. Robert D. Bogart.

Q. Will you tell the committee what kind of a man he proved to be?—A. He proved to be a thief.

Q. How much did he steal, that you know of?—A. Twenty-nine thousand and forty-nine dollars and thirty-six cents.

Q. Did you find out that he was a defaulter while he was a clerk with you?—A. No, sir; not until after he ran away.

Q. After he left you, upon an examination of the books you found this deficiency?—A. Yes, sir.

Q. What was done with him?—A. He was tried by court-martial.

Q. You reported him to the Secretary of the Navy?—A. Yes, sir.

Q. And he was arrested?—A. I arrested him myself down in Texas. I went to Texas and arrested him.

Q. At whose instigation did you go to Texas?—A. By order of the Navy Department, and under the authority of a bench-warrant from Judge Benedict, at Brooklyn.

Q. The civil authorities?—A. Yes, sir; I had authority from both.

Q. You arrested him and brought him back?—A. No, sir; I left him there in the hands of the marshal, and he was brought back in the course of a month.

Q. And tried by court-martial?—A. Yes, sir.

Q. Where?—A. At the New York navy-yard.

Q. What was the result of that court-martial?—A. He was convicted and sentenced to the State's prison for three years, but the sentence of the court was set aside by the Secretary of the Navy on a legal point. The point made was that I had appointed another clerk within ten days after he cleared out, and therefore I accepted his resignation, and they could not hold him. That was the excuse given.

By the CHAIRMAN:

Q. Was this man an officer?—A. Yes, sir; he was paymaster's clerk. They are considered officers.

By Mr. BURLEIGH:

Q. You say that was the excuse given?—A. That was the excuse given.

Q. Do you mean to say there was no justice in it?—A. No, sir; there was not. It was reported that the solicitor in the Navy Department received $2,500 to set aside this sentence. This fellow Bogart bragged of paying him $2,500 to set aside the sentence. It was set aside, but whether he was at the bottom of it or not, I don't know.

Q. Did you ever have any conversation with the Secretary of the Navy about it?—A. Yes, sir.

Q. What did he say about it?—A. He said he would like to have it proved that Bolles, the solicitor, received that money.

Q. You told the Secretary that Bolles did receive that amount of money?—A. I told the Secretary that this fellow had said so. I not only told him that, but Judge Catlin, assistant district attorney, told the Secretary, in my presence, so; that this man said he had paid $2,500 to Bolles to set aside the sentence.

Q. Was any action taken by the Secretary in regard to Bolles?—A. No, sir; not that I know of.

Q. Then was Bogart released?—A. He was turned over to the civil authorities, to the United States court, and there he put in a plea that he belonged to the Navy. He was then to be turned over to the Navy, but he ran away, and was arrested a second time.

Q. He ran away from the civil authorities?—A. Yes, sir; Judge Benedict claimed that he belonged to the Navy; the Secretary claimed that he did not. Before Judge Benedict gave his decision, (fearing that Bogart might get clear,) Assistant District-Attorney Catlin and myself went to Washington, and after much trouble got an order from the Secretary of the Navy for his arrest, which was forwarded to the commandant of the navy-yard at New York. Search was made for him, (Bogart,) and he could not be found. Well, the fellow went to San Francisco. A friend telegraphed me from that place that he was there, and I reported this to the Navy Department at Washington, and an order was, I think, issued by Secretary Robeson for his arrest. As soon as I heard that he was there, I teleg aphed my friend to have him watched, so that he could not escape. He was afterward arrested by the United States marshal (or his deputy) at San Francisco, and delivered to the naval authorities at the Mare Island navy-yard, California.

Q. Who authorized the United States marshal to arrest him?—A. I never knew how it was done; I knew it was done. I heard he was arrested and went out there, and he was tried again.

Q. By whom?—A. By the Navy. He was tried by court-martial there at our navy-yard.

Q. What was the result there?—A. He was sentenced to the State's prison for four years. That sentence has never been promulgated, but it is in the Navy Department. I say it was four years. I have every reason to believe so.

Q. Was this clerk in the paymaster's office when you took that position at New York?—A. Yes, sir; he had been there three years as clerk.

Q. When you took the position were there any conditions stipulated?—A. No, sir; he

was highly recommended to me by the former paymaster. I had no clerk that I wanted to put there; he had been there three years; was a competent man, and I appointed him upon the recommendation of my predecessor.

Q. You say he was sentenced to four years' imprisonment at San Francisco?—A. Yes, sir; I had it from good authority that he was.

Q. Did he serve his time?—A. No, sir; he never went to the State's prison. He was kept on board the receiving-ship there for nearly a year, I think, and one day he escaped.

Q. Was he kept in close confinement on board the receiving-ship?—A. Yes, sir; I think he was. He was kept on board the ship, at any rate. Then, I understand, he was allowed the liberty of the yard from morning to sunset, and the second day he went ashore; he went across to Vallejo, and there took a steamer and went to San Francisco.

Q. That was the second day after he had the liberty of the yard?—A. Yes, sir; the first day he did not run; the second day he did.

Q. Did he carry his baggage with him when he ran?—A. No, sir; he sent back to the ship for his trunk, and it was sent to him; so I was informed.

Q. Who sent his trunk to him?—A. That I don't know. I presume the commanding officer or the executive officer. He wrote to some one. At any rate, his trunk was sent to him, as I understand.

Q. You think they connived at his running?—A. Yes, sir; I am confident of it, because I do not see how a man could get out of the navy-yard and take vessel for San Francisco and have his trunk sent to him without the connivance of somebody.

Q. Do you know where he is now?—A. Yes, sir; he is a reporter in Washington. You can see him in the gallery any day.

Q. Has the Secretary of the Navy ever been informed that he is there?—A. I wrote to my brother-in-law to say to the Secretary that he was there.

Q. Who is your brother-in-law?—A. George A. Bagley, a member of Congress. This fellow made a confession of the whole thing to Mr. Bagley, and Mr. Bagley went out to San Francisco as a witness in the case.

Q. Did the Secretary of the Navy ever give you any reason for releasing him on this quibble?—A. No, sir.

Q. Only that he was governed entirely by his solicitor?—A. He did say (I had forgotten that) that he signed the order for his release without knowing the circumstances. He laid the whole thing to the solicitor. I know of no excuse for not carrying out the second sentence, though.

Q. Did he know of the second trial in San Francisco?—A. O, yes; he was tried there under his order. All court-martials are convened under the order of the Secretary.

Q. How long did you stay in New York after this man ran away?—A. He ran away in December, and I did not get him until June, I think. I staid in New York just about six months after he ran away.

Q. Did you apply for a position as paymaster at San Francisco at any time?—A. No, sir: I was offered the place; was told, rather, that I could probably go there.

Q. By whom were you offered the place?—A. By the acting Paymaster General.

Q. Who was the Paymaster-General at that time?—A. James H. Watmough, acting Paymaster-General.

Q. He told you you could go there?—A. He asked me if I would like to go, and I said I would, if I could appoint my own clerk there.

Q. Why did you say that?—A. Well, because there was a clerk there whom I thought to be a rascal; I knew there were certain parties who wanted to keep him there, and no paymaster could go to that pay-office unless he took him.

Q. What reply did he make to that answer?—A. He told me I had better go and talk with Senator Sargent.

Q. Did he intimate to you that you could not go unless you took that clerk?—A. No, sir: I don't think he said anything about the clerk.

Q. But he said nothing more to you about going to the place?—A. No, sir; he only told me I had better go and see Mr. Sargent, if I wanted to go there.

Q. You understood you could go there if you could make an arrangement with Mr. Sargent?—A. Yes, sir.

Q. Do you know anything about the history of that clerk whom Sargent wanted you to keep?—A. All I knew was from rumor; when I was in San Francisco, Mr. Dodge, Senator Booth's partner, who was a schoolmate and old friend of mine, and a man who had done a great deal of business for the Government, told me that for the last two years he had not been allowed to bid for anything; that the purchases were all made in a certain ring there, and nobody else could get them. He told me of several transactions in that office, and it was said that this man Pinney, the paymaster's clerk, was the man who did it.

Q. Was it publicly known in San Francisco that he was a rascal?—A. It was known by all the Navy officers; of course, I did not know the business-men there, but it was talked about generally by the Navy officers, so much so, that the commandant of the yard, while I was there, who had some provisions to buy, sent down the paymaster's clerk from the inspection of provisions and clothing of the yard to make those purchases; he would not trust them to be made from that office.

Q. And that was the man they wanted you to keep as clerk, if you went there?—A. Yes sir.

Q. Do you know anything about him subsequently?—A. He cleared out, leaving a defalcation of something like $750,000; not all, however, from Government.

Q. From San Francisco?—A. Yes, sir.

Q. How do you know that?—A. I know it from the papers; there was an investigation, and the paymaster there, Spaulding, is being tried now on this same case; the court of inquiry, it seems, found enough against him to try him by court-martial, and he is being tried now. When I was talking about going there, Spaulding had been there four years. They could not get any paymaster to take the place, because nobody would take this man as clerk. It was offered to several, I have understood, and they would not take it, because the condition was that the paymaster must keep this man as clerk, or he could not have the place. I know two paymasters to whom it was offered: Pay-Inspector James Fulton and myself.

Q. Did you say anything to Senator Sargent?—A. Yes, sir; Pay-Inspector Fulton and myself went to the Senate to see him, but he was busy and asked us to come to the house; we went there and had an interview with him. There were two places to be filled—inspector of provisions and clothing at Mare Island navy-yard, and the purchasing-paymaster's office at San Francisco, that Mr. Spaulding had.

Q. Did you tell him you would like to go to that place?—A. I did.

Q. What was his reply?—A. Well, he said that he recommended this man as the clerk; he intimated that whoever went there would have to retain him.

Q. Did he say that in so many words?—A. I am not positive, but that is the conclusion we came to, both of us. I said that if I went out there I should appoint my own clerk; I had had experience enough in taking another man's clerk, and would not do it again; that settled the question; we bid him good evening, and that is the last I ever heard of it.

KITTERY, ME., *March* 16, 1876.

B. F. CHANDLER sworn and examined.

By the CHAIRMAN:

Question. What duty are you performing here?—Answer. Civil engineer, sir.

Q. How long have you been engaged in that work on the yard?—A. Twenty-three years.

Q. What work have you had to do in the way of civil engineering for the last year or two?—A. Repairs of the buildings, walls, docks—everything. Our buildings here are constantly going to decay. They must be constantly renewed.

Q. Is there any greater necessity for the employment of a civil engineer to repair the buildings here than there would be over in the city?—A. Yes, sir; they have no such thing over there as ship-houses. They are large buildings, and we are very much exposed to winds. Unless they are properly fastened, and secured a gale would sweep them away. Over in the city people who have property look after it, each one for himself. Here are sixty or seventy buildings, and nobody to look after them unless the civil engineer does. It is his particular duty to see that all walls, walks, wharves, everything of that kind is kept in repair.

Q. Could not the chiefs of each one of those bureaus do that as well as a civil engineer?—A. There are some buildings occupied by three or four departments. I don't know of any chief that knows anything about limes, cements, or mortars.

Q. Might they not employ a mason?—A. Yes: but they would know nothing about it.

Q. Would a man be suitable for a boss mason unless he knew something about the quality of brick?—A. No, sir; but he might not be able to mix cement for particular purposes. That belongs to the business of a hydraulic engineer.

Q. Don't you find as good walls over in Portsmouth as you find here, and as good buildings?—A. Yes, sir; but they employ an architect if they have buildings to construct of any magnitude.

Q. Have you any knowledge of any abuses in the naval service here?—A. Well, Mr. Mills, I try to keep within my own particular line of duty and look out for abuses in my own house. When I have done that I think I have done the best I can. If I see work going on, I take it for granted that it is ordered by the proper power. I may think that such and such a way is not the best way of doing it; but it does not come under my direction, and I am not responsible for it. If I see them breaking up anything, I suppose that it is all right and I ask no questions; and if I should go out here and go to tearing down a building, I don't suppose any person would ask any questions of me. That abuses will exist to a certain extent, I don't doubt. I suppose it is the same here as in private life.

Q. Do you know of any property that has been carried away from the navy-yard improperly, belonging to the Government?—A. I know that I have missed it, sir.

Q. What sort of property have you missed?—A. I missed a large quantity of copper one day.

Q. How much did you think was taken away that day?—A. I must explain: We have got down here in No. 1 naval store, where we keep our oils and such other goods as are heavy, like lead and copper and things of that kind, a room where we seldom resort except for linseed-oil for painters. I sent down there one day for them to bring up some oil, and they reported that they could not get in. I went down, and we tried the lock, and could not make the key work at all. The only thing that we could do was to break it open. Then we examined the lock and found a piece of key in there. I reported it, of course, to the commodore, and he took such action upon it as he thought best. That has been a subject of investigation here. The act never was done in the day-time, because it is utterly impossible for a man to get into a building in the day-time and take away a thing that weighs thirty pounds, like a pig of copper. The next thing was to see what was missing. We weighed and measured everything, and found a quantity of copper gone.

Q. You keep a strict account, so that you could know what was gone?—A. I should think there was $300 worth gone. That is simply a matter of impression. To say that I have no doubt as to who got it would be no evidence at all, because I have no proof as to who got it. That is only one of a thousand little straws that you and I might see, but they would not hang a man.

Q. Might it not have been done by watchmen?—A. If it was not done by watchmen, even, yet the fact must remain that the watchmen did not do their duty in finding out who it was that committed the act, because there is a post close by there.

By Mr. JONES:

Q. Did your investigation lead you to suspect that any particular individual had got it?—A. O, yes, sir; I have no doubt about it.

Q. Who is the man that you think got it?—A. It would not do for me to state it here, because if I should give you an idea in regard to it, and out of that should grow the man's dismissal, I might be liable.

Q. Do you think the man is now at work here?—A. He is at work.

Q. You have some thieves here now. Do you know how much work of this kind was done in a year?—A. No, sir.

Q. Do you think any of the watchmen took that copper?—A. I must answer as I did before.

Q. Do you think it was a watchman?—A. Yes, sir; if asked directly, I should say that I do.

Q. Did Mr. Randall have anything to do with it?—A. Well, I don't want to implicate anybody.

Q. You don't want to say "no" on that?—A. No, sir.

Q. You are a Government officer?—A. Yes, sir.

Q. Did Mr. Allen have anything to do with it?—A. No, sir.

Q. You will say "no, sir," on Mr. Allen, but will not say it on Mr. Randall?—A. I don't want to answer that question. Here is another thing that makes me think so. A man came to me and said: "There is a bolt of copper down in one of the privies there, on one of the sills, in that building." Said I, "You watch it until we find out all about it." The first thing I found out was that the man that I think got this copper down here heard of it, and at the time we went to look for it it was gone. I was very sorry. He was notified there was no such thing.

Q. Mr. Randall was notified that that was here?—A. Yes, sir; there was a piece of copper down here. When the man went to show it to me it was not there.

Q. Please state any circumstances in that investigation which implicated Mr. Randall.—A. I could not, because I was not on that board that investigated it. What I say to you now is only what impresses me strongly with the idea that the man's name was not Allen.

Q. Was Mr. Randall ever discharged from this yard?—A. I could not tell you further than he is not in my department now. He is not on "yards and docks" roll.

Q. Has he not been discharged from "yards and docks" for improper conduct?—A. I understand so.

Q. He was restored to duty here on this yard with a higher rank?—A. Yes, sir.

Q. And higher up than he had been before?—A. He was captain of the watch then, and he is captain of ship-keepers now; and I think he has half a dollar a day more. He goes on at 4 a. m., and comes off at 5 p. m.

Q. Do you think he is a proper man to have charge of Government property?—A. I would not recommend him to Mr. Burleigh to have charge of his property.

Q. Would you employ him to take care of your own?—A. I would not have him on the premises.

Q. Do you know who put him back here?—A. It was done by order either of the bureau or of the Secretary; I don't know which.

Q. How much copper has been missed from the yard since he has been watchman?—A. I can only tell you what is in my own branch. I was obliged to require that off of my books, because otherwise it would stand against me. I must require that as lost and gone, otherwise it would lie there charged to me.

Q. Do you know of any copper being purchased on the island by the Government for the last two or three years?—A. No, sir.

Q. Do you know of any that they have sold here?—A. No, sir.

Q. Do you know the value of the copper missed from here?—A. No, sir.

Q. There has been a great deal of it?—A. I don't suppose it is in the power of man to know.

Q. They have been carrying it off for many years?—A. Well, sir, you know that where they cut off the end of a bolt from a ship's bottom it is of such a length that it is easy to carry it off in your pocket. I don't know how you can prevent it. They would steal from any corporation in the same way.

Q. You certainly could not prevent it by having men employed on here whom you knew were engaged in doing such things.—A. No, sir. I say you should have men for watchmen who are responsible men. It costs $25,000 a year to watch this yard. There are twenty-seven watchmen.

Q. Don't you think it would be a great saving to the Government—property would be better protected and cared for—if the yard should be watched by the marine force that is here?—A. Now, about that I must be fair. I know that has been discussed a great deal. The marines detailed for watchmen are men of no home, no family ties, and no reputation that they care anything about; and when they enlist they generally enlist and ship when they are drunk, and they want to run away. If you put them here they must be under rigid control themselves or they would run away. I have known instances since I have been here when a marine has been put on his post, and when they go to relieve him they find nothing there but a gun. In fact, he has gone. I would put on good, responsible men, with family ties and social ties—men that care something about themselves. I think it pays them enough—$2.26 a day when they are on one day in three. There are three watchmen to a post. They relieve one another for two days and one night.

By Mr. BURLEIGH:

Q. You have charge of the blacksmith's shop in "yards and docks?"—A. Yes, sir.

Q. That comes under your department?—A. Yes, sir.

Q. If anything goes into your department you are to judge in regard to its quality?—A. Yes, sir; I am now the inspector, and have been always, ever since I have been here, except during the time that Mr. Wentworth was the inspector.

Q. Do you know of any instances where any iron has been into your bureau which you have condemned?—A. O, I have had it offered and I would not take it.

Q. How offered? Do you mean landed on the yard?—A. Yes, sir.

Q. They have landed it here?—A. Yes, sir; and I have made them take it away.

Q. You took out enough to try it, didn't you?—A. Yes, sir; I inspected it; I heated it and pounded it.

Q. How large quantities have you ever rejected?—A. O, I rejected the whole of one cargo. We were to have Norway iron, and that was sent here as Norway iron when it was not, and I rejected it.

Q. Who sent that here?—A. It was David Babcock & Co., of New York.

Q. Was it landed here on the dock?—A. Yes, sir; we could not inspect it until it was thrown out, you know.

Q. Was it taken away again?—A. No, sir; they sold it to "Construction."

Q. Was it suitable for "Construction?"—A. They might use that American iron and it might answer their purpose. It would do very well for blunt bolts, but would not answer for repairing in our department.

Q. Did you get a bill of that iron at that time?—A. Yes, sir.

Q. Do you remember the date?—A. No, sir; but I can find it.

Q. And you can find the number of tons there was of it?—A. I think I can.

Q. We wish you to give that to the committee—the date and the party that shipped it and the price and what you did with it and what became of it, to the best of your knowledge. After it was rejected it was out of your charge?—A. Yes, sir; I notified them to take it out of the way; but it was not taken away, and I never used it. My iron has generally been good. We don't use but very little except Norway iron.

Q. That iron would not go into "Construction" without the bill being with it?—A. No, sir.

Q. It could not go without an order for some one to put it there?—A. No, sir.

Q. Now about the duties of the civil engineer under the Bureau of Yards and Docks?—A. I am required every year to make estimates in detail of the new buildings that I think in my judgment will be required for the development of the yard, and to make it a ship-building institution. Well, I judge of the necessities as I go along, by developments in other branches. When I came here there was no such thing as a steam-engineer in the bureau. The blacksmith's shop was small, but sufficient. After that a Steam-Engineering Bureau was created, and it called for extensive works. I enlarged the buildings belonging to that branch that they could use. The same thing I do every year. I report upon the condition of everything every year. That goes before Congress. Then when the money is appropriated I am notified, and then I distribute it in proper channels and pay for the repairs of all buildings; and new buildings, if needed, are built. Now take our large buildings. Our ship-houses could not be replaced for less than $100,000. They are likely to blow down.

By Mr. BURLEIGH:

Q. You have been here on the yard a great deal. Have you known any time that the Government would sell any of its material to outside parties?—A. I never have sold any except what was condemned by survey.

Q. That you would sell at auction?—A. Yes, sir.

Q. You could not sell anything to individuals by private sale?—A. No, sir; I never sold a nail. Furniture I speak of more especially.

Q. Have you ever known of any paints being used in this vicinity with the stamp of the Government on them?—A. No. sir.

Q. Have you ever known of any of the Government painters working outside?—A. No, sir.

Q. Not at any time?—A. No, sir; I never did.

Q. Of Government painters using Government paint on private property outside?—A. No, sir.

Q. Have you known the carpenters of the yard going outside to work for other individuals?—A. No, sir; I have never known of an instance. I say there is no instance in "Yards and Docks." I don't know about any other department.

Q. Do you know that in your department, or any others, the people outside have employed Government mechanics?—A. Only from information. From my own Bureau I do not.

Q. Have you ever known people whom you supposed were on the pay-roll being outside to work for private parties?—A. No, sir; I never supposed that such a case ever occurred.

Q. Did you ever know of the material of the Government being cut up and cut into shape for the outside or inside finish of any houses in the vicinity; material got out on the island by the use of Government tools?—A. No, sir.

Q. Not of an instance?—A. I never knew of any instance.

Q. That would not come under your department, would it?—A. No, sir; it would not be done in my department. In my department I don't think that anything larger than a picture-frame ever was made on this yard for anybody; that is, in "Yards and Docks." I confine myself to that.

Q. You have heard rumors of something larger than picture-frames being made in that way?—A. Yes, sir; but I look out for ourselves. It might be a picture-frame or a bracket, or something; but nothing that you or I would care anything about for its magnitude.

By Mr. JONES:

Q. In your bureau have you ever had orders from the heads of other bureaus in Boston, to deliver such and such material that had been advertised for sale? Now, you must have scrap-iron and old boilers, and all those things that come under your orders?—A. No, sir. The most of our old material would be condemned furniture from the quarters; that we sell at auction. We repair those things and keep them along until they are all used up. A carpet we cannot repair; after it gets to be so bad that you cannot turn it, then I request a survey of it. We have a furniture manufacturer on the yard. He does not make new furniture to amount to anything, but repairs. Now that you speak about boilers, we have two new boilers on the dock, because the old ones were not safe at 65 pounds. But they would be safe at 25 pounds. I had them condemned and bought new boilers, and one of those old boilers is used for pumping purposes, because we do not need much steam on when it is used for pumping. We can use that old boiler the same as a new boiler for a long time. The other has been out here, and has never been sold. I suggested that it might be sold, but it never has. We do not build boilers here—not from "Yards and Docks."

Q. Do they not in "Construction?"—A. The Steam Engineering department build marine boilers. You will have before you a list of everything that we have sold at auction since 1868, according to your orders.

Q. Have you a list of what you have sold at private sale?—A. We do not sell anything at private sale in our department; what we have belongs to the Government—every single piece.

KITTERY, ME., *March* 18, 1876.

B. F. CHANDLER recalled.

The WITNESS. I wish to add to my previous deposition that iron was contracted for for the years 1873 and '74 with Babcock & Co. The bureau contracted for Norway iron. They delivered the quantity of iron in September; but it was not received because it was not Norway iron.

By the CHAIRMAN:

Question. What was the price of that iron? What did they charge for it?—Answer. I think 6 cents. Everything like that changes every year. I had the bill showing the price at which it was billed to me. I will give it. Here are the bills in this volume. [Having brought in the volume.]

Q. They are in your department, are they?—A. Yes, sir. That bill which I now indicate September 16, 1873, was by contract. Most of the iron, you see, was at 6 cents. Here at this point [indicating] is where the Norway iron stopped. Then there was some American iron. I figured up the Norway iron. There was about twenty-five tons of Norway iron.

Q. Did you transfer these bills over to "Construction?"—A. No, sir; I never had anything to do with that. This is not the iron that was rejected. This was supplied afterward.

Q. We want to know how much was rejected, in order to know how much went into the Bureau of Construction.—A. I cannot tell that.

Q. How much was sent you? Give us a copy of that contract.—A. That contract was "class 11," dated July 1, 1873. I will get it for you now. [Produces it.] The bureau receive bids and make contracts, and then they transfer the figures from their contracts on to the original printed paper like this, and that is sent to us. [Reads it.] There are the prices.

Q. On this contract dated July 1st, was this the annual bid?—A. Yes sir; by public advertisement. They got that contract by public advertisement dated July 1, 1873. I made the original schedule that that contract was based upon.

Q. And this is the contract, and the iron that was sent to fulfill this contract was not what it purported to be by the contract?—A. Certainly it was not. It was not Norway iron at all.

Q. You rejected this iron, and afterward you understood that it was taken into the Bureau of Construction on this yard?—A. Yes, sir; I know now that it was.

Q. Will the Bureau of Construction show that it was taken at that same price?—A. I don't know.

Q. Why was it taken?—A. Because the chief of the bureau authorized them to take it.

Q. We would like to see that order.—A. You will have to call on the constructor for that.

Q. Who has that order?—A. It would come through the commandant.

Q. Do you know the time you rejected it?—A. It would be in September, 1873.

Q. What are Trickey & Jewett's names on here for?—A. They are contractors for that class which is mentioned there—white pine and spruce.

Q. This amount stated here is the amount that was called for?—A. Yes, sir.

Q. How much was there of the iron that actually came here under this order?—A. I never weighed it. There were some twenty-five or thirty tons of it.

Q. You said the other day that it was fifty tons.—A. If I said so it was merely a supposition. But upon looking it over I find that it was about fifty-four thousand pounds.

Q. How much was there of this iron that was rejected—of this iron that came under this bid—that you rejected?—A. Every particle of that iron I rejected. It was not Norway.

Q. How much was there in that lot? You had a bill of it when it came.—A. Yes, sir. The bill that I rejected I never had anything to do with. Why should I take notice of the bill unless the iron was according to contract? I took no coguizance of that bill. I notified the Department that they had failed to supply according to their contract, and I made a requisition in open market to buy it; and you see this memorandum at the bottom there. That open-purchase requisition was not approved by the bureau.

Q. What was the price of that iron?

Mr. BURLEIGH. There are several classes and qualities of iron rejected. The whole amount of money was $4,260.

By the CHAIRMAN:

Q. Do you think that this iron that you rejected as unfit for the work required of you to be done in your department, was sufficient for the work required of iron in the Construction department?—A. I couldn't tell you what they are going to do with it.

Q. Could not they have done the same work in the Construction department with cheaper iron. You must have very superior iron. But could not the Construction department do with a less costly iron?—A. That is a hard question to answer. If it is for blunt bolts, it will do. If it is for making chain, it will not do.

Q. If they are required to have the same kind of iron in the "Construction department" that you had in "Yards and Docks," this was unfit for them?—A. Yes, sir; and never could be made fit.

Q. But then, if they are not required to have that, a cheaper iron would do?—A. Yes, sir.

Q. Then, if they took this iron at the same price that it was billed to you for, they paid too much for it?—A. Yes, sir. The engineer, as ordered, made an open-purchase requisition, but Babcock & Co. were allowed to furnish good iron.

By Mr. BURLEIGH:

Q. Now, in regard to Savage's contract at that time, for files and other stuff; why did you have to require open purchase for that?—A. Because they didn't send any at all.

Q. Was their bid accepted?—A. Yes, sir. But they didn't comply with the bid, and I had to make a requisition upon open purchase.

Q. Now, in regard to James L. Parker, of Portsmouth?—A. Mr. Parker bid for Mr Bailey.

Q. On the Savage contract bid of 1873. His bid, which he failed to supply, was for what? —A. Files, two dozen, at $5; that was flat bastards, 14-inch. Mr. Savage charges $7. Three dozen half-round; for those we paid $7. Mr. Savage's charge is $7. Three and a half dozen round 14-inch, bastard, $7; two dozen square, 14-inch, $8. Mr. Savage's price is $7. Six flat 12-inch, $7.50. Mr. Savage's price is $5; four, flat 12-inch, $6. Mr. Savage's price is $5, Two dozen parallel smooth, $7.50. Mr. Savage's price is $7. Two dozen parallel, $7.50. Mr. Savage's price is $5.25. Five dozen knife, $6.50. Six dozen hand-saws, $7. Mr. Savage's price is $6.20.

Q. Show us some more of your annual contracts.—A. That was about the time the bureau ceased to make contracts. They don't make them by advertisement now; not in that form. If it is over $1,000, they advertise in the papers over in Portsmouth.

KITTERY, ME., *March* 16, 1876.

GEORGE S. CHAPMAN sworn and examined.

By Mr. BURLEIGH:

Q. You have been employed on the yard some time, in the blacksmith's shop—in "Construction."—A. Yes, sir; I have not been for the last six months.

Q. But you were, for some time previous to that, in the blacksmith's shop, in "Construction."—A. Yes, sir; I was in there for about two years.

Q. During that time, did you know of any iron received, either directly or indirectly, hat had been in the Bureau of Yards and Docks?—A. While I was in "Yards and Docks," they required a lot of iron. I tried the iron, and the "Yards and Docks" would not receive it.

Q. Why not?—A. It was not so good as they recommended it, and it was rejected. It was not such iron as it was recommended to be to "Yards and Docks."

Q. What was the quality of the iron?—A. The iron was to be as good as Norway; but it was not anything but common iron.

Q. What process did you go through to reject it?—A. I tried every bar—got a piece of it, and worked it one way and another, to see if it would work.

Q. Did you report it?—A. I reported it to Mr. Chandler. He saw me when I tried it. He told me to try it just the same as though the man was here that he got it from. I did. It was not what it was recommended to me, and he rejected it.

Q. Was it removed from "Yards and Docks?"—A. No, sir; it was left down here on the wharf—all but the pieces.

Q. Do you know whom that iron came from?—A. No, sir; I don't know that I do. I did know at the time; but I have forgotten.

Q. How large a quantity was there of it?—A. Well, I should say there was forty or fifty tons—I don't know but more.

Q. Do you know what became of that iron afterward?—A. I think that iron went into "Construction."

Q. Do you know whether it was used in "Construction" or not?—A. Well, I would not say positively, but I think it was used in "Construction."

Q. You think it did not go off the yard again?—A. No, sir; I was not in "Construction" at the time it went in there. But I think it went into "Construction."

Q Don't you know what was said about that iron at the time they received it in "Construction?"—A, No, sir; I don't know as I do. I know that there was a good deal of very mean iron in "Construction."

Q. A good deal of poor iron?—A. Yes, sir, I know that—while I was there.

Q. Who was foreman of blacksmiths at that time, in "Construction?"—A. Mr. Nealy.

Q. Who was the constructor?—A. Mr. Webb.

Q. Who was inspector of the iron, in "Construction," at that time?—A. Well, I don't know that any one inspected that iron, in "Yards and Docks," at that time. There never has been but two inspectors, I think. One was Captain Carpenter. He had charge of it for a spell; after Mr. Wentworth was inspector. I think that he inspected, I am not certain in regard to iron, but I think he did. I never knew but those two inspectors. I could not say whether Mr. Wentworth was inspector at that time or Mr. Carpenter.

Q. How many years ago was that?—A. Well, I think that was about four years ago.

Q. Do you remember the time of the year?—A. It was in the fall of the year.

Q. Was it four years last fall or this coming fall?—A. I would not say whether it was four years this last fall or the coming fall.

Q. I think you must have been in "Construction" three years ago.—A. It was four years ago last fall, then.

Q. It was just before you left "Yards and Docks?" In inspecting that iron no inspector could tell about it unless he was a practical man and took it to the forge?—A. No, sir.

Q. Then it must have been the foreman of the shop where it was used?—A. A man can-

not tell what a piece of iron is until it is tried. The inspection must be in the shop where it is used.

Q. Would they be likely to receive a poor quality of iron there, that you refused in "Yards and Docks?" Would they not have warning that it was not good iron? Would it not be known from one bureau to another?—A. Certainly it would be. The "Construction" knew that it was rejected up there. I think they took that iron. I am pretty sure they did.

Q. Do you know under what orders it was taken?—A. I do not.

Q. You think that was in the fall of 1871 or 1872?—A. It was in the fall of 1871.

By the CHAIRMAN:

Q. If you could remember the name of the person who furnished the iron, it would facilitate our action.—A. Mr. Chandler could tell. He is over here on the island.

KITTERY, ME., *March* 18, 1876.

DANIEL L. RANDALL sworn and examined.

By the CHAIRMAN:

Q. When were you first put on duty at the Kittery navy-yard?—A. When I first came here, in May, 1867.

Q. How long did you serve here?—A. I served a year and a half in steam-engineering.

Q. Have you got any enemies here on the yard?—A. I don't know that I have got one in the world.

Q. Have you got any about here in the neighborhood?—A. Not that I know of.

Q. Who are your friends?—A. Everybody, I suppose.

Q. What friend exerted his influence to have you appointed here, when you were first put here on the island in 1867?—A. Mr. Ely.

Q. Who was he?—A. A member of Congress from New Hampshire.

Q. What were you then receiving a day?—A. Three dollars. I got $3 most of the time; I won't say all.

Q. How long did you serve here at that time?—A. About a year and a half.

Q. Did you leave then?—A. Yes, sir; to go on the watch.

Q. Were you discharged?—A. No, sir.

Q. You were discharged here once, were you not?—A. Yes, sir.

Q. How long had you served before you were discharged?—A. About six years—from five to six years.

Q. What were you discharged for?—A. It was reported neglect of duty; that was all I knew of.

Q. Were you tried?—A. I was called before Captain Young, and asked some questions. Don't remember.

Q. Did they give you any hearing?—A. Didn't the commandant or any officer bring you before them and inquire into charges against you?—A. I was called up. They ordered me discharged.

Q. Have you ever been removed from here but once?—A. No, sir; was off when reduction was made, and required on again.

Q. When did you return here after your discharge?—A. I returned here about the 1st of October, 1874.

Q. When were you discharged?—A. About the 1st of July, 1874. I was off probably three months or more.

Q. Through whose influence were you brought back?—A. I don't know as I can tell exactly.

Q. Whom did you get to intercede for you to get you restored to your place?—A. I wrote to Mr. Cragin, or got some one to for me.

Q. It was through his influence, then, that you got it?—A. Through his and others—not his alone.

Q. What others?—A. A number of others.

Q. Can you give the names of some of them?—A. Well, I don't know; I suppose that they assisted him, (Mr. Howard and Mr. Pierce;) I suppose they rendered what aid they could.

Q. Who is Mr. Pierce? Is he the Portsmouth postmaster?—A. Yes, sir.

Q. What pay are you getting now?—A. Three dollars and a half.

Q. You get half a dollar more now than before?—A. Yes, sir; 74 cents more than I did on yard-watch.

Q. What is the position that you hold?—A. Captain of ship-keepers.

Q. What do you have to do in that position?—A. Pump and clean ships, assist in moving or hauling ships; look after moorings; have charge of all lights and fires, and things around.

Q. How many ships have you moved lately?—A. The Lancaster, I think, was the last one that came in here.

Q. When there have been any bids for that lumber has there been any combination by any parties here in Portsmouth with you?—A. No, sir.

Q. There are no outside parties in the lumber business here who have had a commission on it?—A. O no, sir; I have had nothing to do with anybody else.

Q. Can you tell us whether there are combinations between the contractors to stifle competition; whether, whenever there are contracts to be let out, a number of them get together who would otherwise bid against each other?—A. No, sir. We all try to take care of ourselves in all those things. We don't mean to do anything very wicked about it, however. It is my business, and I generally try to take care of my business pretty well.

Q. How do you account for it that you have been contractor so long, when it depended upon the chances about making the lowest bids?—A. I will take what your colleague, Mr. Jones, said about me when I first came in here, as affording an answer to that question, viz: I am a pretty clever fellow. I think I have done the business here to the satisfaction of every person in the yard. I don't think there is a man, from the commandant to the menial servant, but what would do me a favor at any time. I try to take pretty good care to make the prices reasonable. There is a pretty uniform price for our commodity.

Q. Now can you tell us about what proportion of the contracts that you have had since the war you have obtained by the annual letting?—A. I have never attempted any contracts anywhere except for the Kittery yard.

Q. How many contracts have you got by regular course of annual letting?—A. I guess I have got the majority of them usually.

Q. Have you supplied any lumber or timber here at the yard by contract with Mr. Hanscom, or parties at Washington, without its having been advertised for or demanded?—A. I have not had any contracts with him.

Q. Your contracts have been through the regular channels?—A. Yes, sir.

Q. Whom would that come through?—A. Through the purchasing-paymaster. A requisition is made for the article, and that is sent to the purchasing-paymaster.

Q. That is by the open purchase?—A. Yes, sir.

Q. When it is not by the open purchase, then they let it out?—A. That is done at the annual letting in Washington once a year.

Q. Do you bid at those?—A. Yes, sir.

Q. Then when those are exhausted, the balance is by open purchase, and then you make contracts with the paymaster?—A. Yes, sir.

Q. Now, you think it is over half of the contracts that you get by the bidding at Washington—the annual letting?—A. I should think so, since the war.

Q. I am talking about since the war. When you have made your bids at the annual letting, have you ever known that the Government would require at this station any more during the year than your annual bid was?—A. No, sir; never. And if I did, years ago, before the war, perhaps, or in the early stages of the war, I think there was a rule of this sort: that the successful bidder at the annual lettings was supposed to have the privilege of furnishing any balance that might be wanted, at the same rate. That used to be the rule before I had anything to do with it.

Q. Is it not the rule now?—A. No, sir; I don't understand it so.

Q. Provided at the annual letting you should make a bid of ten or twenty thousand dollars for a certain kind of lumber, have you not been in the habit of putting more than that upon the yard and letting it lie here, or of a lower grade, for which you thought there would be an open purchase?—A. No, sir. We have sometimes had a surplus. It has come by cargoes, and there has been a surplus. They are not authorized to receive above 5 or 10 per cent. above the contract. I have sometimes had a surplus of a small amount, and frequently had a small surplus of some kind of timber upon the yard.

Q. Do you have to get an order from the chief to have it delivered—to have it delivered more than your contract?—A. If the excess did not exceed 5 or 10 per cent., the constructor here would take the liberty of receiving it.

Q. Have there not been times when you have had a good deal more than that excess, when you have had an order from the chief to let you deliver it in the yard?—A. There may have been such instances; but I don't recollect of any.

Q. You never paid Mr. Adams any per cent. for commissions?—A. No, sir. I think some times I may have had an account with Mr. Adams out of some special contract. I don't know that I ever gave him a commission for anything. I don't think I did.

Q. You said that you fellows calculated to take care of yourselves. Has there not been an understanding, when you bid, for these open purchases?—A. There may have been in some instances. I don't remember, however, of the instances.

Q. Whoever got the contract, have not the rest had a share in the profit?—A. No, sir; I don't recollect any instance of that kind. No, sir; I should say not. It might be that I might have done Mr. Adams some service, in return for service he might have rendered me. But as to his having an interest in the thing, I don't think there ever could be a case of that sort.

Q. At these annual lettings they always let to lowest bidders?—A. Yes, sir.

Q. You have got contracts for the last ten or fifteen years?—A. No, sir; I got more or less of them. There might be a dozen or twenty classes, and I get one or two or three classes. Here is a class of oak timber, and a class of pine timber, and a class of oak plank.

Q. The class you bid on, don't you get?—A. I bid on all of them, and lose some of them, and some of them I get.

Q. You don't lose on all you bid on?—A. No, sir; not by any means.

Q. Did you or Mr. Trickey furnish the frame for the Tallapoosa, at the yard?—A. I think Mr. Trickey had an order for some timber, and I was interested there with him.

Q. Did you and Mr. Trickey furnish any of the timber that built that vessel at Baltimore?—A. No, sir.

Q. Do you know who did furnish that?—A. No, sir: I do not.

Q. Do you know how that timber was bought?—A. I don't know anything about it.

Q. Do you know anything about the improper removal of any Government property from the navy-yard by anybody?—A. No, sir.

Q. Now in regard to the timber-inspector here. How long has he been timber-inspector here?—A. Well, I shall say seven or eight years. In the beginning of the war, in 1861, Mr. Bennett was timber-inspector, and I think Mr. Lockie sometime, said to be an assistant of his.

Q. Who got Mr. Lockie's appointment?—A. I don't know; I have always understood that he was a member of the legislature at the time of Mr. Cragin's re-election, and the probability is that it was through his influence. All I know is that he is a very good fellow.

Q. Right in the same line, do you know whether Dr. Wentworth, who holds some position in your State here, is, or not, general inspector here?—A. He was. I understood that he resigned some months ago.

Q. He was two or three months ago?—A. Yes, sir.

Q. How long did he serve?—A. Two or three years.

Q. At the same time that he was inspector here, was he a member of the legislature of Maine?—A. He was a member last winter and the winter before, I should think two winters.

Q. And at the same time was inspector here?—A. I should think he was.

Q. Who procured him his appointment?—A. I have no knowledge about it.

Q. Was there not some Senator elected from Maine, the same as there was from New Hampshire?—A. I should think likely.

Q. Was there not a Senator elected from Maine while the doctor was in the legislature from Maine?—A. I should think there was a Senator elected a year ago.

Q. Was that when he was there?—A. Yes, sir.

Q. What Senator was it?—A. My friend Burlingame knows all about that. It was Mr. Hamlin, I think.

PORTSMOUTH, N. H., *March* 16, 1876.

AMBROSE J. CLARK sworn and examined.

By Mr. BURLEIGH:

Question. What is your position here, sir?—Answer. Purchasing-paymaster.

Q. That is, you pay for all purchases?—A. I do the purchasing.

Q. Under requisitions made from this yard?—A. Yes, sir.

Q. Any other yard?—A. No, sir.

Q. State, if you please, what the form is of the order for purchasing, and the forms through which bills go before you pay them.—A. The department or bureau at the yard make their requisition upon me for stores, and I then purchase them on that requisition.

Q. How do you purchase them?—A. By either sending out for bids, or, where only small amounts are required, buying them in the market, at the lowest price.

Q. What proportion of your purchases is made by bids, and what proportion in the market?—A. If any large amount is wanted, that is, anything over a few hundred dollars, I always send out to the different business men and get their bids, and I give the order for the goods to the lowest bidder.

Q. You do not advertise in the papers?—A. Where the amount is over a thousand dollars, I do.

Q. You advertise that in all cases?—A. I have never had a case of over a thousand dollars since I have been here.

Q. You send out notices to the dealers in the line of goods that you want to purchase, and they send in bids?—A. Certainly. For instance, I get a requisition to-day, and send out an invitation for bids, and give them two or three days, as it happens, to reply, and at the end of that time I give the order for the goods to the man who makes the lowest bid.

Q. Then what becomes of the goods?—A. The bill is sent with the goods by the party who furnishes them, they are inspected by the chief of the department at the yard requiring the goods, and then the bills are made out at the yard and signed by the inspector as having been received, and then they come to me and I certify as to the price.

Q. Does the commandant sign those bills?—A. After they go from me. He is the last one who signs them. The bill is then complete, and the commandant sends it over to me, and I make my requisition on the bureau in Washington, sending a triplicate bill. All bills are made in triplicate. The triplicate bill goes to Washington, and there they examine it;

NAVY DEPARTMENT,
BUREAU CONS. & REPAIR,
Washington, Oct. 16th, 1873.

MY DEAR COMMODORE: I am afraid you will think me very remiss in not replying to your last; but I must plead the pressure of business as an apology. Your official letter in relation to Griffiths' contract calls for an unofficial explanation as follows, viz: In the first place, it was understood that the same facilities were to be given to whomever might obtain the contract to do the work, as are usually given under the same circumstances by private ship-builders. When a job, such as raising, timbering, planking, &c., is let in a private ship-yard, the builder or owner furnishes *all* materials and tools (except workmen's) that may be required to do the work. The work only is contracted for. I have done much work of that character myself, and always have had same facilities and materials, such as water-buckets, augers, files, oil, greese, chalk, grindstones, etc., that men employed by the day in the same yard have had; and we must give Griffiths the same. This was told to every person who made an offer, and their estimates of the cost were made accordingly.

The number and amount of these things must be decided by the commandant of the yard, or double the amount necessary might be expended by waste. So much for that work.

I wish you would have the order to furnish the bureau with photographs carried out, that the condition and progress of the work may be known. None have been received of the Marion for a long time. Let me have some of the new vessels as they progress. Wish I could talk with you an hour or more, but know not when I can get that way.

Yours, very truly,

I. HANSCOM.

Commodore J. C. HOWELL, U. S. N.

JOHN H. KNOX, *Clerk.*

NAVY DEPARTMENT, BUREAU OF CONSTRUCTION AND REPAIR,
Feb. 4th, 1875.

SIR: The inclosed letter from Mr. Eben Haggett, of the 4th inst., in relation to white-oak knees, and white-oak plank, stock-logs, and keel-pieces, now at the yard, under your command, is respectfully referred to you.

If the knees and timber therein named are wanted, and are of suitable quality, they may be landed and stored, but bills for them must not be made out without further instructions from the bureau.

Respectfully, your obt. servt.,
(S'g'd) I. HANSCOM,
Chief of Bureau.

Commo. A. BRYSON, U. S. N.,
Com'd't Navy-Yard, Portsmouth.

DAMARISCOTTA, MAINE, *Feb'y 4th*, 1875.

DEAR SIR: During the month of August last, I entered into an agreement with Mess. Trickey & Jewett, of Boston, to furnish and deliver at the Kittery navy-yard, on their account, some two hundred and fifty (250) white-oak knees, together with what white-oak plank, stock-logs, and keel-pieces would be required with the knees to make out a cargo.

This material I got out in good faith, and shipped to the yard named, where the vessel arrived about a month ago, and remains there still with her cargo on board. As the vessel is under demurrage, and I am put to great expense through no fault of mine, I respectfully request that permission may be given me to have the material herein named landed, and that the bureau will send an order to the commandant of the yard to that effect.

Very respectfully,
(Signed) EBEN HAGGETT.

Chief Const'r I. HANSCOM,

NAVY DEPARTMENT, BUREAU CONSTRUCTION & REPAIR,
Washington, April 19th, 1875.

MY DEAR COM: I am about leaving for California, to be absent about five weeks, and in the hurry have left the office without writing officially in relation to a load of white-oak timber, which was delivered by Capt. Higgins, * I think. The timber was due on an order or agreement by Trickey & Jewett. Please have the timber inspected, and if it is what is wanted, you can have bills made at the lowest market-price. Before cutting up the *Portfire* we must have a proper report, condemning the vessel and recommending it. Hope to see you soon after my return, and find you and family in good health and spirits.

Yours, very truly,
(Signed) I. HANSCOM.

Commodore A. BRYSON, U. S. N.,
Commandant.

NAVY DEPARTMENT, BUREAU CONS'N & REPAIR, *July 28th*, 1874.

SIR: Under agreement with Mess. J. Bigler & Co., part of the live-oak timber delivered at the yard under your command was to be paid out of appropriation construction and repair, 1874–1875. In order to do so, it will be necessary to have new bills made out, dated and approved after July 1st. The inclosed triplicate bills, amounting to $22,181 $\frac{79}{100}$ and $1,886 $\frac{88}{100}$, are herewith returned for that purpose, and you will please have both of them considered open purchasers, retaining no reservation.

Messrs. Bigler & Co. will return to you the original and duplicate bills, and you will please forward to them the new set of bills.

Very respectfully, your ob't serv't,
(Signed)

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
NAVAL CONSTRUCTOR'S OFFICE,
March 21, 1876.

SIR: In compliance with your order of the 15th instant to furnish you with the amount of supplies estimated for, as also amount of supplies furnished upon "open-purchase requisitions," I respectfully submit the following:

Amount of supplies furnished by contract, under annual estimates, from March 16, 1872, to March 16, 1876	$106,704 54
Amount of live-oak furnished under James Bigler & Co.'s contract, for same period	330,526 62
Amount of supplies furnished upon open-purchase requisitions from March 16, 1872, to March 16, 1876	397,917 12
Aggregate amount of supplies from March 16, 1872, to March 16, 1872	835,148 28

Very respectfully, your obedient servant,

T. D. WILSON,
Naval Constructor.

Commodore A. BRYSON, U. S. N.,
Commandant.

INSPECTION PROVISIONS AND CLOTHING,
Navy-Yard, Portsmouth, N. H., March 18, 1876.

SIR: In obedience to your order of the 15th instant, I have the honor to inform you that this inspection does not make estimates for supplies, but is furnished from other inspections (generally from New York) when the stock on hand runs low.

The aggregate of supplies or stores received at this inspection in the past four years is $194,710.17; and the amount received on open-purchase requisition is $473.31.

I am, very respectfully, your obedient servant,

CHAS. F. GUILD,
Paymaster and Inspector in charge.

Commodore A. BRYSON, U. S. N.,
Commandant.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Ordnance Office, March 23, 1876.

SIR: I inclose herewith, in compliance with your order of the 16th instant, a statement of the aggregate of supplies furnished this Department during the past four years, showing the amount furnished on open-purchase requisitions and by shipment from other navy-yards and stations.

Very respectfully, your obedient servant,

S. D. AMES,
Commander U. S. N., and Inspector Ordnance.

Commodore A. BRYSON, U. S. N.,
Commandant.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Ordnance Office, March 23, 1876.

Statement of the aggregate of supplies furnished this department from March 16, 1872, to March 16, 1876, inclusive:

From contractors, nothing.	
From open-purchase requisitions	$6,142 38
From other navy-yards	65,108 52

Very respectfully, your obedient servant,

S. D. AMES,
Commander U. S. N., and Inspector Ordnance.

ORDNANCE OFFICE, NAVY-YARD, PORTSMOUTH, N. H.,
March 23, 1876.

Statement of estimates for supplies of all kinds made in the department of ordnance at the United States navy-yard, Portsmouth, N. H., from March 16, 1872, to March 16, 1876, inclusive:

Tools	250 00
Stationery	500 00
Fuel	1,484 00
	12,234 00

Estimates for fiscal year ending June 30, 1874.

Stores necessary in fitting vessels, including paints, oils, lumber, &c	$10,000 00
Tools	250 00
Stationery	500 00
Fuel	1,284 00
	12,034 00

Estimates for fiscal year ending June 30, 1875.

Stores necessary in fitting vessels, including paints, oils, lumber, &c	$10,000 00
Tools	250 00
Stationery	500 00
Fuel	1,284 00
	1,2,034 00

Estimates for fiscal year ending June 30, 1876.

Stores necessary in fitting vessels including paints, oils, lumber, &c	$10,000 0
Tools	250 00
Stationery	300 00
Fuel	1,284 00
	11,834 00

Very respectfully, your obedient servant,

S. D. AMES,
Commander U. S. N., and Inspector Ordnance.

NAVY-YARD, PORTSMOUTH, N. H.,
March 18, 1876.

SIR: In compliance with your order of the 15th instant, to furnish you with a statement of estimates for supplies of all kinds made in the steam-engineering department for the past four years, with the aggregate of supplies furnished, and amount of supplies furnished

upon open-purchase requisitions for the same period, I respectfully submit the following, viz:

Amount of estimates made for supplies of all kinds from March 16, 1872, to March 16, 1876	$107,400 91
Amount of supplies furnished upon open-purchase requisitions from March 16, 1872, to March 16, 1876	109,770 83
Aggregate amount of supplies furnished from March 16, 1872, to March 16, 1876	197,230 64

Respectfully,

DAVID B. MACOMB,
Chief Engineer, U. S. N.

Commodore A. BRYSON, U. S. N.,
Commandant.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Civil Engineer's Office, March 18, 1876.

SIR: Herewith is respectfully submitted estimates of supplies department of Yards and Docks, for the four years ending March 16, 1876, $148,965.21.

Aggregate of supplies furnished during the above time	$148,965 21
Of the above the following was received on contracts made by the Bureau of Yards and Docks	62,011 17
Open purchase	86,954 04

Very respectfully, your obedient servant,

B. F. CHANDLER,
Civil Engineer, U. S. N.

Commodore A. BRYSON, U. S. N.,
Commandant.

MARCH, 16, 1876.

Total expenses for the years 1872, 1873, 1874. 1875, *at United States naval hospital, Portsmouth, N. H.*

Expense.	1872.	1873.	1874.	1875.	Total
Freight and tolls	.....	$27 81	$10 01	$12 61	$50 43
Fuel	.....	39 00	188 00	328 75	555 75
Groceries	.....	165 97	370 65	329 30	865 92
Instruments	.....	18 66	35 00	.....	53 66
Medicines	$587 45	753 33	259 14	545 93	2,145 85
Provisions	1,512 70	1,405 90	677 72	1,120 16	4,716 48
Repairs	.....	186 02	38 00	.....	224 02
Stationery	.....	11 68	6 20	.....	17 88
Washing	63 00	100 00	122 00	147 00	432 00
Incidental	364 96	390 20	24 05	185 02	964 23
Furniture and bedding	.....	39 97	246 24	6 75	310 96
Sum total	.....	.....	.....	.....	10,237 44

The above gives the aggregate of supplies furnished the medical department at this station during the past four years, so far as the hospital records show. The records of first quarter 1872 are missing.

The expenditure for medicines give the total amount for medicines, hospital stores, and surgeon's necessaries for the sick and hurt of the Navy and Marine Corps at this station, as well as the expenditures of medicines, &c., for the families of naval and marine officers, attached to this station, and the servants and employés of the several departments of the navy-yard.

The expenditure for provisions, groceries, &c., covers the support of over 200 medical and surgical cases treated yearly in this hospital.

As the medical property of ships going out of commission at this yard is merely passed through to the United States laboratory, New York, there are no "copies of orders authorizing

the removal of property, either by public sale or otherwise," nor has there been any "public property removed to any other station" beyond the medical stores just mentioned.

Estimates for supplies of all kinds are not made by the medical officer in charge of the hospital at this station.

Respectfully, &c.,

C. J. CLEBORNE, U. S. N.,
Surgeon.

Commodore ANDREW BRYSON, U. S. N.,
Commanding Navy-Yard, Portsmouth, N. H.

NAVIGATION OFFICE,
Navy-Yard, Portsmouth, N. H., March 18, 1876.

SIR: Agreeably to your order of the 15th instant, I beg leave to state that no yearly estimates are made in the navigation department at this yard. Deficiencies in stores for issue to ships are supplied by the bureau on requisition, and generally sent to us by freight from the New York yard.

Aggregate of supplies furnished during the past four years, $23,400, of which amount $650 was upon open purchase by order of the bureau.

Very respectfully, your obedient servant,

S. D. AMES,
Commander U. S. N., Navigation Officer.

Commodore A. BRYSON, U. S. N.,
Commandant.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Naval Constructor's Office, March 16, 1876.

SIR: In compliance with your order of the 15th instant to furnish you with a statement of the number of men employed and discharged in this department (monthly) from January, 1868, to the present time, I respectfully submit the following tabular statement:

Employed March 16, 1876, 92.

NAVIGATION OFFICE,
Navy-Yard, Portsmouth, N. H., March 15, 1876.

SIR: In obedience to your order of the 15th instant, I would repectfully state that the force employed by the navigation department since January, 1868, and borne upon our rolls, is one clerk, one store helper, and one pilot, (the latter's appointment dates from 1872.) The little extra labor required in this department when a ship is fitting out is transferred by requisition from other departments.

Very respectfully, your obedient servant,

S. D. AMES,
Commander U. S. N., Navigation Officer.

Commodore A. BRYSON, U. S. N.,
Commandant.

INSPECTION PROVISIONS AND CLOTHING,
Navy-Yard, Portsmouth, N. H., March 15, 1876.

SIR: In obedience to your order of this date, I submit the following list of men taken on and discharged at this inspection, since the 28th day of November, 1874, the date of my reporting here for duty. There is no record at this inspection of men taken on previous to that time.

December 20, 1874.—Seven men taken on for one day to discharge stores from the Ticonderoga.

July 29, 1875.—Four men taken on for one day each; and six men half a day each to discharge stores from the Tallapoosa.

October, 1875.—Two men taken on for one day each, painting receiver's room.

December, 1875.—One man taken on for one day; one man for two days; and eight men for three days each—breaking out the Lancaster, and stowing the Marion.

February, 1876.—Two men taken on for two and a half days each, discharging stores from schooner Defiance.

Very respectfully, your obedient servant,

CHAS. F. GUILD,
Paymaster and Inspector.

Capt. J. YOUNG, U. S. N.,
Commandant.

One nurse now employed to act as scullion, assistant cook, messenger, fire-maker, and to nurse twelve to fifteen patients.

The above is a list of nurses and laborers employed in the medical department of this st a tion from January, 1868, to present date.

On July 21, 1874, orders were received from the Secretary of the Navy to discharge the laborer, since which time but one extra nurse has been employed for one month only.

The nurses of this hospital and dispensary have averaged one since 1868. Over two hundred medical and surgical cases (an average of 2,700 sick-days) are yearly treated in this hospital, besides the sick of the navy-yard families and barracks.

Respectfully, &c.,

C. J. CLEBORNE, U. S. N.,
Surgeon.

Capt. JONATHAN YOUNG,
Captain of Navy-yard, Portsmouth.

Very respectfully, your obedient servant,

S. D. AMES,
Commander U. S. N and Inspector Ordnance.

No. 334.] U. S. NAVY-YARD, PORTSMOUTH, N. H.,
Com'd't's Office, Dec. 8th, 1874.

SIR: In the bureau's letter of the 4th inst., I am informed that Mr. Griffiths is to go on with the work on the Enterprise "as soon as everything is ready." In this connection and on referring to a copy of yours of the 12th Nov., to Mr. Griffiths, I find that a copy of statement from the [this] yard, giving the work necessary to be done by Mr. Griffiths to complete the vessel for sea, was furnished him, and by which he was to be guided, subject &c. In this copy I find no mention made of spar-maker, boat-builder, cabinet-maker, cooper's work, all of which will be required to complete her. In the copy of the statement from the [this] yard is included the work herein mentioned, and I would ask if this work is to be done by Mr. Griffiths, or whether he is to confine himself to the work mentioned in the bureau's letter of November 12 ultimo.

Very respectfully,
(Signed) A. BRYSON,
Com'd't.

Chief Constructor ISAIAH HANSCOM, U. S. N.,
Navy Department, Washington.

A true copy.

W. E. H. F.

NAVY DEPARTMENT, BU. OF STEAM ENG'G,
Washington, May 11th, 1875.

SIR: By direction of the Hon. Sec't'y of the Navy the bureau has satisfactorily disposed of the material in the yard under your command, which was examined and so recommended by the board of which Chief Engineer Stewart was the senior member, to the Providence Steam-Engine Co., as follows:

One pair 60×36 engines, intended for the Illinois, with all the parts and fixtures thereunto belonging that may now be in the yard. Two boilers, intended for the Massachusetts 46½×50, reserving the four best for this vessel. Two boilers, removed from the Nantasket. Shafting, &c., removed from the Peoria. About 20 tons old scrap from the Plymouth's boiler.

Please direct that the above, together with such old parts of machinery, wrought iron and composition as may be on hand, and for which there is no present or prospective use for purposes of this bureau, be placed under the derrick, on the wharf, and the usual facilities of the yard afforded to the purchaser to facilitate the removal of the same.

A careful account will be taken of each kind of material delivered, under the following heads, viz., cast iron, wrought iron, copper, and composition, and the weight of each sent to the bureau.

Respectfully,
W. W. W. WOOD,
Chief of Bureau.

Commodore A. BRYSON, U. S. N.,
Com'd't Navy-Yard, Portsmouth, N. H.

A true copy.

W. E. H. F.

CONSTRUCTOR'S DEPARTMENT,
Navy-Yard, Kittery, Me., September 29, 1874.

Commodore ANDREW BRYSON, U. S. N.,
Commandant:

SIR: In obedience to the bureau's order of the 21st instant, I have made a strict and careful examination of the condition of the United States steamer Enterprise, and respectfully report:

The vessel was launched on the 23d of June last, and has been lying alongside of the wharf since then as well protected from the weather as was possible under the circumstances. She will require to complete her for sea the following-named work:

Vessel to be docked; bottom seams hardened in and filled up, graved and coppered, two threads of oakum to be put in above the copper line, one thread in the batteries, two thread in the main deck, and one in each of the others. The vessel will require her seams to be puttied, and two good coats of paint outside and inboard, and the cabin, wardroom, and steerage to be glossed. The spars and boats to have three coats of paint. Poop-deck to be puttied and painted. Spars to be made as per plan, and fitted complete. Spare spars and boat-spars to be made and fitted complete. Four torpedo-spars to be made and fitted together with the torpedo

fittings for the launch. All the blocks in connection with the rigging and outfits require to be made. One composition counter-knee,* magazine-rods and casing of same,* awning-bands on masts, fore and main-stay bolts,* fore and main storm stay-bolts,* fore-top gall't and royal stay-bolts,* flying-martingale stay-bolts,* jib and flying-jib guy-bolts,* martingale block-rope bolts,* ringbolts for lashing anchors,* eyebolts for and lading-blocks under pin-rail, rods between file-rail stanchions for leaders and leading-blocks, stay-sail sheet's bolts,* topsail halliard's bolts.* eyebolts in hatch bars,* shot and shell racks where required, shot and shell cranes and fittings for same, fore and main-tack bolts, eyebolts over magazine and shell-room hatches,* eyebolts for spanker-sheet,* bag-rack rods and shot-racks fitted on berth-deck, boring for holding down bolts to engine, fastening of engine keelsons and shaft-bearings, eyebolts in deck and coamings around masts; scupper, side, and hawse-pipe plugs; bridge-ladders, &c., in connection with stowing spare anchors, gratings to be fitted in bread and sail rooms, also in magazine and shell-rooms, foot-plates on bow-chocks, brass to be put on in wake of ladders to the poop and top-gall't forecastle decks,* roller on bowsprit-bitts, head-chutes, eyebolts for cat and fish-fall leaders, composition rudder-chains and eyebolts for same, eyebolts in channels for lashings, one complete set of pump-gear,* iron stanchions and rail in the head,* top-sail sheet-bitts to mortise and sheave, quadrant and steering-gear fitted complete, dead-eyes, heart's and bull's eyes to make and strap grab-rods on the vessel, in wake of gang-way, and rod on sea-steps; putting down pivot-gun tracks, pivot centers, and breast-pieces on port-sills for broadside guns; all pump-brakes, capstan-bars, &c., to be properly stowed when not in use; bath-tubs to be fitted under forecastle as per plan,* iron stand and overhead tank for the scuttle-butts and connections with filterer, two mooring-chocks forward, of wood, to be fitted in bridle-ports,* port-shutters cut for guns and fitted with fearnaught and port-bucklers where required,* 4 iron mooring-cleats on main deck, shifting-boards in hammock-nettings, securing of hammock-cloths, putting in passing-scuttles in decks for powder, and pipes for foul-air pumps, lockers for marines' hats, water-closets fitted in sick-bay, flush wash-bowl stand, and medicine lockers, air port wrenches and stowing of same, two anchor-shoes, fishes for masts or yards, (iron,) hatch-battens, hatch-coamings to be fitted to batten down. All pantries to be fitted, wine-glass racks; cup-hooks, &c. The following boats to be built and fitted complete: Launch, length 28′, breadth 7′ 10¾″, depth 3′ 2″; first cutter, length, 26′, breadth 6′ 8½, depth 2′ 5¾″; second and third cutters, length 24′, breadth 6 2¼″, depth 2′ 3½″; whale-boat, length 27′, breadth 5′ 8″, depth 2″ 2½″; dinghy, length 18′, breadth 4′ 9¼′, depth 1′ 9¼″. Shot and shell racks to be made and fitted; carpenters' work in connection with putting coal-bunkers;* Lewis bolts and boxes to be made and put in place;* all the necessary work in connection with the fitting and securing of the shoe, stern-post, rudder and jacket;* docking and coppering of ship; gallows frame for spare spars to be made and fitted complete, (no spare spars made—bureau order;) torpedo fittings complete, per regulations; boxing of pumps in hold; one lift and force pump, with all the necessary pipe connections to tanks, galley, and scuttle-butts, two head-pumps with connections to sea-cocks and discharge in head and under topgallant forecastle deck; forecastle and quarter-deck scuppers;* scuppers in hammock-nettings;* fitting tanks and connections n water-closets;* 3 channel-pumps and fittings; 1 wash-deck pump and fittings; ventilator through cabin to be made and put in;* 4 pump-tops to be made; side ladders aad sentry-walks to be made and fitted complete; boxing of lead pipes; cleats to confine mess-chests in place; steering-wheel to make and wheel ropes to case, with all the necessary fittings; musket rack and belt-pins to be put up; halliard-racks, hose and hawser reels to be made and put up in place; carpenters' work-bench and tool-chests; bureau, wash-stand and toilet-rack for each state-room; spring-bottom in each berth; sideboard and extension-table in wardroom; sideboard, extension-table, writing-table, book-case, sofa, settee and silver-ware chest in cabin; extension-table for warrant officers, extension-table for engineers; hanging-table for ship's cook; desk for paymaster, ships' writer, marine officer, and captain's clerk; mess top, channels, boat, arm and turpentine chests to be made, (latter fitted with copper tank,) water-closet and bath-room to finish in the cabin, put in seat, tub, bowl, and all the necessary fittings;* bulkheads of magazine and shell-room to be covered in the hold with galvanized iron;* 4 oil-tanks with connections; shell-room flood-pipes; two bath-tubs to be made and fitted as per plan under topgallant forecastle; transom seat and book-case to be made and put up in after-cabin; quarter-gallery ports to finish; moldings to be put up over all cabin-windows; cornice around mizzen-mast in cabin; boarding-pike racks around mainmast; door-sills in cabin, wardroom, and steerage, to be covered with brass;* cabin-deck to be sheathed per regulation; new gratings and ladders to be made for the hatches, as those now in her will not answer; lash and gratings in hood over the cabin sky-light to repair; gratings for bridle-ports; making one composition hatch and securing it; composition pin-bands and pins on the mizzen-mast and composition hawse-rail with all the necessary leaders attached around it; port-shutters made and hung, (composition hinges,) with rings and bolts or hooks complete;* breeching side and train tackle-bolts to be put in;* hatch-bars, copper and iron;* hawse-pipe covers and plugs; hammock-hook to be made and put in;* brass canopy-rail to wardroom and steerage hatches, iron over the others; coal-scuttles, put in as per plan;* five sets of boat's davits to be made and fitted complete—

* Work that should have been done on the first contract.

two fitted with cradles to stow boats in the waist;* crotch stanchions, for swinging and fish booms; iron awning-stanchions aft, made to answer as a crotch for spanker-boom; iron cleats where required;* ship's bell and fittings; breeching bolts pins to be made; running light shades and iron stanchions, complete; rabbeting for, and making and hanging, all the port-shutters;* main-brace and fore-tack bumkins, and all the fittings connected therewith;* stanchions and rail on poop and topgallant forecastle, rail and stanchions on front of poop to be of composition;* pin-rails for jib and flying-jib sheets, and fair-leaders for same; awning stanchions fitted, complete; cat-heads, (composition,) completely fitted;* bill-board, completely fitted;* 4 life-buoys; 1½ sets of capstan-bars, and stowing of same; chain-nippers, fitted complete; making and stowing of tanks in hold; making rigging-racks in hold and putting up hanging-rods for stowing lumber, &c.; changing fore-sheet chocks, agreeable to plan; making and putting on all the necessary cleats, cavils, and mooring chocks;* wedging of masts; 2 one-hundred-gallon casks; 4 sixty-gallon casks; 6 forty-gallon casks; 10 twenty-gallon casks; 11 ten-gallon casks; 15 two gallon molasses-breakers; 6 two-gallon boat-breakers; 15 two-gallon vinegar-breakers; 15 seventeen-gallon mess-breakers; 8 six-gallon boat-breakers; 40 deck-buckets; 30 spittoons; 1 scuttle-butt; 1 double harness-cask; 1 starting-tub; 1 steep-tub; 3 funnels, copper nozzles; pins in mooring-cavils where required; bolts for yard and stay-tackle falls;* bolts for leaders for the fore and main topmast and fore and main topgallant-studding-sail halliards;* bolts for leaders for mast-ropes;* eye-bolts for leaders for the main-topmast and main-topgallant stay-sail sheets;* bolts in cheek-knees hooking the cat-backs;* bolts for rudder-pendant-stops;* bolts for receiving whisker-jumpers;* bolts for bowsprit shrouds and links for bob-stays; bolts for fore-yard tackle;* bolts for leaders for boats' falls; coats to mast, canvas; coats to bowsprit, canvas; armory, to be fitted; chronometers, fitted in a box in navigation-room; book-case, in paymaster's room; tanks, to be secured in hold; boat-davits' stretchers; tins, in mess-chests; trail-boards to be put on; shifting-rail in pivot ports; engineers' store-room to be fitted; writing-table and drawers, for yeoman, in general store-room; mess-table for petty officers; ash-chutes, to be cut in side of ship;* bolts in topsail-sheet bitts for stoppers;* spare blocks for ship's stores; cot frames for ship's stores; spare oars for ship's stores; spare boat-hooks for ship's stores; fittings for head-lights; scuppers to be cut in bulkheads of magazine passages; iron pipes to be cased in magazine; iron fastenings in magazine passages to be cased up; rods in prison to confine prisoners; roller in sail-room door; lower rims to chain-pipes and securing of same.

Articles now on hand that have been made for, and not yet used, on the Enterprise: Ninety-three breeching-starts; 40 double eye-bolts; 40 train tackle eye-bolts; stanchions for poop and forecastle decks; eye-bolts and joints for poop-deck rail; 80 port-hooks and 64 eyes for port-hooks; 4 water-closet tanks; part of the after-ventilator; strongbacks to capstan.

The following is a summary of the estimated cost of material and labor in the several branches:

	Materials.	Labor.
Shipwright	$8,404 00	$2,898 00
Calkers	500 00	2,458 00
Joiners	964 00	2,596 00
Block and spar makers	3,560 00	8,634 00

NAVY DEPARTMENT,
Washington, Aug't 12th, 1875.

MY DEAR COMMODORE: I write unofficially, as I neglected to write officially from the office, to have you ship the third or last load of iron to Mr. Cramp & Sons, Philadelphia.

*Work that should have been done on the first contract.

Please do so. I leave here on Sunday night for New York, where I expect to join my wife and son, who will go to Boston with me, and I shall proceed to Portsmouth; shall be obliged to call upon the Secretary before calling upon you, and which I hope to do on Wednesday or Thursday. Hope to find you and family in good health and spirits.

Yours, very truly,
(Signed) I. HANSCOM.

Commodore A. BRYSON, U. S. N.,
Commandant.

Rec'd Aug't 14th, 1875. Order given to N. constructor on the morning of same day.
A. B.

The foregoing is a true copy.

A. BRYSON, *Com'd'r.*

PHILADELPHIA, *July* 15, 1875.

Commodore ANDREW BRYSON,
Portsmouth Navy-Yard, Kittery, Maine:

DEAR SIR: On the 9th we made a contract with Naval Constr. R. W. Steele to carry about 1,000 tons of the iron at the Portsmouth navy-yard to Chester, Pa., at $2.00 per ton freight, and the iron to be loaded by the shipper free of expense to vessel. Therefore, we take pleasure in introducing to your kind favor Captain Henry Tower, of the schooner Amos Edwards, to which vessel please deliver about 450 tons of the iron; also please give the vessel all the dispatch possible, and oblige,

Very truly, yours,
(Signed) D. S. STETSON & CO.

A true copy.

H. A. MITCHELL,
1st Cl'k to Com'd't.

NAVY DEP'T, BU. CONS. REPAIR,
July 14th, 1875.

SIR: It has been decided that the Massachusetts will not be completed, and you will have all of the iron intended for that vessel, which the naval constructor may think not advisable to retain, shipped to Mr. John Roach, at Chester, Pa., for the purpose of rerolling, keeping a strict account of the amounts so shipped.

Very respectfully, &c.,
(Signed) I. HANSCOM,
Chief of Bureau.

Commodore A. BRYSON,
Com'd't Navy-Yard, Portsmouth, N. H.

A true copy.

W. E. H. F.

NAVY DEPARTMENT,
BU. CONS. & REPAIR,
July 14th, 1875.

SIR: Your letter of the 12th inst. (No. 119) relative to the shipment of iron belonging to the Massachusetts (formerly the Passaconaway) has been received. With the view of facilitating this shipment, Naval Constructor R. W. Steele was instructed to look out for vessels going to the yard under your command with coal, and he has reported to the bureau an engagement for this freight at $2 per ton, in accordance with the letter of Mess. Stetson & Co. to you of the 9th inst., which is herewith returned, and you will please have this iron shipped accordingly, consigned to John Roach, Chester, Pa.

Very respectfully, your ob't serv't,
(Signed) I. HANSCOM,
Chief of Bureau.

Commodore A. BRYSON, U. S. N.,
Command't Navy-Yard, Portsmouth, N. H.

A true copy.

W. E. H. F.,
2d Cl'k to Comd't.

No. 119.] U. S. NAVY-YARD, PORTSMOUTH, N. H.,
Commandant's Office, July 12, 1875.

SIR: The inclosed letter, received this a. m., is respectfully referred to the bureau for its action. I can find no authority in this office from the bureau in relation to this iron, and therefore prefer getting instructions from the bureau before permitting the iron to leave the yard.

I am, sir, your obedient servant,

A. BRYSON,
Commandant, Commanding.

Chief Constructor ISAIAH HANSCOM, U. S. N.,
Navy Department, Washington, D. C.

U. S. NAVY YARD, PORTSMOUTH, N. H.,
Commandant's Office, July 12*th*, 1875.

Messrs. D. S. STETSON & Co.,
14 *No., Del. Avenue, Philad'a, Penn.:*

GENTLEMEN: I beg to acknowledge the receipt of your letter of the 9th inst. relative to the delivery of certain iron belonging to the Bureau of Construction and Repair.

In reply, until instructions from the bureau are received, it will be impossible for me to permit the iron to be loaded.

I have sent your letter to the bureau for its action.

Yours, respectfully,
(Signed) A. BRYSON,
Comm'd't.

A true copy.

HENRY A. MITCHEL,
1st Cl'k to Comd't.

PHILADELPHIA, *July* 9*th*, 1875.

Commodore ANDREW BRYSON,
Portsmouth Navy-yard, Kittery, Maine:

DEAR SIR: We have this day contracted with Naval Constructor R. W. Steele, esq., of our city, for carrying about 1,000 tons (more or less) out of the 1,200 tons of iron at Portsmouth navy-yard to Chester, Pa., at $2.00 per ton freight, and to be loaded free of expense to vessel.

Therefore we have to-day, under R. W. Steele, esq., instructions, given Captain Harry Thompson, of schr. Mary T. Bryant, an order for about 600 tons of the iron. The Bryant will sail to-morrow with a cargo of coal shipped by the U. S. Navy for Portsmouth navy-yard, and upon discharge of cargo will load the above iron for Chester, Pa.

We have also given Capt. Henry Sommers, of schr. Amos Edwards, an order for about 450 tons. She will sail about the 15th with a cargo of coal for Portsmouth navy-yard.

Hoping you will load both vessels with dispatch, we are, very respectfully,

D. S. STETSON & CO.

A true copy.

H. A. MITCHELL,
1st Cl'k to Com'd't.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Commandants Office, November 4, 1872.

SIR: You will be pleased to have made a balsa or raft, of Commodore Amman's plan, 16 feet long, and forward the same to the Kansas, either at New York, where she will remain for some time, or at Norfolk, where she will touch before proceeding to her station.

Respectfully,

J. C. HOWELL,
Commodore and Commandant

Naval Constructor THOMAS E. WEBB.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Commandant's Office, September 30, 1872.

SIR: You will proceed to break up the Nantucket preparatory to rebuilding, and have the materials that will be of use in her reconstruction carefully preserved. The old copper not

suitable for use in the repairs will be boxed up and sent to the Washington navy-yard, to be re-manufactured.

The old wood not of use will be disposed of as directed in the case of the Marion.

Respectfully,

A. M. PENNOCK, *Commandant.*

Naval Constructor THOS. E. WEBB.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
July 14, 1875.

SIR: It has been decided that the Massachusetts will not be completed, and you will have all of the iron intended for that vessel which the naval constructor may think not advisable to retain, shipped to Mr. John Roach, at Chester, Pa., for the purpose of re-rolling, keeping a strict account of the amount so shipped.

Very respectfully, your obedient servant,

I. HANSCOM,
Chief of Bureau.

Commodore A. BRYSON, U. S. N.,
Commandant Navy-Yard, Portsmouth, N. H.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Commandant's Office, August 14, 1875.

SIR: In compliance with an order received from the Chief of the Bureau of Construction, you will please ship the third or last load of iron to Wm. Cramp & Sons, Philadalphia.

Respectfully, &c.,

A. BRYSON, *Commandant.*

Naval Constructor T. D. WILSON, U. S. N..
Navy-Yard, Portsmouth, N. H.

NAVY DEPARTMENT, BUREAU OF STEAM-ENGINEERING,
Washington, December 21, 1874.

SIR: The bureau has accepted an offer of the American Tube Works to remanufacture new tubes, such as the bureau may require, from the old brass tubes in the navy-yard under your command, belonging to this bureau

Please direct that all such tubes be delivered on board vessel for them as they shall request, and furnish the bureau with statement of the weights as delivered.

To be delivered without cleaning.

Respectfully,

WM. W. W. WOOD,
Chief of Bureau.

Commodore A. BRYSON, U. S. N.,
Commandant Navy-Yard, Portsmouth, N. H.

NAVY DEPARTMENT,
BUREAU OF STEAM-ENGINEERING,
Washington, May 11, 1875.

SIR: By direction of the Hon. Secretary of the Navy, the bureau has satisfactorily disposed of the material in the yard under your command which was examined and so recommended by the board, of which Chief Engineer Stewart was the senior member, to the Providence Steam-Engine Company, as follows: One pair 60 x 36 engines intended for the Illinois, with all the parts and fixtures therewith belonging that may now be in the yard. Two boilers intended for the Massachusetts, (46½ x 50.) reserving the four best for the vessel. Two boilers removed from the Nantasket; shafting, &c., removed from the Peoria; about twenty tons old scrap from the Plymouth boilers.

Please direct that the above, together with such old parts of machinery, wrought iron, and composition, as may be on hand, and for which there is no present or prospective use for purposes of this bureau, be placed under the derrick on the wharf, and the usual facilities of the yard afforded to the purchaser to facilitate the removal of the same. A careful ac-

count will be taken of each kind of material delivered under the following heads, viz: c iron, wrought iron, copper, and composition, and the weight of each sent to the bureau.

Respectfully,

WM. W. W. WOOD.
Chief of Bureau

Commodore A. BRYSON, U. S. N.,
Commandant Navy-Yard, Portsmouth, N. H.

NAVY DEPARTMENT,
BUREAU OF ST. ENGINEERING,
Washington, February 19th, 1874

SIR: Please ship to the Boston navy-yard any old scrap-iron that may be in the engin ing department at the Portsmouth yard, not probably needed for use there, which ca utilized in the rolling-mill of the Boston yard for bar-iron.

Respectfully,
(S'g'd)

W. W. W. WOOD,
Ch. of Bureau

Commod. J. C. HOWELL, U. S. N.,
Comd'g Navy-Yard, Portsmouth, N. H.

A true copy.
(S'g'd)

W. E. FENTRESS,
Comd't Clerk

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Commandant's Office, October 4, 1872.

SIR: You will be pleased to have the boilers recently removed from the Plymouth up and the iron shipped to the Boston yard.

Respectfully,

J. C. HOWELL,
Commodore and Commandant

Chief Engineer THOM. WILLIAMSON,
United States Navy.

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Commandant's Office, May 17, 1873.

SIR: You will be pleased to ship to the Boston yard the scrap-iron from the old boiler the Speedwell, and any other wrought scrap on hand not required for use in this yard, t may be suitable for being rolled into bar-iron.

Respectfully,

J. C. HOWELL,
Commodore and Commandant

Chief Engineer THOM. WILLIAMSON,
United States Navy.

COATESVILLE, PA., *February 6, 187*

COMMANDANT NAVY-YARD,
Portsmouth, N. H.:

SIR: Please deliver to John Roach & Son, or order, the boilers now in your yard, wei ing 500,000 pounds, purchased by us from the Bureau of Steam-Engineering on the ultimo.

Very respectfully,

C. E. PENNOCK & CO

Please deliver the iron specified above to Messrs. D. W. Richards & Co., or order.

JOHN ROACH & SON

UNITED STATES NAVY-YARD, PORTSMOUTH, N. H.,
Commandant's Offic

Forwarded October 8, 1872.

J. C. HOWELL,
Commandant

Please deliver the wrought iron in the within boilers to Messrs. The Nashua Iron Steel Co.

DAN'L W. RICHARDS & CO.,
New York

COMMANDANT'S OFFICE,
NAVY-YARD, PORTSMOUTH, N. H.,
March 16, 1876.

I certify the foregoing statement of bills to be correct, as per books in this office.

JOHN H. KNOX, *Clerk.*

[Circular.]

NAVY DEPARTMENT, BUREAU CONS. & REPAIR,
April 2d, 1875.

SIR: As it is desirable to reduce the expenses of the Government to the lowest practicable amount, it is considered feasible to decrease the cost of taking care of vessels at least fifty (50) per cent.

The expense of taking care of vessels having extra ship-keepers was introduced as a war-measure, when vessels were liable to be burnt by secret emissaries or spies, and was absolute necessary, but that necessity no longer exists. Where vessels are so safely moored, as to be considered perfectly safe from the effect of gale or sudden squalls, they can be securely closed against thieves or robbers; and, being put under the eye of a yard-watchman,

it seems that no ship-keeper is required, or that one ship-keeper can watch two or more vessels. The iron-clads can be closed and locked up, and be under the care of the yard-watchman, without any ship-keeper. In view of these considerations regarding the necessary economy to be observed, will you please inform the bureau what is the lowest number of ship-keepers absolutely necessary at the yard under your command?

Very respectfully, &c.,
(Signed) I. HANSCOM,
Chief of Bureau.

Comm. A. BRYSON, U. S. N.,
Comd't Navy-Yard, Portsmouth.

A true copy.

W. E. H. F.

No. 58.] U. S. NAVY-YARD, PORTSMOUTH, N. H.,
Commandant's Office, April 5th, 1875.

SIR: With reference to the bureau's circular letter of the 2ond inst., in reference to the reduction of ship-keepers at this station, I would respectfully recommend that three (3) ship-keepers and one (1) captain of ship-keepers be discharged, leaving six ship-keepers still on the rolls, and this number, I think, cannot properly be reduced until the Enterprise shall come out of dock. I will endeavor then to have her so moored as will enable me to make a further reduction of three (3) ship-keepers, should the bureau so direct.

Very respectfully, your obt. serv't,
(Signed) A. BRYSON, *Commandant.*

Chief Constructor ISAIAH HANSCOM, U. S. N.,
Navy Department, Washington, D. C.

A true copy.

NAVY DEPARTMENT, BUREAU CONST'N & REPAIR,
April 7th, 1875.

SIR: With the view of reducing, as far as the public interests will permit, the expense incurred on account of ship-keepers, whenever the services of a captain or quarterman of ship-keepers, or both, are considered by you and the naval constructor as really unnecessary, they may be dispensed with, and a leading-man substituted therefor.

Very respectfully, your obt. servt.,
(Signed) I. HANSCOM,
Chief of Bureau.

Commodore A. BRYSON, U. S. N.,
Commandant Navy-Yard, Portsmouth, N. H.

A true copy.

W. E. H. F.

No. 60.] NAVY-YARD, PORTSMOUTH, N. H., COMMANDANT'S OFFICE,
April 9th, 1875.

SIR: In compliance with the bureau circular letter of the 2d inst., I informed it, the bureau, in my letter No. 58, April 5th, that in my judgment three (3) ship-keepers and one (1) captain of ship-keepers could be dispensed with. In a circular letter from the bureau of the 7th inst., received this a. m., I am instructed as to the captain of ship-keepers; not so as to the three (3) ship-keepers referred to in my letter of the 5th inst. Will the bureau direct me as to whether I am or not to make the discharge of the three ship-keepert as recommended in said letter?

Very respectfully, your obt. servt.,
(Signed) A. BRYSON, *Comm'dt.*

Chief Constructor ISAIAH HANSCOM, U. S. N.,
Navy Department, Washington, D. C.

[Telegram.]

WASHINGTON, D. C., *April 10th*, 1875.

Commodore A. BRYSON, U. S. N.,
Comm'dt N. Yard, Portsmouth, N. H.:

When ship-keepers are employed or discharged, the naval constructor will make the selection.

I. HANSCOM,
Chief of the Bureau.

A true copy.

W. E. H. F.

NAVY DEPARTMENT, BUREAU OF CONSTRUCTION AND REPAIR,
April 12th, 1875.

SIR: Referring to your letter of the 9th inst., (No. 60,) the intention of the bureau was that your views relative to the discharge of the (3) three ship-keepers should be carried into effect.

The late captain of ship-keepers will be re-employed and retained as such.

You were telegraphed on the 10th inst. that in the employment and discharge of ship-keepers the naval constructor would make the selection.

Respectfully, your obt. servt.,
(Signed)

I. HANSCOM,
Chief of Bureau.

Commo. A. BRYSON, U. S. N.,
Comdt. Navy-Yard, Portsmouth, N. H.

A true copy.

W. E. H. F.

NAVY DEPARTMENT, BU. CONS. & REPAIR,
Oct. 16th, 1874.

SIR: By direction of the Department, the following persons will be employed in the yard under your command: Dan'l L. Randall, as captain of ship-keepers, at $3.50 per day; Forest Trafton, as ship-joiner; Wm. Dennett, as laborer.

Very respectfully, your ob't serv't,
(Signed)

I. HANSCOM,
Chief of Bureau.

Commodore A. BRYSON, U. S. N.,
Comd't Navy-Yard, Portsmouth, N. H.

The above order will be complied with by the naval constructor.
(Signed)

A. BRYSON, *Comd't.*

A true copy.

W. E. H. F.,
2d Clerk to Comd't.

[Circular.]

NAVY DEPARTMENT, BUREAU CONS. & REPAIR,
Oct. 30th, 1874.

SIR: Captains of ship-keepers will have control of the ship-keepers, receiving his orders from the naval constructor, under the general supervision of the commandant of the yard, to be employed, with his assistants, in pumping and cleaning vessels, taking care of all lights used on board of vessels repairing, assisting in mooring vessels, and such other work as may be required, subject to the police regulations of the yard.

The ship-keepers will be selected by the naval constructor.

Very respectfully, your ob't serv't,
(Signed)

I. HANSCOM,
Chief of Bureau

Commo. A. BRYSON, U. S. N.,
Commandant Navy-Yard, Portsmouth, N. H.

I certify this to be a true copy.

W. E. H. F.,
2d Clk. to Comd't.

INVESTIGATION BY THE COMMITTEE ON NAVAL AFFAIRS.

TESTIMONY

TAKEN BY

THE COMMITTEE ON NAVAL AFFAIRS.

APRIL 27, 1876.—Ordered to be printed.

BOSTON NAVY-YARD.

BOSTON, *March* 20, 1876.

EDWARD T. NICHOLS sworn and examined.

By the CHAIRMAN:

Question. What is your rank?—Answer. Commodore in the United States Navy.

Q. How long have you been on duty at the Charlestown navy-yard?—A. Since the 19th of October, 1873.

Q. Where were you on duty before that?—A. Immediately previous to that I was a member of the examining and retiring board in Washington. My service previous to that was as chief of staff of the squadron in China

Q. How many officers have you in the service of the Charlestown Navy-yard, and on board the receiving-ship, and who are they?—A. In the yard there are on duty twenty-one commissioned officers, of whom ten reside in the yard; at naval rendezvous, three; marine barracks, four; hospital, three; receiving-ship, eleven; and one pay-director as purchasing agent at Boston. Of those residing in the yard, there are the commandant, captain, commander in charge of ordnance and navigation, commander as aid to commandant, surgeon, pay-director in charge of provisions and clothing, paymaster of the yard, chief engineer in charge of department, naval constructor, and civil engineer. Marine barracks, one lieutenant-colonel in command, one captain, and two lieutenants. On board receiving-ship, one captain, one lieutenant-commander, three lieutenants, one surgeon, one assistant surgeon, one paymaster, one chaplain, one passed assistant engineer, and one lieutenant of marines. At the rendezvous, one captain, one lieutenant-commander, and one medical director. At hospital, one medical director, one surgeon, one assistant surgeon. At niter depot, Malden, one lieutenant-commander. Attached to the yard, other than the above, are five lieutenant-commanders, one lieutenant, one assistant surgeon, one chief engineer, two passed assistant engineers, and one chaplain.

Q. How many enlisted men?—A. Eighty-four in barracks, (marines;) on board receiving-ship, one hundred and seventy, crew and recruits and marines.

Q. How many clerks have you on duty here?—[List furnished to committee.]

Q. How many writers?—[List furnished to committee.]

Q. In your opinion, can any of the officers on duty here be dispensed with, without detriment to the public service?—A. My present impression is that some can be dispensed with. The civil engineer, in my opinion, can be dispensed with entirely. With the small amount of work now on hand, some of the junior officers might be dispensed with, but in ordinary times at least one assistant in each department would be necessary.

Q. Can any of the force of enlisted men be dispensed with without detriment to the public service?—A. No, sir; I can answer that positively.

Q. Can you dispense with any clerks?—A. My impression is, that one or two clerks may be dispensed with; that is, those that are called clerks—salaried clerks. I think all who are rated as clerks are regularly performing the duty of clerks.

Q. Can any of those whom you call writers be dispensed with?—A. I think they can. The usual number of writers, in the construction department, particularly, can be reduced.

Q. In what condition are your public buildings on the yard; in what state of repair—good, or otherwise?—A. They may be called in fair condition. Of course, there is more or less to be done to them at all times in this climate. In the winter, the slate roofs deteriorate more or less, and we always have a little patching to do. Men are almost constantly morking on them. There are no very extensive repairs required at present, except to floorings, &c., for which estimates have been made.

Q What vessels are being built here?—A. There are two yessels being completed, one of which was built by contract at East Boston, and the other built at Portsmouth by day's work. These vessels are being completed by contract.

Q. What are those vessels?—A. One is named the Adams, and the other the Essex, belonging to the class commonly known as the eight sloops of war.

Q. Where was the Adams commenced to be built?—A. At East Boston.

Q. Under contract?—A. Under contract with Donald McKay.

Q. Have you a copy of the contract?—A. I have. [Copy furnished. See appendix to testimony taken at Boston.]

Q. The Essex is here now, is she?—A. She is.

Q. Under contract for completion?—A. Under contract with Mr. McKay for completion.

Q. Have you a copy of the contract that he made with the Government to complete the Essex?—A. Yes, sir; there is one contract for completing both. The first contract that you called for is a contract with Mr. McKay for building the Adams.

Q. Complete?—A. Yes, sir; for building her complete—the hull.

Q. Fitted for sea?—A. No, sir; his contract was to complete the hull of the Adams; then there was a subsequent contract made with Mr. McKay to complete the Adams and the Essex, both combined in one contract. I do not call it a contract; I call it an agreement.

Q. Are they not separated in the stipulations of what he is to do for each, and what he is to receive for the work on each?—A. Yes, sir; what he is to receive for the work on each, and the work to be done on each.

By Mr. BURLEIGH:

Q. Is that the only contract relating to those two vessels?—A. That is the only one I know of. The first contract was for the building of the Adams, and this last was a contract for the completion of the Adams and the Essex; the Adams for so much and the Essex for so much. There are some differences between the work on the two vessels. There are some things which he was obliged to furnish for the Adams which he was excused from furnishing for the Essex by his contract.

By the CHAIRMAN:

Q. You were here in command when the Essex was brought around here from the Portsmouth navy-yard, were you not?—A. I was.

Q. Do you know whether or not there was a quantity of material in that vessel?—A. There was a quantity of material brought here, partly finished.

By Mr. BURLEIGH:

Q. For the purpose of completing her?—A. Yes, sir.

Q. (By the CHAIRMAN.) Was there an inventory of the material taken by any officer in your yard?—A. I presume there was. The material that came around in her was invoiced to the constructor of the yard, and he receipted for it, and the receipt was returned to Portsmouth. The constructor has that in his department.

[Copy of invoice furnished. See appendix to testimony taken at Boston.]

By Mr. BURLEIGH:

Q. Was there any value put upon that invoice?—A. I presume there was, but I can't say positively whether there was or not.

Q. Was there a board of survey, or was there any estimate made by your constructor, or any other officers here, what the cost would be to the Government of completing the Essex?—A. There was a board of constructors ordered for this purpose by the bureau, and its report was transmitted to the bureau.

Q. Was there any advertisement for bids for the completion of the Essex when she was brought here?—A. Not that I ever heard of, for the Essex or the Adams.

Q. Was there any advertisement for bids for the first contract on the Adams?—A. None that I am aware of. The earliest information that I remember in regard to the Adams was the receipt from the Bureau of Construction of a copy of the contract made with Mr. McKay. On reference to the files of my office, I find that printed proposals were issued on June 21, 1873. This was before I came here.

By the CHAIRMAN:

Q. In the making of a contract between Mr. McKay and the chief of the Bureau of Construction, could not the exact cost of the Essex be ascertained? Is it so separated from the Adams the entire cost of that vessel can be ascertained?—A. I presume it can, because the prices in the agreement or contract, whichever it may be, calling for the completion of the

Adams and Essex, were separate; so many thousand dollars for completing the Adams, so many thousand dollars for completing the Essex.

Q. Do you know whether there has been any subsequent contract made by those parties by which they are to do some additional work after completion?—A. I do not.

Q. Do those contracts, as far as you remember, embrace the making or building of the spars?—A. The second contract does.

Q. Are they working on those vessels now?—A. Mr. McKay has a very small force working on them; how many men I can't say.

Q. What is the prospect for finishing those vessels? At what time do you think they will be finished, probably?—A. That would depend somewhat upon the necessity for them. If they were wanted immediately, I should think they could be finished in four weeks, complete.

Q. What is the character of the workmanship on those vessels, as far as you have observed?—A. Very substantial, but I think not as well finished as our naval work.

Q. How will the hull of the Adams compare with the hull of the Essex, built in the Portsmouth navy-yard?—A. Very favorably so far as a general inspection enables me to judge; but I have not examined them critically and closely as to the manner of fastening, and so on; but as the Adams was built under the superintendence of naval constructors, Mr. Pook first, and subsequently Mr. Easby, regularly detailed for that purpose, it is only fair to presume that the work has been faithfully done. When Mr. Pook was detached from the yard, Mr. Easby was ordered to perform those duties. They were supposed to look after that vessel, and I presume they did; for I know they frequently went over to East Boston.

Q. Do you know whether Mr. McKay has made any claim for any extra work?—A. I don't know whether he has made any claim for extra work, but he has threatened to do so.

Q. Upon what ground?—A. Upon the ground that I had interfered with his plans and had caused him loss.

Q. Have you done so?—A. Not in any way that I am aware of. I have simply endeavored to keep Mr. McKay down to the terms of his contract or agreement.

Q. Has there been any disposition on the part of any officer over you to relieve him from any of the terms of his contract?—A. None that has come through me; none that I am aware of.

Q. Have you ever referred any questions of differences about his contract to the chief of the Bureau of Construction?—A. None between Mr. McKay and myself. The naval constructor who was superintending the work has referred questions to me, which I have referred to the bureau.

Q. How did the bureau decide them?—A. I can't positively answer. Sometimes, perhaps, in favor of the contractor, and sometimes, perhaps, in favor of the Government. In one instance that I remember, the bureau decided, I think improperly, in favor of the contractor, in regard to putting the tops over the mastheads. In the Navy, when masts are stepped, it is always considered the constructor's business to step the masts, and to put the tops over. Mr. McKay's contract was that he was to step the lower mast and place the bowsprit. It was reported to me that the mast was stepped, and that the vessel was then ready for the equipment department to take hold and rig her. Then it was reported to me that the tops were not over. I sent, through the constructor, to Mr. McKay, to have the tops put over the masthead, which he declined to do, saying that it was not a part of his contract. The question was referred, I think, by telegraph, to the bureau, and the bureau telegraphed back in reply, "Construction will put the tops over," and the tops were put over by construction labor in the yard.

Q. What was the cost of that work?—A. It would not be a great deal; probably it would not be more than $30 or $40.

Q. Do you remember any other instance where the Bureau of Construction relieved him from doing any portion of the duty which you think he is bound to do by his contract?—A. I am under the impression that he was relieved, under his contract for building the Adams, from making the spars for that vessel.

Q. Are the engines and machinery in both of those boats?—A. Yes, sir.

Q. What is your opinion about the engines and machinery; are they good, bad, or indifferent?—A. Not being a practical engineer I can only judge from the report of the inspecting engineers, which was sent through me, officially, that the engines are very good engines, and the work was very well and satisfactorily done. That was by contract with the Atlantic Works, at East Boston, I believe. They are the compound type of engines, with a corresponding type of high-pressure boilers. From all that I can learn the trouble seems to be more with the boilers than with the engines of the new vessels.

Q. They have compound engines in them, have they?—A. Yes, sir.

Q. What do you think of the policy of having vessels built by contract in the navy-yard? Can they be built better or cheaper by the Government in their own yard than they can be built inside by contractors from outside?—A. I see no reason why vessels cannot be built by the Government, by contract, in our navy-yards, the Government furnishing the materials, and the vessels being built under honest supervision, just as well and more cheaply than by day-work under the present system. What I mean by the "present system" is this: We labor under great disadvantages in the navy-yard compared with out-

side workmen, from the fact that we pay, in the navy-yard, by law, the same amount of money for a day's work of eight hours, that Mr. McKay or others pay for a day's work of ten hours, and, probably, sometimes more. Consequently the Government is paying ever day for two hours' work which it does not get, which, in the aggregate, taking the men at $3 a day, for instance, of ten hours' work, is 30 cents an hour, and eight hours' work, 37½ cents an hour. If you carry that out, with an average of five hundred men through the year, it is a very simple matter of arithmetic how much more the Government pays than it gets. But with the same independent selection and control of men and keeping them up to their work, as is the case outside, paying the same *rate* of wages as is paid outside, freeing the foreman, &c., from all political influence, and the *fear* of it, I see no reason why the Government should not do its own work as well and cheaply as by contract.

Q. Now, is there not some difference in the character of the labor which the contractor gets, and that which you get?—A. I think there is.

Q. Does not a contractor select his labor with reference to its skill?—A. Yes, sir; unquestionably.

Q. Is not some of the labor on the yard selected for you, and do you not have to take such as is sent to you, whether skillful or not?—A. The labor in the yard is required for by the heads of departments. A requisition is made like this: "John Smith, ship-carpenter, or blacksmith, as the case may be, required for service in this department." This requisition is signed by the head of the department, and is brought to me for approval. My signature, in approval, goes down, and the man or men are employed. The names of the men to be employed are generally given to the head of the department by the foreman. The head of the department naturally relies, more or less, upon the foremen in selections of men, supposing them to be better acquainted with their qualifications than he possibly can be. The foreman is, probably, a political appointment, and very naturally favors his friends, regardless of their efficiency.

Q. Is it not sometimes the case that political influences thrust men on you who are not good workmen?—A. I can't say that they have been thrust on *me*, but I think it is very safe to say that political influence does put a good many men into the navy-yard who are not worth the money the Government pays them.

Q. And those men you are bound to take?—A. The commandant has no power to reject them unless he *knows* them to be improper men.

Q. Have you ever rejected any men whom you knew to be improper men, for any cause, and been ordered by the Department at Washington to take those men into the yard?—A. No, sir: I don't remember of any case where men who were rejected on account of being improper men have been ordered into the yard.

Q. The question was, men who have been rejected for any cause?—A. No, sir; I think not. I don't remember of any instance.

Q. Do you know of any instance where politicians in the city have furnished lists of men to be employed, where requisitions have been made here in the yard?—A. There was a case occurred during the election excitement here at the time when Mr. Gooch was defeated for Congress. There was a list of some twenty men, the names being given, placed on my desk to be signed. Knowing that it was near the end of the month, and thinking it possible that the allotment for the month might be short, I sent for the constructor and asked him if he had money to pay these men for the balance of the month, and he said "no." I said, "Then why do you make this requisition?" He said, "The names are given to me by outside parties, with a request to require them." I questioned him as to who the outside parties were, and he replied, I am pretty certain that they were friends of Mr. Gooch, or Mr. Gooch's committee, or something to that effect. I said, "Why do you, when you know you have not the money to pay the men, make a requisition for them?" His reply was to the effect that the pressure on him was so great that he was obliged to do it. I said, "Very well, that being the case, I will not approve this requisition," and I did not approve it. That afternoon I received from him an official communication to the effect that the money for that month would be exhausted on the following evening, and it would be nesessary to make a requisition for additional money to carry on the work during the remainder of the month. In reply to that, I sent him an official letter, acknowledging the receipt of his, and said that as the money would be exhausted the next evening, he would suspend the entire force in the construction department until the first of next month. The suspension took place on Friday evening, and on Sunday I think it was, or Saturday afternoon, I received a telegram to make no suspensions in any department of the yard. That telegram came from the Naval Department. I have forgotten now whether it was sent by the Secretary or by Rear-Admiral Reynolds, who was acting Secretary at the time. A few days subsequently to that, I received a telegraphic order to employ twenty additional men. Whether the same twenty men were employed that I had refused to sign for, I don't know.

Q. Was that telegraphic order from the same parties?—A. It came from headquarters at Washington, from authority that I was bound to obey.

By Mr. BURLEIGH:

Q. Don't you think those same men were employed, whose names you found on your desk?—A. I think they were, from this fact, that this matter occurred just at the time that

Mr. Pook was detached from the yard. The requisition lay on my desk a day or two after Mr. Easby assumed the duties, and he came to me and said there were parties bothering him about a requisition for twenty men which had been sent in some days ago; they wanted to know why those men were not employed. I picked up the requisition that was lying on my desk, and said, "You can take this requisition to those gentlemen, and tell them that the reason they have not been employed is because I have not seen fit to approve the requisition, and do not intend to approve it." Either that day or the following day, I received the telegraphic order to which I have referred to employ twenty additional men. I did not make any inquiries to ascertain whether those twenty men were the same whose names were on the requisition, but the circumstances induce me to think they were.

Q. Do you remember any other instance where you have been ordered from Washington to take men on your rolls here for service in the last three years?—A. Yes, sir; I cannot enumerate them. I have orders upon orders to take on men, more than I could enumerate, but all of which are on file.

Q. Do they name the men whom you are to take on, in any instance?—A. In most instances they name the men who are to be taken on; in others the order is to take on so many men.

Q. Have you received any of those orders just preceding elections?—A. Yes, sir.

Q. Are they mostly about that time; that is, are the larger number of men required to be employed about that time?—A. The orders for the employment of the larger number of men are made immediately about election time—just preceding election.

Q. How many men were employed, if you remember, just preceding the election of 1874, on account of the election?—A. By reference to the records, I find that the number so employed, just preceding the election of November 4, 1874, was five hundred and eighty-six in construction department, and a few, about twenty-five, I think, in steam-engineering department.

Q. Will you furnish us a list of the number of men employed at the yard in each month for five years past, in all departments, and the number of men discharged each month?

(List furnished. See appendix to testimony taken at Boston.)

Q. Do you know whether those men, when they are employed at those times I have mentioned, have been required by those who employed them to vote a certain ticket, or to vote for certain individuals, as a part of the contract of their employment?—A. I can't say.

Q. Do you know that the men who are employed at those times do vote a certain ticket?—A. No, sir; I don't. I only know that there was a big row here after this election. The general impression was that nine-tenths of the men who had been employed on the yard had gone back on their employers. That was the report at the time, but of course it is not within my knowledge.

Q. Do they march them out to vote in a regular line, or do they let them go and vote as they please?—A. No, sir; nothing of that kind is done here. It has been the custom at this yard, at presidential and gubernatorial elections, to give a half-holiday, to allow everybody to vote, and for ordinary local elections it is just as the commandant pleases. I have generally allowed them an hour to vote, and I think that has been the custom for years here.

Q. Do you or not think that the practice which has grown up in the navy-yards of the employment of a larger force just preceding elections is detrimental to the public interests?—A. I think most decidedly so, sir.

Q. You think that the public service in all its parts ought to be kept entirely aloof from political partisanship?—A. Just as distinct and separate from it as it is possible to be kept.

Q. Do you know of any other reason operating against the building of ships in the yards as cheaply as outside of them, besides the two you have mentioned? Has a contractor outside any advantage over the Government, except those two to which you have referred?—A. I don't know of any other advantage that he has.

Q. Then, as I understand you, if the Government could select labor as a contractor does, and everybody does outside the navy-yards, the Government could build vessels cheaper and better in a yard than they can be built by contractors?—A. I think so, or certainly as cheap. I believe that our ships are stronger than merchant vessels; our ships are more heavily built and timbered than merchant ships of the same tonnage, and necessarily must be so, because they are subjected to greater and more diverse strains. In merchant vessels the strains are more uniform than in vessels of war, owing to the more equal distribution of weight; for these reasons, as well as the many more fittings and appliances of a man-of-war, it will always cost more to build them per ton than merchant vessels.

By Mr. BURLEIGH:

Q. Is there twice as much fastening?—A. No, sir; I should not think there was twice as much.

Q. How much more should you think?—A. That question could be more intelligently answered by a constructor. I merely have a general idea of it; I know that our ships are more heavily timbered, certainly, than merchant ships, and are better fastened; but as to the relative proportion I can't say.

Q. They cost about four times as much, do they not?—A. I know they cost a great deal more than merchant ships do, but I hardly think the disproportion so great as that.

By the CHAIRMAN:

Q. Do you know how much timber you have in your yard? Do you know whether you have timber enough to build a vessel complete in this yard?—A. I should think we had, certainly; I will not say about the different materials that would go into construction; there might be some of which we have not a large quantity; but I think we have on hand, in the yard, the main part of the materials, in the way of timber, necessary for the building of half a dozen ships. I can't answer the question positively, but I should think so.

Q. Have you all your live-oak timber in wet-basins?—A. No, sir; a very small portion of it.

Q Is any of it exposed to the weather?—A. Yes, sir; the last delivery of live-oak timber is all exposed to the weather.

Q. Has that been received by the Government?—A. Yes, sir.

Q. Who delivered that live-oak?—A. W. C. M. Swift.

Q. Why is not that in your wet-basins; because you have not room for it?—A. We have not the room, in the first place, and we have not the force to put it in. When I say we have not the room, I mean that it would require considerable time and expense to prepare a place for it. We have put some in, recently, brought from East Boston by water, by means of a derrick on the vessel that brought it over. It was lifted over the wall of the wet-basin and dumped in there.

Q. Was this live-oak timber required by your constructor, or was it sent here by orders from the bureau at Washington?—A. Sent here by orders from Washington; or rather, I was ordered to receive all the live-oak timber belonging to Mr. Swift in the navy-yard and vicinity.

Q. Do you know how much of the live-oak timber that you have received is out of the basin?—A. No, sir; but by far the largest portion of it is out of the basin.

Q. How many cargoes were received from Mr. Swift?—A. My impression is that there were three schooner-loads; perhaps more.

Q. Did you decline to receive it without orders?—A. I knew nothing about it until I received the orders from Washington. There were two cargoes of live-oak timber came here some time last fall, if I mistake not, brought by Mr. Swift. I refused to permit the vessel to come alongside of the yard; refused to receive the timber unless a contract, or an approved requisition, or an order could be shown for it. The schooners disappeared; where they went to I don't know. Some time after, I can't tell how long afterward, I received an order from the Chief of Bureau of Construction to the effect that Mr. Swift had some live-oak at East Boston, which he had agreed to deliver, according to navy-yard measurement, or Government measurement—something of that kind—and authorizing me to permit the timber-inspector of the yard to go over there and measure that timber for Mr. Swift. Subsequently to that I received a telegram (I can't give the date, but the whole correspondence is on record) to permit Mr. Swift to land his live-oak timber in the navy-yard. I telegraphed back to the effect, "How much timber, and at whose expense?" An answer came back, "25,000 cubic feet, Mr. Swift to land the timber, the yard teams to haul it away, and the Construction Department to be at no expense." When Mr. Swift had delivered his 25,000 cubic feet, I forbade his landing any more. I then received another telegram to allow him to land 25,000 cubic feet more, and subsequently an order came permitting the landing of more live-oak. How much he landed at that time I don't know, but my impression is that it was upward of 60,000 cubic feet. Then, not very long ago, came the order to receive all of Mr. Swift's live-oak in the yard and vicinity, which embraced the live-oak in East Boston also, supposed and believed by me to be that which was on board the two schooners that came here to the yard previously and which I had refused to allow to land their timber. But I would much prefer to have the committee call for the correspondence and records in this case rather than trust to my memory. I sent over there and had the timber inspected.

By Mr. JONES:

Q. Do you know that you have in the yard what your inspector inspected over there?—A. I have nothing more than the word of the inspector. He certified to the bills.

By the CHAIRMAN:

Q. You have the report of your subordinate officer, not only of the inspection, but of the removal of the timber here?—A. I have the certificate of the inspector made to the constructor; or rather, it is on the bills. The timber-inspector is a subordinate of the Construction Department. He inspects the timber and makes his report to the constructor, and when the bills are made out for this timber, the timber-inspector certifies on the bill that he has inspected and measured it, and that the amount is correct. It also has the signature of the constructor on it, and then it comes to me. Finding the names of the constructor and the man who has the handling and inspecting of the timber on the bill, the presumption is that the bill is correct. Then it receives my approval, and the bill goes to Washington to be paid.

Q. The point of my question was, whether all the timber which was inspected was removed over here and is in your custody?—A. I have every reason to believe it is. It was loaded as it was inspected and measured onto lighters, or on a vessel that we have here, what we call an "anchor-hoy," and brought over.

Q. How much of Mr. Swift's timber did you receive in all?—A. I can't say positively, but my impression is that there was somewhere about 80,000 cubic feet—possibly more or less.

Q. Where is that timber now?—A. A portion of it is in the wet dock. The larger portion of it is piled up in the yard.

Q. Under cover?—A. Not under cover.

Q. Is it not being injured by being exposed to the weather?—A. I should say it was injuring. The fact is, that we have not the space or the facilities for docking the amount of live-oak timber that is on hand in the yard. This timber that I am speaking of now is a very small portion of the live-oak timber that is in the yard, but all the rest of it is under cover.

Q. How much live-oak have you got in the yard that is not in your docks, aside from this that you are speaking of that is under cover now?—A. I can't say, but I should think there were several hundred thousand feet not in timber-sheds.

Q. What is the price of live-oak per cubic foot?—A. It varies. I don't think that any of it is below a dollar a foot; still, I may be mistaken about that, and it goes up as high as $2.50, I think, and perhaps higher.

Q. Do you know what Mr. Swift's timber was received at?—A. I don't know. There are various prices, according to quality.

Q. Do you know what the aggregate was?—A. I approved the bill, but I don't remember the amount. I will furnish that from the books.

Q. From whom did the Government purchase that live-oak which is under cover?—A. That was from Mr. Swift, also, I think.

Q. He has been a contractor in live-oak for a number of years?—A. Yes, sir; I think he has.

Q. Does any one else supply live-oak to the yard?—A. No one else supplies it that I am aware of. The schedule this year was for 25,000 cubic feet at this yard; but it does not seem to have been awarded to any one. Mr. Swift at that time had his timber on the yard, under the order that I spoke of, to "allow him to land his timber on the yard, but at no expense to 'Construction.'" And this timber was already on the yard, when the annual contracts were awarded. The schedule called for 25,000 cubic feet only.

Q. Do you know how much of that live-oak was advertised for in this contract you spoke of where the other man made the lowest bid?—A. 25,000 cubic feet; I think that was the schedule.

Q. And that has all been furnished by Mr. Swift for this year, has it?—A. He has furnished that and a great deal more, by order of the bureau.

Q. How much more has he furnished by open purchase?—A. I hardly know what you mean by "open purchase," in that sense. The schedule for this year called for 25,000 cubic feet of live-oak only. Swift had much more than this on the yard and at East Boston, and it was all received by order.

Q. That schedule came from your yard on requisition?—A. I am not aware that any requisition was made for live-oak. When the award is made on a contract, the successful bidder is notified that his bid is accepted, and he commences, according to the terms of his contract, to deliver. Mr. Swift already had on the yard, when the contract was closed, this large quantity of timber, exceeding 25,000 feet, and all of that timber was received, besides that at East Boston.

Q. The point I want to get at is, did your Construction Bureau here make out a requisition at the commencement of the year, originating with itself, for this timber?—A. Not that I know of.

By Mr. BURLEIGH:

Q. Do you know of any live-oak that has been brought here until within the last two years?—A. Soon after I came here—over two years ago—the live-oak was coming in here so fast that we couldn't handle it. At one time Mr. Swift had several schooners loaded with live-oak at the wharves, on demurrage, that could not be unloaded. We were unloading at the same time.

By Mr. JONES:

Q. Was that received by orders from the Department?—A. Yes, sir; my impression is that it was being landed when I took command of the yard.

By the CHAIRMAN:

Q. In the course of two winters will not that timber be destroyed, for useful purposes, for ship-building?—A. I think not; but it will be injured very much. It is very tough, hard wood, but of course the winter frosts and the summer sun tend to shake it a good deal.

Q. It will crack very badly by exposure to freezing weather, will it not?—A. Yes, sir; unquestionably the timber is very much injured by being exposed, but I should hesitate to say that it would be ruined by two years' exposure, because we have some here belonging to Mr. Swift, or supposed to belong to Mr. Swift, that has been here for five years. It was rejected when it came here, and it is as hard as a brick now.

Q. Is it not cracked?—A. Yes, sir; it is cracked.

Q. Does not that injure it very much?—A. Yes, sir; of course. It was rejected timber in the first place, and we have never been able to get it out of the yard.

Q. One of the principal ways in which it would deteriorate is by cracking to pieces; that is the reason I asked the question whether it would be cracked in two winters?—A. It would be very much injured, undoubtedly. Where it is exposed in that way they nail slabs across the butts to prevent it from splitting.

Q. How much of that timber is on the yard, unreceived by you, belonging to Mr. Swift still, what you call rejected?—A. It is impossible for me to say. I gave directions a few days ago for the constructor to furnish me a list of all rejected material there was on the yard. He has not been able to furnish me that yet, but I will furnish a copy of that list.

(List furnished. See appendix to testimony taken at Boston.)

Q. Has there been any necessity for the expenditure of this large amount of money to purchase this large supply of live-oak on this yard?—A. I should say that it would be hardly necessary to procure such a large supply so rapidly. It is advisable to have a good stock of seasoned material always on hand, but whether it is judicious to accumulate it in such a short space of time is doubtful. I should be rather in favor of accumulating it more gradually, which would leave more money to be used for building and repairing ships; this accumulation of timber was a subject of general complaint among workmen, as it left but little money for the employment of labor.

Q. Have you a large amount of other timber on the yard besides live-oak?—A. Yes, sir; we have a large amount of white-oak timber and yellow pine.

Q. Have you the means of taking care of it, and preserving it?—A. Most of it, I think, is under cover.

Q. Have you got as much or more than you want?—A. I don't think we have as much of that kind of material on hand in proportion as we have of the live-oak.

Q. Is it liable to waste by being retained a long time on hand?—A. I think the pine, after a certain time, does deteriorate.

Q. Who furnishes you with your pine timber and white oak?—A. The majority of the white-oak timber comes from Maryland and Virginia, I think, and the pine from farther South. There is a man by the name of McCulloch, who has just delivered a cargo of white-oak logs. That was delivered on contract, and that is the only contract that I can call to mind now. There may have been other contracts for white oak, but a great deal of the timber and lumber that is furnished here is furnished by Mr. Trickey, formerly of the firm of Trickey & Jewett. I think there is no such firm now.

Q. He has been a contractor for a number of years, has he not?—A. I think he has, or has furnished lumber.

Q. Who furnishes you your coal?—A. That is furnished by contract from Philadelphia. Each department has its own coal.

Q. When you use that word "contract," do I understand you mean annual lettings by bids?—A. Yes, sir.

Q. Is there a certain amount furnished under contract, and then a larger amount by private contract with the same parties during the year?—A. I think not, sir. It might happen that, owing to some extraordinary circumstance, the annual supply of coal under the contract would not be sufficient to carry us through the year. Then the coal is purchased in open market. Generally, it comes from Philadelphia, brought by schooners. During what we call the Cuban war excitement, over two years ago, our stock of coal here was exhausted; that is, of steamer-coal, which is furnished by the Bureau of Equipment; and I wrote to the bureau to say that we were out of coal entirely, and they ordered two cargoes of coal from Philadelphia.

Q. They send to you every year to make an estimate of what you want of coal, live-oak, white oak, and other things which are necessary for your yard here. Now, when you make out your estimates for the amount which you deem sufficient to run the yard for the year, has it not been the habit of the Department at Washington to cut that down very largely in its annual lettings?—A. Not that I am aware of.

Q. Do they not furnish a small portion by annual lettings, and then purchase the rest in the open market during the year?—A. I don't know of any case of that kind. The only instance, as I say, that I have any recollection of is that case where coal was purchased in that way at the time of the Cuban war. We fitted out two large ships, which made a very large hole in our coal-pile, and the Bureau of Equipment ordered two cargoes of coal from Philadelphia. There is an officer stationed at Philadelphia, who purchases coal direct from the mines. I don't think that the price paid for coal in any department this present fiscal year was over $7 a ton. We got ours in the Yards and Docks Department at $6.39 a ton, I think. That low price was owing entirely to the low freights.

Q. Do you know anything about any material being shipped from this yard to any other part of the United States by order of the chief of bureau, or Secretary of the Navy?—A. Yes, sir; there have been large quantities of material shipped.

Q. What material?—A. Iron and steam machinery, and composition propellers, and a lot of scrap composition.

Q. Where has it been shipped to, and to whom?—A. My impression is that it was shipped to John Roach. The iron was iron-plating that came off of the monitor Miantonomoh, which

vessel was put into the hands of Mr. Roach to rebuild, and the machinery that was shipped away was also the machinery of the Miantonomoh, which was sent to Mr. Roach also. The composition-propellers were some that had been removed from vessels. Then a large quantity of new plate-iron, that had never been used, which was intended for an iron-clad now on the stocks, the Oregon, was also shipped away to Roach. There was also a large quantity of scrap-composition delivered to E. H. Ashcroft, of Boston.

Q. Do you know the amount?—A. The books will probably show, because everything was weighed.

Q. Do you know under that contract it was shipped away to Mr. Roach?—A. I do not. I simply had orders to send it away.

Q. Do you know anything about any gun-carriages that have been shipped off anywhere?—A. No, sir; I don't remember any gun-carriages being shipped off. There was quite a large number of gun-carriages sold at auction some time ago that were obsolete, and I believe some were furnished for experiments at Nut Island.

Q. By whose orders were they sold?—A. By the orders of the chief of Bureau of Ordnance.

Q. Were they advertised?—A. They were sold at advertised auction.

Q. Who purchased them?—A. They were purchased by different parties. They were not all purchased by one party. A good many were purchased by people for the purpose of breaking them up for fire-wood; at least, that is my impression.

Q. Were they useless to the Government? Had they been condemned?—A. They had been condemned. Possibly they might have been used in case of emergency, but they were old-style gun-carriages intended for guns that were out of date, as I understood the thing.

Q. Do you know what those gun-carriages sold for?—A. I do not. The books will show, and the ordnance-officer would be a witness on that point.

Q. What was the character of the iron that you were ordered to ship off to John Roach; was it new iron?—A. A portion of it was new iron, just as it had been delivered here in the yard, intended for the plating of the Oregon. It varied in thickness from one to three inches.

Q. Was it suitable for plating?—A. It was intended for armor-plating.

Q. Was it fit for it?—A. Yes, sir; presumed to be. I should think it was fit, because it was sent here for that purpose. I don't know anything to the contrary. There was also other iron which was the plating which came off of the monitor Miantonomoh. The wood was found to be very much decayed, and her turrets were taken off of her, her machinery all taken out, and her hull was stripped entirely of its iron-plating, which was all piled here in the yard. That iron-plating, and the new iron-plating that was intended for the Oregon, and the steam-machinery belonging to the Miantonomah were all shipped, I think, to John Roach. I don't now recall any other name than his.

By Mr. BURLEIGH:

Q. Will you tell us what was done with the hull of the Miantonomoh?—A. The hull of the Miantonomah was towed by the steam frigate Powhatan from here to New York. The machinery had been taken out of her for some years. She was nothing but a rotten hulk lying here with no deck on her at all. I received orders from the Bureau of Construction to furnish estimates of what it would cost to put her into condition to be towed to New York. The machinery and plating that came from the vessel were sent away by orders of the Department.

Q. What was the idea of towing that rotten ship around to New York?—A. That I can't say. My orders were to prepare her to be towed to New York.

Q. What did you do?—A. We spent, I think, somewhere in the neighborhood of $4,000, possibly a little more, in covering her over. We put a rough deck on her to keep her from filling up with water in case she got into a seaway, and calked her sides. We calked her outside partially; didn't give her any very thorough calking, of course, and she was towed around to New York by the Powhatan.

Q. Was she known to be rotten when she left here?—A. Yes. She had been condemned for years and laid here for years at the wharf.

Q. What should you say was her value?—A. Nothing at all; only an empty shell.

Q. You spent $1,000 on her?—A. The estimate was, I think, upwards of $8,000, and the bureau authorized an expenditure of about $5,000, I think, to prepare her so that she might be towed around without danger of sinking.

Q. Where did she go from there?—A. I don't know anything beyond her arrival at New York, but I am told she was towed from there around to Chester to be repaired by John Roach.

By the CHAIRMAN:

Q. Was that machinery which was shipped around to Roach good machinery? Was it a good engine?—A. Yes, sir; it was a good engine. I don't know what type of engine it was, but it came out of the Miantonomoh.

By Mr. JONES:

Q. Was it stove up here?—A. No; it wasn't broken up. My impression is that everything connected with the machinery of that vessel was shipped by schooners to Chester, Pa.

By the CHAIRMAN:

Q. Do you know of any copper having been shipped away from the yard?—A. If I remember rightly, we shipped at one time some bolt-copper to Portsmouth for use in the yard there. We had a surplus stock.

Q. When was that shipped to Portsmouth?—A. It was some time ago; I can't tell the date.

Q. Have you shipped any timber from here to Mr. Roach?—A. No, sir.

Q. Have you ever shipped any timber to anybody else?—A. None that I know of. During the building of the Adams at East Boston, we furnished a good deal of timber to McKay by orders of the Department.

Q. Did his contract provide that he was to be supplied with timber?—A. No, sir; the contract was that he was to be supplied with the live-oak frame only, and we kept an account of all this material and timber that was delivered to him, and it was charged to his contract. That is, I suppose it was. I know there was a deduction of some $18,000 made at one time.

Q. Do you know of any officer or employé of the Government who has given any consideration in money, property, or the representative of either, for any position, or for any benefit to be derived therefrom?—A. No, sir; I do not.

Q. Do you know of any contractor, or other person not connected with the Navy, who has given any money, or property, or the representative of either, to any person connected with the Navy, for the procurement of any contract or other benefit from the Government?—A. No, sir; I do not.

Q. Do you know of any person connected with the Government who has received any money, or property, or any present, for the procurement of any office or any contract, or any benefit connected with the naval service, either as officer, contractor, or employé?—A. No, sir.

Q. Do you know of the fraudulent or improper removal of any of the arms, munitions, or material for ship-building, tools, or property of any kind, belonging to the Government?—A. Some seven months ago, by authority of the Chief of the Bureau of Yards and Docks, and on my recommendation, a dredging-machine belonging to the Government was loaned to private parties under the following circumstances: These parties had a contract with the harbor commissioners to dredge out a shallow place between the city of Boston and the navy-yard, running over toward the navy-yard, and sometimes it had been a little inconvenience to us. They made a written proposition, that if the Government would loan this dredger to them for this purpose, for ninety days, they would take the dredger exactly as she was, put her in thorough repair, and return her to the Government at the end of ninety days, in thorough working-order. The dredger was at that time hauled up on the blocks with a considerable hole in her bottom, considerably out of repair, her boiler and machinery entirely out of her, and stowed away in the shop, and needing a good many repairs. I had an estimate made, previously, of what it would cost to put that dredger in thorough repair for the Government use, if we were to do it ourselves in the yard, and it amounted to upward of $2,000. These parties, as I say, sent in their proposition to take her exactly as she was, put her in thorough working condition, and return her in that condition, for the privilege of using her for ninety days, under this contract. The civil engineer of the yard submitted their proposition to me, with a strong recommendation that it be accepted, on the ground that we should want to use the dredger ourselves in a short time, and here was an opportunity to have her put in thorough order without any expense to the Government. I submitted the proposition to the chief of bureau, and recommended its acceptance, under the circumstances. The bureau acceded to it, and authorized the loan of the dredger. She was repaired on the blocks, and put in good condition, and taken away, and was performing her work, when I received a copy of a letter from a firm of dredgers here, Woolley Brothers, my impression is, to Collector Simmons, complaining that the navy-yard dredger was doing private work, and was interfering with the business of regular dredgers by working at a lower price than they could afford to work, and the navy-yard dredger was doing the work at a lower price, because its repairs and expenses were paid at the navy-yard. Mr. Simmons sent this letter to the Secretary of the Navy, and the Secretary of the Navy referred it to the Chief of Bureau of Yards and Docks, and he sent the correspondence to me. I immediately called on the civil engineer for an explanation of the matter. His explanation was not satisfactory to me, and by direction of the Bureau of Yards and Docks, I ordered a board to investigate the matter, and that board made a thorough investigation of it, and developed the fact that much of the expense that was put upon that dredger was put upon it here in this yard, at the Government cost, and with the knowledge and connivance of the civil engineer of the yard. The report and the entire evidence in the case were sent to Washington, and laid before the Secretary of the Navy four months ago, and no action has been taken on it yet. That is the only instance I can recall now.

By Mr. BURLEIGH:

Q. Was not the civil engineer suspended?—A. No, sir.

Q. No notice was taken of it?—A. No notice was taken of it so far as I know.

By the CHAIRMAN:

Q. State whether or not, when this matter was charged to this civil engineer by the board, he went to Washington to see about it?—A. He did not, at that time.

Q. Did he afterward?—A. He did subsequently.

Q. Do you know what he said when he returned?—A. I don't, except from rumor.

By Mr. BURLEIGH:

Q. Do you know how long he was in Washington?—A. My impression is he was there two weeks, perhaps longer.

By the CHAIRMAN:

Q. Have you any use for such an officer as a civil engineer in your yard?—A. I don't consider that we have.

Q. He is one of the officers that could be dispensed with without any detriment to the public service?—A. Yes, sir; my opinion in regard to the employment of civil engineers in yards is that it is simply a waste of money. We pay the civil engineer $3,000 a year, when there is really no engineering work that a person of good common sense could not perform. He has a clerk, and he is virtually the head of the department of yards and docks. If that department should shut up, everything would be obliged to shut up.

By Mr. JONES:

Q. Couldn't his duties be performed by the constructor, the boss joiner, and captain of the yard?—A. The constructor need not have anything to do with it, and the captain of the yard is already doing double duty, and the constructor has ample work in his own proper department.

Q. He might have to repair your docks?—A. Yes, sir, the gates.

By the CHAIRMAN:

Q. You could have his work performed very well by somebody and save that money?—A. Yes, sir; I think that any intelligent naval officer (they are being paid all the time) could perform the duties. I have always advocated getting rid of the civil engineer. He is a civil appointment, and, as a general rule, a political one, too; a head is necessary simply to keep things running straight in the department. A naval officer, say a lieutenant or lieutenant-commander, could take his place. And as he is on pay all the time, there would be no additional expense, and in my opinion the Government's interests would be more honestly cared for.

Q. Have you such an officer as captain of ship-keepers on your yard?—A. Yes, sir.

Q. Can that officer be dispensed with?—A. I should think he could be dispensed with and substitute some one at a less rate of pay. The constructor has charge of the ship-keepers, for all purposes of watching ships, &c., and has the nomination of them.

By Mr. BURLEIGH;

Q. Why does the constructor need a captain of ship-keepers?—A. It is a kind of police force, and on the same principle that in the police force of a city there are patrolmen, and roundsmen, and sergeants, and lieutenants, captains, &c. We have, for instance, here, I will say, twelve ship-keepers; for those twelve ship-keepers we have a captain and two quarterman. The captain received $1.50 a day. We have twenty-seven watchman, who are entirely separate and distinct from the ship-keepers. They are divided into three watches, nine in a watch, and, even at that, it is a small force to cover so large an extent of territory, where there are so many hands, and such a large water front open for thieving. They have three captains. It is necessary to have some one to oversee the watchman and ship-keepers, and see that they are vigilant and on their posts; to go around and visit them during the night, &c. As a comparison between the manner in which the service of one bureau is conducted and that of another, I will state that those three captains receive $2.75 a day.

Q. They are landsmen?—A. Not always. Some are sailors and soldiers.

Q. It is intended that a ship-watchman shall be a sailor, is it not?—A. A ship-watchman ought to be a sailor. I have tried, as far as I could, since I have been here, whenever there has been occasion to take one in, to take a sailor.

By the CHAIRMAN:

Q. You think that the captain of ship-keepers can be dispensed with?—A. Yes, I think he can be dispensed with. My impression is that there are a captain and two quartermen. If there is only one quarterman, I should say that if the captain of ship-keepers is dispensed with, another quarter-man should be appointed; but if there are two quarter-men, I don't think a captain is required.

Q. Couldn't the marines perform the duties of watchmen, and dispense with the watchmen entirely?—A. I think they could, under a different system.

Q. Do you know of any other person using the labor or property of the Government for the use and benefit of private persons, except in the instance you have mentioned?—A. No, sir.

Q. Do you know whether any of the bills of one fiscal year are carried over and paid out of the appropriations for the next succeeding year? Have you any orders on that subject? —A. Yes: I know that I have been ordered to change the dates of bills, to bring them within the fiscal year for the purpose of being paid, but, of course, I don't know whether those bills were paid out of the money of the fiscal year they were not incurred in or not. The presumption is that they were. The authority on which bills are incurred is required to be indorsed on the bills. In one case a set of bills came back with orders to make a new set, leaving off the indorsement of the authority. A set was made out in accordance with those orders, and that set came back again with orders to date them subsequently to the 1st of July, which was done.

Q. The changes required to be made by this correspondence were all to adapt your accounts to the new fiscal year, were they not?—A. I presume so, sir.

Q. When the appropriation for the current year is exhausted, what course do you take about your bills? Do you issue certificates of indebtedness, or anything of that kind?—A. No, sir; I have never done so.

Q. Do you know how much money is to the credit of your yard here now?—A. No, sir; I don't, except in one department—the department of yards and docks. The allotment for that department for the fiscal year is made at the beginning of the fiscal year by the chief of Bureau, and the commandant knows exactly what he has got to run on for the year, and regulates his expenses accordingly. The department of yards and docks is considered to be under the more direct supervision of the commandant than any other department.

Q. Is not the same course pursued in the other departments?—A. No, sir; the other departments make their monthly requisitions on the heads of the bureaus, and the amount is allotted. I have to do the same in regard to yards and docks. For instance, the Chief of Bureau of Yards and Docks writes me and says: "The amount of money allowed for the Boston navy-yard under the head of 'repairs and preservation' for the coming fiscal year will be so much; under the head of 'general maintenance' it will be so much. That is all the money you will be allowed for the fiscal year." Then it is left to the commandant to expend that money in the most judicious manner, in such works as have been previously recommended to the bureau. It is not left with the commandant to spend it exactly as he pleases, but he is to make an annual statement to the chief of bureau of what is required, &c.

Q. Do you know whether or not the parties from whom your purchasing paymaster purchases in open purchase pay him any commission for favors accorded to them in giving them contracts?—A. I don't know that they do. It is strictly prohibited.

Q. Do you know anything about the breaking up of the Virginia?—A. No, sir; the commencement of the breaking up of the Virginia was before I came to the yard, but the work has progressed so far that she is useless without a very heavy expense.

Q. How long has that vessel been at the yard?—A. She has never been launched. She has been on the stocks a great many years.

Q. When did they commence tearing her down?—A. It is over two years and a half ago, because it was begun before I came here.

Q. What was the object in tearing her down?—A. The reason given for it, according to the records, was, that they wanted the slip where she was to build a new ship in.

Q. Have they occupied it for the purpose of building a new ship since?—A. No, sir; they have not got rid of the old one yet.

Q. Two years ago, preceding the election, were there not hands employed here who were discharged immediately after the election?—A. Yes, sir.

Q. Would it not be beneficial to the public to tear that vessel down and get it out of the way?—A. She is of no earthly use as she is now. Her room would be better than her company. This expense could have been saved by having her torn down by private persons and giving them the timber, the Government taking the metal. Her frame is of live-oak, and it is as hard as iron. They saw her up in great blocks. They took a good deal of the planking off of her decks.

By Mr. JONES:

Q. Were you at this yard during the erection of the timber-bending machine?—A. I was not.

Q. Will you ascertain and give us the particulars in regard to the bending-machine?

(Contract and correspondence furnished. See appendix to testimony taken at Boston.)

Q. What is your opinion of the benefit of that bending-machine to the Government?—A. That is a difficult question to answer. I have never seen any of the results of its operation, but my common-sense view of it is, that a piece of bent timber is not as strong as a piece of naturally curved timber.

Q. Then you would not consider it of any benefit to the Government, would you?—A. I should think it was of very little benefit, if any.

By the CHAIRMAN:

Q. What is your opinion of ships built by contract for the Government?—A. As a general rule they are not as well built as ships built by day's work in navy-yards.

Q. Is it detrimental to the Government's interest to have contract-work performed in the navy-yard where the contractor has the privilege of using the tools and everything else in preference?—A. In revising the answer to this question, I would say that reflection upon the matter involved has caused me to change my views somewhat. I think the Government interests would suffer in a measure, for while the work would be supervised by Government officers, they could not exercise the same control over the employés as if they were in Government employ. The use of the tools and valuable machinery by them would be objectionable, because they have no interest in them, and therefore would be indifferent to their preservation. If the Government were doing work at the same time, there would inevitably be clashing and jarring, and it would be decidedly objectionable to have contractors' men roaming at will about the yard.

Q. Has the chief ever ordered you to receive timber or other material that had been rejected by the constructor?—A. No, sir; I have no recollection of having received any such orders.

Q. What was the nature of the investigation regarding white-oak knees at this yard about two years ago?—A. It was reported to me by an outside party, a citizen, that he had been in the habit of furnishing knees in the name of another party, that he had received pay for those knees from a Mr. Spooner, who was the receiving clerk in the construction department, and that he had now brought in a lot of knees which they were trying to cheat him out of the pay for, or something of that kind. I asked him how it was he got his pay here at the yard, when all public bills were paid by the paymaster in Boston. He said he didn't know how it was, only he knew that he got his money from Spooner. I immediately called a board to investigate the matter, and that board went into a thorough investigation of it, and developed the fact that this man, whose name was Jarvis, had been delivering knees in the name of Matthew Keeney. He testified that he had paid Spooner $500 for the privilege of delivering five hundred knees. Spooner denied that statement. Upon examining the books, it was found that the bills on which Jarvis testified he had received a certain number of dollars, had been made out against the Government to Matthew Keeney for considerably more, how much I don't remember now, than had been paid to said Jarvis. The whole transaction proved collusion and fraud on the part of Spooner and his subordinate in that department, and immediately upon the completion of the investigation I suspended him from duty. He was a Department appointee, and of course I could not dismiss him. I sent the report to Washington, with a recommendation that the man should be immediately dismissed. The board also recommended that the man should be immediately dismissed, as being unfit for the position, untrustworthy; and there the matter hung, I don't know for how long, but a considerable time, and Mr. Spooner never was dismissed.

By Mr. BURLEIGH:

Q. Is he here now?—A. No, sir; another man was appointed receiving-clerk, but Mr. Spooner was never formally dismissed.

By Mr. JONES:

Q. He has never been called since?—A. No, sir; he has not been called since.

By the CHAIRMAN:

Q. Those knees were brought into the yard, and they must have been inspected?—A. Yes, sir.

Q. To fill a contract with whom?—A. To fill a contract with Matthew Keeney. He claimed that he did not know anything at all about them. Mr. Keeney kept a corner grocery-store here in Boston, and he did not know a ship's knee from a bale of hay, but he let his name be used as a contractor, and this man Jarvis claimed that he paid $500 to Spooner for the privilege of delivering those five hundred knees, which Spooner denied. The whole thing is on our records here.

By Mr. BURLEIGH:

Q. Is that the only instance of that kind that has come to your knowledge?—A. That is the only instance of that kind of transaction.

By the CHAIRMAN:

Q. Are any articles received here after having been rejected?—A. It is sometimes the case that when articles do not come fully up to the contract, they are received at a reduced price. That is the case sometimes with timber. Timber may be a trifle short of what the contract calls for, but it is good timber, and will work in very well for some other purpose, and in that case it is sometimes received at a deduction.

Q. Did you receive any communication from I. Hanscom about 23d October, 1874, requesting you to approve requisitions for men; and, if so, will you furnish us a copy?—A. I did receive such a letter, and will furnish a copy. (See appendix to testimony taken at Boston.)

BOSTON, MASS., *March* 21, 1876.

Testimony of Commodore E. T. NICHOLS resumed.

By the CHAIRMAN:

Question. I think when we stopped last evening we were talking about the Adams, and about the material supplied to Mr. McKay. I see he is to complete that vessel according to the contract for $184,500, the live-oak timber to be furnished him by the Government. Did the Government furnish Mr. McKay in the first contract with any other material except live-oak—his first contract on the Adams?—Answer. Yes, sir; in this way: I was directed by the Chief of the Bureau of Construction to furnish Mr. McKay with such materials as he might require in the construction of the Adams and to charge those materials to the account of his contract. Some time subsequent, I think, to the launching of the vessel, bills for the eighth payment, as I recollect it, were sent to me from the bureau, with instructions to ascertain whether or not it was safe to allow McKay another payment (the eighth) under the terms of his contract. I had a calculation made from the constructor's books, by the naval constructor, who was the superintendent of the vessel, of the amount of material that had been furnished to Mr. McKay, exclusive of the live-oak frame, which amount I charged as so much money paid to Mr. McKay on his contract. After making the necessary calculations I reported that Mr. McKay had already received the eighth payment and a portion of the ninth, and that if the bureau was satisfied of McKay's ability to complete the vessel for the sum of the tenth payment and gross reservation, he was entitled to $9,465 as the cash portion of the ninth installment, and to no more until the vessel is completed. Not long afterward the bureau informed me that it had approved a bill in favor of McKay, on account of his contract, amounting to $12,000.

Q. Well, had the bureau ordered each one of the payments to be made to him, and the reservation also, leaving the matter of the timber open for further settlement?—A. That I could not say, sir; I can only say what my action was in regard to this communication from the bureau, inclosing these bills to me, and that I ascertained that Mr. McKay, according to the terms of his contract, had already been paid beyond what the contract called for, charging the material he received as so much money.

Q. Leaving the material out, then how was it?—A. Leaving the material out, I think he had not been paid up to the terms of his contract.

Q. How does the contract stand to-day? Has he been paid in full?—A. That I could not tell. That is the only money transaction in connection with the first contract of the Adams that came under my supervision at all.

Q. Do you know whether Mr. McKay had any charge for any extra work, or any demurrage, caused by the Government interfering?—A. I don't know personally that he had. But it was very currently reported, about the time of the launching, that Mr. McKay had refused to launch the ship, because the launching was not mentioned in his contract, and that he was allowed $5,000 to launch her.

Q. You don't know whether that is true or not?—A. No, sir; I gave that as the current rumor.

Q. From whom could we obtain that information? Would it be the constructor, or a paymaster, or Mr. McKay?—A. I presume from Mr. McKay himself.

Q. Do you know anything about the value of launching that vessel?—A. No; I do not, except that, from general knowledge, I should say that $5,000 for launching a ship of that kind was an extravagant price; very extravagant.

Q. Would $4,000 be an extravagant price?—A. I should think so, sir. The preparations far launching a merchant-vessel are very much more simple and inexpensive than they are with our naval vessels. We take every precaution to prevent accidents.

Q. Do you know whether Mr. Adams complied with his contract in the building of that vessel? Has he done all that he contracted with the Government to do? Do you know anything about that?—A. No; I do not—not being the superintendent.

Q. Who was the inspector?—A. During the first part of her building, and nearly up to the time of her being launched, Naval Constructor Samuel H. Pook, the superintendent constructor, was inspector. A short time before she was launched, Naval Constructor Easby relieved him at the yard, and became the superintendent constructor; Assistant Naval Constructor J. F. Hanscom was also superintendent for a short time.

Q. Did he use the tools of your yard to any extent in building that vessel, or get tools from you?—A. Not that I am aware of. I know nothing of it. I know nothing positively of his having used the tools. I was authorized to furnish tools, to be paid for if not returned.

Q. Did he have any work done by your machinery?—A. Not that I am aware of.

Q. Did they get out the frame for the vessal in the yard?—A. Yes, sir; the frame was got out; I will not say positively that all of it was got out; but I know that a portion of it was sawed out, for I was at the saw-mill one day and saw them at work.

Q. Who did that work?—A. The yard people; the mechanics of the construction department.

Q. Was that at the expense of the Government?—A. I presume it was.

Q. Has there ever been any charge made for that work?—A. Not that I am aware of, sir. There may possibly have been.

Q. Your books will show whom these men were working for, and what they were doing each day?—A. Yes, sir. The constructor's books will show that.

By Mr. HARRIS:

Q. Was it claimed at the time that the frame was to be gotten out by the Government?—A. I received a letter from the Bureau of Construction informing me that the molds for the sloop of war building at Portsmouth were to be sent to this yard, and the frame for the sloop of Mr. McKay was to be got out by the those molds. This is implied authority for the work being done in the yard. Subsequently an order was received from the bureau directing that the men employed in getting out this frame were not to be suspended.

By Mr. BURLEIGH;

Q. It seems to me that you must have had some orders. Did you have orders about delivering material?—A. Yes, sir; I had orders about delivering material.

By Mr. HARRIS:

Q. Let me ask whether the Government officers here determined what sticks entering into the construction of that vessel should properly be of live-oak?—A. That was specified in the contract, sir. The frame of the vessel—all that goes in in the frame is the ribs and stern, and stern-post, apron-pieces, &c.

By Mr. MILLS:

Q. Do you know whether Mr. Hanscom relieved him from doing any portion of the work on this vessel, that he had contracted to do, or permitted its omission?—A. I think that Mr. Hanscom authorized the omission of the making of the spars.

Q. The spars would come in the contract to finish?—A. The spars are specifically required by the second contract, but there is something about spars in the first.

Q. Was not that vessel docked at the expense of the Government?—A. She was, sir.

Q. By whose order?—A. By order of the Bureau of Construction.

Q. Now, about what was the expense of docking that vessel?—A. I could not say; the constructor would be able to give you more accurate information upon that point than I could.

Q. Is not that part of Mr. McKay's contract, to dock that vessel?—A. I do not remember whether docking is mentioned in the contract, but as he was bound to *finish* the hull, and launched the vessel without coppering, the docking for that purpose should be at his expense, He could have coppered her on the stocks, with consent of the Government, and saved the expense of docking.

By Mr. HARRIS:

Q. Could it be if he was not bound to launch her?—A. Having been launched without coppering, it was absolutely necessary to dock her for that purpose.

By Mr. JONES:

Q. How could he finish her bottom without launching her?—A. McKay raised a point about furnishing the graving material for putting on the bottom. I maintained, as the coppering came in the original contract, by which he was bound to furnish all the material except the live-oak frame, that he was bound to furnish the graving material. But in order to avoid delay, as the vessel was in dock, I authorized the material to be furnished, and informed the bureau.

By Mr. BURLEIGH:

Q. It says here in these specifications that all material necessary shall be furnished by Mr. McKay, except the live-oak timber. Now, can Mr. McKay build, equip, and fit the hull of a sloop of war complete, without launching her?—A. I should say that he could, sir; I see no reason why he should not.

Q. The building of the hull of that vessel complete is what is specified. Would it be complete without the copper?—A. Certainly not.

Q. If he had launched that vessel before he coppered her, whose would be the expense of docking her for the purpose of coppering her?—A. I should say unquestionably, Mr. McKay's, unless he was required by the Government to launch her before her being coppered; then there might be a question.

Q. The ship in the contract was built to be accepted by the inspectors of the Government. They were final, as you understand?—A. Yes, sir.

Q. Now, would the Government inspectors ever have accepted that ship until she had been put in the water?—A. I presume not, sir.

Q. You would think it was contrary to common sense?—A. Yes, sir; she is to be delivered to the Government afloat—not on the land.

Q. Then you feel confident that he must launch the ship before the Government inspector could accept her?—A. Unquestionably.

Q. Now, the expense of building, fitting, and equipping the hull of a vessel, you understand that is different from the rigging?—A. Yes, sir.

Q. "Building, fitting, and equipping"—what would that include?—A. That would include everything connected with the hull of the vessel proper, such as bits, pin-racks, pin-rails, and all fixtures, and the apartments for officers and crew.

Q. Then, when the ship was rigged after that, with her rigging complete, she would be ready for sea without any expense to the Government, would she not? Supposing that the Government had made a contract for the hull fitted and complete, and should then have made another contract with other parties to build the spars, and place upon her the sails and rigging—complete rig and fit—that being done, what else would the Government have to do?—A. The Government would then have to furnish the stores and outfits for the vessel.

Q. I put in the sails.—A. It might be a question whether or not the hull would include the completion and thorough equipment of the hull; whether that would include boats. There might be a question upon the contract.

Q. Would not that be governed by the usages in that respect?—A. I presume it would be governed by the common usages in contracting for building ships for sea—fitting ships for merchants.

Q. Do you know what the common practice is in merchant-ships?—A. No, sir; I do not. I have never seen a contract for building a merchant-vessel.

Q. The contract for a merchant-vessel would be to build a ship and hull, and spars, and sails, and rigging, ready for sea?—A. Yes, sir.

Q. Would or would not that include boats?—A. I should presume that it would include boats under those circumstances.

Q. Now, here is another clause in this which I wish to call your attention to. It says that the vessel "shall be built in all respects in accordance with the specifications and drawings hereto annexed, and which are hereby made a part of this contract, and are to govern the parties hereby contracting, as truly as if they were incorparated in this instrument. Nor is the omission of any detail therein, or object necessary to carry into effect the spirit and intent of this agreement to be to the detriment of the United States." What would be your construction of that?—A. That it would cover all contingencies, I should say.

By Mr. HARRIS:

Q. The expression "to build, equip, and fit the hull"—would you say that that included the coppering?—A. Yes, sir.

Q. Suppose the specifications themselves were silent upon the subject of coppering?—A. There would be a distinction between the merchant service and the naval service. We *always* copper our ships before sending to sea, *rarely* on the stocks, but more frequently docking them after launching. In the merchant service I believe the rule is never to copper until they have run her a voyage or so.

Q. In point of fact, who did copper this vessel?—A. Mr. McKay coppered her.

Q. Then he construed it to be a part of his duty. Who paid for the dock?—A. It was the navy-yard dock.

Q. Did he pay anything for the use of the dock?—A. No, sir.

Q. Could she be properly coppered upon the stocks before launching?—A. Yes, sir; I should say that she could. But an objection to coppering on the stocks is the danger of injuring the copper in launching.

Q. Could Mr. McKay afford to pay the extra expenses of docking rather than to copper on the stocks?—A. Well, that I could not say, sir. That would be a financial question for Mr. McKay to consider.

Q. You could give some idea of it, whether the risks to the copper would be so great that he had better pay the expense of docking than copper on the stocks. Would you think it wise always to put the vessel into the water to ascertain whether she was tight before the copper was put upon her?—A. I should say it was *necessary* to do so.

Q. If he was bound to copper the vessel, and so interpreted his contract, you would say that he was bound to launch the vessel at his own expense?—A. Most unquestionably, sir, and to copper her at his own expense, and I think you will find in that correspondence there, something bearing upon that very point.

By Mr. MILLS:

Q. Well, now, what is the contract for finishing the Essex and the Adams? Have you a copy of the second contract for the completion of the Essex and the Adams, and will you be so kind as to furnish it to the committee?—A. I have a copy here in my hand, but I wish to say that it is not certified to. I should prefer comparing it myself personally with the original.

Q. You will revise your testimony after we have got it written out for you.—A. This, which I now hand you, I believe to be a true copy of the original. (Contract read.)

Q. Now, as those two vessels are exactly of the same dimensions in every respect, why is the difference made in the price of finishing those two vessels after the hulls have been made?—A. The constructor is the person to get all this information from.

Q. I will withdraw that question. I will ask you further, commodore, do you know, at any time during the progress of that second contract, whether Mr. McKay was relieved from the performance of any part of his stipulations—was anything omitted on that vessel

that was contracted to be put upon her—the Adams or the Essex, either or both?—A. My impression is that there were exceptions made; but I cannot state from memory what they were.

Q. Would your constructor be posted in regard to those matters?—A. Yes, sir; because he was the superintendent, and had the carrying out of all the orders for any changes that might be authorized.

Q. We would like to have the correspondence relating to the work on the Essex and the Adams.—A. I will make a memorandum of it, and procure it for you.

Q. In contests that would arise between the naval constructor and the contractor, were they usually referred to you to decide between them?—A. Yes, sir.

Q. Were your decisions referred to the chief of the bureau at Washington?—A. Sometimes they were. But I could not say that they were in all cases. What was done privately outside of my office I don't know.

Q. Will you state that in the decisions of the chief of the bureau, that were had from Washington, he generally sustained the contractor, or otherwise?

Q. I ask whether he uniformly decided questions referred to him in favor of the contractor. It has been stated that he did.—A. That I should not be able to answer positively, without first looking over the correspondence, because I might make a mistake. If the committee are willing, I would perfer to look over the correspondence bearing upon that subject before answering.

(Correspondence furnished.)

Q. Then we will leave that subject. I ask you now if you know anything about the breaking up of two iron-clad monitors here, since you have been here?—A. Yes, sir.

Q. Do you know of any more that have been broken up?—A. I do not personally.

Q. Do you know of sales of any vessels that have been made at this yard?—A. Yes, the Shawnee and the Wassuc.

Q. What became of the plating and machinery of the Miantonomoh?—A. That was sent to John Roach, after I came here.

Q. There were two other vessels besides that were ordered to be broken up?—A. Yes, sir; two others were ordered to be broken up, and are still in process of being broken up.

By Mr. BURLEIGH:

Q. Then there are three such vessels since you have been here?—A. No; I testified pretty fully yesterday in regard to the iron of the Miantonomoh being carried away. These are two other vessels. I know nothing about the Miantonomoh except her being towed away. It was all done, except the removal of the iron and her being towed away, before I came. The two vessels alluded to are the Wassuc, what was called a light-draught monitor, and the Shawnee.

Q. Now about the sales of vessels?—A. Some time ago, possibly a year or more, those two vessels, the Wassuc and the Shawnee, were advertised to be sold at public auction, by order of the chief of the Bureau of Construction. They were so advertised, and the auction was held here in the yard, and the vessels were bid off by a Mr. Nat. McKay, if I am not mistaken. The prices for which they were sold I do not remember. The percentage of the purchase-money was deposited, according to regulation, or law, in the shape of a check, with the paymaster of the yard.

Q. How much was that, commodore?—A. I think it was 30 per cent., sir.

Q. That would amount to $13,000?—A. The vessels were to be delivered to the purchaser within, I think, twenty days after the confirmation of the sale by the bureau. When the sale was confirmed by the bureau, (which was some considerable time after the sale was made, I think about a fortnight,) I understood that the purchaser declined to fulfill his bargain, on account of the delay that had been made in the delivery. At any rate, the vessels were never delivered to any one; and, without being positive of it, my impression is that the paymaster of the yard still holds the check for the percentage. That is all there is in connection with the sale of the vessels.

Q. What were the terms of the delivery? You had them sold under your order?—A. Yes, sir The terms were 30 per cent., I think, down, and the balance on removal of vessels, within twenty days of confirmation.

Q. Were the parties to receive them as they were, as they lay by the wharf here?—A. Yes, sir; except that the guns and navy anchors and chains were to be removed—and boats.

Q. It required no delay on the part of the Government, except to tell them, "There is your vessel: take her."—A. That is all, sir; a week might possibly have been required to remove guns, &c.

Q. Did you do that?—A. No. The sale had to be confirmed in Washington. I had no authority to deliver them until confirmed.

Q. It was confirmed, was it not?—A. Yes, sir; my recollection is that it was confirmed, and that the purchaser declined to comply with his part of the bargain, because the Government had made so long a delay in confirming the sale. I think it was beyond twenty days before it was confirmed.

Q. Did you make the report of the sale directly to the Navy Department?—A. Yes, sir.

Q. Was there any delay in the confirmation of the sale from the Navy Department?—A. The delay was there if anywhere.

Q. Was it that the sale was to be confirmed within twenty days?—A. The vessels were to be removed within twenty days after confirmation. They had on board of them at the time they were sold, guns and carriages in the turrets, and it would have taken some time to have gotten those guns and carriages out of the turrets, and the delay in delivering them, after the sale was confirmed, was to enable us to take those guns and carriages out, as I understood.

Q. How long was it before you took them out; or did you take them out at all?—A. We did not take them out until the vessels were turned over to the parties who are now breaking them up.

Q. From whom did you receive your orders to break them up or to turn them over?—A. From the chief or the Bureau of Construction.

Q. You were ordered to destroy those vessels and what to do with the material?—A. The material—the iron, copper, composition, &c., belonged to the Government, and was to be stored here in the navy-yard. A question came up in regard to the wooden part of the vessels, which I referred to the bureau, and the bureau decided that the wood entering into the construction of the vessel might be taken by the contractor, as it had been done in former cases of breaking up.

Q. Did they give the contractors the wood?—A. Yes, sir.

Q. For what consideration?—A. None whatever.

Q. The Government paid all the expenses of breaking up the vessel?—A. No, sir.

Q. Did the contractor do that?—A. The contractors were to break up the vessel. The Government paid them $6 a ton for the iron taken off of the vessel; and that was all the Government paid them for breaking up the vessel, and then the Government gave them the wood.

Q. What became of the iron and metal taken off?—A. That was stored in the navy-yard. As it came off of the vessel it was carted and piled by itself, not very far from this building.

Q. Is it there now?—A. Yes, sir. What has been taken off is there now.

Q. They have not shipped any of it off?—A. No, sir.

Q. Have you orders to ship it, any of it?—A. I have orders to ship it to William Cramp & Sons, when they call for it.

Q. What was the efficiency of those vessels at the time you commenced to destroy them?—A. Their motive-power I believe—boilers and engines—was in good serviceable condition. The vessels themselves, so far as I know, were in serviceable condition. They required docking, and cleaning, and painting, and possibly might have needed some slight repairs.

Q. What became of the machinery, engines, and boilers?—A. The engines, boilers, and all the appurtenances, with the exception of some small separate pumping-engines and blowing-engines and so forth, which we took out before the sale, were sold.

Q. You mean pumps and fans?—A. No, sir; I don't mean the fans. I don't think the fans were taken out.

Q. They were taken out before it was sold. What did you do with the engines and boilers?—A. The engines and boilers proper of the vessel were sold to a Mr. Dole, I think his name is. My impression is that he was a partner with Mr. Powers in the contract for the breaking up of the vessel.

Q. Were those sold at private sale?—A. I don't know anything about the sale except that I was informed, from the Bureau of Steam-Engineering, that the boilers and engines had been sold to this person, for I think $10,000, and that the proceeds were to go toward paying Powers & Co. for breaking up the vessel; and if there was any money left after paying them it was to be deposited in the Treasury.

Q. The whole of the proceeds of the vessel, then, were given to the parties for destroying her, were they? They gave them the timber and then the machinery for destroying them. Was that the idea?—A. The machinery was sold for $10,000.

Q. To a partner of the man that broke her up?—A. I will not say that he is; but my impression is that he is. But, at any rate, the letter which informed me of the sale of machinery to this man, also stated that the proceeds were to be used in the payment to Powers & Co. for breaking the vessels up.

Q. You don't know how much of that went to their payment, or whether that paid the whole of the debt or not?—A. That cannot be ascertained, sir, until the work is complete.

Q. They were to have $6 a ton for the iron taken off?—A. The Government was to pay them $6 a ton for breaking up the hull of the vessel; and this iron as it came off of the vessel was to be taken and weighed on yard scales, under our own superintendence, and for every ton of iron they delivered they were to receive $6.

Q. Was the machinery to be weighed too?—A. No, sir; the machinery was sold in the lump.

Q. For removing it from the vessel, were they to have so much a ton for that?—A. No, sir. When the machinery was sold for $10,000, it belonged to the party who bought it. They were to take it out at their own expense.

Q. Where does this man Dole live?—A. I don't know, sir. But I could ascertain, I think.

Q. Where was the machinery sent?—A. That I don't know, sir. It is being taken out of the yard every day now, a portion of it. I don't know what progress they have made; but I think they have made considerable progress in taking it apart and taking out the iron. Here is the letter. [Mr. Harris reads the letter.] The payment of the money is between Mr. Dole, the man to whom the machinery was sold, and Powers & Co., the parties who were breaking up the vessels. There are two distinct things. Powers & Co. have a contract or agreement, or an order to break up those monitors; that comes from the Bureau of Construction; and they are to receive $6 a ton for breaking them up. While the vessels were in process of being broken up. the question came up as to what was to be done with the machinery; who was to take that out of the vessel, and at whose expense it was to be done, or something of that kind; and it was referred to the Bureau of Steam-Engineering, and this is the letter in answer to the reference.

Q. It appears that one order was from the Bureau of Construction, and one from the Bureau of Steam-Engineering?—A. Yes, sir.

Q. Now, did, on the letter, the parties that bought the engines pay the money over to that bureau?—A. No, sir. The wording of the order is this: That the offer of John Dole to take the machinery of the two monitors, Wassuc and Shawnee, as it now stands in the vessels, for $10,200, is accepted, and you will please deliver it to him, the amount to apply on the contract for cutting up the vessels.

Q. Now, has Mr. Dole ever paid for the vessels?—A. Not to the Government. He pays Powers & Co.

Mr. HARRIS. They probably are partners in both transactions. If they are, then the contract is all right. "You are to take the machinery at $10,000; you are to be allowed $6 a ton for cutting up," and one is to apply upon the other, and if they are equal, then that is a settlement.

Mr. BURLEIGH. But, provided that Mr. Dole takes the machinery and agrees to give $10,200, and they fail to comply and cut up these vessels, and only cut up $3,000 worth and then quit, it looks to me as though they have no right to make any contract of that kind, provided Powers & Co. fail to get out $10,200 in amount at $6 a ton.

The WITNESS. That is provided for in the order here, in this way: "The amount to apply on the contract for cutting up the vessels, and if any balance remains due (*i. e.* if there is any balance of this $10,000 after the vessels are cut up,) the same to be deposited with the paymaster of the United States Navy at Boston, and inform the bureau how much was applied on the contract, and how much deposited."

By Mr. MILLS:

Q. Going back to where we were yesterday, I want to ask you about how many men you took on preceding the election for Congress on November 3, 1874, in the months of September and October, under orders of the bureau at Washington.

Mr. HARRIS, (interposing another subject.) The $6 a ton applies to all metals taken off—copper, iron, and everything else.

The WITNESS. Yes, sir; I presume so. I just had my hand on the very letter itself from the bureau, which explained the whole thing. Here is the beginning of it. Here is the bureau's letter to me, and my reply.

By Mr. MILLS:

Q. Now how many men were employed in your yard under orders from the bureau during those months of September and October, 1874?—A. As per statement of the naval constructor there were 586.

Q. Was there any necessity to the public service for the employment of those hands?—A. I did not consider that there was.

Q. What was the cost to the Government of the employment of those hands, the entire cost?—A. That is a sum in arithmetic that would bother the lightning calculator.

Q. How much did you pay them a day, each hand?—A. The lowest rate of wages was $2 a day, for laborers. I suppose it would be safe to say that the average of all employed was $2.75 to $3, taking the higher rates with the lowest

Q. Now make your general average, from the time you employed those hands until they were discharged, and what will you say was the cost incurred by the Government by reason of their employment? You remember what your pay-roll was daily? Do you remember what your constructor reported your pay-roll to be daily?—A. No, sir; our pay-rolls are not reported daily, only semi-monthly.

Q. Do you remember what he estimated when called upon by the Department, in order to know how much it would take to pay your pay-rolls daily?—A. I would explain that that increase of 586 men that is specified there was not an increase all at one time, but it came on gradually, so that the cost per day was varying.

Mr. MILLS. That is the reason why I asked you to make an average.

By Mr. HARRIS:

Q. Will not the pay-rolls in the department show exactly he increase?—A. The pay-

rolls in the department are made semi-monthly. The pay-days are the 10th and 25th of each month, and the pay-rolls are made up to the 15th and the 30th. Those pay-rolls would show the total amount for the half-month, and by dividing by the number of days, of course it would show the average per day.

By Mr. MILLS:

Q. Here in this book Mr. Easby reports the daily pay-roll as $1,250.—A. We had discharged a great many men at that time, I think.

Q. Approximate as near as you can to what the cost was to the Government by reason of the employment of those men. You know about the time they were discharged. Make an average.—A. Well, sir, it would be impossible for me to do so without access to the pay-rolls, because sometimes we would discharge fifty men a day, and sometimes forty, and sometimes ten.

Q. But did you not commence discharging until the 5th?—A. We commenced discharging on the 5th of November.

Q. You discharged very rapidly then?—A. Yes, sir; we reduced the force down as fast as we could. I don't know how I could make an approximation. It would be nothing more than a guess, and I, being under oath, would rather be more positive than a simple guess. The only way to get at it, as I think, would be to take the semi-monthly pay-rolls, and average the principal time.

Q. Could you get that here?—A. Yes, sir; the duplicates of the rolls are here.

Mr. MILLS. We would like them.

By Mr. BURLEIGH:

Q. In that semi-monthly pay-roll you would find the clerks and the organization that obtains here all the time?—A. Yes, sir.

Q. And it would take a nice calculation on the part of the officers?—A. There are men here all the time.

Q. It would be easy to go to the pay-rolls and see how many were taken on at this time, and then how many were discharged after the election?—A. You want the pay-rolls for labor for September and October.

By Mr. MILLS:

Q. I asked the question, How many men did you take in under orders from the Department during those two months?—A. With all due deference to the members of the committee, I think they are duplicating me here a good deal. Things that I told about yesterday they make me tell over again.

Mr. MILLS. Yesterday I remember that you went over this ground; but I wanted to get the exact amount.

By Mr. HARRIS:

Q. Do you know how these extra men were employed?—A. Well, I cannot say how all of them were employed. I can only say that I took advantage of the influx of laboring people into the yard to do a good deal of cleaning up, what we call policing, piling up timber and stuff that was lying around loose, which was not a work of necessity nor a work of importance, but added to the neat appearance of the yard; and I took advantage of the labor to do it.

Q. Was there any large amount of heavy timber which required to be piled up; any large amount of live-oak timber?—A. There was a large amount of live oak timber here; but my impression is that most of it had been piled before this great influx of laborers took place.

Q. You have given the opinion that the Government did not require that labor at the time?—A. No, sir.

Q. In your judgment it was not required?—A. No, sir.

Q. Did you communicate to the Department at Washington your views upon that subject?—A. No, sir.

Q. You just obeyed orders?—A. My business was to obey orders, sir.

Q. There were charges made in the Boston Herald that a great many supernumeraries were employed, and that half a dozen men would be used to lift a stick, to lift which only two were necessary. What have you to say in regard to anything of that kind?—A. I know that on one occasion I watched from my office-window and saw three or four men standing by a loaded cart; I watched them for some considerable time. They were doing nothing but talking; and I went out of my office and walked around by the road, (it was some 150 yards, perhaps,) to get to this place where the men were, and as I approached them they saw me and began to scatter; and I called to them to stop, and asked them what they were doing. They said they were waiting for a rope to tie this load on. I asked them if anybody had gone for a rope. They said no, that there had not anybody gone for it, but they were waiting for a rope, nevertheless. So I took the four and marched them down with me to the clerk's office of the construction department, to have their names taken down and send them out of the yard and discharge them. On my way down, which was only a short distance one of them slipped me, and I only succeeded in getting down there with three; and wh

I came to count over the three, I found that one of them was an interloper that had stepped in in place of one of the culprits. On the way down a culprit had stepped out and this one stepped in, on information that they were being taken down there to be employed. So that I only succeeded in bagging two out of the four, and those two I discharged. The other two slipped.

Q. Do you know of any men being employed here under the name of carpenters or blacksmiths or artisans who didn't understand those trades?—A. I have no personal knowledge of it at all.

Q. Is that your impression—that men were brought here under the name of carpenters, &c., who didn't understand that kind of business?—A. It could only be an impression from hearsay.

Q. I suppose you have some pretty distinct idea about it?—A. I had an idea that there was a good deal of imposition and many worthless men were employed; and I have no doubt there was much skulking and loafing.

Q. I asked you if all the men taken on had to be taken on with your approval?—A. Yes, sir.

Q. So that if the recommendation came for certain men, or you were to employ certain men, you ordered them put upon the roll?—A. Yes, sir.

Q. Did you receive instructions from the Department at Washington giving you the names of the men to be employed in any instances?—A. In some instances I did.

Q. Now, what parties did you come in contact with in the putting in of those men? Who applied to you, or who brought the names to you or insisted upon their being employed?—A. There was no insistance at all practiced upon me personally. The heads of departments make out the lists of the men—what is called a requisition for the men. They make the lists themselves. They send the lists to me or bring them to me for appoval, and if I know nothing against any of the men—do not know them to be improper or bad workmen or anything of the kind—my duty is simply to approve those requisitions.

Q. Do you mean the heads of the bureaus here?—A. Yes, sir.

Q. So you appoint upon recommendation of the heads of bureaus here?—A. Yes, sir.

Q. Now, how did they get instructions to take on the extra men, or recommend them?—A. Any instructions to take on men would come through me.

Q. Did you receive such?—A. I did.

Q. From whom?—A. From the Chief of the Bureau of Construction and the Chief of the Bureau of Steam-Engineering and Secretary.

Q. Have you those instructions in writing?—A. Yes; all official instructions are on record.

Q. Will you furnish the committee with them for inspection, and then have copies of them made, if they desire?—A. Certainly, sir.

Q. Now, what members of Congress, or candidates for Congress at that period, appeared on the scene, if any?—A. None of them ever came near me, sir; I never saw one.

By Mr. MILLS:

Q. Were you ordered to retain, since you have been here, any clerks that you had no necessity for, whether you had the funds to pay them or not?—A. Not clerks, I think, sir, because they are salaried; as a general rule, they are salaried.

Q. I think I find that you recorded the suspension of certain writers here because you had no funds to pay them; but at the instance of certain parties you have been ordered to retain them. I want to know if they are necessary to the public service?—A. Can you refer me to the particular place? It may have been that in some instances I may have done it on account of the shortness of funds. [Witness reads order of March 18, 1874, from the Secretary of the Navy, of the original appointment of George W. Wood as writer.] Here is a letter from myself in regard to Mr. Wood, dated April 17, to the Secretary of the Navy, stating that the funds of that department are so reduced that it is impossible to keep Mr. Wood, unless some other person, probably more competent, is discharged to make room for him; that there are no other vacancies existing in any other departments of the yard, and that I am informed that he cannot be employed beneficially to the service; and that I have ordered his suspension until the pleasure of the Department is made known. On the first order his name was simply enrolled; but in consequence of the lack of funds he was not put on for pay.

(Reads:)

"SEPTEMBER 19, 1874.

"By direction of the Department, George W. Wood will be re-appointed as writer in the yard, under your command.

"ISAIAH HANSCOM."

That must have been in consequence of a suspension.

(Reads:)

"DECEMBER 19, 1874.

"By direction of the Department, George W. Wood will be employed as writer in the yard

"ISAIAH HANSCOM."

That must have been after another suspension.

Here is an order September 19 to re-appoint George W. Wood, and December 19, three months afterward, there was an order that he be employed as a writer in the yard. Within that three months he must have been suspended again, under general instructions for reduction.

That is all that I find in this book in regard to Mr. Wood. That kind of order is constantly making trouble.

Q. Were Mr. Wood's services required here in this department?—A. No, sir; I don't think that they were necessary.

By Mr. JONES:

Q. Was he competent for the business he was employed upon?—A. I know nothing of him personally. Those people do not come in contact with me; but I have a recollection or impression that Mr. Easby informed me that he was one of the least efficient men that he had in his department in that capacity.

By Mr. MILLS:

Q. Does the bureau or Department at Washington, in any number of cases, interfere by appointing parties here, and requiring you to take them in for clerks and writers?—A. Clerks and writers, I may say, are almost invariably appointed without any consultation with any one in the yard, without any requisition for their services.

Q. And without much reference to their qualifications for performing their duties?—A. There is no examination as to their qualifications.

Q. And in nearly all of the instances could you do without the services of the men sent you from Washington?—A. I think, in a great many instances, their services could be dispensed with.

Q. Do you regard that manner of the appointment of clerks and writers here in the yard as an abuse proper for correction?—A. I consider it exceedingly objectionable, sir; for it forces upon an officer who is responsible for Government property placed in his charge subordinates of whom he knows nothing whatever, and who are necessarily placed in positions of more or less responsibility, and without any consultation with him at all as to the necessity of these men, or their qualifications for their position. In other words, what I mean in plain English is, that the officer who is responsible for the property placed under his charge should at least be consulted in regard to the character of the subordinates who are placed in responsible positions under him.

By Mr. HARRIS:

Q. Will you state how long this present system has been in course of operation, as far as you know.—A. Well, sir, this is my first experience in command of a navy-yard, and I could not tell how far it goes back; but it has prevailed since I have been here.

Q. What would you think would be the proper mode of appointing the subordinates here in the yard? What would you recommend as the system which should be adopted?—A. I should recommend, sir, that when a vacancy occurs for any position as a clerk or a writer, that the head of the department, who is the responsible man, and who is responsible for the subordinate, should have the election of that subordinate, and that that subordinate should be subject to an examination, a competitive examination, to show his fitness for the position, and that when appointed to the position, he should subscribe to an oath to faithfully and honestly and diligently perform the duties of his office, the same as we all have to take an oath. Every military man has to take an oath; and I see no reason why a man placed in a civil position of responsibility should not be put under some restrictions. As members of Congress, you gentlemen have to take an oath. Judges of courts take oaths, and so do all officers in responsible positions in civil life.

Q. Should you say that the commandant of the yard, or the head here, should have the entire power in that matter, both as to the employment and discharge of men, without any appeal to any superior?—A. No, sir; not entirely.

Q. Then go on and give us your views.—A. The appointment should rest properly, I think, with the head of the bureau to which it pertains. But the appointment should not be made until the candidate has been examined and pronounced fit and qualified, and is acceptable to the person who is responsible for him after he is appointed. He should be recommended by the head of the department in which he is to be employed.

Q. Then you would go on, and having caused an examination and given your approval of the man, you would send his name forward to the Department for his appointment?—A. Yes, sir.

By Mr. HARRIS:

Q. Now, in case of removal, how would it be?—A. In case of removal it would have to be done by the same power that appoints him.

Q. You would think that the commandant of the yard should recommend his removal?—A. Yes, sir; that the commandant of the yard should recommend his removal; and the commandant should have the power always. I believe they all assume it now. I do, at any rate. In regard to all appointments made by a higher power than myself, I suspend them from duty and pay at once, for misdemeanor, and do not allow them to perform any duty until the matter is decided upon at Washington.

BOSTON, *March* 27, 1876.

Commodore E. T. NICHOLS recalled.

By Mr. MILLS:

Question. Will you state whether there is any material on this yard belonging to any other owner than the Government of the United States?—Answer. Yes, sir; there is.

Q. Please state what it is, and how much.—A. On the 14th of March, 1876, there was in Yards and Docks a quantity of white-pine timber which had not been rejected, but was part of a requisition for 25,000 feet. This amount was required October 25, 1875, and furnished by Mr. John Trickey. It was brought in here and left, and the amount of timber that is now here belonging to him is the overplus of the requisition. He furnished more than was called for, and has been notified by me officially to remove it from the yard. That is the only timber that I am aware of that is on the yard that has not been rejected. The rejected timber is as follows, as reported by Constructor Easby under date of March 22, 1876:

125 white-oak knees, the property of John Trickey.

17 of the above rejected October 25, 1873.

29 of the above rejected October 22, 1874.

79 of the above rejected November 20, 1874.

133 white-oak knees, property of Martin Keany; rejected, not having orders to receive them.

18 hickory butts, property of John Trickey; rejected April 26, 1873.

5 hickory spars, property of John Trickey; rejected April, 1873.

5,000 feet, board-measure, 3-inch $3 white-pine plank, property of J. W. Dwyer; rejected December 18, 1875.

200 sticks live-oak, property of W. C. N. Swift; rejected at various times since 1872.

26 spruce spars, property of A. A. McCullough; rejected February 14, 1876.

1,000 feet, board-measure, ash, property of Southard & Co.; rejected February, 1876.

2 sticks white-oak timber, property of John Trickey; rejected March 6, 1876.

66 sticks white-oak timber, property of A. A. McCullough; rejected March 18, 1876.

In reference to the 200 sticks of live-oak rejected, the property of W. C. N. Swift, I would state that under date of October 9, 1874, the Chief of the Bureau of Construction writes me: "Mr. Swift informs the bureau that he has at the yard under your command a quantity of rejected live-oak timber which he offers for whatever price it may be worth," and directing me to cause a schedule of this timber to be made, with an estimate of what it is considered to be worth for Government purposes. About March 24, 1875, I transmitted to the bureau a report of Naval Constructor Easby with regard to the above rejected timber belonging to Mr. Swift, in which he stated that there were about 19 pieces out of 193 that might be used for Government purposes. On the 15th of June, 1875, I called the attention of the Bureau of Construction to the above report, and recommended the removal of the timber, as it was a source of expense and was an obstruction to our four wharves. June 17, 1875, the bureau replied to foregoing letter, directing an examination to be made by naval constructor to ascertain if any of it can be advantageously used for the smaller vessels: and, if so, what would be a fair valuation for such. This order was complied with, and on July 6, 1875, I informed the bureau that the naval constructor reports, after an examination of the timber, that there are six pieces, containing 31¼ cubic feet, that can be used, and placing its value at $1 per foot. No action has been taken on that letter, and the timber remains here in the yard, where it has been, a portion of it, since 1871. Before calling the attention of the bureau to that rejected timber of Mr. Swift's, I had twice written to him requesting and directing him to have it removed from the yard. To my second letter, he replied that he was negotiating with the Department for the sale of it. After waiting a reasonable time, I called the attention of the bureau to the matter, and the correspondence that I have just quoted from was the result of it.

Q. I called the other day for a report of the amount of money expended in the construction department during the months of September, October, and November, 1874, exclusive of your permanent force. Can you furnish that report now?—A. As per memorandum furnished from the construction department, I find that $40,631.11 was expended in the month of September; in October, $49,642.69; in November, $23,504.40. That is excepting the money paid to the permanent force, such as clerks, writers, and foremen. The foremen are considered as permanent force. (See D.)

Q. Why was the amount for the month of November less than for either of the other months?—A. Because large numbers of men had been discharged.

By Mr. HARRIS:

Q. Can you tell us what the force was in the month of August? Was it larger or smaller than in September?—A. It was smaller, sir; because the increase went on through September.

Q. It began in September?—A. The increase began before September.

By Mr. MILLS:

Q. I wanted to get at the exact cost of the labor employed in consequence of the orders issued

to you from the bureau to take on more labor during the election excitement of 1874. Do the figures which you have just given show it?—A. No, sir; that is in construction department alone. That is the only department where any increase of labor was employed, excepting that there were twenty additional men taken on during the entire time in the steam-engineering department.

Q. You have not reckoned the cost of that labor?—A. No, sir; this is construction alone.

Q. Please give us the correspondence in regard to the last lot of live-oak timber purchased from Mr. Swift, and a statement of the amount as it stands between the open purchases and contracts for lumber.—A. I present it, as far as I have been able to get it. (See E.)

Q. I called on you for the number of men employed and discharged in each month for the last five years; will you please furnish it to the committee if you have it convenient?—A. I have the schedule here. (See F.)

Q. I also asked you for the amount expended from July 1, 1874, to January 1, 1876, by open-purchase contracts, and bureau orders.—A. I have had a table prepared, which I submit to the committee. (See G.)

Q. I called on you, also, for the weight of copper and iron delivered to John Roach & Son, under orders from the bureau.—A. I am prepared to furnish that information now. (See H.)

Q. Also, the correspondence in reference to the timber-bending machine.—A. Yes, sir; I have them here. (See I.)

Q. I also asked for the correspondence in regard to the rejected coal received under contract from S. P. Brown & Co.—A. I submit the correspondence, (J.)

Q. I also called for the names and pay of the men ordered to be employed by the bureau.—A. I have caused a schedule to be made, which I now present, (K.)

Q. Also, the correspondence in reference to the purchase of hemp of A. G. Cattell & Co.—A. I submit the correspondence referred to, (L.)

Q. Can you give us a statement of the timber and materials brought into the yard without authority?—A. I have the correspondence, and can have a statement made up. I can give the main facts from this correspondence. Under date September 24, 1874, I informed the Bureau of Construction that it had come to my knowledge that considerable quantities of timber and other materials had been delivered at the yard, for which there was no requisition or other authority, and that I had called upon the naval constructor for information in regard to it, (and inclosing a copy of the naval constructor's reply,) stating to the bureau that "if material is delivered in the yard in this way, without requisition or authority sent through the commandant, it will be impossible for me to properly scrutinize the bills or keep the run of affairs," and that, in order to prevent the recurrence of such a thing, I should forbid the reception of all articles not covered by duly-approved requisitions or orders from the bureau. Under date of September 26, the bureau acknowledges the receipt of my letter, and approves of my proposition to forbid the reception of all materials. I addressed a letter to Mr. Pook, in regard to this timber of which I have spoken, directing him, before leaving the yard, in obedience to orders assigning him to duty in New York, to furnish me with a statement of all lumber, timber, or articles of any kind at that time in the yard, which had not been covered by duly approved requisitions, and also to include in the same statement the amount of rejected material of all kinds remaining in the yard, with the time that it had been here, and by whom delivered. In reply to that letter, the constructor wrote me officially that there had been delivered by Messrs. Trickey & Jewett, 32,047 cubic feet of yellow-pine stock logs, and 5,280 cubic feet of white-oak plank stock logs, and 650 white-oak knees, not covered by approved requisitions, and stating that, to the best of his knowledge and belief, the above was delivered by consent of the bureau. Then there were 2,697¼ cubic feet of locust timber, requisitions for which had been approved by the bureau sometime after the timber was delivered in the yard; the price of it was in dispute. Then, of rejected timber, there were 200 feet white-oak plank, the property of Trickey & Jewett; 12 white-oak knees, the property of John Trickey; 18 hickory butts, the property of John Trickey; 5 hickory spars, the property of John Trickey; also about 300 sticks of live-oak timber, the property of W. C. N. Swift, delivered between 1871 and 1874, including 25 sticks live-oak timber, the property of James Bigler, rejected July 12, 1871. October 5, 1874, the bureau directed me to have requisitions made for the white-oak and yellow-pine timber, and for the 650 white-oak knees delivered by Messrs. Trickey & Jewett, for which bills can be made for the knees at regulation prices, and for the white oak and yellow pine at fair market-prices; and that the bills for the locust timber will be made at lowest market-price. That letter is indorsed on the margin, "Prices of the articles named herein were reported to commandant by Paymaster Plunkett in letter of October 8, 1874."

By Mr. JONES:

Q. Mr. Plunkett made the prices for this timber?—A. The market-price; he is required to certify on all bills the correctness of the price.

Q. This amount was received here without authority from the bureau, and then afterward there was a requisition made?—A. Yes, sir.

Q. By whose orders were the prices made?—A. Mr. Plunkett simply reported the market-price, as required to do.

Q. Was it taken at his price?—A. I think it was; I am pretty sure the bills were made out at those prices.

Q. Have you any statement that you can make to the committee with regard to the purchase of any diving apparatus?—A. I find a letter dated April 3, 1874, signed by Isaiah Hanscom, Chief of the Bureau of Construction and Repair, addressed to myself, stating that "Messrs. Wells and Morse & Sons, of Boston, have been authorized to deliver at the yard under your command, subject to inspection, eight of their submarine diving apparatus, nickel-plated, and complete in every respect, at $1,500 each."

Q. What is that diving apparatus used for here?—A. It is used in submarine work, examining the bottoms of vessels; and on one occasion since I have been here, we found it very useful in cleaning the propellor of the torpedo-boat Intrepid, which had fouled on one of the mooring-chains of the Ohio.

Q. Is that a reasonable price for these diving machines?—A. I am not familiar with the prices of those things, sir, but it seems to me to be a pretty large price.

Q. What is a diving apparatus? Is it like a diving-bell?—A. It is a diving-dress. It is what is called "submarine armor," and it has connected with it, or as a part of it, a force-pump, for pumping air down into the dress, when the man is wearing it under water.

Q. Can they work under water with it?—A. Yes, sir; work very well.

Q. One dress cost $1,500?—A. That is the price, sir; it is stipulated that they are to deliver them at $1,500 each.

Q. What are they made of?—A. The dress itself is made of rubber, and the head-piece, which is a helmet, is made of metal of some kind. There are rubber pipes for conveying the air, which are inexpensive, and a double-piston force-pump.

Q. Did you need eight of them at once?—A. No, sir; not at this station. I presume the eight were ordered here to be distributed.

Q. How often have you used any of them?—A. I don't know of their having been used but once since I have been here.

By Mr. JONES:

Q. Are the eight here now?—A. No, sir; some of them have been sent away. I do not remember whereto or when, but I recollect that some diving apparatus were ordered to be sent away. In connection with that order, I find another letter of September 8, 1874, "inclosing triplicate bills in favor of Messrs. Andrew J. Morse & Sons and Thomas F. Wells, for $12,000, to be canceled together with the original and duplicate bills, which are presumed to be in possession of the above-named parties or the paymaster. In order to pay these bills out of the appropriation to construction and repair, 1874–'75, you will please have two new sets made out, giving the bureau's authority for the purchase of the article after July 1, 1874. I. Hanscom." That is all the correspondence that I know of in connection with those articles. In connection with the timber previously spoken of in my testimony as being unauthorized, on the 16th of September, 1874, I addressed a letter to the Chief of Bureau of Construction, informing him that I forwarded to the bureau requisition No. 32, for 2,697¼ cubit feet of locust timber. It was represented to me by the naval constructor that this timber was already in the yard, and the requisition was intended to cover its delivery. "The requisition is this day returned, with the approval of the bureau, and in the body of it is this remark: 'This price is high, and it should be obtained at the lowest market-rates.' This would infer that the bureau supposed that the timber should be purchased in the market, whereas I am informed by the naval constructor it has already been purchased, or, at any rate, delivered." I further stated that I could not see how the above indorsement could be acted on, and respectfully asked specific instructions in regard to the bills. I also stated in the same letter that "the constructor informs me that this timber was received by order of the bureau, but I can find no such order on the records of the office." Under date of October 5, the bureau orders bills made for that locust timber.

Q. State whether you have received any amount of lumber from Messrs. Trickey & Jewett by order from the Department for which there had been no requisition; and, if so, when and why did you receive it?—A. Besides what I have already testified to, as having been delivered in the yard by Messrs. Trickey & Jewett without authority, there was a quantity of white-pine lumber, the bills for which, amounting to $11,244.82, were approved by me on the personal assurance of Mr. Trickey himself that he had ample authority to make said delivery, and I transmitted the bills to the bureau with a letter explaining my action thereon. The date of my letter was July 30, 1874. Under date of August 1, 1874, the Bureau of Construction informs me that the white-pine lumber delivered by Messrs. Trickey & Jewett was delivered by the order of the Department, and that in order to make the books regular they directed me to have the usual requisition forwarded to the bureau for approval. That is all I can find in relation to unauthorized lumber or material.

Question by committee. "Please give the day, date, and amount of metal sent from the yard; whether it was sold here to parties, who took it away; whether or not the same was sold at private sale or auction."

Delivered to C. E. Pennock & Co., by bureau's order of January 31, 1872, aboard cars; sent to yard, 200$\frac{480}{2240}$ tons of bloom-iron, rolled at yard mill; 39$\frac{1329}{2240}$ tons bloom-iron, made by Pembroke Forge Company; and on the same order, to M. A. Herrick, treasurer Nashua Iron

Company, by order of D. W. Richards & Co., to them by John Roach & Son, and to them by C. E. Pennock & Co., $91\frac{624}{2240}$ tons of unsheared scrap-iron, and $50\frac{1}{2240}$ sheared scrap-iron. (See letter A.)

"A.

"NAVY DEPARTMENT,
"BUREAU OF STEAM-ENGINEERING,
"*January* 31, 1872.

"SIR: The bureau has disposed of the old iron, &c., enumerated in the list inclosed in your letter No. 200 of the 23d, with the exception of the boilers in the Franklin and Niagara, to C. E. Pennock & Co., of Coatesville, Pa., who will remove it from where it now lies at their own expense.

"Please give them every facility of the yard to enable them to get this iron away without expense to the Government. Also please detail an assistant engineer to oversee the removal of this iron, to see that the quantity given in the report is removed and no more.

"Respectfully,

"J. W. KING.
"*Chief of Bureau.*

"Rear-Admiral CHARLES STEADMAN, U. S. N.,
"*Commandant Navy-Yard, Boston.*"

Delivered to American Tube Works, by bureau's order of July 3, 1874, and June 26, 1874, 221,810 pounds of old boiler and condenser tubes, and 10,450 pounds yellow-metal sheathing. (See letter C.)

"C.

"BUREAU OF STEAM-ENGINEERING,
"*Washington, July* 3, 1874.

"SIR: Referring to your letter of the 25th ultimo, No. 131, with the inclosure relative to old brass tubes, you are informed that the bureau has disposed of all the brass tubes in the engineering department of the Boston navy-yard that are considered unfit for use, to the American Tube Works, they to remove them after they shall have been loaded on their teams by the yard force.

"Please have the tubes weighed as delivered, and the weight reported to the bureau.

"Respectfully,

"WM. W. W. WOOD,
"*Chief of Bureau.*

"Commodore E. T. NICHOLS, U. S. N.

"Forwarded for the guidance of Chief Engineer Farmer.

"RICHARD M. BARTLEMAN,

Question by committee. "Have any engines or machinery been delivered to outside parties; and, if so, to whom, when, and by whose order.

Delivered to John Roach & Son, November 23, 1874, by bureau order of October 20, 1874, all of the engines, pumps, shafting, propellers, and instruments of the United States steamer iron-clad Miantonomoh. Delivered June 7, 1875, to James Power & Co., on order of John Roach & Son, the four boilers complete belonging to the same. Weight of iron in boilers, 179,980 pounds; old composition, 21,490 pounds. (See letter D.)

"D.

[Telegram.]

"PHILADELPHIA, *October* 20, 1874.

"To Commodore E. T. NICHOLS,
"*Charlestown, Mass.:*

"Please deliver to John Roach all the machinery, boilers, and appendages belonging to

Miantonomoh connected with and under cognizance of bureau of Steam-Engineering and return invoice of same, which forward to bureau after delivery.

"WM. W. W. WOOD,
"*Chief of Bureau.*

"Forwarded to Chief Engineer Farmer, in charge of stores.

"EDWARD FARMER,
"*Chief Engineer, United States Navy.*

"OCTOBER 20, 1874."

Now being delivered to John Dole on bureau's order of January 27, 1876, the machinery of the two monitors, Wassuc and Shawnee, at the price of $10,200. Sold by the Department. (See letter J.)

"J.

"NAVY DEPARTMENT,
"BUREAU OF STEAM-ENGINEERING,
"*Washington, January 27, 1876.*

"SIR: The honorable Secretary has directed the acceptance of an offer of John Dole to take the machinery of the two monitors, Wassuc and Shawnee, as it now stands in the vessels, for $10,200, and you will please deliver it to him, the amount to apply on the contract for cutting up the vessels; and if any balance remain due, the same to be deposited with the paymaster United States Navy, at Boston, and inform the bureau how much was applied on contract and how much deposited.

"Respectfully,

"W. W. W. WOOD,
"*Chief of Bureau.*

"Commodore E. T. NICHOLS, U. S. N.,
"*Commandant Navy-Yard, Boston, Mass.*"

Respectfully submitted.

C. C. E. MOORE,
Clerk Steam-Stores.

Question by committee. "Did you ever manufacture any iron in this yard; and, if so, what kind, and at what cost? When was the mill closed, and by whose order?"

There was manufactured in this yard from the time the mill commenced running, in May, 1872, up to the time it was closed, June 30, 1874, a total of about eight hundred tons of flat, square, round, half-round and angle shapes. The cost per pound for this iron to the Government, ascertained by adding the cost of the scrap-iron at the market-rate of 1¼ cents per pound to the total of money paid out for labor, coal, oil, supplies, and superintendence, and dividing this amount by the total quantity of iron produced, was 3 7/10 cents.

The mill was closed per order of Bureau of Steam-Engineering, July 1, 1874, and the order for the same was dated June 30, 1874.

Respectfully submitted.

C. C. E. MOORE,
Clerk Steam-Stores.

BOSTON, *March* 20, 1876.

Captain EDWARD Y. MCCAULEY sworn and examined.

By Mr. BURLEIGH:

Question. What is your office?—Answer. Captain in the United States Navy; captain of the navy-yard, Charlestown.

Q. How long have you been here?—A. Since December.

Q. Are you acquainted with the manner of employment of laborers on the yard?—A. No, sir; excepting in my own department. I am also equipment officer. I am the police officer and equipment officer.

Q. You are the executive officer of the yard?—A. No, sir; that office was abrogated about a year ago.

Q. Since you have been here, do you know of any cases where persons have been designated by the bureau at Washington to be employed at this yard when no requisition had been made for them here?—A. No, sir. In my present position I would not be likely to know anything about it.

Q. Do you know of any person drawing pay on this yard who performs no service here?—

A. No, sir; I do not. Those things are kept entirely out of my way. I know about a man named Jeremiah Galvin here, about whose honesty there are some suspicions, and it is very questionable in my mind if he earns his $3 a day as inspector of chips.

Q. Are you making any chips here now?—A. They are always cleaning up the yard, getting wood out of the docks, &c.

Q. How many men have you at work making chips?—A. None at all in my department.

Q. This man is inspector of chips?—A. Yes, sir; he is inspector of chips.

Q. And his pay is three dollars a day?—A. Yes, sir.

Q. How long has he been here?—A. I haven't the slightest idea. I presume, from my general impression of the thing, at least a year. He came here by an order from the department. He cannot read nor write. His tickets come in to me signed by a cross. He has been moved from one place to another, and is now inspector of chips.

Q. Do you know of any person who is on two pay-rolls, drawing pay from two different bureaus or departments?—A. No, sir.

Q. Do you know of any abuse of any kind in the naval service here or elsewhere?—A. I have nothing at present in my mind that I could testify to; and what I have is hearsay. When in command of a ship—and I have had practically the command of the Asiatic squadron—I am responsible for everything; and no double-dealing can take place unless I have a hand in it myself, and that I am under too heavy bonds for.

Q. That is, your honor?—A. My existence—35 years' service; all the past, and no future.

Q. Do the officers stand more in fear of what we may call politicians than they do of the contractors?—A. I don't think they stand in fear of politicians. I do think they stand in fear of contractors. That is the general character of the officers of the Navy. That is to say, if I should meet a politician, the chances are, I meet a gentleman and a friend. If I should meet a contractor, I should run as fast as possible to get out of his way.

Q. For what reasons?—A. Because I have seen so many cases in my life-time of contractors getting officers into trouble. I have seen officers who have avoided them.

Q. Into such trouble as what?—A. I was on a survey in 1851 or 1852, and sent home some bread from the Independence, at Spezzia, and the bread was bought by a contractor, rebaked, and sent out again to me. It was reported bad, and I went and examined it, and found it in the barrels that I had marked myself That bread came home, and was bought the second time, and the lieutenant who was inspector in the yard refused to pass it. He was told to do so by this contractor, and refused, and the next morning a telegram came removing him, and the bread came out to the Mediterranean the third time. I think that to remove an old officer, with a large family, under such circumstances, is too bad.

Q. How did the contractor accomplish that?—A. He must have applied to the Department to have him removed, because he had not passed his bread. That occurred in the New York navy-yard in 1852.

Q. Have you had any cases of that kind since then?—A. Not that I remember at the present moment. These cases come up and dwindle away.

Q. Do you think that fear of contractors prevails among the officers of the Navy where they are brought in contact with them?—A. I do.

Q. For such reasons as you have testified?—A. Yes, sir.

Q. Have you ever known any contractor to threaten any naval officer if he interfered with his supplies in any way that he would get him removed?—A. No, sir. All I know is by hearsay. I never come in contact with them personally, but I know that is the feeling among the officers. This feeling does not arise from a solitary instance. I have heard relations of the facts about timber coming into the yard. A quantity of timber came into the yard; part of it was received, and part of it was condemned. The contractor, after a short time, produced orders from Washington to receive this rejected timber. I hear these things. I know that that contractor has that power, and were I brought in contact with him, he would tell me either to pass that timber, or I should leave the yard.

By Mr. MILLS:

Q. Do you know of any instances where contractors have prevailed on the Department at Washington to remove an officer on his refusal to pass any of their material?—A. I know Commodore Boardman was removed from the New York navy-yard, shortly after he went in there as commandant, because he refused to do what some ward politicians told him to do.

Q. If a man stands by the Government up and down in trying to do his duty, he does it, then, at the peril of being removed, in your opinion?—A. I think he does.

Q. Do you think that that feeling obtains among the naval officers generally?—A. I think it does.

Q. Do you know any instances where men who have endeavored faithfully to discharge their duty, and reported some abuse or something of that kind, have been removed?—A. Yes, sir; I know the case of that lieutenant, which occurred in 1852. I cannot, unfortunately, give his name. I cannot give instances, but my general impression is that if a Navy officer came in contact with a contractor, and refused to do what he was asked to do, influences would be brought to bear against him.

Q. Are the same influences brought to bear upon the employment of persons in the yard as laborers?—A. That I can't say. I have nothing to do with it. The laborers are all appointed by other people, and the commandant has charge of all that.

Q. Has it been customary in the departments to remove skillful mechanics, and put on unskillful ones, that they may serve political ends?—A. Yes, sir.

Q. Are we to understand from what you have stated that a contractor has more influence with the Navy Department than naval officers have?—A. Most decidedly, I should say so.

Q. You do not feel that you could safely say to the Department at Washington, "This is detrimental to the public service?" You do not think it would be safe to make a complaint that such doings were detrimental to the public service?—A. I think that, in an individual case, where I honestly recommended that a thing should not be done, I would be listened to by the Department at Washington; but I think a persistent rejection of articles or interference with contractors would result in my removal.

Q. So you would not feel safe in pursuing such a course?—A. No, sir.

Q. You understand that when a person is employed here, it is with the understanding that he is to vote a particular ticket, or use his influence for its success?—A. That I can't say about; that is merely hearsay; I believe it is so.

Q. Have you heard any of those employed say so?—A. No, sir; not lately.

Q. Do you know of any officer or employé of the Government who has given any consideration in money, or property, or the representative of either, for any position or any benefit to be derived thereby?—A. I do not.

Q. Do you know of any contractor or other person not connected with the Government who has given any money, property, or the representative of either, to any person connected with the Government, for the procurement of any contract or other benefit from the Government?—A. I do not.

Q. Do you know of any person connected with the Navy who has received any money, or property, or present, for the procurement of any office, or any contract, or for any benefit in any manner?—A. No, sir. That is entirely without the limits of my knowledge. I could not possibly know it.

Q. Do you know of the fraudulent or improper removal of any arms, munitions, or materials for ship-building, tools, or property of any kind, belonging to the Government?—A. Only cases of petty larceny that come under police.

Q. In those cases, have the perpetrators been discharged if they were employés on the yard?—A. They have been proceeded against legally, before the United States commissioner.

Q. Have they been punished?—A. No.

Q. Because they were not proven guilty?—A. I will state an incident. A man went out the other day with two logs of lignum-vitæ slung across his shoulder, with his coat thrown over them. The guard saw him, arrested him, and took him over to the commissioner. He was discharged, because the commissioner said nobody could say that he did not carry those sticks of wood into the yard. He probably took them into the yard, and brought them out in that way, concealed under his coat!

Q. What is your opinion of the compound engines?—A. I have never seen one operate, but I don't think they have produced the effect in our men-of-war that they were intended to produce, from the reports I have heard from vessels where they are used. I don't think they are as economical as simple engines.

Q. Do you know of any person using the labor or property of the United States for the benefit of any other than the Government?—A. No, sir.

Q. You do not know of the laborers in the yard being used for the benefit of persons outside the yard?—A. I know nothing of that kind, of my own knowledge. The commandant has undoubtedly told you what has come within his knowledge. There is a long story about the dredger which he knows, and probably of a good deal else.

Q. Do you know anything about false bidding, straw-bidding, or combinations among bidders or dealers to suppress competition?—A. No; I should not be likely to know of it.

Q. Do you know whether there is room in your wet basin here to take care of all your live-oak?—A. I think there is, properly stowed.

Q. It is not all in the basin?—A. No, sir; but there is room for it.

Q. Does all the live-oak that is on the yard belong to the yard?—A. No; there is some here that does not belong to the Government. There is some that has been condemned, which is to be removed, and there is timber in process of coming in to fill contracts.

Q. Is there any live-oak timber in the store-houses that the Government does not own?—A. None that I know of.

Q. Do you examine the articles that come into your department?—A. Yes, sir; and if I have any doubt I call in an expert.

Q. What do you mean by "an expert?"—A. If t is crockery-ware, when I am in doubt about it, I send over to Abraham French, and get him to send over a man. For the prices I refer to the price-list. For iron-ware, I call in the blacksmith of our department, and ask him to inspect the article. If it s anything which I know nothing about, I send over to town and get an expert to come over before I certify to the receipt. It is not often that I have to send for experts.

By Mr. BURLEIGH:

Q. Is it the general opinion of naval constructors and men acquainted with ship-building that the frames of ships should be built of live-oak?—A. Yes, sir.

Q. If ships are to be built of live-oak, is there any necessity for bending-machines to bend the timber?—A. No; I believe they are of very little use.

Q. Do you think that the frame of a ship ought to be built of bent timber?—A. No, sir.

Q. Is it customary to advertise for bids for supplies?—A. When large amounts are required, it is. I have not been familiar with that. I make my requisitions on Washington, and they direct me where to obtain the goods. They refer me to some firm, stating that the article can be obtained at such or such a place in New York, where they have made contracts for general delivery to the service.

Q. And you buy directly from them?—A. Yes, sir; we send the requisitions directly to them, and they fill them. We don't negotiate about the price at all. That the Department arranges, and it has a schedule of prices. Nichols & Co., I believe, are the contractors for crockery, as being the lowest bidders.

Q. Are the bills sent to you?—A. The bills are sent to me merely to sign as received.

Q. Are you posted in regard to the market-prices of the articles on those bills?—A. Yes, sir.

Q. What is your opinion in regard to the price paid by the Government; is it lower or higher than the market-price?—A. I think, at the time the bids were made, they were very fair prices. At the present time, I think they are in excess.

Q. You think the Government is paying more than the articles could be bought for in open market?—A. Yes, sir; I called the attention of the Government to the fact that they were paying 20 per cent. more for crockery from Nichols & Co. than I could get it from Abraham French & Co.

Q. Do you know whether they have a yearly contract with Nichols & Co.?—A. No, sir; I know nothing about it. I merely presume that they have, the same as they have for our hardware. A majority of our hardware comes from Walton & Co., New York.

Q. Do you know what they pay for that; whether it is above or below the market-price?—A. No; they do not pay above the market-price. We have had but very little since I have been here; but wherever the price is in excess of the market-price, I call the bureau's attention to it.

Q. Have you been called upon to notify them of that fact more than once or twice?—A. Yes, sir; two or three times. But the bureau could not very well have been aware of it. In one case it was some buoys furnished by Walton & Co. They charged $80 or $90 for a buoy.

Q. How many were there?—A. I think three or four.

Q. You were ordered to buy those buoys?—A. Yes, sir; they were ordered to supply them.

Q. By the bureau at Washington?—A. Yes, sir; by the bureau of Equipment. The moment I called the attention of the bureau to it, they wrote me not to pay the bill, but to settle it on the basis of some just price. I wrote to New York to ascertain what they were paying at the yard there, and asked the chief engineer what Lowmoor iron was worth; and then, making a fair allowance for having molds made, I allowed them $33 for the buoys, I think it was, instead of $80.

Q. Have you had other goods of the same firm?—A. Yes, sir.

Q. How were the prices of the other goods?—A. Very moderate; very reasonable. In our Bureau of Equipment, whenever there is an excess of charge, or anything irregular in that way, I immediately report it to the bureau, and in every instance have had the matter attended to and corrected.

Q. Have they given orders to this firm since that time?—A. No, sir. That was for the Vandalia, and she went off, and we closed down on all purchases after that. The purchases in the bureau are very small. There is nothing but state-room furniture and carpets for the cabin.

Q. Don't you have a purchasing-paymaster here?—A. There is one in Boston.

Q. Does he not purchase such articles as you call for?—A. No, sir; the bills go to him for settlement.

Q. Does he not go into the market and make purchases?—A. That is merely incidental, when we are short of anything, and have no time to send anywhere else to get it, or it is something not in the regular line. If we want a few pounds of wire to make hooks, of course we get it from some other department. If we want some small thing, a dozen chairs for a cabin, for instance, we send over there.

Q. Is that all the use you have for the purchasing-paymaster?—A. O, no.

Q. What does he do?—A. He settles for all the purchases for the yard, settles for the transportation we send away, settles for the transportation on board of the receiving-ship, and pays all bills outside of the navy-yard; pays the Navy officers' traveling expenses, and the Navy officers' pay that are ordered to the station.

By Mr. BURLEIGH:

Q. Do you know whether your bills are paid with the usual promptness now or not?—A. No, sir; I can't say.

Q. You know of no failure in the promptness of payment?—A. I can't say whether there is or not. The bills receive my signature indorsement that they are correct.

Q. You know about your own pay?—A. Yes, sir.

Q. Are you paid in full?—A. Yes, sir; but as soon as a bill leaves my hands, with my indorsement upon the back that the material has been received in good order, that bill goes over to the purchasing paymaster, and I see no more of it. Whether it is paid six months after, or a year after, it is impossible for me to know. I presume they are paid about as rapidly as Government bills usually are.

Q. Do you think the office of civil engineer in this yard is necessary?—A. Not at all.

By Mr. MILLS:

Q. Do you think his clerk can be dispensed with?—A. I cannot go into the detail of the matter, but I think the office might be dispensed with altogether, as I am under the impression that it is rarely a civil engineer fills the position.

Q. Do your duties and his ever come in collision?—A. No.

Q. Are there not a great many of the duties which he attends to which you could just as well do?—A. Yes, sir; he does not come in contact with me. He could not do it, because the distance between us is too great. I have charge of the yard, and in the absence of the commodore I am commandant. But I can see his finger in a good many things where he trusts to my easy-getting-along manner.

Q. Are you familiar with the duties of the watchmen?—A. Yes, sir.

Q. Do you think that those duties could as well be performed by the marines?—A. I doubt if the marines could do the duty as well. These watchmen have been here for twenty or thirty years, and they have too much to lose to connive at any dishonesty; whereas a marine, who is here to-day and on board ship to-morrow, has not the same interest.

Q. How many clerks have you, and what work do they perform?—A. I have one clerk, who keeps the record of all the laborers in the yard. Reports from all the different departments are sent to me every day I receive a written statement of all the yards and docks people and what they are employed at, cleaning streets, screening coal, and whatever every man is doing. There are some twenty or thirty of them. Then he also keeps the navy-yard log, and does any writing I may require.

Q. You have only one man?—A. Only one man. I had two, but since we reduced the work down I discharged one.

Q. Do you think the inspector of timber might be dropped, and the heads of bureaus do the work better?—A. My impression is that the head of the bureau does the work, independently of the inspector.

Q. Do you mean to say that he does not follow the inspection by the inspector?—A. When the inspector has inspected a lot of timber, Mr. Easby goes down and inspects the timber himself, and satisfies himself personally that it is all right.

Q. Then whose inspection is taken?—A. Mr. Easby's.

Q. What is the use of the other man's inspection?—A. I don't know. That is something outside of my department.

Q. Do you have an inspector in your department?—A. No, sir; I have a lieutenant-commander who is my assistant in that department, and signs himself as inspector.

By Mr. JONES:

Q. Are you familiar with the form by which articles are passed out of the yard?—A. Yes. They are passed out by a pass signed by me.

Q. Who is the gate-keeper?—A. The gate-keeper is the sergeant of the guard, with a detective there by the name of Trickey.

Q. What is Mr. Trickey's duty?—A. It is that of a detective, and very useful he has been, too, in searching out petty larcenies, thefts, and preventing, by his knowledge of the people, disreputable characters from coming into the yard. He is there at all hours when the yard is open, when carts are coming in and out, and he also sees that the workmen in going out carry off nothing. A good many men have been stopped by him since he has been on duty in the yard, who were attempting to carry off things.

Q. Is he a son of the contractor?—A. He has acknowledged to me that Mr. Trickey is his father.

Q. Could he pass out material without your knowledge?—A. Yes, sir.

Q. Does he ever do it?—A. As far as I know the man, I don't think he does.

Q. By whom was he appointed?—A. I don't know. It was long before my time.

Q. Do you know of any abuses about this yard?—A. None at all have occurred so far since I came here, except what the commandant has told you.

Q. Do you know of any Government officer receiving presents or bribes of any kind?—A. I do not.

Q. Have you ever heard of any?—A. No, sir.

BOSTON, *March* 21, 1876.

Testimony of Capt. E. Y. MCCAULEY, continued.

The WITNESS. About this coal. It appears it was ordered to come in detail. Mr. Bartle-

man inspected the first, and they came and rejected it; a board of Navy officers was called. That which arrived was ordered to be docked by the Navy Department, and the cost of picking to be taken from the bill of the cost-price. There are the bills made out with the cost deducted of picking the coal; and there is a letter here also which I don't understand, referring to something of that kind. At that time we didn't receive the orders describing things. This was in 1870, when I was far away. This letter is to the commandant, Commodore Charles Steedman, I presume—to the Navy Department Bureau of Inspection. [Reads letter dated September 14, 1870.]

By Mr. MILLS:

Q. Mr. Bartleman says that this was about 3,500 tons of coal.—A. Here are the amounts of coal received of S. P. Brown. Here is one of 464 tons, by schooner Mountain Eagle, $3,300, cost of picking coal, $213, deducted. Here again is S. P. Brown. There is no deduction there. It was that one single lot, I presume. That is all I could understand about it very well. It was never all delivered.

Mr. BARTLEMAN. I have my rejections for four of the vessels, and, if my memory serves me, I stated that the other vessels contained the same kind of coal, and it was decided by the other officers. I inspected four, for I have read the orders this morning. [Reads report upon the coal that was suitable to be received, signed by Spencer. Also, report of Chief-Engineer Bartleman, on another lot that was not suitable to be received. Also, another report recommending that the bone and slate be picked out of another cargo, which was ordered to be done at the expense of the contractor.]

Q. Was it impossible to get good coal without doing that?

Mr. BARTLEMAN. We managed to get good coal the other day by rejecting everything which was attempted to be shoved off upon us. It had to be picked at the mines and not at this yard. If a party contracts to give good coal, it is not the way to make it good coal by picking it after it comes here. You can't stand over the men who are picking it and watch them.

Q. Did they use the force of the yard in picking it?—A. I think they used the ordinary gang of the yard in picking this coal.

Q. How many of them were at work?—A. I cannot tell; but it was a suitable number of them.

Mr. MILLS. Take time to-morrow and hunt up the information.

Adjourned to 7 o'clock p. m.

Coal received from S. P. Brown & Son under their contract for the years 1870 and 1871.

	Pounds.
Schooner M. A. Franklin	$801\frac{168}{2240}$
Schooner Panther	$852\frac{630}{2240}$
Brig M. C. Comery	$464\frac{1320}{2240}$
Schooner Loretta Fish	$563\frac{900}{2240}$
Schooner Rhoda Holmes	$548\frac{355}{2240}$
Schooner S. A. Watson	$429\frac{800}{2240}$
Schooner M. D. Haskell	$456\frac{1642}{2240}$
	$4,116\frac{420}{2240}$

Report of board appointed to examine the coal of the M. D. Haskell.

UNITED STATES NAVY-YARD, BOSTON,
September 28, 1870.

SIR: In obedience to your order of this date, we have held a strict and careful survey on the cargo of coal of the brig Comery, and respectfully report: That in our opinion a satisfactory selection can be made from it, so as to receive it in conformity with the contract; and we recommend that all the lumps of solid slate and those containing slate or dirt, so far as practicable, be picked out by hand before it is received in store.

Respectfully, &c.,

A. BRYSON,
Captain United States Navy.
E. LAWTON,
Chief Engineer United States Navy.
E. D. ROBIE,
Chief Engineer United States Navy.
J. HANSCOM,
Naval Constructor United States Navy.

Commodore CHAS. STEEDMAN,
Commandant.

Approved.

CHAS. STEEDMAN,
Commandant.

This coal was picked over on the recommendation of the board by the ordinary gang, and charged by Bureau of Yards and Docks to the department in transfer account; the total cost of picking the coal was deducted from the account of S. P. Brown & Son.

Copy of report of board appointed to examine coal of schooner M. D. Haskell.

UNITED STATES NAVY-YARD, BOSTON,
September 30, 1870.

SIR: In obedience to your order of this date, we have held a strict and careful survey on the coal now in the schooner M. D. Haskell, and report that, in our opinion, it is not of a quality sufficiently good to be received.

Respectfully, your obedient servants,

A. BRYSON,
Captain United States Navy.
E. LAWTON,
Chief Engineer United States Navy.
E. D. ROBIE,
Chief Engineer United States Navy.
GEO. P. HUNT,
First Assistant Engineer United States Navy.

Commodore CHAS. STEEDMAN,
Commandant.

This board was appointed by commandant to examine this coal, and the correspondence in relation thereto was made by the senior officer of the board.

[The Western Union Telegraph Company, dated Washington, D. C., October 1, 1870. Received at Charlestown, Mass.]

To Commodore CHAS. STEEDMAN,
Commandant Navy-Yard:

Coal per Mary E. Haskell has been inspected, passed, and paid for at Philadelphia. It must be received.

DANL. AMMEN,
For Chief of Bureau Equipment and Recruiting.

Copy of report of board on the schooner Loretta Fish.

UNITED STATES NAVY-YARD, BOSTON,
September 28, 1870.

SIR: In obedience to your order of this date, we have held a strict and careful survey on the coal in the schooner Loretta Fish, and report, in our opinion, the quality is not sufficiently good to be received.

Respectfully, &c.,

A. BRYSON,
Captain United States Navy.
E. LAWTON,
Chief Engineer United States Navy.
E. D. ROBIE,
Chief Engineer United States Navy.
GEO. P. HUNT,
First Assistant Engineer United States Navy.

The correspondence in relation to this coal was made by the senior officer of the board, and we have no record on the files of this office in relation to the above coal.

Copy of report of board appointed to examine coal of schooner M. A. Franklin.

UNITED STATES NAVY-YARD, BOSTON,
September 14, 1870.

SIR: Agreeably to your order of this date, we have held a strict and careful survey u the coal on board the schooner M. A. Franklin, and respectfully report in our opinion it i good quality, and should be received.

Respectfully, your obedient servants,

W. F. SPICER,
Captain United States Nav
E. LAWTON,
Chief Engineer United States Na
GEO. P. HUNT,
First Assistant Engineer United States Na
C. J. McCONNELL,
Assistant Engineer United States Na

Commodore CHAS. STEEDMAN, U. S. N.,
Commandant Navy-Yard, Boston.

Approved.

CHAS. STEEDMAN,
Commandant.

We have no correspondence in this office showing why this board was ordered.

Report of board appointed to examine coal received from schooner R. Holmes.

UNITED STATES NAVY-YARD, BOSTON,
September 28, 187

SIR: In obedience to your order of this date, we have held a strict and careful surv the coal now in the schooner R. Holmes, and report that in our opinion it is not of a qu sufficiently good to be received.

Respectfully, &c.,

A. BRYSON,
Captain United States Na
E. LAWTON,
Chief Engineer United States Na
E. ROBIE,
Chief Engineer United States Na
GEO. P. HUNT,
First Assistant Engineer United States Na

Commodore CHAS. STEEDMAN,
Commandant.

Approved.

CHAS. STEEDMAN,
Commanda

The correspondence in relation to this coal was between the senior officer of the b and the commandant.

BOSTON, *March* 20, 187

E. K. McMICHAEL sworn and examined.

By Mr. BURLEIGH:

Question. Do you know anything about the bending-machine at the navy-yard?—Answ I known of a bending-machine that once stood in East Boston, which was built by Mr. G fiths, and, as I understood, was owned by Glidden & Williams, Howes & Crowell, an man by the name of Brown. I was a ship-builder at that time in Boston, and some time a the machine was completed and in operation, I was invited, with others, to witness its op ation. At that time Mr. Isaiah Hanscom, who was then constructor at the Charlestown na yard, was present, and Mr. Griffiths bent one or more sticks of timber. I had talked w Mr. Hanscom before in regard to the machine, and he always claimed that it was an i practicable thing, and after witnessing the operation, Mr. Hanscom said that the machine w not practicable for ship-building purposes. His argument was, that you could not ben

straight stick of timber, and have it as strong as nature would make a crooked stick. He did not believe it would ever come into practical use as a practical success in ship-building.

Q. Was William Hanscom there at that time?—A. No, sir; I do not know that he had been re-instated at that time, and I do not know but he had.

Q. Do you know that that machine was ever used in building a ship?—A. Yes, sir.

Q. What was the name of that ship?—A. The New Era.

Q. How large a ship was she?—A. I think about 1,200 tons.

Q. What was her frame made of?—A. White oak. They were a long while building her, and Mr. Griffiths told me the cause of the delay was, that they could not get the right kind of timber to bend; it took a peculiar kind of timber. He talked with me about getting some timber for him. I had a brother-in-law in Maryland who was in the business.

Q. Ordinary timber would not work with that machine?—A. No, sir; that is, not for sharp curves.

Q. Did you ever know the frame of any other ship to be built by the use of this machine except the New Era?—A. No, sir.

Q. Do you know whether or not the New Era was pronounced a success?—A. Mr. Griffiths pronounced it a success, and I have heard some of the owners of the vessel say it was a success. That is, the ship stood well.

Q. Did the owners of the bending-machine own any part of the ship?—A. The owners of the machine built the ship, as I understood.

Q. Those same owners never used it on any other ship?—A. No, sir; it was never used except on this one ship.

Q. Have those same owners built any ship since?—A. Not that I know of.

Q. What became of that machine afterward?—A. I understood the Government bought it and put it into the Charlestown navy-yard.

Q. Don't you know that they put that machine into the Charlestown navy-yard?—A. I did not see it going there. I know it as well as I know anything that I did not help handle.

Q. Did you ever see it in the yard?—A. I was never in the building but once.

Q. State to the committee what you know about the machine after that?—A. I have no knowledge to impart about the machine after it was in the yard. I don't know anything about it.

Q. What other prominent ship-builders were present at the time the trial was made at East Boston?—A. I don't remember now.

Q. Was there a difference of opinion in regard to the value of the machine, at that time, outside of those interested in it?—A. I don't think you can find a ship-builder in Boston who would not condemn it.

Q. And did then condemn it?—A. Always did, whenever I heard them speak of it.

Q. How large was the timber that you saw operated on there with the machine? Was it large enough for the frame of a thousand or twelve hundred ton ship?—A. If I remember, he bent two sticks for hanging knees that would have been suitable to put into a ten or twelve hundred ton ship.

Q. Did he break the grain of the timber in bending it?—A. Not very much, those pieces that he bent.

Q. Were they steamed before he bent them?—A. Yes, sir.

Q. They were hot when he bent them?—A. Yes, sir.

Q. What is the usage here, where a man proposes to build the hull of a ship; is he expected to put her in the water or not at his own expense?—A. Yes, sir.

Q. I believe you made a bid on the Enterprise?—A. Yes, sir.

Q. Did you expect to put her in the water when you made that bid?—A. I should not want to say without looking at my proposals. Perhaps I may have excepted that. If I did not except it, I expected to put her in the water, of course. If I build a vessel, I expect to launch her.

Q. In the case of the McKay ship, building the hull and putting in the machinery, what would you expect, if nothing was said in regard to launching her?—A. I should have expected to have built that ship, launched her, and done all the wood-work connected with putting in the machinery—"waited upon the machinery," as we call it; cutting the holes, and doing all such work.

Q. How much would it be worth to launch that ship?—A. I would have launched the McKay ship for $500.

Q. Without assistance from the Government employés?—A. O, yes.

Q. What would have been the expense of launching the Enterprise, built in Kittery, the Government putting out the lines to stop her, furnishing blocking convenient, making the wedges, and getting out the ways?—A. I should rather launch a ship outside, but then I should have been glad to launch that ship for $500.

Q. Do you think that $500 would have been sufficient to launch the Enterprise where she was?—A. Yes, sir.

Q. Do you think it could have been contracted to have been done for that by as good ship-builders as there are in this vicinity?—A. Yes, sir.

Q. It was a pretty large job; was there much competition and talk among ship-builders in relation to getting these contracts?—A. Yes, sir; considerable on both ships; that is,

on the Griffiths and McKay ship. There was considerable competition on the Griffiths ship.

Q. There were not a great many bids, I suppose you understand?—A. I understand there were but three bids.

Q. Did you ever understand or hear why there were not any more? Did you ever hear any ship-builder say they should not build the ships, and give any reason for not bidding on either of them?—A. I have heard some of them say the reason they did not bid was because they took it for granted I was going to have the Griffiths job, and it was no use for them to bid for it. I have understood that the people at Kittery supposed I was going to have her. I don't know why they should think so.

Q. Did either Mr. McKay, or Mr. Griffiths, or both of them, hold out any inducement to you to aid them in getting their contracts?—A. Mr. Griffiths never did. I did all I could to aid Mr. McKay.

Q. How much did he agree to give you for doing that?—A. He agreed to give me for helping him get the vessel, and my services on her, (I went to Washington for him, at his request, and assisted him what I could,) which were not to exceed four months, $3,000.

Q. Did you go to Washington and render him four months' service on it?—A. No, sir; the four months' service was to be in building the ship.

Q. Did you render it to him?—A. No, sir.

Q. Did he pay you $3,000?—A. No, sir.

Q. How much did he pay you?—A. He paid me $675.

Q. Whom did you see in Washington in relation to it?—A. I talked with Mr. Hanscom.

Q. What inducement did you hold out to Mr. Hanscom?—A. Well, I don't know; I simply coaxed him to give it to McKay; that is all there was about it; the same as anybody would.

Q. You went to Washington and used what influence you could with Mr. Hanscom to get him to give the ship to him?—A. Yes, sir; that covers it about all. I made no promise and offered no inducement to him.

Q. When he got the contract Mr. McKay did not require your services any further?—A. Mr. McKay commenced work on his ship, and I asked him from time to time when he wanted me to go to work. Finally, I did go to the navy-yard, and picked out a stem, a stern, &c., and worked four or five days for him. His friends were all the time coming to me and asking me if I wouldn't settle off with McKay short of $3,000. The first I knew, to my surprise, I had an appointment from the Navy Department to go to New York and superintend the repairs of iron-clad ships. Then I looked the thing all over, and knowing he was a hard man to get along with, I settled with him the best I could, and got $675, when he had agreed to give me, and I have his writing to that effect, $3,000.

Q. What iron-clads did you superintend?—A. I superintended the repairs on the Catskill and one other iron-clad, the name of which I cannot recall.

Q. From whom did you receive the appointment, how long were you there, and what were you paid?—A. I received a telegraphic dispatch from the Chief of the Bureau of Construction, Mr. Hanscom, to report at No. 34 Murray street, to Mr. Steele, who was the constructor there; that is, he had charge of all the outside work. I went there without knowing what my pay would be, really. It was intimated to me that it would be $1,500 a year. I supposed it would be more, and I went there and staid through January, February, March, April, and May. The Catskill was repaired by Tom Rowan, at Green Point. The other vessel was repaired right across the river, at Quintard & Murphey's. They were light-clad monitors, both of them. I was acting under Robert Steele, constructor.

Q. What pay did you get for that?—A. At the rate of $1,500 a year. That shows you that it was a losing go with me, settling off as I did with McKay. I could not afford to stay in New York for any $1,500 a year.

Q. Were you in Washington at the time the President signed the bill for the building of the eight sloops of war?—A. I was there the day the President signed the bill, as I was told.

Q. Was Mr. Griffiths there at the same time?—A. Yes, sir.

Q. Did you have any talk with him about building any of those ships?—A. I talked with him about where they would be built, and he told me they would part of them be built outside and part in; and he told me he should have one of them.

Q. Did he tell you the grounds of his belief?—A. Not at all. I was rather surprised that the man should know so much. I did not know any reason why he should know.

By Mr. MILLS:

Q. Did Mr. Hanscom tell you anything about it?—A. No, sir.

Q. Did you have any conversation with him on the subject?—A. Not a word.

Q. Did your bid on the Enterprise cover all the specifications required?—A. Yes, sir. I was very particular in that matter.

Q. Why were you so particular?—A. Because I thought it was an important matter for me to cover everything in my proposals, so that I should not leave out anything that anybody would put in, and thereby lose the contract by not putting in all the specifications called for.

Q. What was the amount of your bid?—A. $46,725. I would like to state that I em-

ployed one of the best naval architects in the country to take the specifications and draw my proposals from it, being sure to cover every point.

By Mr. JONES:

Q. Do you know whether those specifications for the Enterprise are in the yard now?—A. I presume they are.

By Mr. MILLS:

Q. Did you have any memorandum furnished you by Mr. Hanscom explaining what was meant by those proposals?—A. Never in the world. Not a thing.

By Mr. BURLEIGH:

Q. Did you have the proposals according to the advertisement of July 30, 1873, for building these sloops-of-war?—A. Yes, sir.

Q. Did you cover all that was mentioned in those proposals?—A. Everything.

Q. Was there anything impracticable in making a contract strictly according to the proposals published and the specifications?—A. No, sir; I should not have objected to it.

Q. Did Mr. Hanscom or anybody else describe what were the "facilities of the yard?" What did you understand by that phrase?—A. I understood that I would have the use of the facilities of the yard, the tools and teams to do my work.

Q. And men to use the teams and tools?—A. Men to drive the teams; of course, I did not suppose they were going to do my work for me. I supposed that anything that was done in the mill they would do.

Q. Did you expect they were going to get out your moldings and panels, mortice your doors, and all that sort of thing?—A. No, sir; I did not suppose anything like that. If I had had the vessel, I should have gone to a joiner outside and got him to do the work the same as I would to do any other joiner-work.

Q. You would not have expected them to turn out your bannisters?—A. No, sir; nor file my saws, nor anything like that, which they did for Mr. Griffiths.

By Mr. JONES:

Q. You supposed the Government would furnish the men to run the tools?—A. I supposed they would run the mill, and plane any timber that I wanted planed, or saw any that I wanted sawed.

By Mr. BURLEIGH:

Q. How long have you known Mr. Griffiths?—A. I have known him eight or nine years.

Q. What has been his business since you have known him?—A. The first I knew of him was in connection with this bending-machine over in East Boston.

Q. Had he ever had any contract with the Government to your knowledge, before he had the contract for the Enterprise?—A. Not to my knowledge.

Q. How many sons has he?—A. I don't know. I never saw but two. I know two by sight.

Q. Were either of his sons ever connected with this bending-machine?—A. I guess they both were.

Q. Are they both with him now?—A. I don't know.

Q. Did you ever know that one of them had a lamp-patent for sale?—A. Yes, sir.

Q. Did you ever meet him?—A. Yes, sir; his name was Oliver.

Q. Did you ever have any conversation with him in regard to any bribery or anything of that kind in connection with that bending-machine; did he ever tell you that his father or the owners of the bending-machine had to pay, or did pay, Mr. Hanscom any money for his influence with the Navy Department to induce them to buy that machine?—A. No.

Q. Did you ever hear him say anything in relation to his having a claim on the Navy Department?—A. He told me that he held the patents for this planing-machine and sold them, I think he told me for $6,000; I understood him, that after it was sold to the Government he still held the patents. I used to see him riding back and forth during the construction of the bending-machine mill. I met him in New York about two years ago, and he said he had taken his part of the money which was received for the sale of the bending-machine, which I think was $6,000, and went to Chicago and invested it in trade there, and was unfortunate, and bought a lamp-patent for which he paid $2,000, and had it left on his hands there. I judged he did not consider it of any very great value; it was an elephant on his hands, and he wanted to sell half of it. He said if I could give him $400 for one-half of it, he would give me one-half of all he could get in the future on some presumed claim that he had on the Department.

By Mr. MILLS:

Q. Was it on the Department or on the bureau?—A. The Navy Department, I think he said; that they would be glad to give him a certain amount of money. The "Navy Department" was what he said.

Q. What does that mean?—A. It means Mr. Hanscom and Mr. Robeson.

By Mr. JONES:

Q. Did he give you to understand how much he thought he could get out of them?—A. He told me he calculated to get $10,000.

Q. And if you would buy one-half of this lamp he would give you one-half of all he could get?—A. Yes, sir.

Q. Did he convey to you the impression that he thought they were in such a position that they would give him that large amount of money?—A. The idea was, that they were in such a position that they would give him this hush-money, or black-mail; I don't know what you would call it.

Q. But he said he thought they would be glad to give him $10,000?—A. He said he thought it would be good for about $10,000.

By Mr. BURLEIGH:

Q. Have you ever seen him since?—A. I never have seen him nor heard of him since. I don't know what became of him.

By Mr. MILLS:

Q. Do you know whether Mr. Griffiths has ever, directly or indirectly, given any property, or money, or the representative of either, to any one connected with the Navy Department to aid him in the procurement of his contract?—A. No, sir; I do not.

Q. Do you know of any person who has given any inducement of that kind to any one connected with the Navy to obtain any benefit from it?—A. No, sir.

Q. What would you give for that bending-machine?—A. I should not want it at any price. That is to say, I could sell it for what it is worth for old junk.

Q. Was it worth, in your judgment, about what old iron would be worth?—A. That is what I consider it. I should not know what to do with it if I had it, if I had a ship-yard.

By Mr. BURLEIGH:

Q. Is it not the policy of the Navy to build their frames of live-oak timber, and do they not propose to do it?—A. I understand the Navy Department does not propose to use anything but live-oak for frames. For bending easy curves of white oak, the bending-machine will do very well.

BOSTON, *March* 21, 1876.

RICHARD M. BARTLEMAN sworn and examined.

By the CHAIRMAN:

Question. You are the chief of what bureau?—Answer. I am the chief engineer of the yard. I am a steam-engineer and head of the department of steam-engineering, Boston yard.

Q. Do you know of any abuses in the navy-yard here, the correction of which you can suggest to the committee?—A. Well, no, sir; I don't think I do, except the forcing of incompetent or unnecessary men upon the heads of departments by influential friends.

Q. Do you know of any persons being employed in your department, or any other department in the yard, who are unfit for the service they are to render?—A. No, sir; not in my department.

Q. In any of the others?—A. I have heard about this man Galvin not being fit for the position he held.

Q. Do you know anything about the machinery taken out of these two iron-clads, the Wassuc and the Shawnee?—A. It is now being delivered to a man by the name of Dole, by order of the Bureau of Steam-Engineering at Washington.

Q. What are those machines and boilers worth in each one of those boats?—A. Well, I suppose they probably cost $75,000 each.

Q. What are they worth now in the market?—A. I don't think they are worth anything. They are of a pattern that would not be adapted to any other ship that they could put them in now. They are made expressly for that class of vessels.

Q. They would not be fit for stationary engines?—A. No, sir; not at all.

Q. What about the boilers?—A. Well, the boilers are of a type, built very low, that would suit just that class of vessels and would not be adapted to other vessels. They have not power for the class of vessels building or likely to be built.

By Mr. HARRIS:

Q. Whether as old material the boilers and engines are worth more than $10,000?—A. I should think so, where they could use the shafting. There is not a great deal of brass-work about them. They cost something to cut up. It costs about $7 a ton to cut them up, so that they can be converted into bar or other shaped iron.

Q. That is the boilers?—A. Yes, sir.

Q. You mean to cut up the boilers?—A. Yes, sir; I mean that in cutting them up it would cost about $7 a ton.

Q. How much would those boilers weigh?—A. Those boilers would weigh, as near as I can think, probably twenty-eight tons each.

Q. What would they be worth as old iron?—A. Well, sir, I suppose they could sell them for 1¼ or 1½ cents a pound. At one time we had a rolling-mill going on in the yard, and we used to convert all those old boilers into bar-iron. We made seven or eight hundred tons of bar-iron here that would stand a tensile strain of between sixty and seventy thousand pounds per square inch. It is better than any you can buy, and compares favorably with the finest iron made.

Q. How many of those boilers were there to each boat?—A. Two, I think, sir.

Q. Well, then, you think that those boilers would be worth, at a cent a pound, $2,000?—A. That would be $22.40 a ton: 112 tons for the four would be $2,500.

Q. Have there been any other engines disposed of here?—A. Yes, sir. There were engines in the yard that have disappeared since I left. They were the engines taken out of the large iron-clad.

Q. What has become of them?—A. I don't know; they are gone. I don't know where they went. I heard of their being sold to some parties.

Q. What was the iron-clad?—A. I think one that is being rebuilt now in New York—the Miantonomoh.

Q. Had these engines been used?—A. Yes, sir; they were used in that ship during her life, and then taken out and stored in the yard.

Q. Do you know what became of them?—A. No, sir.

Q. Do your books give any account of them?—A. Yes, sir; we have the whole thing from them.

Q. Was that a good engine; are you familiar with it?—A. I have seen them. They were in good order—excellent engines, simple engines. They were double engines, two on each shaft, for driving vessels designed on the Monitor principle.

Q. What were the four worth?—A. I don't suppose they would sell for a great deal. They were designed by Mr. Isherwood, and there is a good deal of prejudice by some against his machinery, although they were excellent engines. The difficulty is, however, in applying old engines. I suppose they would not have sold for more than old metal.

Q. Would they not have done to have gone into some of the boats that the Government is building?—A. Yes, sir.

Q. Would they go into the Adams or the Essex?—A. No, sir; I don't think they would. They are intended to drive twin screws, and they take up a good deal of space. They would have done for gunboats, used separately; that is, in pairs.

Q. Would they have done for the Miantonomoh?—A. Perhaps so. I think that if the new ship is to have as good a model and displacement, the engines would drive her as fast as the old ship: that is, nine or ten knots.

Q. Is not that about the maximum speed in iron-clads?—A. I guess that is a little faster than they can average.

Q. Do you think these vessels could be built to be driven with that rate of speed?—A. Yes, sir.

Q. And they are in excellent condition?—A. Yes, sir.

Q. Were you here when the plating was taken off of the Miantonomoh?—A. No, sir. I was here when she was ordered to be sent to New York.

Q. Were you here when the plating was sent away?—A. No, sir. I know some of the plating that came from the other vessel, the Oregon, was taken down the harbor, some of it, to make a target for Mr. Wiard. In passing through the ship-house the other day I didn't see any iron for the other ship. The constructor would know about the disposition of that iron. It comes in his department.

Q. Was that going to be put on the new ship? It was purchased for that purpose?—A. Yes, sir.

Q. Were you here when the Miantonomoh went to sea?—A. I was here when they towed her away.

Q. Do you know anything about the condition that her hull was in?—A. It was very rotten.

Q. Was there much expense attending her?—A. Only in making her so that she would float at sea. There was a little calking and some deck work. It was not much expense; I should think, from the number of men they had on, that it would amount to $3,000, or in that neighborhood. Perhaps the constructor could tell you exactly. He should have that on his books, and I suppose that he has.

Q. What did she carry around to New York?—A. Nothing. She was towed around there to be rebuilt.

Q. If she was rotten, what was the necessity of rebuilding her?—A. Building a new ship I believe.

Q. How could they build the new iron ship out of a wooden one?—A. That is one of the conundrums I cannot answer.

Q. Was she towed from here to New York or to Chelsea?—A. I think she was towed direct to New York.

Q. Are you sure there was nothing in her?—A. There was nothing in her, except her stern-pipe, and such parts of the machinery, as we could not get at to move. There were pipes through the stern or dead-wood.

Q. The commodore said there was some bent timber put into her.—A. I didn't go on board her: she might have been laden with timber for aught I know.

Q. You have not any account of any iron sent away from your department since you have been here?—A. No, sir; not except manufactured iron that we made here in the yard. I made a shipment the other day to the Norfolk navy-yard of 2,600 pounds. Frequently we have a requisition to ship it from this yard to other yards.

By Mr. JONES:

Q. Why did you quit the further manufacture of iron?—A. I don't know. Perhaps we were making iron too good.

Q. Did you have an order from any one?—A. I think there was an order to discharge the men. I think it was from the bureau. I think perhaps it might have been in consequence of having too large a stock on hand. The scrap-iron has been sold.

Q. Did you have any scrap except that which accumulated in the yard?—A. No, sir; all the old boilers taken from the ships were cut up here and manufactured into bar and scrap iron. I think at the time of the close of the mill we probably had six or eight boilers on hand.

Q. You could make your iron cheaper and better than you could buy it?—A. Yes, sir; it cost less than four cents a pound, and we have made iron here to stand 68,000 pounds tensile strain. We probably have manufactured some seven or eight hundred tons.

Q. What is that machinery doing?—A. It is standing idle.

Q. Is it going to decay?—A. No, sir; I take care of it as well as it can be, with the force at command.

Q. Do you buy all your iron now?—A. Not since we commenced rolling.

Q. You have iron of your own manufacture?—A. Yes, sir; at times we have large quantities, probably 500 tons.

Q. How long has that iron been here?—A. I think it was summer before last, or two summers ago, they closed the mill just as I was leaving here.

Q. Did you make any small round iron?—A. Yes, sir; we made nearly all sizes. We could make any size that the Navy required by fitting up our works. We made a good many sizes of both round and other shapes.

Q. How many years were you manufacturing?—A. I guess not more than two years after we got the mill successfully at work, perhaps three.

Q. Do you know whether in 1872 you were making good iron?—A. I am not sure about the year. Possibly the mill was up in 1872. I don't know whether at that time they made any light iron or not. They ran off a great deal of coarse iron.

Q. Did you manufacture bolt-iron here?—A. Yes, sir; we could do that. We made a great deal of iron for the constructor, and all we used for our own purposes. We manufactured refined iron and made it out of the best charcoal scrap and got just the kind for bolt-iron. It cost us between three and four cents a pound. None of it has ever gone up as high as five cents a pound, taking the mill and everything into account.

Q. Do you allow something for scrap?—A. I take in everything: counting the expense of labor and repair, and everything.

Q. That didn't include the material that you made the iron of?—A. Yes, sir; taking the scrap at the market price.

Q. Has anything ever been shipped from the yard in your department that you can tell us anything about?—A. No, sir; not since I have been here this time. We have sent at different times on requisition from officers of other yards, such things as we had in store. Instead of their purchasing we would send to the yards of Portsmouth and New York, irons, at different times. Once in a while we have sent copper and zinc.

Q. Have you sent anything to John Roach?—A. I think there was a lot of composition sent to Mr. Roach; screw-propellers, and different things; propellers that were here when I was attached to the yard before. The store-clerk, Mr. Moore, can give you the date of everything. That was in Steam-Engineering. I can get that for you from him.

By Mr. MILLS:

Q. I understand from conversation with you that a certain amount of money was required from the workmen for political purposes?—A. While stationed at the Portsmouth navy-yard, ten years ago, this was the case.

Q. Who required this of them?—A. I understand that the foreman collected it.

Q. You understand that this was in violation of the law?—A. Yes, sir; if anything of that kind occurred in my department, with my knowledge, I should stop it.

By Mr. HARRIS:

Q. Do you know of any presents being offered or received by anybody connected with this yard in an official capacity, from any contractor?—A. I do not, sir.

By Mr. MILLS:

Q. Do you know whether any parties who furnish supplies to this yard pay any commissions to any one that is interested in controlling that custom to them, inside of the yard, or otherwise?—A. No, sir.

Q. Do you know what they paid for the engines aboard of the Adams and Essex?—A. I do not. They were contracted for by the bureau, I believe. We can build any modern machinery in this yard that can be built in any works in the United States. We can build the very best machinery of all kinds.

Q. What is your opinion of contractor's work?—A. I have seen some poor, and some good. As a general thing it is not equal to the work of the yard.

Q. Is it detrimental to the Government to have contractors perform their labor in the navy-yard?—A. I should think it was, sir.

Q. Does it interfere with the discipline of the yard?—A. Most emphatically, yes.

By Mr. HARRIS:

Q. In what way is it detrimental to the service?—A. They have the benefit of the yard and all tools paid for by the Government. We have to employ watchmen to see that they do not carry off anything that does not belong to them. Neither do the yard authorities have any control of them.

Q. What different constructors have been employed here while you were here?—A. Mr. Pook and his son, Mr. Hartt, both Messrs. Delano, and the Hanscoms. In fact all the old constructors have been here during the time that I have been attached to the yard in different capacities.

Q. How does the contract-work compare with your Government work that you do on your own vessels?—A. I think the Government work is much superior. I have seen some good contract-work, but as a general thing I think the Government work is infinitely better.

Q. Do you do all the large forging that is required here?—A. No, sir; not the shafting. That is a business of itself. There are works at Bridgewater, Mass., and in Pennsylvania. I suppose most of the large establishments in the country would buy their shafting. It requires a peculiar set of men and high pay. But all other work we can do, *i.e.*, all the ordinary forgings.

Q. I understand that all the big shops have to buy those things?—A. Yes, sir. It is cheaper for them to buy them than to keep these men. They are special men.

Q. What is your idea of that machinery in the Essex and Adams; do you think it is very good machinery?—A. I think it is very good machinery.

Q. What speed will it give those boats?—A. I suppose the contractor would give it as high as twelve knots or more. If they get ten they will do very well.

Q. Do you think they will get ten?—A. Yes, sir.

Q. When the boat is armed and has got all her armament and provisions on board, will she then make ten knots?—A. I think she will. Yes, sir.

Q. Which are the best, the simple or compound engines?—A. That is a matter that engineers differ about. I would make a simple engine for a good many reasons. I should certainly prefer a simple engine.

Q. Do you know of any articles received in your department after they have been rejected?—A. No, sir; not in my department, sir—except on one occasion—(it was not in our department;) it was in the instance of some coal that I inspected and rejected, and afterwards it was received. It was when the Bureau of Equipment furnished coal for all the departments. I was called as an expert.

Q. By whose order was that received?—A. I think by the Secretary.

Q. Was it bad coal?—A. Yes, sir; I inspected it. I thought it was bad coal. It looked to me to contain 35 per cent. of stone and slate. I am pretty sure that it did.

Q. What became of that coal?—A. It was distributed round to the different departments in the yard, and has been used.

Q. What did it cost; how much was the amount?—A. I think, looking over the schedule to-day, that it was invoiced at $7 or $9; I have forgotten. It came into the Bureau of Equipment. There was something like 3,500 tons. I think it was in that neighborhood. I was simply called in as expert, on inspection.

Q. Who was the contractor?—A. S. P. Brown, of Washington.

Q. Whom do you get this from?—A. The equipment officer, Captain McCauley.

Q. Can he give us the orders also?—A. Yes, sir; they have everything. Admiral Steedman was in command of the yard at the time, In that case I was simply called upon as an expert. I was the chief engineer in charge of the stores.

Q. Were you the inspector?—A. I was not really appointed the inspector, but was called upon by order of the commandant to survey it, and pass judgment, and I condemned it, and I think after that there were different boards ordered by the commandant, of which Commodore Bryson was the senior member.

Q. That was not coal furnished for steamships?—A. That was furnished, I think, at that time by the bureau for all purposes. That is, we were apportioned on our requisitions. It came to us in the different departments of the yard. The coal was furnished by the Bureau of Equipment.

Q. Does S. P. Brown furnish anything else here?—A. I don't know of anything that he has furnished lately, not in our department. We have not made any purchases for some time.

By Mr. HARRIS:

Q. In regard to the watchmen and civil employés, what do you say to that system in preference to the employment of marines—would the marines do the same service better?—A. I rather like the watchmen, for they can chase a man found stealing. I think they are very well, but marines cannot be well dispensed with.

Q. Could the Government save anythinh by dispensing with the watchmen, and letting the marines do that duty?—A. Yes, sir; the marines are cheaper than watchmen, if they could be used as such.

Q. Would they do it as well?—A. I don't think they would, in all cases.

Q. Were you present when the bending-mill was built in this yard?—A. No, sir. I have been in that building several times while they were erecting it.

Q. Have you ever seen it in operation?—A. I have never seen the machinery in motion, but I have seen timber in the machines.

Q. Did you see timber in the machines?—A. Yes, sir; I saw a number of knees left in the machines, to set.

Q. What is your opinion in regard to the value of it to the Government for bending timber?—A. Well, I suppose they can get some timber out of that machine. I don't know as they can get any as good as the natural timber. I don't believe they could; though I made that remark once in the hearing of a commodore, and he said he didn't think I knew anything about it, or words to that effect. I don't think the knees that are bent there are anything to compare with the natural knees. He said somebody had calculated that there was about 20 per cent. additional strength in the artificial knees.

Q. I should think it would be the other way.—A. So should I, sir; and I believe it is, too.

Q. Those knees are bent, and then the angle filled up with another piece?—A. Yes, sir. They get an arched piece of wood, and then they have it filled out to get the right angle.

Q. Did you cut up an old vessel called the Vandalia, and build a new one?—A. Yes, sir.

Q. Did they build the new one out of the old?—A. No, sir. The new one is a steamer and the other a sailing-vessel; and they were of different sizes.

Q. Does this Navy Register contain the names of all the ships, and their cost?—A. Not their cost: only the names of the vessels, and where they are built.

Q. Do you know Jerry Remick?—A. I do not, sir.

Q. Did you, or any one in your department, ever estimate for the engine and the boilers of the Adams and Essex?—A. No, sir. I think the estimates and contracts were given by the bureau.

Q. Do you know whether the price paid was more than they could be built for in the yard?—A. I don't know, sir, what they cost. We did build the machinery in the yard for the Vandalia and the Marion. The latter ship was built in Portsmouth. Both engines were altered to the compound type, by the bureau's design, from simple engines.

Q. Will you state which has the heaviest engine, the Marion or the Vandalia?—A. I think the engines are as near alike as possible. I don't know what attachments were put upon the Marion there; but they were built side by side in the shop, from the same patterns and drawings.

Q. What is your opinion of the attachment of the Marion, Wiard's?—A. I have never seen it in operation. That was just finishing when I came here.

Q. Do you know what the cost of that attachment is?—A. I heard say that it was something like $500 for the work alone, per boiler, but I have no means of knowing. If there are any bills I can find them here; but I think that was paid for by the bureau.

Q. Do you consider the attachment of any real practical value?—A. I wouldn't like to answer positively, because it is a new thing. I have never seen it in practical operation. I know it took up considerable space in the boiler, and there was a good deal of it. I think if I was chief engineer of the ship and got away somewhere out at sea, that I should shut it off if I could. I think I could get along without it. The purpose of it is to keep the circulation of the water regular, and prevent injury to the heating-surface. If it will do it, it is very good.

Q. Can you give any reason why our vessels do not have more speed?—A. Generally, wherever I have been chief engineer of a ship, the captain has been worried about the coal and about economy, and in some cases has tried to regulate the fires—about how many fires are used, and how much coal, and conditions that will not work together—revolutions, steam-pressure, &c.

Q. Is it not your experience that if you want to get steam-power you must have coal?—A. Yes, sir; a pound of coal will do so much work and no more. Whenever I have been in foreign countries, I think our vessels get along about as fast as anybody's. We have been along at ten knots and theirs going twelve, yet we keep up with them. I think those vessels of Mr. Isherwood's had as fine machinery as I ever saw in my life. It cost comparatively little to take care of them, they are almost always in good working condition, and

drove the ships well. In the war, some of those vessels when they first started out used to give ten and eleven and twelve knots. They were of different designs by Mr. Isherwood, the last ones in particular. We have one now in the yard, suitable engines for the Wabash, the receiving-ship now lying off here. They were made for a vessel now on the stocks, one of the long vessels, called the Pennsylvania.

Q. Which will never be finished?—A. Which will never be finished, probably.

Q. I understand you to say that they had sold some new engines from the yard?—A. No, sir; not new ones; they sold the old ones that came out of the iron-clad. They have sold no new ones that I know of. We have got everything on our books to show.

Q. Is there not a large amount of ordnance and old material in this yard lying about here that is perfectly worthless to the Government?—A. There is considerable over in that park. I should think obsolete.

Q. Have you got any guns over there that will be used in war?—A. The best guns, the 9 and 15 inch guns are there. They are not out of date in our Navy. There are a great many shot here that will not fit any gun that we have now.

Q. How many vessels going to ruin?—A. There is the Iowa, and the old hulk, the Niagara.

Q. Is it something more than a hulk?—A. She was worn out some time ago. They tried to convert her into an iron-clad and abandoned the project.

Q. How many ships commenced on the stocks, during the war, which will probably never be finished?—A. There were three or four besides the old Virginia, which they tried to cut up. There is one large iron-clad; I think three other steamers.

Q. Were there not some vessels partially finished here that might be sold and converted into useful ships in the merchant service?—A. No, sir; I think they are too large, and there is material in them that is not sound.

Q. Why should they be kept here—vessels that are not to be finished and that are going to decay?—A. I don't know, except that they are ornamental.

Q. Could those vessels be given away?—A. I don't believe you could find anybody who would take them as a vessel for sea use.

Q. I mean, to be removed?—A. I think outside parties would purchase them to destroy them for the old metal in them, and in a hurry you might want the ways and the house that they are in.

Q. Your idea is that they could be removed without cost to the Government?—A. No, sir; I don't think they could, by the Government.

Q. Could any man afford to take them down for the material?—A. Yes, sir; I think they might. There is a good deal of bolting.

Q. Do you think the Virginia could have been got rid of in that way?—A. I have no doubt she could. I never saw that experiment tried.

Q. Don't you suppose there are a good many people who would come in and pay a consideration for the privilege?—A. I think it is very possible that a number would do so.

Q. But under the hands of the Government it cannot be removed without great expense, can it?—A. No, sir.

Q. That is, the material which the Government saves will not compensate?—A. No, sir; they would have a number of men employed in cutting them up, which would cost more than the old material, to recover which (metal) they are generally burnt.

Q. Is not that vessel copper-fastened?—A. She is. There is much copper bolting in her.

Q. Some one has suggested the idea that the hull of that vessel might have been converted into something useful?—A. It might have been made a receiving-ship or store-hulk.

Q. It would involve several millions to complete her as a receiving-ship?—A. No, sir; not many thousands.

Q. What do you suppose our largest ships cost?—A. From $800,000 to $1,000,000.

Q. Well, she, the Virginia, seems to be tolerably sound?—A. Yes, sir; as perfect to-day as when the wood was cut. It was way back in 1824 that she was begun; I think it was before that.

Q. How near destroyed is she?—A. Down to the lowest deck. She has one deck entire, except a hole cut in her for convenience of getting out.

Q. Is the deck-plank on?—A. No, sir; not wholly.

Q. What is done with the timber that comes out of her?—A. I don't know what they did with it. It is cut up, I suppose.

Q. It is never used for any purpose?—A. No, sir.

Q. Is it given away, or do the officers use it?—A. The officers use some of it. They couldn't begin to use it all. Our buildings are heated with steam; we use our ranges with coal, and want little wood.

Q. Do the workmen get it?—A. I think at one time they sold wood, but I don't think it is so lately. I think the chips and such things as that are given to poor people outside.

Q. Was that a live-oak frame?—A. Yes, sir.

Q. Was it white-oak plank?—A. Yes, sir; we never use live-oak for that purpose. She had a fine frame, and was an old-fashioned built ship-of-the-line. She was as solid as a rock.

Q. They never got up to her rail, did they?—A. Yes, sir; she was nearly completed; she

is not calked or anything of that kind; but she was a nearly completed ship-of-the-line, as far as shipwrights are concerned.

Q. What was the reason she was not finished and put to sea?—A. That style of vessel has gone out of date—a ship-of-the-line. She could have been launched and made serviceable as a receiving-ship.

Q. Don't we have ships enough for that purpose?—A. Yes.

BOSTON, *March* 21, 1876.

R. E. JACKSON sworn and examined.

By Mr. BURLEIGH:

Q. Where do you belong?—A. East Boston.

Q. What is your profession?—A. Ship-builder.

Q. How old a man are you?—A. I am sixty-two next June, or sixty-three. I will be hanged if I know my own age.

Q. Did you bid on the sloop-of-war Adams?—A. Yes, sir.

Q. Do you remember the amount of your bid?—A. $168,950, I believe it was.

Q. What did you propose to do?—A. I proposed to build the hull, according to the specifications that were sent to me.

Q. What were those specifications; to build the hull of the ship complete?—A. The hull of the ship complete.

Q. What do you understand by "the hull of a ship complete?"—A. I mean to complete everything that belongs to the hull, separate from the rigging. In completing a sloop-of-war, or any other vessel here, we complete everything that belongs to the hull—chains, quarter-davits, and such things.

Q. How about the cabin furniture?—A. We finish the cabin complete, but furnish no furniture. If I fit out the vessel for sea, I furnish that.

Q. How about the cabin, state-rooms, ward-rooms, pantries, and all those things?—A. We furnish them all in working order, that is, with locks and keys, wash-stands and everything, but no movable furniture.

Q. Everything that is a fixture about the hull?—A. Yes, sir.

Q. Would that embrace it, "everything that is a fixture about the hull?"—A. Yes, sir.

Q. And all that the rigging is attached to?—A. Yes, sir; all that the rigging is attached to; that is chain-bolts, ring-bolts, eye-bolts, and such things.

Q. Would you expect to copper a man-of-war?—A. No, sir; unless it was in the specifications.

By Mr. JONES:

Q. Would you expect to do any part of the work inside unless it was in the specifications?—A. Yes, sir; if they asked me to complete the hull, that is, if I was going to build a sloop-of-war for you or anybody else complete, I should calculate to build her state-rooms all ready to receive their furniture.

By Mr. BURLEIGH:

Q. Chain-lockers and all the things appertaining to a ship of war?—A. Yes, sir.

Q. If you agreed to paint it, what should you do?—A. I should give it three coats.

Q. Putty it?—A. Yes, sir.

Q. Leave it smooth and nice, and in a staunch condition?—A. Yes, sir.

Q. How about launching?—A. I should launch her.

Q. Is not that customary in all cases?—A. Yes, sir; in all cases.

Q. It is not customary on the river to copper a merchant-ship?—A. No, sir; not unless you agree to. If it is in the contract, of course you have got to do it.

Q. Now, in regard to the hull of a ship, does not the bowsprit go with it?—A. Yes, sir: I should build the bowsprit, because you cannot very well complete the hull without a bowsprit.

Q. Should you put the bowsprit cap on?—A. Yes, sir.

Q. The capstan-pumps?—A. The capstan-pumps.

Q. Ventilators?—A. Ventilators, yes, sir.

Q. Steering-wheels?—A. Steering-wheels.

Q. All chocks?—A. All chocks.

Q. And sheaves in the chocks?—A. The sheaves that go into the hull.

Q. Fastened in?—A. Yes, sir; fastened in; also dead-eyes.

Q. You would complete the hull ready to receive her rigging?—A. Yes, sir.

Q. Ready to put in the provisions and go to sea?—A. Yes, sir.

Q. To build the hull of a ship complete would be to so build her, as far as the work on the hull was concerned, that there would be nothing to do but to put in the men, the furniture, and stoves, and go to sea?—A. Yes, sir; the cabin furniture and upholstering. We don't do any of that.

Q. In your bid on that ship, how much work did you expect the Government to do on the hull?—A. Not anything.

Q. What did you expect the Government to find for you?—A. My specifications said they were to furnish the live-oak timber.

Q. Did you expect they would frame it for you; that is, that they would mold it?—A. Certainly not. I did not expect they were going to build the vessel. I expected to take the timber in the rough.

By Mr. MILLS:

Q. About what would it cost to mold the frames in live-oak?—A. It could be got out, I suppose, for somewheres about $8,000 in good shape, cants, frames, and everything of the kind, $8,000 or $9,000.

Q. Have you a copy of your bid?—A. I have somewhere, but I have not got it with me.

Q. Was the New Era built at East Boston?—A. Yes, sir.

Q. How many years ago?—A. I should think it was six years ago.

Q. Do you know anything in relation to that ship, whether she was a good ship or a poor ship, or anything in regard to her?—A. They got an A 1 rate for her, I think, and then she went across to Liverpool or London, and they rated her down to A 2, a second-class ship.

Q. How would they class a white-oak ship built here of the same material?—A. The last one I had classed as A 1 at the French Lloyds for eleven years; at the American Lloyds twelve years.

Q. This ship was classed A 1 before she went to sea?—A. No, sir; I don't say that. I say that I think she was.

Q. But you know that she was cut down when she went to Europe?—A. When she got across I heard her spoken of as being classed A 2.

Q. Have there been any ships or vessels of any kind built of bent timber, to your knowledge, in this vicinity since?—A. No, sir; and I don't believe there ever will be again.

Q. How long after this ship was built with this machine was the machine sold to the Government?—A. That I can't say. I think it was very nearly a year.

Q. You think the owners had learned the value of the machine by the time they sold it?—A. I guess they had, pretty well, too. The vessel cost something like $200,000.

Q. It cost more to build her of straight timber, bent by the machine, than it would have cost to build her of crooked timber?—A. Certainly it did.

Q. Why?—A. They went to any kind of expense, and steamed the timber, and bent it, and broke it. You know you have got to have a perfectly straight-grained timber to bend it into the shape they did, and they broke up any quantity of stuff and hove it away or sawed it up for fire-wood.

Q. How large was this ship, the New Era?—A. I believe she was about a thousand tons. I live close by the yard where she was built, and went down to go into the yard while she was building, and they stopped me. They were going to have something there a little nicer than anybody else, and they wouldn't let me go in. After that I was asked to go into the yard, and I would not go. I don't know what the reason was, but they kept a man there at the gate and would not allow anybody to go in. I suppose they thought they had something there that nobody else was going to have.

Q. How long did that continue?—A. They kept some one there all the time she was building. They wouldn't let only a very few go in.

Q. Do you know whether they bent any knees to put in that ship?—A. I did not see any, but they said they did.

Q. Is that ship in existence now?—A. That I don't know.

By Mr. JONES:

Q. Who was foreman of that ship?—A. I think Mr. Griffiths' son was the foreman.

Q. Mr. Griffiths built the ship himself?—A. Yes, sir.

By Mr. BURLEIGH:

Q. Do you say, of your own knowledge, that that machine was known, by ship-building men in this vicinity, to be a failure before the Government bought it?—A. Why, yes; we all considered it so; that is, it was called a failure by every one—every boy in the street, and every man.

Q. Boys are mistaken sometimes. I want to know what practical men, like yourself, thought of it.—A. Practical men wouldn't take it for old iron when they were building that ship; wouldn't give the price of old iron for it.

Q. Who were the owners of the New Era?—A. Glidden & Williams.

Q. Who were the owners of the bending-machine?—A. Glidden & Williams. I don't know but Mr. Griffiths owned part of it.

Q. Did you have an idea that they built that ship for the purpose of advertising that machine?—A. I had no idea about it, sir.

By Mr. HARRIS:

Q. You say Glidden & Williams owned the machine?—A. Yes, sir; I think so, and they sold it, I think.

By Mr. MILLS:

Q. It was a patented machine, was it not?—A. I think it was; I don't know.

Q. Do you know who had the patent?—A. No, sir.

Q. Do you know whether any other person bid lower than Mr. McKay on this ship?—A. I only know by hearsay; I heard there was a man in New York who was lower than Mr. McKay.

Q. Did you ever hear Mr. McKay say so?—A. No, sir.

By Mr. BURLEIGH:

Q. About what would it cost Mr. McKay to launch the Adams?—A. Well, I should have been glad to have launched her for $400. I would have taken my stuff from my yard, and furnished everything, and launched her for $400, and would have made $200 out of it at that. It is not much of a job to launch a ship. I will take 20 men and go into my yard and launch a ship in two days. I have done it a thousand times.

Q. She was a vessel of 615 tons, besides the displacement, which would make her nearly a thousand tons; do you think you could launch such a ship for $400?—A. It would make no great difference about launching her whether she was 600 or 1,000 tons; all you would have to do would be to put on a few more planks. You would launch her on the same launching-ways and the same bilge-ways.

Q. Here is a ship 185 feet long, 35 feet wide, and 16 feet 2 inches deep in the hold; what would you build a merchant-ship of that size for, that would carry herself well with the heaviest cargoes you could put into her, finding everything, and finishing her as that ship was to have been finished?—A. I would do it for $120,000.

Q. And furnish the live-oak?—A. Yes, sir; furnish the live-oak.

Q. If the specifications showed at what height she was to be coppered, would you agree to do all there was in the specifications? Would you agree to copper the ship?—A. Certainly I should.

By Mr. JONES:

Q. You would agree to do whatever was in the specifications?—A. Yes, sir.

By Mr. HARRIS:

Q. Did you make a careful estimate before you made your bid?—A. Certainly.

Q. Did you have before you the specifications?—A. Yes, sir.

Q. Can you now tell what you ascertained it would cost you to build that ship according to the specifications?—A. I thought it would cost about $110,000.

Q. Then you calculated to make $58,000?—A. Yes, sir; thereabouts. I knew I could make $50,000 out of it.

Q. So there was reckoned into that bid a profit of $50,000?—A. Yes, sir.

Q. You were not very anxious to build it, apparently?—A. Well, from the best knowledge I could get from A, B, C, and from our naval constructors, they said it was worth about $200,000. They were figuring for somebody; I don't know who.

Q. Whom did you see?—A. I saw several.

Q. Whom did you see connected with the Government?—A. I saw Mr. Hanscom—both the Hanscoms.

By Mr. JONES:

Q. Did they tell you that it would cost $200,000 to build that vessel?—A. I think they did; anybody who built her for less than that, as I think they represented, would get sucked.

Q. The Chief of the Construction Bureau said that?—A. Yes, sir.

By Mr. HARRIS:

Q. Can you not tell the conversation you had with each of those gentlemen a little more specifically than that?—A. Well, that is what I talked with William Hanscom. He said, "It will cost $190,000 to build her, and she can't be built for any less than that." I figured on her, and went to the navy-yard and found out what I could from folks, and Mr. Pook said, "Jackson, you can build that ship for $130,000;" says I, "Mr. Hanscom has been in the business: we consider William Hanscom one of the best mechanics we have among us." "Well," said he, "that is so; but," says he, "you can build her over there for $130,000." I says, "I don't think it." Says he, "You can." From what folks said, and from what I learned in talking with the Hanscoms, I made up my mind to ask them $169,000 and something.

Q. What did Isaiah Hanscom tell you?—A. Well, it was about the same thing.

Q. Where was he?—A. I don't know; I cannot recollect. I have seen him so many times.

Q. Did you see him with reference to the probable cost of that vessel?—A. No, sir; not particularly.

Q. Did you ask him the question what he thought that vessel could be built for?—A. Yes, sir; I asked William and Isaiah and Mr. Pook.

Q. What did Isaiah tell you?—A. He told me about $200,000.

Q. I want the conversation as near as you can give it.—A. It went from $190,000 to $200,000 that it was worth to build that vessel. That was what he said, as near as I can recollect. I saw him here, and I saw him in the navy-yard.

Q. Did you ask Mr. Isaiah Hanscom for the purpose of getting his opinion?—A. Yes, sir; I wanted to find out. My intention was to get information what it was worth to build that vessel. I never had built a sloop-of-war.

Q. Did you get the idea that he was seeking to mislead you as to the price?—A. After I had talked with Mr. Pook and his brother, I found his brother and he agreed very near, and I didn't know what to make of it, and when I came to figure it according to my own judgment I knew very well there was some $40,000 or $50,000 leeway there, and I was not afraid to try it. I calculated that it would cost me from $110,000 to $120,000.

Q. That was your estimate?—A. I calculated that I had that leeway.

Q. That is, you judged that it would cost you from $110,000 to $120,000, and that you would make the difference?—A. Yes, sir; I thought it could be done for that. Well, you know the Government always put on somebody to watch and superintend and look after this thing and another, and I was going to have some leeway.

Q. You knew you were going to build that vessel for the inspection of somebody?—A. That is it exactly.

By Mr. JONES:

Q. Did Mr. Hanscom say to you that if any man built that vessel for less than $190,000 he would get "sucked?"—A. Yes, sir.

By Mr. HARRIS:

Q. Which Mr. Hanscom?—A. I think it was Isaiah, but I won't say. That was the idea I got from them, from $190,000 to $200,000, from both of them.

Q. Do you know that they said that if it was built for less than $200,000 the contractor would get "sucked?"—A. Yes, sir.

By Mr. MILLS:

Q. Do you know whether Isaiah Hanscom or William Hanscom were interested in the bending-machine?—A. No, sir.

Q. Were they about there manifesting any interest in it when it was being erected at East Boston?—A. Not that I know of.

Q. Do you know anything about a quarrel between Oliver Griffiths and the Bending-Machine Company, by which he extorted some money from them?—A. No, sir.

By Mr. HARRIS:

Q. I would like to inquire whether or not in your acquaintance with the men connected with the Navy Department, either on this or any other contract, you have known any of them to receive any money from any contractor by the way of gift or bribe?—A. No, sir.

Q. Or their families?—A. No, sir.

Q. Have you dealt with the Navy Department at all?—A. No, sir.

Q. Have you done any business with those gentlemen?—A. No, sir.

Q. This bid is the only bid you ever made?—A. Yes, sir; that is the only bid I have ever made.

By Mr. BURLEIGH:

Q. How many years have you known William and Isaiah Hanscom?—A. I have known them ten or fifteen years; fifteen years, I guess.

By Mr. HARRIS:

Q. Was this ship, the Adams, built upon a model made by either of those men?—A. I don't know.

Q. You do not know who was the draughtsman?—A. No, sir.

By Mr. BURLEIGH:

Q. I draw your attention to the specification of the Adams where it relates to coppering, and to the contract saying that the ship is to be built according to the specifications. You say that you would be in duty bound if you accepted the contract to copper the vessel according to the specifications?—A. Certainly.

Q. And you would furnish the copper?—A. Certainly I should.

By Mr. HARRIS:

Q. Should you say that the copper could be properly put on before the vessel was launched?—A. Yes, sir; I have coppered a good many vessels before they were launched.

Q. Suppose the contract says you are to complete the vessel for so much money, and you shall copper her and shall complete the hull and no reference is made to launching, how do you get the inference that the contractor is bound to launch her?—A. Because we always do it here as much as we build the vessel.

Q. Would you do anything that your contract did not specify? Would you do any more than your contract required you to do by its fair construction?—A. Of course I would not do anything that I could get clear of.

Q. But you think custom would require it even if the contract was silent?—A. If I agreed with you to complete the hull of a vessel, I should not calculate I had completed her until I shoved her into the water and hauled her into the wharf; then you could take her wherever you pleased.

Q. Unless there is something in the contract about it, you would simply rely on the custom?—A. Yes, sir; I would get clear of it if I could. At the same time, you may ask any builder in Boston or the vicinity of Boston, and he would tell you that he should expect to launch here, if he is going to complete the hull.

By Mr. BURLEIGH:

Q. In building the hull of a ship, are not the boats included? Is that not the usual custom?—A. Certainly. If I agree to build you a ship, to do the whole, I should build you the boats.

Q. Without any additional charge?—A. Yes, sir.

Q. Long-boat and two quarter-boats?—A. Yes, sir.

By Mr. MILLS:

Q. In case you contracted to build the boats, would it be your duty to build the oars?—A. Not without I fitted for sea. Then I should give you the oars.

BOSTON, MASS., *March* 21, 1876.

Commander GEO. BROWN sworn and examined.

By Mr. HARRIS:

Question. You were at some time designated to observe the firing of heavy guns by Norman Wiard at Nut Island, were you not?—Answer. Yes, sir; during the whole of his experiments with the exception of the first time that he fired.

Q. Were you present at any of his experiments during the year 1873?—A. Yes, sir.

Q. Did you make any observations?—A. Yes, sir; I have the reports. He fired his shots at iron-plating in the fall, the 28th of November, 1873.

Q. Was it not in 1872?—A. I was not present in 1872 at all. He never fired a shot that was officially recorded until 1873.

Q. Didn't he fire some for his own experimental purposes, enough to find that the run of his carriage was too short?—A. Not that I have any knowledge of.

Q. I think he reports himself to the Department some time in November, 1872, that by experiment he finds that he has got to lengthen his carriages. You were not present then?—A. No, sir.

Q. What guns had he mounted at Nut Island in the fall of 1873?—A. Two 15-inch guns. I know what the guns were, exactly.

Q. Just describe them.—A. They were two 15-inch guns, of a pattern peculiar to themselves, made at the South Boston Iron Company's works.

Q. Was one rifled?—A. One was rifled on the Wiard plan, and the other was a smooth-bore. They were sister guns to the 15-inch guns sent to England.

Q. Were those new guns?—A. Yes, sir.

Q. Were they made for the purpose?—A. No, sir; I think they were not. My impression is that they were made for experimental guns.

Q. Were they or not the same guns that were mounted there in the fall of 1872?—A. Yes, sir. I have an impression that they were the same guns.

Q. Will you give the committee a general description of what was done there and what you did, and the result of the work of that year—during 1873?—A. I was not present at the firing at the 15-inch targets on the 28th of November, 1873, but I saw the targets two or three days afterward. The one struck by the rifle-shot was perforated and broken, and the one struck by the round shot was penetrated, I think, three plates, and the others were all broken to pieces. Subsequent to that, and during the fall of 1873, we made some experiments for comparative ranges. The results, of course, I have tabulated right here.

Q. Are those results given in your report made to the Secretary of the Navy in the fall of 1875 or this winter?—A. Yes, sir.

Q. They are the same which are there?—A. Yes, sir; they are the same which are there. My report to the Secretary, made in January of this year, went over the whole ground, from the very first firing they made.

Q. And you included the firing of 1873 and 1874?—A. Yes, sir. They included the firing of 1873 and 1874.

Q. Now, were there not other guns brought there and mounted after 1873?—A. Yes, sir. In 1874 there were two 15-inch navy guns taken from the yard. I have made a report to

the Secretary of the Navy in the winter of 1875–'76. See the report in the hands of the committee, at Washington.

Q. Now, did you make a report to any other person than the Secretary of the Navy?—A. I made reports at different times, as we would complete some of the experiments, to the chief of the bureau, Captain Jeffers.

Q. Can you give the dates of the others?—A. Yes, sir; from my books I can.

Q. Then if you can do that, we will be able to call upon Captain Jeffers at Washington.—A. There is a report here of my predecessor, the day I relieved him, Captain W. T. Truxton, November 29, 1873. That is the first. It was made to Captain Jeffers, Chief of the Bureau of Ordnance. It is just a description of the firing. [Reads the report.]

Q. Now refer to your own report.—A. The next is my report of December 17, 1873, which was the last report for 1873. The next report was made by me on the 28th of September, 1874. I went away on leave at this time. The next was a report of Lieut. H. W. Lyon, dated October 16, 1874. The next was another report of Lieut. H. W. Lyon, dated October 31, 1874. The next was my report dated December 18, 1874; which was all in 1874. The last report I made to the bureau was December 17, 1875, which embraced all the firing made during 1875; and a report to the Secretary of the Navy. The last report I made on it was a report to the Secretary of the Navy, dated January 12, 1876, covering the whole ground from the time I came here.

Q. That is all I desire to ask you about on reports, because those we can examine ourselves. They were all sent, were they?—A. All those reports were sent to Washington, I presume. Some of those reports are reports of the bursting of guns.

Q. Are there any facts within your knowledge concerning these experiments not fully stated in those reports, or any conclusions to which you arrived?—A. No, sir; not that are not stated in my last report to the Secretary of the Navy. I would like to make the statement that in all of my reports to the bureau, I merely reported the facts, and was expressly ordered to express no opinion. But in the report to the Secretary of the Navy, made in compliance with his verbal order to me, I was directed to express my opinion freely on all points.

Q. Now I noticed in the opening part of your report of January, 1876, you stated in substance that you were instructed to express no opinion during the progress of the firing. Do you know why that order was made, and will you state what you understood to be the meaning of that direction?—A. Well, it is a custom with the Ordnance Bureau for an inspector that examines any invention, merely to report the facts and all the data, so that the chief of the bureau himself can judge of the value of whatever the invention may be.

Q. Did you understand that the instruction was that you were not to give to any outside person any opinion as the firing was going on?—A. Our general instructions expressly prohibit my giving any opinion, except in writing to the bureau, when ordered to do so.

Q. Now in your judgment were the experiments made in 1873, 1874, and 1875 valuable to the Government?—A. The experiments in 1873 and 1874 were perfectly worthless, as far as anything was developed. The experiments made in 1875 did show that Mr. Wiard had a very superior projectile, when used under certain circumstances.

Q. But so far as the result of his experiments of rifling smooth-bore guns successfully were concerned, what do you think of them?—A. They were a total failure, sir.

Q. Mr. Wiard claimed to be able to change the smooth-bore into a combination of the smooth-bore and the rifle, which could be used with great effect as a gun.—A. I say that is a failure, because he weakened the gun by rifling it, and his rifled guns, with one exception, all burst. He was to ream them out and not weaken them.

Q. Would you consider such experiments valuable and desirable to determine the possibility of so converting smooth-bore guns?—A. I don't think they were.

Q. Did the results differ from your preconceived notions on the subject?—A. Not at all; the subject had been experimented on in England, France, and Germany, at very great expense.

Q. Were you at that time familiar with the results of those European experiments?—A. I was aware, from having read reports in books and conversing with ordnance men, that a large amount of money had been expended for that purpose, and resulted in failure.

Q. Now, did you understand that in 1874 there was any projectile invented by Mr. Wiard which was to be used in experimenting?—A. We did.

Q. Did his projectile come into notice in 1874?—A. His projectile was part of his system of rifling at all times. No other projectile could possibly be used in his guns. That projectile was in contemplation all the year as part of the system.

Q. You say that in 1875 that developed some advantage for improvement, and, in fact, changed the whole character of the projectile. Some of the projectiles in 1873 and 1874 failed to leave the gun.—A. They broke up in the gun by the force of the powder-gases and by being wedged.

Q. I noticed that he used very heavy charges of powder—140 pounds—on some occasions. Do you think it safe to use such charges upon any gun that has ever been made?—A. No, sir; nor did Mr. Wiard, because we never fired a gun that he did not get in as safe a place in the bomb-proof as all the others on the island.

Q. Was there an effort made to ascertain how much powder one of those guns would stand without bursting?—A. No, sir; he was to test them for endurance with his projectile.

Q. What would be considered the fair average charge for such guns, with that projectile in use, for safety? What, in case of war, would be the proper charge to be used with such a projectile, having reference to the safety of the ship and the men?—A. I can answer that clearly with regard to a smooth-bore; but you want it with Wiard's projectile.

Q. With both.—A. I will state that the service-charge for that class of guns is 35 pounds. We are allowed to use, at times, 50 pounds; and in extraordinary cases we are allowed to use 100 pounds of powder of the present navy-powder, which we know all about. But no one gun is allowed to be fired over five times with a 100-pound charge. It would be withdrawn from service if it had.

Q. Now, did the practice of firing these enormous charges tend to show you properly the real endurance of the gun in service?—A. No, sir; I don't think we could get at, properly, the endurance of the gun by firing such excessive charges. In order to test the endurance of the gun, you fire it with service-charges and projectiles until you burst it—until you get at its life-time of endurance.

Q. Then, only with Mr. Wiard's heavy charges you produced the greatest possible result with his projectiles?—A. Yes, sir.

Q. Did you think that was a fair way to test the gun, or the projectile either?—A. I don't think it was a fair way to test the gun, because we knew we could use no such charges in service with safety.

Q. You knew, also, that no cast-iron gun had been invented that could be used with such charges with safety?—A. Yes, sir.

Q. Is there any wrought-iron gun invented that has been subjected to such charges as those?—A. No, sir; not in this country.

Q. What is the real fact as to those projectiles being used with safety?—A. His latest form of projectile, which he calls the mitten shot, is of very peculiar form and distribution of metal; and, in my opinion, its accuracy of flight depends upon its being given a very high velocity, and I don't believe that we could fire charges heavy enough to insure a high velocity from cast-iron guns; *i. e.*, the value of his shot all depends upon whether the guns will stand the necessary charge.

Q. Then, in your judgment, with proper wrought-iron guns, his form of projectile might be made of use?—A. His form of projectile might be made very useful; but, of course, only in a gun rifled upon his plan—a wrought-iron gun, rifled upon Mr. Wiard's plan.

Q. In the course of your observations and experiments, were any influences attempted to be brought to bear upon you to secure a favorable report?—A. I think nothing, sir, except in a social way; such as my being thrown socially with Mr. Wiard all the time every day, and my association with him was always very pleasant.

Q. Do you know whether he was expending any money to secure favorable reports from the officers of the Navy, or any of them?—A. I don't think he expended any money with that view.

Q. He expended money pretty freely?—A. He expended money very freely, indeed; but not with the view of influencing any officers.

Q. He spent money a good deal to influence the newspapers, as I understand it?—A. Yes, sir; and the public mind—to influence people who could be of no service to him.

Q. Did he keep a steam-yacht?—A. Yes, sir; the Minnehaha.

Q. And he was taking down, from time to time, members of the press and other people?—A. Yes, sir; scientific people and officers of the Army and Navy would go down with him, and officers of the city government.

Q. Do you know under what arrangement or contract the firing in 1873, 1874, and 1875 was done?—A. I know nothing about the first contract with Mr. Wiard. The first contract was for the appropriation of $40,000. It was expended, or nearly so, the first year. I have some letters bearing on that.

Q. Have you any copies of the bills which were approved in favor of Mr. Wiard?—A. No, sir; I never knew anything of his bills.

Q. Who was the officer who did approve the bills which were paid at Washington?—A. I don't think any one approved them; though, under the contract, I thought I had to do so. I never did, and never was called upon.

Q. Have you the account of the bills which were paid?—A. No, sir; no knowledge whatever of any amount having been paid to Mr. Wiard, or by him to others.

Q. You supposed you would be the officer to pass those bills?—A. In looking over the contract (and I remember reading it) I supposed I was to be called upon. This is the $60,000 contract, which I now hand you.

Q. Have you copies of any other papers which preceded this contract of $60,000?—A. I have an accompanying letter. I have a letter of January 6, 1874.

Q. Have you a contract of January 2?—A. No, sir.

Q. Did you not understand that the contract of January 28 was a substitute for a contract of an earlier date? Is there not annexed to that which you have now in your hand a letter of January 2?—A. No, sir.

Q. None of the bills for Norman Wiard's contracts were ever submitted to you for approval?—A. No, sir.

Q. And you don't know what money, if any, has ever been paid on that contract?—A. No sir.

Q. Were you detailed for that purpose?—A. No, sir; I was only detailed to witness the firing.

Q. Have you the letter of instructions ordering you to witness this work?—A. Yes, sir.

Q. Have you got it here?—A. Yes, sir.

Q. I would like to have substantially all the directions you received.—A. [Reads:]

"NAVY DEPARTMENT.
"*Washington, October* 21, 1873.

"To Commodore EDWARD T. NICHOLS,
"*Commandant Navy-Yard, Boston:*

"SIR: Please direct Captain Truxton, inspector of ordnance, not to receive or receipt for anything from Norman Wiard, or to hold any correspondence with him in relation to the firing of the 15-inch guns on Nut Island, except through this bureau or the Navy Department.

"I am, sir, your obedient servant,

"WILLIAM N. JEFFERS,
"*Chief of the Bureau.*"

The second letter is as follows:

"BUREAU OF ORDNANCE, NAVY DEPARTMENT,
"*Washington, October* 27, 1873.

"Commodore E. T. NICHOLS,
"*Commandant Navy-Yard, Boston:*

"SIR: Whenever Mr. Norman Wiard shall inform you that he is ready to fire the 15-inch guns, which he has placed on Nut Island for experimental purposes, you will direct Captain Truxton to witness the practice. As the experiment is wholly and entirely Mr. Wiard's, Captain Truxton is not to make any suggestions in relation to it, nor interfere in any manner with the programme which may be determined upon by Mr. Wiard. He is simply to witness and report.

"I am, sir, your obedient servant,

"WILLIAM N. JEFFERS,
"*Chief of Bureau.*"

That letter was turned over to me by my predecessor. Of course that was one of the unexecuted orders transmitted to me. There is no other order about it in that place in this book. There was an order to deliver to Mr. Wiard some Parrot guns, to be altered, by the chief of the bureau. Would you like to have that?

Q. Yes, sir. That enters under the $60,000 contract.—A. [Reads:]

"BUREAU OF ORDNANCE, NAVY DEPARTMENT,
"*Washington, February* 2, 1873.

"Commodore E. T. NICHOLS,
"*Commandant Navy-Yard, Boston.*

"SIR: Please deliver to Norman Wiard or his authorized agent the following Parrot rifles when applied for: 150-pounders, registry numbers 33, 34, 84, and 85; 100-pounders, registry numbers 55, 73, 161, and 263.

"I am, sir, your obedient servant,

"WILLIAM N. JEFFERS,
"*Chief of Bureau.*"

Here is an order direct from the Secretary:

"NAVY DEPARTMENT,
"*Washington, April* 6, 1874.

"SIR: The Navy Department directs that you will deliver to Norman Wiard, esq., when he calls for them, two 15-inch guns, in good condition to be experimented with, under a contract made with him.

"GEO. M. ROBESON,
"*Secretary of the Navy.*

"Commodore E. T. NICHOLS,
"*Commandant Navy-Yard, Boston.*"

In July, 1874, there were long instructions—quite a long letter of instructions—from the Chief of the Bureau of Ordnance to me, giving quite a little history of the affair.

Q. What became of the property at the end of Mr. Wiard's experiments?—A. Everything was sold at auction.

Q. By whose order?—A. By order of the Chief of the Bureau of Ordnance—after having been regularly advertised.

Q. Were you present?—A. Yes, sir.

Q. Do you know what the whole amount of the wreck brought, approximately?—A. I could tell you exactly the amount of the sale by looking over a press-copy book here. I know it was about $11,000. We sold some things that had no connection with that island.

Q. Were you present at the sale of the wreck after the completion of Mr. Wiard's experiments?—A. I was.

Q. Can you tell what the articles which Mr. Wiard had furnished, or which the Government had furnished Mr. Wiard, brought at auction?—A. I have lumped the whole thing here. There was little or nothing which he furnished, except pieces of broken guns and carriages. But the amount of $3,519.67 was realized in the sale of the *débris* from that island, the *débris* and injured guns.

Q. State whether or not the guns furnished by Mr. Wiard to the Government under contract of January 28, 1874, were burst?—A. No, sir.

Q. How many of them were not burst?—A. Well, one 15-inch gun was not burst. He only burst one Government gun, one navy gun.

Q. Were the guns which the Government furnished him sold?—A All with the exception of one 150-pounder Parrot, which remains intact. That is, was not re-rifled by Wiard.

Q. All the other guns were sold?—A. Yes, sir; they were sold, having been injured more or less.

Q. And they all brought that sum?—A. Yes, sir.

Q. And the *débris* from the broken guns and composition from broken-up gun-carriages were sold under order of the Department at Washington?—A. Yes, sir; and regularly advertised for the prescribed time.

Q Did they bring what they were worth?—A. Some things brought very good prices; others did not.

Q. Have you any other correspondence relating to the matter, between yourself and the Department, or between yourself and Mr. Wiard, other than the letters you have referred us to?—A. No, sir; I have had no correspondence with Mr. Wiard.

Q. Now, if you know of any act on the part of the officers of the Government, Bureau of Ordnance, Secretary of the Navy, or anything else which at the time struck you as irregular, fraudulent, or improper, state it and give us the benefit of your judgment upon it.—A. I thought there was a very grave irregularity in this whole Nut Island transaction, simply because Mr. Wiard was given control of the experiments, *i. e.*, as to its manner of expenditure. It is usual for experiments to be carried out by a board of officers, and the necessary expenditures to be made from time to time by that board, by the authority of the bureau.

Q. Have you ever before known experiments to be carried on under a contract with a person outside of the Navy?—A. Never, sir, not at the Government expense.

Q. Therefore, this case would be distinguished from an ordinary case of firing by Government officers, would it not?—A. Yes, sir, it is entirely different.

Q. Mr. Wiard was really firing under a contract, and had the entire control of the matter?—A. Yes, sir.

Q. And all your instructions were just to see what he did?—A. To witness and report.

Q. So that in that respect it was different from anything you have ever before known in the Navy?—A. Yes, sir, and I have conducted a good many experiments for other people.

Q. At any time were any of the officers of the Navy Department at Washington present at any of these experiments?—A. The chief clerk, Mr. Hogg, was there for some little time as a guest of Mr. Wiard.

Q. Was Mr. Hanscom or Mr. Jeffers present?—A. Neither of them ever saw a gun fired upon that island, to my positive knowledge.

Q. You look upon the whole experiment as a waste of money to a large extent?—A. As I see it now, I feel that the money was wasted. When I say "wasted" I mean that it has been expended, but not entirely thrown away.

Q. In your judgment, was there promise which the thing offered at the beginning? Without reference to the event, could you say that it was a judicious expenditure of money, or judicious to make those experiments?—A. I should say that it was not judicious to make those experiments—to start in them, *i. e.*, I never would have approved of any such experiments being made.

Q. Did you form an opinion when fully instructed about it in the beginning, whether or not it would be successful or useful, or otherwise?—A. Well, from time to time there were impressions made on my mind: but they were never breathed to any living soul or published in any way, until the Secretary ordered me to do so, and then it was at a very late date, when I had given up all idea of being called upon to express an opinion.

Q. Do you know one Captain Michaelis, who has made a report subseqnent to yours?—A. Yes, sir. He was associated with me at Nut Island, by order of the Secretary of War, I presume.

Q. He was an ordnance officer of the War Department?—A. An officer of the Ordnance Corps or the Army.

Q. Do you know whether he was particularly selected by Mr. Wiard or whether he was the choice of the Department?—A. I know that Mr. Wiard was desirous of having Mr. Michaelis here to observe velocities, because of Mr. Michaelis's superior knowledge of the

instrument we were to use, and of his having brought the first one from Europe, and having had more experience with it than any other officer in the Army.

Q. Did you consider him an accomplished officer of the Army in that respect?—A. A very highly accomplished officer, and I know for those reasons Mr. Wiard was very anxious that Mr. Michaelis should be detailed. I wrote to Mr. Michaelis on the occasion of this last series of experiments, and told him that Mr. Wiard was very anxious that he should come, and he replied to me that he had no objections to seeing the experiments of 1875, but that he would certainly object to coming if applied for by name. Then subsequently he wrote me that Mr. Wiard had written to him asking if he would be likely to come; and he said that he would not object to coming, but that he would make no application, nor did he want Mr. Wiard to apply for him by name.

Q. So far as you know, did Mr. Michaelis come here as a disinterested and entirely independent observer?—A. Entirely so, sir.

Q. Do you think he could have had any possible interest in the result?—A. Not the slightest in the world, sir.

Q. Have you seen his report?—A. Yes, sir.

Q. You notice that it is in some respects more favorable to Mr. Wiard's operations than your own?—A. I think only on the subject of his snubbing-rope, a naval affair which a soldier knows nothing about.

Q. You don't attach great value to his opinions on the snubbing rope?—A. No, sir.

Q. It not being used in Army warfare?—A. No, sir.

Q. If you observed anything wrong or irregular, state it.—A. I never have, sir; except as I stated before, that I thought it was irregular that any Government money should be expended without some Government officers controlling it.

Q. Do you think this money was expended wastefully by Mr. Wiard?—A. I think that he literally threw away a great deal of money.

Q. You mean in the experiments?—A. All of his expenses were paid here by the Government undoubtedly—every cent that he expended here.

Q. Do you think the Government had any knowledge of his disposition of the money, except so far as the bills were shown? Was he throwing away the money with the consent of the Department, or without their knowledge?—A. I don't think the Department could control him.

Q. Do you understand that any of the expenses of getting about and living here were paid by the Government?—A. I understand that all his expenses were paid out of the $60,000.

Q. And he was to have $60,000 for doing certain things?—A. Yes, sir; and he was not required to expend the whole of that $60,000 for those purposes; but he was to provide means of transportation.

Q. Have you ever seen the bills made out upon those things?—A. I never have seen them. He lived on board his yacht. There was nothing in the contract that would show that his expenses were going to be paid. But I will say that while I was accepting the hospitalities of the yacht Minnehaha I did not feel that I was under any obligations to Mr. Wiard, because I was informed by private letter from Captain Jeffers that those subjects undoubtedly came out of the appropriation, and that I had better make the best of it and live on the enemy.

Q. Have you got those letters?—A. No, sir; I never keep a private letter.

Q. Captain Jeffers was not friendly to the experiment?—A. He undoubtedly antagonized it from the beginning.

By Mr. MILLS:

Q. Do you know of any officer in the Navy who favored or indorsed the course pursued by Mr. Wiard and by the Secretary, or believed in it, or thought it was proper, or that the plan was feasible, or the money properly expended?—A. No, sir; I do not.

Q. Do you know what the opinions of the ordnance officers of the Navy generally were about this thing?—A. Well, I don't know what their opinions were. I only know what Captain Jeffers's opinion was.

By Mr. HARRIS:

Q. If there are any other facts that you know about these things I would like to have you give us the benefit of them.—A. I don't know of any.

By Mr. MILLS:

Q. How many of those guns burst?—A. He burst his first 15-inch gun, and then burst one of the Navy 15-inch guns, which is almost one of the same kind of guns. That was in 1874. And then the last gun in 1874 was an 11-inch gun, which he cast here at South Boston, a new cast-iron gun weighing 34,000 pounds. It was double the weight of our smoothbore 11-inch gun. They weigh only 17,000 pounds. This was a very heavy gun, and was cast for the purpose, and made a regular Wiard rifle from the beginning; and I think it burst at the first trial, or the second trial. He put 100 pounds of powder in it, and it went up. Then he burst the Army 10-inch Parrot. The last shot he fired he burst it with a

round shot in it, showing conclusively, as my report does, that the gun had been previously overworked by excessive charges of powder.

Q. You found out how much they would not stand?—A. Yes, sir.

Q. But you never found out how much they would stand up to the limit?—A. No, sir.

Q. Can you tell how much the Government furnished to Mr. Wiard in full?—A. I can give it to you to-morrow morning.

Q. I wish you would do that.—A. I have a list of everything supplied to Mr. Wiard, because I took his receipts for everything, and invoiced those to the bureau. The *debris* from the carriages was returned to me, and the composition from the carriages which was sent to me and sold at auction by order of the Department.

By Mr. BURLEIGH:

Q. Have there been any gun-carriages sold here since you have been on the yard?—A. Yes, sir; I can give you the exact number here from this letter-book. [Referring to book.] There were ninety-one wooden four-truck carriages sold at public auction on the 27th of December, 1875, they having been regularly advertised.

Q. At what price?—A. They sold at $3.62½ a piece.

Q. Were they iron-trimmed?—A. Some had a very little composition on them; but most of them were valuable only for the iron.

Q. What were the conditions of that sale, about the delivering of the carriages?—A. Ten per cent. was to be paid down on the day of the sale, and they were to be paid for before being taken out of the yard.

Q. Did the parties purchasing them take them out of the yard?—A. They or their agents did. They employed somebody.

Q. The Government was not at any expense in removing the carriages?—A. Not at the slightest expense in handling any of them, unless it was that one man was kept in the gun-carriage shed, to see that they took only the proper carriages, and to see that they did not take anything else.

Q. Was it a fair price for the carriages?—A. It was a very good price for them, because they were worth nothing except for the iron. I broke up one, and calculated the weight of the iron in them, and found that they would have hard work to get their money back—besides the labor of breaking them up. The men who bought them paid 50 cents apiece to have them hauled, and got poor people to break them up for the wood, and sold what was left for old iron.

Q. Do you know anything about the breaking up of the ship Virginia?—A. No, sir; nothing of my own knowledge.

Q. You were not here then?—A. I have seen parties at work upon her, breaking her up.

Q. Do you know what her condition was found to be in breaking her up—whether the timbers were all sound?—A. I have never seen anything but perfectly sound timber come out of her.

Q. Do you know anything about the building of the Vandalia?—A. No, sir; I know nothing about her cost.

Q. Do you know anything about the breaking up of the two iron-clads, Wassuc and Shawnee?—A. I know of their being broken up by outside parties.

Q. Do you know anything about the engines in them?—A. The engines were of obsolete type.

Q. Were they good?—A, They were good of their kind. But I think they were the Ericsson grasshopper engine.

Q. Not now used at all by anybody?—A. No, sir; they never would be used in any other ship as engines.

Q. Could they be used as stationary engines?—A. They could; but they would be very expensive engines to run in any stationary work.

Q. Do you know anything about any abuses in the Navy that ought to be corrected?—A. Well, I only know of certain matters in this yard.

Q. Those are the very ones we want.—A. It is in relation to the civil engineer of the yard, or his department.

Q. Give us anything on that subject that will be for the benefit of the service.—A. I was a member of the board, investigating some reports against Mr. Granger, the civil engineer, and in regard to the loaning and repairing of the yard dredge. I would just simply say that in the course of our investigations we found that Mr. Granger had used a great deal of Government material, and expended a good deal of money for labor on that dredge, both before she left the yard, and while she was at work out in the stream, when he had been expressly ordered not to do so, but that the party borrowing her was to go to all that expense.

Q. Do you know whether he received any consideration from those parties for that? Was that developed in evidence before your board?—A. No, sir.

Q. No consideration for his doing it at all?—A. No, sir. There was no way of obtaining anything of that kind.

Q. You just simply found that fact to exist. Did he evince any anxiety at any time that the parties should have the dredge?—A. Yes, sir.

Q. Who are those parties?—A. Well, Mr. Lewis.

Q. What is his other name?—A. I don't know his given name.

Q. Do you know where he lives?—A. I don't know that he is a resident of Boston.

Q. Are there any other abuses except that of Mr. Granger that you know of. The commodore told us all about that yesterday.—A. Well, there are a good many things that I would have different if I had my own way.

Q. Before you leave that subject, I will ask this question: Did you ever hear Mr. Granger saying when he returned, that he had been to Washington and got himself all fixed up right, after that board had passed upon that case, and that he was going to attend to some of the balance of you, the officers of the yard, and have you removed?—A. I saw him the night he returned from Washington, and was told by him that his matters were all settled; that the officers who signed that report would be called to account for doing it; that he had disproved the matters which this board had alleged against him.

Q. Have any of you ever been called to account?—A. Never, sir.

Q. Did he state whom he had been to see?—A. He stated that he had seen the Secretary.

Q. Do you know of the employment of any clerical force, or writers as they are called, that are unnecessary on the yard and could be dispensed with? Are there any in your department?—A. None, sir; as I have but one clerk in each of my departments, and no writers. I would say that I have charge of the navigation department as well as the ordnance department. I have a clerk in each, but no writer.

Q. Could one clerk discharge the duties of both those departments?—A. No, sir; because my clerk in the ordnance department does the work that used to be done by three people.

Q. Go on now and state any other abuses that you know about.—A. There is certainly something wrong when men are employed in the yard and their foremen and quartermen have no control over them, as was the case in the fall of 1874, when they had that large influx of men. I know and heard the foremen say that they had no control over their men; that their men told them that they were only here for a short time, and knew they had to go as soon as the election was over, and they did not care whether they did anything or not.

Q. Did they do much?—A. I saw at that time, while those men were here, more loafing than I certainly ever have seen in the yard during the whole time I have been here.

Q. Standing about doing nothing?—A. Yes, sir; standing about doing nothing, or idling until I came upon them. I remember one day particularly that I went into the Vandalia ship-house and I did not hear a sound. I thought it was very singular, and wondered where all the people were, and I walked up to the bow. By the time I had gone up there I had been seen, and the matter had been telegraphed from one to another, and I could not make myself heard while talking to a man on deck for the calking irons that were going like a drum. I asked the foreman, "Are you taking a rest?" He shook his head and said he could not control them. And that is generally understood here—that men who are put in in that way will not work; in fact, some of them rather refused to.

Q. Were you able to get calkers during that time?—A. Yes, sir. But it must be a man who understands his trade before he can be put on as a calker.

Q. In that period did you increase the number of your calkers?—A. I have no knowledge that they did. My impression is that they did.

Q. Do you know of any shoemakers being employed, or bootmake s?—A. Not to my knowledge. There was no increase of force in my department during that time.

Q. State if you have any views upon the subject of the employment of marines rather than civilians as watchmen.—A. Well, I am satisfied that the Government property would be much more securely guarded and honestly cared for if there was not a watchman in the yard. I could give you my reasons for making that statement.

Q. Certainly, we want all that.—A. I would state that at this yard we have a water-front of nearly half a mile, which is guarded by four watchmen. Their duties take them away from the water-front around through buildings and behind other buildings. Now, even if they were vigilant, I think it is possible for these river-thieves to sneak in and get under our sea-walls and carry off anything that may have been thrown there to them. And I think the door is left very wide for collusion between the watchmen and thieves. A watchman knows for days and weeks ahead at what time of night and for how long he will be on his post on the sea-walls, and if he is inclined to be dishonest, he can readily, by collusion with some river-thieves as we term them, allow a great deal of Government property to be taken out of the yard.

Q. You are satisfied that property is taken out?—A. I have no doubt of it in my own mind. With regard to marines, they live in the yard all the time, and have nothing in common with the workman, and the watchmen have, who may be his neighbor; and the marine never knows which post he is going on to until he is called there, in the middle of the night perhaps, to prepare himself for the post. He is taken from the guard-room, his name called off, and he is then told that he is for a certain post. Consequently he could never enter into collusion with these river-thieves.

Q. What is the general character of these marines for sobriety and integrity?—A. Well, we occasionally find them intemperate, but seldom intemperate while on duty. When they are on liberty, they are like other men.

Q. Do you notice whether or not they take it upon themselves as a duty to protect the

Government?—A. I think they do. I think they take an interest in the duty they are sworn to perform. They are sworn men. They are men under most excellent discipline also.

Q. Can you tell how many civilian watchmen are employed on this yard?—A. There are twenty-seven, sir.

Q. How many marines are there stationed here?—A. I don't know the exact number, sir.

Q. Do you know about how many?—A. About fifty, I think.

Q. Not enough to do the duty?—A. No, sir; not enough to do the duty to put them down on the water-front, or we would do so. We have a marine at this point and one at the extreme end.

Q. You have not enough to do the work that you have to do and to do watching?—A. No, sir.

Q. Would you think it to the advantage of the Government to increase the marine force, so as to have them for watchmen?—A. I think it would be for the interest of the Government in all respects.

Q. Do you know what the cost of a watchman is for eight hours?—A. It is $2.26 a day.

Q. Do you have to have three for one day's work?—A. Yes, sir; three for each post. We have nine posts.

Q. Do you know the cost of a marine, including his rations, pay, and clothing?—A. I figured up on it the other day, but I cannot give it now exactly. It is less than a dollar. Captain Pope could give it to you; he gave it to me—the cost of his rations, clothing, lights, water, and everything else.

Q. I suppose, in order to find the exact cost of an effective marine, it would be right to reckon the cost of the officers, would it not?—A. Yes, sir; the officers who are doing duty at the particular station.

Q. You have beside the civil force of watchmen, their captains?—A. Yes, sir; we have the three captains included in the twenty-seven that I gave you.

Q. In which department shall I go to get the exact figures upon watchmen?—A. The department of yards and docks.

Q. I noticed when you were asked about abuses your mind seemed to turn upon specific acts of fraud, but I suppose the question was meant to embrace the system or systems; therefore if you see anything in the system here which is productive of wrong, I think we should have the benefit of that and of your experience in that department.—A. I am quite sure that the system in relation to the way in which we make our purchases here is altogether wrong.

Q. What purchases do you refer to?—A. What are termed "open purchases."

Q. In what respect?—A. Well, I think that there are people around the paymaster's office. I don't know those things, however, but only say that I think so.

Q. You are discussing a system, and you have a right to give your views of the system —A. There are certain persons around the pay-office here who are certainly interested in every purchase that is made. I really believe that.

Q. What class of goods do you refer to—timber, iron, and coal?—A. General supplies that come from time to time.

Q. It does not embrace clothing?—A. No, sir; I know of a case where I had occasion last fall, in my own department, to get at the estimate for putting in new heating-pipes throughout the ordnance building. In order to send that estimate on, I sent my foreman machinist over to town, to go about to the different places, to find out where he could get those goods the cheapest, and to get the figures from two or three parties; and I found that the Walworth Manufacturing Company, a very large establishment, would furnish them at a very reasonable figure, or would deduct 40 per cent. from their list prices. That is the usual trade-discount on that kind of work. The bureau approved of my suggestions of making the alterations in the heating apparatus. I made the requisition on the bureau, making note that the above articles could be selected; meaning that I was to have something to say as to their selection, although I had nothing to say about the price. And those bills were paid by my bureau as sent from the Walworth factory. But what I wanted to say, bearing upon this subject, was, the regulations of my department require that when I make a requisition for anything to be purchased at open purchase, that I shall send the estimated cost. In order to obtain that, when I first came here I would send an expert over to town to find out what he could buy for—such things as paints, or oils, or hoop-iron, or sheep-skins, or anything that we needed very quick, or needed for emergency. He would bring me the prices at which he could obtain them from reliable dealers; and in making the requisition in triplicate I would put this estimated cost down on only one, leaving the other two copies blank, as was our custom. That copy having the estimated price on it was retained by the bureau. The other two copies being approved, one was sent to me, and the other to the purchasing-paymaster. He had no knowledge of the estimates I had sent on. I found that the prices which he certified to as being correct, and as the lowest market price, were always in excess of the prices at which my people could have bought those things—running up as high as 25 per cent. in some instances. I wrote a private letter, or semi-official letter, to Captain Jeffers on the subject, and shortly afterwards I went to Washington, being ordered there for some other purpose. I spoke to him about it.

He said to me, "It is an abuse; we know it; but we cannot correct it." He says, "Those paymasters have to deal with certain parties." He made that remark. I suggested to the commodore that I thought it was my duty to report this matter officially, and he said, looking over the regulations and the laws, that I had nothing to do with the prices whatever; the purchasing-paymaster was the sole judge of the price, and his certificate was final, and I had no right to question it. This was when I called his attention to the excess of charges made there. When I would send my experts over to town to get these estimates, they would come back sometimes and tell me, "These people say it is of no use to give you these prices; that they cannot get the supplying of those things, no matter what they put in or bid for." My man would always say, "These paints are always bought from the Boston Lead Company," or something. They appeared to know where the purchases were made. But now, for a year or more, I have ceased sending over to get these prices. The regulations do not require me to do it, but merely to put down the estimated price, so as to give the bureau some idea of how much it would cost. So I take my last bills of the same kind of goods and put that down as the estimated price.

Q. You have ceased, as you might say, trying to make a reform. Did you go as far with that Walworth contract as you intended to go?—A. Yes, sir; I think I explained fully that the bills were made out showing the 40 per cent. discount on them, the same prices as at my office. I cited those as a case where I selected the same articles myself. I put on the bottom of my requisition, "To be selected," so that I could have the privilege of ordering from the Walworth company

Q. He did not order them there?—A. Yes, sir; he did. I went with a requisition to the pay-officer, and said I wanted to get them. I had anticipated the approval of the requisition, knowing I was in a hurry.

By Mr. MILLS:

Q. Do you know, or not, that these parties who furnish these supplies to the Government have an understanding with the paymaster that they pay him a certain commission upon all those purchases that he makes from them?—A. I don't know anything about it one way or the other.

Q. Is it understood among you here that the paymaster gets a commission?—A. It is not understood that the paymaster does, and I don't think that the paymaster's name is mentioned here particularly, only those things are discussed. We merely feel that certain things are bought from certain people at all times, and articles are bought from parties who do not deal in them.

Q. Under what direction? Let us get at it.—A. Well, I know on one occasion, I know of one instance, when I first came here, an approved requisition from the ordnance department came back for quite a large quantity of paints and oils, and turpentine, and brushes, and varnish, and things of that kind. The paymaster gave the order to the Boston Lead Company to furnish the most of these things. The varnish was not such as I wanted for an especial purpose, and I went over there to the Boston Lead Company to make some arrangement about changing it. They told me, "O, you go down to some other firm." They directed me to some other firm, and told me, "We do not deal in varnishes, but we order that from these other parties." I went down there and found this firm who had really sent in the varnish unwilling to make the exchange that I desired, and I went to the pay-office to see what could be done there, and the chief clerk at that time, Mr. Plunket, said he would arrange it for me. He went out with me and went down and had a talk with these dealers in varnishes, and arranged that I should have an exchange.

Q. Who is the head of the Boston Lead Company?—A. I don't know, sir. It is a very large establishment. I looked upon that as an abuse, and undoubtedly one that could be corrected in some way.

Q. How many paymasters have you here?—A. Four.

Q. Are these bills paid in cash here or by draft from Washington?—A. You will find that they are all paid in cash here. I would like to add that my attention was called to this matter very recently, at the time that I was senior member on the board investigating some frauds in connection with the purchase of some ship's knees here. It came out in evidence that the bills for these knees would be made out in the office of the constructor of the yard, by Mr. Spooner, and that after the bills were regularly approved by the commandant and the chief of the bureau at Washington, Mr. Spooner would take them to the pay-office, and that Mr. Plunket, the then chief clerk and now assistant paymaster in the Navy, would at times take these bills down to a man who kept a grog-shop, in a low part of the town, in North street, in whose name the bills were made, and that that man would receipt the bills there and then for Mr. Plunket, but would receive no money. Mr. Plunket would take the receipt. I thought if he would go so far as that, he must be pecuniarily interested in the matter. I guess that is about all I have to say.

BOSTON, *March* 23, 1876.

Commander GEORGE BROWN recalled

By Mr. BURLEIGH:

Question. Do you know Mr. Griffiths, the ship-builder?—Answer. Yes, sir; I can say that I am personally acquainted with him, although I have not seen him for some years.

Q. Do you know anything about a bending-machine he had that is now in the yard?—A. I only know that he had a working-model in the basement of the Capitol at Washington at one time. He had it in working order.

Q. Did you meet Mr. Griffiths in Washington?—A. Yes, sir; I met Mr. Griffiths, jr.

Q. Did he or his father ever make any proposition to you to assist him in selling the machine?—A. Mr. Griffiths, jr., whom I had known while he was building the Pawnee, in Philadelphia, told me that he was very anxious to have some one take that working-model to France, and to Russia, and to other parts of Europe, and that in talking the matter over with some poeple, my name had been suggested, and that as he knew me personally, he would like very much to have me consider the proposition. He said the parties owning it would pay all my expenses and give me 25 per cent. of the profits, if I would consent to go, with the view of introducing it in Europe and selling it to foreign governments, with a view to their ship-building in their yards. I told him that I positively declined there and then; that it did not need any consideration.

By Mr. HARRIS:

Q. Was there any suggestion made that if you could sell it to the United States Government you should have any commission?—A. Never in the least, sir.

Q. Do you know whether any such proposition was made to any other officer of the Navy?—A. No, sir.

Q. Or whether any commissions were paid by him to any officers of the Navy for its sale?—A. No, sir.

Q. Have you any opinion upon that subject which we can get at?—A. No, sir; I never heard the matter broached or discussed.

BOSTON, *Thursday, March* 22, 1876.

OLIVER L. SHAW sworn and examined.

By Mr. BURLEIGH:

Question. Where do you reside?—Answer. In Boston.

Q. Do you know of a timber-bending machine of some notoriety?—A. I do.

Q. Did you set up the original machine?—A. No, sir.

Q. Did you know of the original machine?—A. I did.

Q. Did you ever see it work?—A. No, sir.

Q. Will you tell the committee what you do know in relatien to it?—A. The first of my having anything to do with that machine, I was employed by Mr. Griffiths, the old gentleman, (Oliver, his son, at that time was in Washington,) as a mechanical engineer, with an understanding that I was to go to work for them at a certain price, the time not to be less than six months, with the view of taking that machine from where it stood, in a building over on Maverick street, East Boston, and putting it up in a building that was to be erected in the Charlestown navy-yard.

Q. Who erected that building in the Charlestown navy-yard?—A. Mr. Griffiths contracted for having the building built, and it was built by Pierce & Montgomery of Chelsea.

Q. And the Government contracted with Mr. Griffiths?—A. I presume so; that part I know nothing about. So far as any transactions between the Government and Bending Machine Company were concerned, all those matters were kept very close from me. I never got any information. If I had sought it, I don't know that I should have obtained it; but I did not seek it.

Q. What did you do, sir?—A. As I understood, they had sold this machine to the Government, with the understanding that the machine was to be started up on the first day of January to bend timber, and it had got to be a forced job. We were to bend timber that day anyhow, whether the machine was entirely completed or not; that was the understanding; and, with that end in view, I proceeded as one would in that capacity. I hired some draughtsmen, and the work, as they had no machine-shop of their own, it being a forced job which had to be pushed, was placed in different shops.

Q. What work do you mean?—A. I mean the rebuilding of this machine.

Q. Then this is not the machine which was in East Boston?—A. This is the identical machine that was over there, large portions of it; but it was improved considerably, made larger and stronger.

Q. How long a time did it take to do that work?—A. As I say, I went to work, I think, about the 5th of September, and we were to bend timber on the 1st of January; that would make about four months; but I was engaged on that work six months, less three days.

Q. At whose expense?—A. I was paid by Mr. Griffiths, the same as every one else was paid who was employed by them. I hired draughtsmen, and there were other men employed by Mr. Griffiths, who worked there by the day, and Oliver Griffiths, his son, always brought the money once a week or once a fortnight, I can't tell which now, but I think once in two weeks, and we were paid promptly on Monday. I know I got my money; where it came from I don't know.

Q. How much do you suppose it cost to build that machine over?—A. That is a thing I should not want to guess at, but I can put you in the way of finding out about every single dollar, if you want to know. I can give you the name of the parties who did the work that we put out: that is, that was put out in different shops to be done. I call it a building over of that machine. Really the machine was weak; it used to break down. They built one ship with it, and I was informed by a man who worked on the machine all the time that they used to break more timber than they bent—broke up more than half of it in bending it, and it went under the boilers. That ship was the New Era. I was in East Boston at the time, connected with the Atlantic Works, and knew of the ship being built by this new plan of using bent timber. As I was saying, I can put you in the way of finding out the cost of the alterations.

Q. How many men do you think were employed on it, say in October and November, in the different shops?—A. Really I can't say, because the men employed there were mostly cheap laborers. The skilled labor in connection with this thing was employed in the different shops, but I can give you the names of the parties who did this work, and they could give you the cost of the job.

Q. How many different shops was the work performed in?—A. I can give you the different shops: Bisbee & Endicott, in Chelsea; the Atlantic Works, at East Boston; Mr. Loring, at South Boston; and the South Boston Iron Company. The boilers from Hodges, in East Boston, and engine, were got of Mr. Corliss, of Providence. The shafting was got from Mr. Sellers, in Philadelphia. There was not a large amount of that; it was the main-shaft, simply. Those are the principal parties who performed the machine-work.

Q. Did you consider that each of them had what you would call a pretty-good-sized contract?—A. It was not what you would call a contract. It was done by the day.

Q. Can you not give some idea of the cost of that machine?—A. I cannot, for this reason: because there was so much of it, and, in fact, my mind was so much occupied, as I had the whole thing to manage mechanically. I did not pay any attention to that. I had two and sometimes three draftsmen employed, who were under my supervision in the yard.

Q. Haven't you in your mind the thought that it cost a great deal of money, and could you not say about what?—A. I should not be surprised if they spent on the machine itself somewhere about $30,000.

Q. And how much on the mill?—A. I can't say whether the Government furnished the timber for that building or not. There were piles driven, in the first place, and cut off up high; the building set up on piles, so that there is a kind of a cellar underneath. The piles cost about $3 apiece. How many there are I don't know. I suppose that Pierce & Montgomery would get, for building a building like that, somewhere in the vicinity of $5,000. I am rather impressed with the idea, although I am not positive at all, that the Government furnished the stock for the building.

Q. Was there any timber put into the machine?—A. No.

Q. It was mostly iron?—A. Yes, sir; the machine is all iron; the machine was lengthened out on the easterly end, toward the harbor, for the knee-building portion. This main housing or frame, I will call it, was lengthened out to take the knee-building portion; the two hydraulic rollers which run on casters, those were built by the Boston Iron Company. Then there was that casting, which takes one end of the stick and holds it on the table and the other end follows on the track hydraulic machine compresser, so as to keep the end pressure up.

Q. Are you a ship-builder?—A. No, sir; I have worked extensively on iron vessels, but no wood vessels. I was connected with the Atlantic works for some thirteen years.

Q. Have you formed any opinion as to the practical use of that machine?—A. I couldn't help that; I must have done so.

Q. What opinion did you form?—A. Well, it was a good deal like this: there was a machine that I took hold of to perfect as an engineer; when I took hold of it, I did not suppose that the machine, practically, was worth much; I was, as I have stated, connected with a large concern in East Boston, and I heard more or less about this ship that was being built on this plan. It was a new plan of building a ship out of straight timber instead of naturally-curved timber; from what I heard about the vessel and about the bending of the timbers, I came to the conclusion that it was rather a failure.

Q. Do you know whether it is the policy of the Government to use only live-oak timber for the frames of ships?—A. No, I do not.

Q. Do you know that the frames for the Government vessels are all made of live-oak timber?—A. O, yes; certainly.

Q. Do you know whether they can bend live-oak timber on this machine?—A. I don't think they can. When you ask my opinion about the working of the machine, I feel just like this: these parties agreed to pay me a certain sum of money to do a certain thing.

Q. What was that certain thing?—A. It was to make this machine go round, and to have a certain amount of power combined with it; and I knew I could do that, and I did do it effectually. I knew it would bend timber or break it; whether the timber was going to break or not was another thing. I knew that I could put in two sticks of timber that would make part of a ship's frame—timber that would square 12 or 15 inchs at the butt and taper to the top. I knew that if I put in one of Corliss' engines, with plenty of steam, I could make the device so that it would turn round and bend or break that timber; but whether it was going to break or not was another question. I should say that my view was that the timber when bent would not be worth much.

Q. Is that your opinion still?—A. That is my opinion still.

By Mr. HARRIS:

Q. You think the machine itself cost $30,000?—A. I will say this: I know that they expended considerable money; there are three different sets of hydraulic arrangements, which are quite expensive; it is work that has to work to a decimal, to a nicety.

Q. Do you know how much Mr. Griffiths got for that machine?—A. Not at all; I never knew anything about that; those matters were kept very close from me; I did not take the ains to inquire about it.

Q. Did you consider the machine, when you had finished it, as successful for the bending of timber?—A. I left the machine before it was perfected to that extent which I wished to perfect it.

Q. My question was whether or not, as far as you had gone with it when you left it, it was successful as a device for bending timber?—A. It was successful, as far as turning round was concerned.

Q. And you have testified that it had power enough, as a machine, to bend or break the timber?—A. Yes, sir.

Q. I am only asking you about it as a machine; whether you considered it practically a successful thing?—A. I did not entirely perfect the machine. I have not seen it from the time I left it. My six months expired, and at the time that it expired I was told my services would not be wanted any longer, and I left it.

Q. You do not answer my question. You were charged with the duty of rebuilding that machine, and you were allowed to put your own inventive genius into it, to some extent. You employed your draughtsmen, and you perfected the device, as far as you could, in the time you had. Now, I want to know whether or not you think that that device would accomplish the purpose of bending timber successfully?—A. Bending timber successfully is one thing. If you leave the word "successfully" out and say "bending timber," I can answer that.

Q. I do not ask you anything of that sort. You want to bend a stick of timber 15 inches at the butt, and tapering down to 12 inches at the end, and you want it of a certain shape; could you do it on that machine, provided the timber did not break?—A. Yes, sir.

Q. You had power enough?—A. Yes, sir.

Q. Then the question of its success must depend upon the question whether or not the bent timber could be properly used in frames for ship-building?—A. More that than anything else.

Q. You think in that particular it is a failure?—A. I never had any faith in that material for the purpose of ship-building.

Q. Suppose you take a stick of timber that you want to bring into the form of a rib or rail, and you do successfully bend it into that form without breaking, in your judgment, is such timber suitable to go into the frame of a ship?—A. No, sir.

Q. Therefore, while the machine would do the thing you set out to do, you doubt whether the system of building ships by bent timber is a good one?—A. Yes, sir; that is the main point. It depends, of course, upon where you use the timber. You might bend it so that it could be used for a certain distance upon the frames forward; but when you came to build the bilge timbers, the bend would be so short that it would destroy the fiber of the material.

Q. So that while it might be perfectly successful for some portions of a ship's frame, or some timbers of a ship, it would not do to use in other places?—A. That is my judgment.

Q. Did you succeed in bending timber on the 1st day of January?—A. I think we started that machine on the 1st day of January.

Q. Did you bend any timber?—A. Yes, sir.

Q. Did you succeed in breaking any?—A. Yes, sir.

Q. How much more did you break than you bent into the required form?—A. There were but few frames bent while I was there; perhaps half a dozen sets or so; and I guess four of the six broke, or were useless; somewhere in that ratio; but they were not the worst timbers to bend that you would put into a ship; that is, they did not go near the center of the ship.

Q. Did you understand the theory to be to make a ship wholly of straight timber, bent into the required form?—A. Yes, sir; entirely. That was Mr. Griffiths' idea, to build the ship out of straight timber.

Q. Has any ship in the Navy been built, so far as you know, with timber bent by that machine?—A. Not to my knowledge.

Q. Has any portion of any ship been built of timber bent on that machine?—A. It has been reported to me that there have been some few sticks of timber used for rails or such purposes that were bent on that machine.

Q. What do you say as to the use of knees bent in that way; would they be as strong as the naturally-curved wood?—A. I should favor the knee as it grew.

Q. Suppose it successfully bent, without breaking the fiber of the wood?—A. Even if you did not break it you would disturb the fiber of the wood. That depends, of course, upon the angle that the knee was bent to. You know knees are of different shapes as they go into a ship. If you wanted to bend a knee at right angles, so that it would go into the center of the ship, and it bends a little more than that, I should judge that the disturbance of the fiber of the wood would be so much that it would rather impair its strength.

Q. It would spread the fibers on the outside, and compress them on the inside?—A. Of course it is pressed together on the inner side, and stretched on the outside, and the tendency is to weaken the timber.

Q. Was this timber put into a bath of hot water and steamed before they bent it?—A. Yes, sir. They had it in a boiler, or a cylinder, some would call it. It was built just the same as a boiler; built strong. I suppose it is there now. I have not been in the yard for a long time: but this iron steam-box was made to get a certain pressure on the timber.

Q. The timber was put in there under a certain pressure?—A. Yes, sir; it was intended to force the steam into these sticks of timber; that was the idea, to make it elastic, so that it would bend. You could not bend that timber at all unless you steamed it. The timber would be put into the box in the morning, and allowed to stay there until the middle of the afternoon, and then they would bend it to a certain curve. As I say, I think out of six that were bent for what we call frames, two bent pretty fair.

Q. They had to lie in the room a long time after they were bent?—A. Yes, sir; we had a certain arrangement whereby a stick of timber was laid in the room. There was a thin strip of rolled iron that was put into the machine with the timber, and when the sticks of timber came out bent, this strip of iron remained on the back to keep the back from crushing out. If you did not have something of that kind on the back, the whole length of the timber, and then stays across the front, which would hold it from sliding, you would lose the curve. We never took any timber out after it was bent until the morning, and then they were put on the floor, and they were not released while I was there.

By Mr. BURLEIGH:

Q. What year was that?—A. I can't give the date of that now; it was four or five years ago. I went with them in September 5, 1861, and I think that was in 1872; I can't be positive.

By Mr. MILLS:

Q. Didn't that whole concern cost $50,000? All that work could not be done for less than $50,000, could it?—A. I should think it might have cost about $50,000.

By Mr. JONES:

Q. That is what it cost the Government, you mean, to do the work?—A. I don't know whether the Government did it or not. It was done on the yard, I should have said. There was one other party who worked on the machinery; that was Hodges, over at East Boston. He built the boilers.

By Mr. MILLS:

Q. By whom was that machine owned when it was sold to the United States; who constituted the Bending Machine Company—Charles Allen Brown, and who else?—A. I can't tell. I was never brought in connection with those gentlemen in any shape or manner.

Q. Do you know of anybody giving any commission to any officer of the Navy for the purpose of procuring his influence, or anything of that kind?—A. Not at all.

By Mr. JONES:

Q. Or any one else?—A. No, sir.

By Mr. MILLS:

Q. Do you know of any abuses or frauds being perpetrated upon the Government in the Navy Department by anybody?—A. No, sir.

By Mr. HARRIS:

Q. Where did you do this work on this machine?—A. It was mostly done in the yard.

By Mr. BURLEIGH:

Q. What was not done in the shops outside was done in the yard?—A. There was more or less work that was done in the repair-shop in the yard.

By Mr. HARRIS:

Q. Did you go over to the yard in October?—A. No, sir: I was over at East Boston, in Mr. Griffiths' shop, for about, I should say, four or five weeks before I went to the yard. We

moved the machine right over there, just as soon as the piles were driven, and the building fitted up and made our headquarters in the yard.

By Mr. MILLS:

Q. Did you know Oliver Griffiths?—A. Yes, sir.

Q. Did you ever hear him say anything about the ownership of that bending-machine?—A. I might have heard a casual remark, or something of that sort; but nothing that would benefit you or any one else in any way.

Q. Did you ever hear him say anything about selling his interest to the United States?—A. No, not selling his interest.

Q. Well, selling anybody's interest?—A. I think that Mr. Griffiths told me, on the first start, when he made the bargain with me, that the understanding was that the machine was sold to the United States Government.

Q. At the time you commenced to build it?—A. At the time I commenced altering it over, or to take it down.

Q. Do you know anything of Oliver Griffiths making any demand of the president of the company or Mr. Brown, or any other member, for money for any cause at all?—A. Yes, sir; I have heard so.

Q. What was that?—A. I will state it just as it came to me. It was like this? Oliver Griffiths' brother came to me about a month ago, and had a letter from his father wishing me to make him drawings for a small machine to go to the Centennial, to be set up there, to bend timber. I declined to make the set of drawings and gave him my reasons, and in giving my reasons why I declined, one of the reasons was connected with Oliver Griffiths. It was the manner in which I had been treated by him, and I declined to have anything to do with any of them in any way, shape, or form; and then he told me that Oliver had blackmailed his father, and I made a remark something like this. Said I, "I believe, if I had been so minded, or had been a man of that stamp, I could have said some things to that company that would have made them say they would be glad to give me a sum of money to hold my tongue." "Well," he says, "that is just what Oliver did," and he told me that when the time came for him to settle with the company, he took $10,000 out of them.

Q. What was the thing that Oliver proposed to hold his tongue about or not to hold it?—A. That I don't know; he didn't tell me that.

Q. Don't you know what it was?—A. No.

By Mr. BURLEIGH:

Q. What were you going to say that would make them glad to give you $10,000?—A. Well, so far as I was concerned, my idea was just what I have expressed here. I have expressed, I think, in substance, just about my idea of the matter. I think any gentleman could conjecture from what I have said what it was.

Q. Have you any cause to conjecture that there was anything unfair in the transfer to the Government?—A. I have no knowledge that I can give that would be worth one cent in that direction.

Q. Do you know any circumstances that aroused your suspicion about that transfer or that trade?—A. I will state right here, plumply and plainly, all there is. It is just like this: from all the information I had received in regard to the operations of the machine, it was a failure and so considered over there, and it was sold to the Government at a round price, probably. That is about the whole of it.

By Mr. JONES:

Q. The parties sold something to the Government that really was not good for anything?—A. That is the idea. No value practically for building ships.

By Mr. HARRIS;

Q. You spoke of Oliver Griffiths' treatment of you; what treatment did you receive which you resented?—A. Well, it was the same kind of treatment ——

Q. Won't you be specific in answer to that question?—A. I will put it in these words; that it was treatment that was very discourteous.

Q. In what respect?—A. In regard to the work generally.

Q. Just specify what; I want to get at it; that does not give me any idea.—A. I have not got anything to cover up. I am perfectly open and frank about this thing. The way I feel about it is just like this. If there is any charge to grow out of this, I do not care first or last, top or bottom; you may have it.

By Mr. MILLS:

Q. Did you ever hear Mr. Hanscom say anything about this machine being a failure?—A. No.

Q. Did you ever hear him say anything about it at all?—A. He was about there considerably but I never had any conversation with Mr. Hanscom especially about this machine.

Q. Suppose I should tell you that the Government of the United States paid $160,000 for that machine, would you think there was anything fraudulent in that transaction?—A. Well, I might say that I think they paid too much.

Q. You have stated that it cost about $50,000, and if the Government paid $160,000, what is your idea of the transaction?—A. You mistake there. When I speak of $50,000, I say it would not surprise me if the expense to the company of building that bending-machine, and the expense of putting up that machine, from first to last, was $50,000.

Q. Was it not worth over $50,000 when it passed into the hands of the Government?—A. The value of the machine depends upon what it would do.

Q. How much, in your judgment, had been expended upon it before you began your modifications?—A. That is a thing it would be hard to tell. It was a machine that had been experimented upon, and you know what experiments are in connection with a machine like that. It is a very massive machine. It is impossible to tell what the cost might have run up to.

By Mr. BURLEIGH:

Q. Suppose the machine, as it is to-day, cost and is worth $50,000, what did it cost, and what was it worth, as you took it?—A. Say $50,000 more.

Q. Was it not of more value after you had spent $50,000 on it than it ever was before?—A. Yes it was worth a great deal more, of course. We took the machine as we found it there, with some of its parts broken, and all that kind of thing.

Q. If it cost $50,000 to put it in the condition in which it is now, what was its value when you took it; you say it was broken when you took it?—A. Yes, sir; some parts of it were broken; the thing that we put the end of the timber into on the table, for instance; those things were all thrown away.

Q. How much would it have cost to repair it, making it no longer than it was at that time?—A. To have simply repaired the broken parts there were there, and use it as it was, would have cost but a very small amount of money. But ther ewere entire changes made; it was rebuilt; there was new gearing put on it.

By Mr. MILLS:

Q. Was not a large portion of that rebuilt at the expense of the Government of the United States?—A. I don't know.

Q. What could you build a duplicate of the machine for; couldn't you do it for $50,000? Couldn't you take $50,000 and produce another machine just like it, right by the side of it, building and all?—A. No, sir; I don't think I could. It is a heavy machine; there is a large amount of iron in it, and iron costs so much a pound, anyhow. When you speak of the machine, I presume you mean everything in connection with it, engine, boilers, and everything.

Q. I mean everything about the bending-machine that the Government paid for?—A. No, sir; it could not be done for $50,000.

By Mr. HARRIS:

Q. Now, I want to come back to my question. You say that in your judgment probably $50,000 was spent upon that machine after you took possession of it?—A. Yes, sir.

Q. Now, can you form any opinion of the probable cost of the machine up to the time you took it, or what it might reasonably have cost?—A. I have answered that question in this way, and I do not see any other way to answer it—that this was, of course, an experiment.

Q. I don't want that; I dont want any of your arguments about it. I want you to tell me what, in your judgment, that machine might reasonably have cost.—A. I do not like to prejudice my judgment by jumping at such things as those, nor does any one who has any reputation for doing anything, because it is one of those things which it is pretty hard to tell how much it cost.

Q. Can't you approximate within $10,000 of it?—A. Well, if I was going to jump at it, I should say it would not surprise me at all if it cost $50,000 as it stood there; perhaps more.

Q. Now, I want to bring you back to the question I asked a little while ago. I want to know wherein you think Mr. Oliver Griffiths mistreated you in regard to this matter? What did he do which you say was discourteous or unfair?—A. Well, I have said that he treated me discourteously. I have answered the question about as well as it can be answered.

Q. Did he pay you for your labor?—A. Certainly, I was paid regularly, once a fortnight.

Q. Did he find fault with your work?—A. There was a certain charge that he made at one time in connection with the work that I did not like.

Q. Well, what was it?—A. It was in connection with the work that was done in the shop of the South Boston Iron Company in connection with the hydraulic work. He stated to his father, I can't state the words, of course, but to the effect that I knew better, or that I knew that a certain thing was so when I said it was not so.

Q. Did he at any time charge you with not having done the work properly, or with having made an imperfect machine?—A. O, no, nothing of that sort; none of them ever made any claim of that kind.

By Mr. MILLS:

Q. Do you know how it was that Oliver Griffiths blackmailed his father and Brown and the other members of the company?—A. All I know about that matter is what his brother told me about four or six weeks ago.

Q. Did he tell you in what that blackmailing consisted?—A. As I understood, it was in connection with this work and other Government work.

By Mr. HARRIS:

Q. What did you mean by saying that you knew things that they would be glad to pay you for not telling about?—A. What I meant by that is just what I have stated plainly; that they had a machine there which, in common terms, was thought to be a machine which was not of much account, and it was saddled on the Government. That is about the whole of it.

Q. That was an opinion of yours, simply, wasn't it?—A. I do not like to put that in. I guess you had better leave out that question.

Q. I want to know what you think they would have been glad to pay you money to suppress.—A. I simply said that to his brother, and that remark led to his statement to me, that that was just what his brother Oliver had done, and he got $10,000 out of the company before he would release them, or they could be released from him, or whatever it was.

Q. There is no information which you now desire to suppress from this committee that you then referred to?—A. Nothing, sir; there is nothing that I desire to suppress, so far as any investigation like this is concerned. Believe me, gentlemen, I am a citizen, and have an interest in all these things. I am inspector of buildings for the city of Boston. I believe in having the Government administered as it ought to be, honestly and faithfully, and with integrity, and I believe the work that is being done in these matters now is right, and of course, if I knew anything, I would report it to you willingly. I would rather do it than not. I believe it is the duty of every man, if there is anything in connection with our Government in the shape of fraud, to reveal it. I have no desire to suppress anything.

By Mr. MILLS:

Q. Did you infer from anything that Oliver Griffiths said, or that the old man Griffiths said, or anybody connected with that bending-machine said, that the Hanscoms had any personal interest in that purchase?—A. There was nothing said that I know of. I don't know that I heard anything said between those parties that should lead me to suppose that the Hanscoms had any particular interest in this matter.

Q. Did you hear any statement about Oliver Griffiths having any correspondence in his possession from which he could get that $10,000?—A. No, sir.

By Mr. BURLEIGH:

Q. There is something on your mind; you had better relieve it.—A. No; there was nothing said. I only know that Oliver Griffiths and his father were brought in connection with Mr. W. L. Hanscom, in connection with the work going on.

By Mr. MILLS:

Q. Was it not Isaiah Hanscom?—A. Of course I have heard Isaiah's name in connection with it. I can't state now just how. It was some time ago. But still I know well that in conversation, or in the hearing of conversation, the names of both the Hanscoms were used in connection with doing our work, you understand.

Q. Were those names, or either of them, used in connection with having any interest in the purchase of this machine by the Government?—A. No, sir.

By Mr. BURLEIGH:

Q. You mean interested in the work you were doing on the bending-machine in the yard?—A. That is it, exactly.

Q. Were they any more interested in that than their position might make them interested for the Government in any work?—A. No, sir; perhaps not.

BOSTON, *March* 22, 1876.

CHARLES W. ABBOTT sworn and examined.

By Mr. MILLS:

Question. You are purchasing-paymaster at this place?—Answer. Yes, sir.

Q. Will you state to the committee what proportion of the purchases made at this yard are made by contract at the annual lettings and what proportion are made by open purchase?—A. They are now largely made by contract. There has been so little business within the last year, since I have been here, that it is pretty difficult to say what the proportion would be, but I should think that of all the supplies furnished here at least four-fifths are by contract.

Q. By annual lettings?—A. Yes, sir.

Q. What means have you of obtaining information on this subject?—A. That is merely an estimate. I really have not any way of ascertaining accurately. The books containing the supplies which are to be furnished by contract are sent to me, and I just get a sort of an idea from looking over those books.

Q. You mean, I suppose, that that amount of supplies is ordered here from Washington; they are not purchased by you?—A. That is, the annual lettings by contracts. The bureaus advertise for bids to supply different articles throughout the yards.

Q. Do you know that they do advertise for them, or do they buy them by open contract at Washington?—A. I cannot say. I recollect reading an advertisement in a New York paper, I think, by Commodore Howell, of Yards and Docks.

Q. Has any one here any control over your purchases? Is there any one whom you have to consult before you make purchases here?—A. No, sir. I may consult the bureaus.

Q. Do you ever have to consult Mr. Trickey about any purchases you make, as to whom you shall purchase from?—A. No, sir.

Q. Do you ever do any such thing?—A. No, sir.

Q. Does Mr. Trickey make any suggestions as to whom you shall purchase from?—A. No, sir.

Q. Do you know whether or not he has any interest in the purchases you make when you do not make them from him?—A. Not that I know of.

Q. Do you make many purchases from him?—A. Of lumber,

Q. Do you purchase from him such things as are required?—A. I never have purchased of him anything but supplies in his line—lumber. I think I have paid contract-bills of his for hay. I won't be sure about that; that was when I first came here.

Q. He has no interest at all in any purchases you make for the yard, nor any control over them?—A. No, sir.

Q. And you never consult him about making purchases?—A. No, sir.

Q. Does he or does he not exercise some influence in the management of this yard in some way?—A. Mr. Trickey exercises a certain kind of influence, a sort of moral influence, from being an intimate friend of Senator Cragin.

Q. What has Senator Cragin to do with the navy-yard?—A. Nothing. I know Mr. Trickey is spoken of as if he had a good deal of influence, but I have no knowledge of any exercise of influence. I could not say that Mr. Trickey's influence in the yard in any of its departments was anything.

Q. How do you purchase timber from him? Do you require bids, or do you simply go and purchase it on the best terms you can?—A. In some cases I purchase it at a fair market-price of him, and in some other cases by bids.

Q. Do you ever purchase any live-oak timber from him?—A. No, sir.

Q. Do you ever purchase any white-oak timber from him?—A. Yes, sir.

Q. What is the usual price you give for white oak, white-oak logs, timber, and plank-stock?—A. In one instance, I bought some of him where the bids ranged from a dollar to 90 cents, and Mr. Trickey's bid was the lowest. I referred that to the Chief of the Bureau of Construction, Mr. Hanscom.

Q. What did he do?—A. Mr. Hanscom ordered the purchase to be made of the lowest bidder.

Q. What was the lowest bid?—A. The lowest bid was 90 cents a cubic foot.

Q. How did that correspond with the market-price?—A. I thought it was cheap, judging from the bids. One was 95 cents, another $1, and Mr. Trickey's was 90 cents.

Q. How did the 90 cents bid compare with the price outside?—A. Well, for such timbe as they required, I thought it was cheap at 90 cents, that that was a very fair price.

Q. If you thought it was a very fair price, why did you refer it to the Chief of the Bureau of Construction?—A. I referred it to him so as to get his instructions in regard to it.

Q. Had you advertised for that timber?—A. I sent out bids for it. I did not advertise in the papers.

Q. To whom did you send bids?—A. I sent the bids to Messrs. Huckins & Co., Haskins & Co., and Mr. Trickey.

Q. You did not put any advertisement in the papers here in town?—A. No, sir; I did not advertise.

Q. Had you ever given as high as 90 cents a cubic foot for white-oak timber before?—A. I never had purchased it before.

Q. Who was the purchasing-paymaster here before you?—A. Mr. Plunkett.

Q. How long have you been purchasing paymaster here?—A. I came here in November, 1874, or the latter part of October.

Q. Had there not been any purchases of white-oak timber before this, since you came here?—A. No, sir.

Q. When was it you purchased this plank-stock?—A. This was last September.

Q. Where do those other two bidders live?—A. In Boston.

Q. Are they friends of Mr. Trickey?—A. Mr. Haskins is, but I do not know about Mr. Huckins.

Q. Do you know whether Mr. Haskins and Mr. Huckins were interested in that timber or not?—A. I cannot say.

Q. Do you not think, from the character of that bid, that there was a combination between those three? You thought there was something wrong about it, because you referred it to the bureau?—A. I referred it because it was a large transaction. It amounted to several thousand dollars. There were 8,000 feet. There is a regulation—I never saw it; it is not on file in the office; but I have heard about it—which says that any purchase exceeding a thousand dollars in amount shall be advertised; that nothing shall be advertised unless it exceeds a thousand dollars in amount. This exceeded a thousand dollars.

Q. Does not that say that no purchase amounting to over a thousand dollars shall be made except by advertisement?—A. I don't know. I never saw it

Q. How many other lumber-dealers are there in this city besides those three?—A. There are a large number, I suppose, but I am not well acquainted with them. I have made so few purchases since I have been here of anything, that I have not got well acquainted with the market.

Q. Did you tell Mr. Trickey to whom you had sent those bids? Did he have any knowledge about it?—A. Not that I know of.

Q. You did not inform him that you had sent bids to those two other parties?—A. No, sir.

Q. You do not remember having purchased any white oak at 50 cents?—A. No, sir; I never purchased any.

Q. What other lumber have you purchased from Mr. Trickey?—A. I have purchased ash plank.

Q. How much did you give for the ash plank?—A. Sixty dollars a thousand.

Q. What did you give for pine?—A. I have forgotten.

Q. From what firms in town do you usually purchase your goods—brushes, paints, and other articles?—A. I send out bids, usually.

Q. Do you not usually purchase from about the same persons?—A. There are some persons from whom purchases have been made for years. They have been sort of stand-bys. But I am not governed by that. I purchase, as a general thing, in fact, in all cases where I send out bids, I purchase from the lowest bidder. For paints and leads, I have always sent to the Boston Lead Company, because I was always sure that a first-rate article would be supplied, and at a very fair price. I do not know that I ever sent out bids for lead. I always send the order to the Boston Lead Company.

Q. Have you any understanding with them at what price they are to furnish the lead when you send your requisitions to them to fill?—A. The understanding was that they were to put it in at the lowest price. There was an estimate, and I would compare their price with the estimate. If it exceeded it, I would not pay the bill.

Q. Did you ever purchase from Walworth & Co.?—A. Yes, sir.

Q. What was your purchase from them?—A. Iron.

Q. Have you always got that at the market-price?—A. I have sent bids several times to the Walworth Manufacturing Company.

Q. Would they sell to the Government at the same price they would to private individuals?—A. In a good many cases they would sell lower.

Q. Have there been any cases where they have sold higher?—A. No; they were very anxious to get as much Government custom as they could, and they would put down their prices very low.

Q. When they had reached the lowest price at which they would sell to the Government, was not that higher than they would sell to citizens for?—A. No, sir; I don't think it was. In fact, in many cases I think they have put it in actually lower than they would have sold to private parties. I do not know as I can say that either; but they were very anxious to sell to the Government, and their prices were very low, as compared with others.

Q. Do you not consider it your duty as an officer of the Government, when you have to buy for the Government, to buy as cheaply as you would for yourself?—A. Yes, sir.

Q. Do you not think it is your duty, when you purchase for the Government, to go and see where you can purchase at the lowest price, even if it is below the market-price?—A. Yes, sir. My plan is, and I like to do it constantly, to invite just as much competition as possible. I do not care how much or how low the price is. The only thing is, I must purchase an article that will be accepted when it is delivered at the yard. I have had articles rejected. I would buy an article very much below the estimated cost, perhaps 25 per cent., and when it went over to the yard it would be rejected, and I would be told that the estimated cost was sufficient to purchase the article of a quality that they could accept. That would have to be taken away, and I would have to purchase a proper article. There are a great many things that they want at the yard of the very best quality, and you must have samples, and in a good many cases the services of an expert, when you send out bids, because the parties to whom you send them would not know what was wanted, and in a great many cases they do not reply to bids; do not take any notice of them. They know that those articles are subject to inspection.

Q. Have you got any of the bills for the articles that you have been purchasing?—A. Yes, sir.

Q. Do you remember what you gave for nails?—A. No, sir; I do not recollect now.

BOSTON, *March* 22, 1876.

Rear-Admiral CHARLES STEEDMAN sworn and examined.

By Mr. BURLEIGH:

Question. What position do you hold?—A. Rear-admiral, retired, United States Navy.

Q. Were you at one time commander of the Charlestown navy-yard?—A. Yes, sir; from December, 1869, within a few months of three years.

Q. The committee, as you understand, are in search of abuses and irregularities in the navy-yard, with a view to make a report to Congress and recommend correction, in the best manner possible, of those abuses, and we would ask you if you know of any irregularities or abuses in the management of the Navy during your command at the navy-yard, or at any other time.—A. One of the abuses which came under my notice was in the purchase of coal, a large quantity of which was contracted for, the contractor being S. P. Brown.

Q. Will you state the way in which that contract was made?—A. The coal was delivered in 1870, I think, and received here from that time until November.

Q. Received here from what port?—A. From Philadelphia.

Q. Please go on and state to the committee the facts in the case.—A. There were three or four vessels arrived, one after the other, and according to regulations a survey was ordered on, consisting of a line-officer and two engineers; I forget their names, but it was a regular board, and the coal was condemned as unfit for service. This coal was furnished by the Equipment Department for all the bureaus.

Q. What was there about the coal that rendered it unfit for service?—A. It was full of slate. The contractor having been apprised that the coal had been rejected, asked that a certain quantity should be taken out of the hold of the vessel, stating if that was done we should find the coal good. This was done, and it was rejected again. It was reported to the bureau, and an order came to receive it and let him take out the slate.

Q. From whom did this order come?—A. It came from the Bureau of Equipment. Commodore Reynolds at that time was at the head of it. The order was that the slate should be taken out at the expense of the contractor. Every vessel that came was just in the same condition, and we had to go through the same surveys, the same telegrams backward and forward about it; and after these vessels had been discharged, the contractor wanted to be paid demurrage for his vessels, and I made a report upon it. The substance of the report was that he was not entitled to any demurrage: that all those vessels were kept for his benefit; that the coal was bad, and it had to be screened, and of course that caused delay, and therefore he was not entitled to demurrage.

Q. Who made the demand for demurrage, the captains of the vessels or S. P. Brown?—A. S. P. Brown; it came from Washington.

Q. The bill for demurrage came from Washington?—A. The head of the bureau wrote to me to know whether he should be allowed any demurrage; that a claim was put in for demurrage. My reply was that he was not entitled to any demurrage. Whether he got any or not afterward I do not know; I never heard any more of it.

Q. Did you not have to approve the bills?—A. No; I only indorsed the bill, that a certain quantity of coal had been received. The confract was made in Washington, and I certified to the quantity that was received, and it was paid in Washington.

Q. You do not know whether or not the Department made him take off a discount?—A. I know nothing about it.

Q. At whose expense was the slate taken out?—A. The communication from the bureau stated that that should be done at the expense of the contractor.

Q. Did you render any bill to the Department?—A. No; the whole of that was Construction Department, to whom the coal belonged. One of the Hanscoms was the constructor then.

Q. Do you know that he did not render any bill?—A. No, sir: none came through me.

Q. If he had rendered a bill, would it have gone through you?—A. Of course.

Q. Do you know anything further in regard to the cleansing of the coal?—A. Nothing more. I only know that it was rejected time after time, and telegram after telegram came, as the book will show, and we had to receive it. The last cargo, I think, was about 500 tons for engineer purposes. That was rejected *in toto*.

Q. Do you remember how many cargoes there were?—A. There were from 2,000 to 2,500 tons; there were four vessels, I think.

Q. Was that all the coal that came to the yard during the month of December?—A. From 2,000 to 2,500 tons came from September to November.

Q. More came in November?—A. More came in September. The last, I think, came in November. In regard to the cargo for engineer purposes, which was rejected *in toto*, the bureau telegraphed me to do what was proper in the premises.

Q. Do I understand you that these several cargoes came all along from September into November?—A. Yes, sir.

Q. Were these cargoes of damaged or bad coal the only cargoes that you received that season?—A. Yes, sir; all I recollect were those that came from Brown, in Philadelphia.

Q. Had you received any previous to this damaged coal during the season?—A. No.

Q. That was the supply for the next winter?—A. That was the supply under that contract.

Q. What became of that cargo that was condemned *in toto*?—A. I got an order from the Secretary of the Navy direct to receive it; that order is in the yard.

Q. Who condemned that cargo *in toto*?—A. A board of officers, consisting of line-officers. Mr. Bartelman was one of them.

Q. Have you anything more to communicate to the committee?—A. That is the only gross irregularity that I knew in the yard. We received timber there from time to time, under a contract for the delivery of live-oak, which was rejected; a good deal of it is in the yard still. What was received was very indifferent.

Q. Do you remember from whom that came?—A. Mr. Swift was the contractor.

Q. Do you remember whether any of the timber that was rejected was afterward accepted and paid for?—A. I do not know; there is a great deal that was rejected which is lying in the yard now. I had a good deal of trouble in trying to get it out of the yard. I reported that it was lying about there and was an eye sore to me on the wharves, and so on.

Q. Have you any other communication to make to the committee?—A. None in regard to abuses that came under my observation, unless you put questions: you know I cannot volunteer any testimony.

Q. As I said to you before, we are here in the interest of the Government, and in the interest of the Navy, in which you should take a pride.—A. I will tell you frankly everything I know. I think it is for the interest of the regular officers of the Navy to show up everything that is wrong, so that we can place ourselves right before the country.

Q. When I ask you if you know any other abuses in the Navy, it leaves the question open so that you can state fully everything within your knowledge.—A. I think one of the abuses in the Navy is the filling up of the yard with men for electioneering purposes. Another abuse is that of having men forced upon the yard who do not know anything of their business. I had one instance where a man was sent into the engineer department, and we had an order from the Secretary to receive him. The fellow had been in the State prison, and I was obliged to have considerable correspondence on the subject before I could prevent his coming in, which I eventually did. I remember an instance where the master-boat-builder, who was one of the most capable and worthy men, and who had sent two of his sons and his son-in-law to the war, and supported their families, was summarily dismissed from the yard, and another man, one of his own workmen, put into his place. I represented the facts to the Department, and even went so far as to write a private letter to Admiral Alden to try to have the man put back; but it made no difference, this new man was put in.

Q. Do you know of any money or valuable articles given for the purpose of influencing any one in the Navy?—A. No. There was one case that came under my notice which was a very curious one. That was a fraud in what they call "hide cuttings." You know we make a great deal of hide rope, and when the cuttings have accumulated to a certain extent they are sent to the auctioneer and sold and the money put into the Treasury. Everything that is sold goes back to the Treasury. It appears that some quantity which had accumulated had been sent out of the yard to be weighed, as we thought properly, and the man who purchased from the auctioneer found that he had to pay for a certain quantity over what he receipted for; that is, he paid for 2,500 pounds, but receipted for a thousand—something in that style. The man who bought the cuttings being honest, addressed me a letter, and I ordered a board immediately to investigate the facts, and they found that certain parties had taken advantage of the time when the public weigher was out of the yard—that is, between 12 and 1 o'clock—and sent those scrap-hides over to the weigher of the construction department, and that there was collusion between him and the auctioneer and the other man in the rope-making establishment, and they were weighed and false weights given—that is, false weights given to the accounting-officer; and the purchaser, when he went to pay for his scrap-hides, receipted for a certain quantity and paid for a certain quantity. I had this thing thoroughly investigated.

Q. Did he receive and pay for more than the Government by its books delivered?—A. Yes. He paid for more than the Government was credited with.

Q. Did he pay for any more than he got?—A. No. He paid for what he got, but he receipted for less than appeared on the books. There was a difference of some 2,500 pounds.

Q. Who was in collusion with the auctioneer?—A. The weigher in the construction department. The fellow is now dead. He was a brother-in-law of Norton, who is a politician, and, I think, tried once to run for member of Congress. He was navy-agent at one time. I immediately suspended the parties, and the board recommended that they should be dismissed, except one of the men, who seemed not to be as culpable as the others, and they recommended that he should be suspended. They were kept on suspension about a couple of weeks, and then an order came to put them on duty, and the fellow died on duty. All of them were re-instated except the auctioneer. He was dismissed and another one appointed.

Q. From whom did that order come?—A. From the Navy Department.

Q. What officer?—A. From the Equipment Bureau.

Q. Who was the Chief of the Bureau of Equipment at that time?—A. Admiral Reynolds.

By Mr. MILLS:

Q. Was that by direction of the Secretary?—A. I think it was by direction of the Secretary.

Q. Were abuses of that kind frequent?—A. That was the only instance that came under my notice, though I had suspicions that there were things going on of the same character; but I could never find out. It was impossible. The commandant of the yard is at his office, and it is impossible for him to discover these things. He may suspect them and try to catch the parties, but it is out of the question.

Q. Do you know of any other abuses in any other department?—A. None. There were some questions propounded to me by the chairman of your committee (Mr. Whitthorne) in regard to certain points connected with the retired lists, measures of reform, and so on. Those I will answer directly to him.

Q. Do you know of the sale of any vessels of the Navy while you were at the navy-yard?—A. None were sold while I was there.

Q. Were any torn down while you were there?—A. Yes, sir. The Vandalia was brought from Portsmouth, torn down, and rebuilt. She was a sloop of war of about six hundred tons, old measurement. She was a sailing-sloop, one of the old set of eight, but that, I would remark, (with the exception of converting them into steamers,) has been done from time immemorial; and if we had not done it we should not have had any navy at all. I think that was very proper. Since the war we have had but one appropriation to build vessels, and that was for the building of the eight sloops of war.

Q. Was there a board of survey on the Vandalia at that time?—A. There was no board of survey. She was the receiving-ship at Portsmouth. I remember the circumstances perfectly. I happened to be in Washington, and the constructor was very anxious to find some old ships to tear to pieces and build upon, and I said to him, "There is the Vandalia, at Portsmouth; why not let me send the Sabine there," (which had already been fitted out:) "it will cost nothing but the expense of bending the sails; and let her take the Vandalia and bring her on, and you can convert her into a steam-corvette."

Q. What part did you build upon?—A. We didn't build upon anything; just built a new ship.

Q. Of the same size?—A. O, no. This corvette is 225 or 230 feet long, and the other vessel was about 150; but, as I tell you frankly, if we had not done that we should have no vessels at all. A good many steamers were built in a hurry; they were all rotten, and we could not repair them, and that thing has been carried on ever since I have been in the Navy. The Constitution, for instance, has been rebuilt, I think, twice.

Q. Do you know that if the Department had applied to Congress to do this work they would not have allowed them to do it?—A. I am under the impression that it was a stretch of authority.

Q. You think the Department dared not ask Congress for authority to do it, for fear of being refused?—A. I think so, sir. As I say, this thing has been done, to my certain knowledge, for the last thirty years; but not carried on so extensively as converting a sailing-vessel into a steamer.

Q. You do not call this "converting," at all, do you? It was condemning an old vessel and building a new one.—A. It was just condemning an old vessel and building a new one. The best plan, if you could have done so legally, would have been to have floated the Vandalia down the bay and set her on fire, and got the copper and so on. It would have been less expensive, because it is a very large expense to tear these vessels to pieces; they are built of the very finest timber, and it was a curious thing about this ship that there was scarcely a rotten timber in her. She was built in 1827, and rebuilt afterward, but she was then built of timber that lasted like iron.

Q. Do I understand that they took the timber of the old Vandalia and put it into the new one?—A. No; not a bit of it. She was a new ship entirely.

Q. Was the old Vandalia a good ship?—A. She was no use at all under the sun, excep as a receiving-ship there at Portsmouth, and she just took the room at the navy-yard.

Q. Would she not have made a good supply-ship?—A. No, sir; she was too heavily sparred, and it would have been very expensive to put a crew on board of her to man her. I think the economical plan would have been to set her on fire or to have sold her.

Q. She would have made a good freighting ship, would she not?—A. Yes, sir; she could have been sold, and, with slight repairs, she would have lasted ten or twenty years.

Q. But then you could not have built a new ship?—A. We could not have built a new ship; the money would have reverted to the Treasury; there was the trouble.

Q. The Navy did not get any money out of her?—A. The Navy got all the copper, iron, &c., out of her, and all the wood that was good was sawed up, piled, and sold at auction, and the proceeds went into the Treasury.

Q. Don't you think it cost the Government as much to tear her to pieces as they got out of her?—A. The labor cost more than double the material they got from the ship.

Q. Then if they had sold her for something they would have been better off?—A. Decidedly, so far as the Treasury is concerned, but not as far as the Navy is concerned, because we should have had no ship.

Q. Do you know any difference between the interest of the Navy and the interest of the United States?—A. I always go for the interest of the United States. For instance, at the navy-yard there are a lot of old chain-cables, water-tanks, and so on, that could be sold for thousands and thousands of dollars. I have urged the sale of that old material to get rid of

it, and let the proceeds go into the Treasury; but there has always been an objection, because it did not go into the naval service, instead of going into the Treasury.

Q. Who makes such an objection as that?—A. Why each bureau. You go, for instance, to the Bureau of Equipment, and want them to sell these things, and they object to it. My idea is to sell everything you cannot use and let the money go right into the Treasury; and that has always been my idea.

Q. If the plan of tearing vessels to pieces and building new ones, as in the case of the Vandalia, is to be pursued, then you declare the independence of the Navy of the Government of the United States. Is it not so?—A. Pretty much so.

Q. What was your experience in the purchase of timber during the time you were in command of the yard? Did they pay extra prices?—A. I do not know about the prices, because all that is done at Washington. The system of open purchase, I think, is all wrong, unless you have an extremely honest purchasing-paymaster. For instance, if I made a requisition for a pair of oxen, the same man might furnish the oxen who furnished knees for our ships; that is, I sent a requisition to the Bureau of Yards and Docks for a pair of oxen. It came back to me, and I sent that requisition over to the purchasing-paymaster, and there was no supervision of it whatever. He purchased those oxen and they were sent over here for inspection, of course, to see whether they were good or not. I did not know whether he purchased from a former timber-merchant or from a man who sells carpets. Certain people have the run, as it were, of the Navy. You will find that the firm of Trickey & Jewett have been contractors for timber, and they furnish everything pretty much. For instance, if you want carpets, you send over to the purchasing-paymaster, and he has his man, and sends and buys the carpets of him, and so on. There is no competition whatever. Then you may go to the construction department, and you meet the same things there. Mr. A puts in a bid; he is perfectly familiar with all the workings in Washington; knows all about these contracts, getting people put into the yard, and so on, and the contract goes to him. For instance, he will make a contract for certain tools, a jig-saw, for instance, to cost a thousand dollars. He will put that at $1,500, and other instruments he will put in at a low price, but the aggregate makes his bid lower than other bids. What is the consequence? He furnishes the jig-saw for $1,500, which is, perhaps, 50 per cent. more than it cost, and after it is finished then comes an order from the Department saying that such and such things are not required; or the question comes to the commandant to know whether such and such tools are required. It is referred to the construction department, for instance, and they say that they do not stand in need of them, and consequently they are not bought; but the man gets his $1,500 for his jig-saw.

By Mr. BURLEIGH:

Q. Do you think that is done with the knowledge of the bureaus at Washington?—A. I do not know. I think it cannot be otherwise.

Q. Are such things as you name of frequent occurrence?—A. I have heard that they have occurred from time to time.

Q. That is one of the "tricks of the trade?"—A. It is one of the "tricks of the trade." There is the trouble we have, that everybody thinks that Uncle Sam is fair game.

By Mr. MILLS:

Q. Could not the contractor be put under bonds to furnish all those articles?—A. Yes, sir; that is it. Make him agree to furnish everything, and if he does not, make him pay the damages.

By Mr HARRIS:

Q. Suppose the Government find out that they do not want the article?—A. Then buy it on speculation. This is not a new thing; it is a thing that has been going on for years and years. For instance, I recollect some twenty years ago, in the purchase of clothing and so on for the Navy, (it was the time when the sailors had to buy everything,) Navy buttons, for instance, were furnished at half a dollar a dozen, and sewing-silk, that the sailors used for embroidering their cuffs, collars, and so on, was put in at a dollar a pound, when it was worth four or five dollars. The consequence was that the aggregate, when footed up, was cheap, and the man got the contract for all the articles; but he knew very well that very few pounds of silks would be required, and that he would make on the buttons and so on what he lost on the silk.

By Mr. BURLEIGH:

Q. Then the rule in the Navy Department is to take the aggregate of all bids?—A. Yes, sir; the lowest bidder gets the contract.

Q. And frequently he is let off from furnishing the articles he bids low on?—A. Yes, sir.

By Mr. HARRIS:

Q. Or else there is a requisition for a larger quantity of the others?—A. Yes, sir; or they don't want them.

Q. Do you think it impracticable to make every article stand by itself?—A. You could not of course, carry it to that extreme, but the people who had the control of the requisitions, and so on, could see at a glance where this fraud takes place.

By Mr. BURLEIGH:

Q. Could this practice be successfully maintained without collusion between the bidders and the Department at Washington?—A. There must be collusion. I think the great trouble in the navy-yards in regard to building our ships is with the labor. We get the material, in the long run, about as reasonably by contract as we could purchase outside, but the great trouble in building a ship is the labor; you cannot get the men to work. I was three years at the navy yard, and I never had a man reported to me for default in his work or for inefficiency. I have turned out time after time, and walked through the yard, and if I caught any men idling I would take them up and have them summarily dismissed, but they always got back again.

By Mr. MILLS:

Q. I understand that political influence in the navy-yards has been for years the bane of the Navy.—A. It has been the bane of the Navy, sir. The whole thing, strange to say, commenced with Mr. Woodbury. He was the first person who commenced the system of putting men into the yards for political purposes; it commenced there, and it has been going on ever since. He was Secretary of the Navy under Van Buren. I think myself the members of Congress in the localities of the navy-yards are the most expensive people that the United States have to support.

By Mr. BURLEIGH:

Q. Do you know whether the same abuses in regard to contracts obtained previous to the war as obtain to-day?—A. I think it is worse now; I think it has been worse the last four years than it ever has been, from all I can learn.

By Mr. MILLS:

Q. Like any other abuse, the longer it exists the worse it gets?—A. Yes, sir.

Q. Do you know what was done with the iron of the vessels that were torn down while you were in command?—A. I think that iron was taken and worked over.

Q. Who would do that?—A. That would be done in the construction department, in the blacksmith-shop.

Q. By the Navy Department itself?—A. Yes, sir; all that iron would be sent up to the blacksmith shop and worked over.

Q. They did not ship it off to private individuals to be worked over?—A. No, sir; all the copper that came out of the Virginia, for instance, was collected, and when it accumulated to a certain extent it would be sent to Washington, and there made into bolts or rolled into sheets for coppering ships.

Q. Do you know anything about any timber having been rejected and then received, like the coal you spoke of?—A. I do not know of it, but I have heard of it.

Q. Do you know any other vessels that were torn down besides the Vandalia?—A. There were five or six torn down and rebuilt. The Marion was rebuilt, and the Swatara and the Galena. I think that there were six in all that were torn down and rebuilt. The Marion was a second-class sloop-of-war. She was rebuilt at Portsmouth, and they built a very fine steamer in her place.

Q. Were you in command at the time the bending-machine was bought?—A. Yes, sir. In August, 1870, the Secretary of the Navy ordered me to direct a board of three line-officers and one naval constructor to examine a timber-bending machine erected in East Boston, and report whether, in their opinion, it was advisable to introduce the system into the navy-yards. The board reported favorably, and the report was forwarded to the Department. October 7, 1871, the Bureau of Construction and Repairs forwarded a contract with John Griffiths for a timber-bending machine, to be erected in the navy-yard, including the labor for putting up the building, but the material for the building was to be furnished by the Government. The cost of the whole was $160,000. It was put up and paid for, but whether used or not is a question I cannot answer. Commodore Nichols has all the papers in regard to this bending-machine.

By Mr. BURLEIGH:

Q. Do you remember who constituted that board?—A. I think the present commandant of the navy-yard at Portsmouth, Commodore Bryson, who was my executive officer, was one of them. The building was put up according to the contract, and after they got to a certain point a board was ordered to examine and see if they had built it up to that point according to contract, and then they were paid. I approved the bills as it went on until it was finished.

Q. Who was the constructor?—A. I think William L. Hanscom.

Q. Do you know it was he?—A. I know it was he.

By Mr. MILLS:

Q. Do you remember the other line-officers who were on the board besides Commodore Bryson?—A. I do not. This bending-machine was in full blast when I left, but I have not heard or known of a single piece of timber bent by that machine being put into any ship, although they have built half a dozen since. I think the Vandalia was being built when this thing was in existence.

Q. Do you know who the owner of that machine was?—A. Mr. Griffiths was the own
Q. Any others?—A. No; the contract was with him. He had it over in East Bost
I remember distinctly, when I was commandant of the yard, Isaiah Hanscom, who is cl
of the bureau now, asked me one day if I would like to go over and see the ship that h
been built there out of bent timber. I went over, and was very much pleased with the shi
went all over her, and saw the machinery and the processes. It passed out of my mind, a
the first thing I knew up came this order from the Secretary. I think Isaiah Hanscom
that time had an idea of having it introduced into the Navy when he invited me over
look at it.

Q. Do you remember the vessel that was said to have been built with timber bent by t
machine?—A. I don't remember the ship. There was only one of them built; she w
to sea, and I think got ashore, or some accident occurred to her, and I never heard of
ship afterward.

Q. You say you did not use any timber bent in that way on any of the ships of the Na
although the machine was in full blast?—A. I think it was finished a year before I
the yard, and they bent a great deal of timber.

Q. Was the timber used?—A. None was used while I was in command of the y
Whether it has been used since or not I don't know. It was finished almost to the day
Griffiths agreed it should be finished.

Q. Do you know why it was not used?—A. I do not know; I thought myself, when t
were building the Vandalia, that they would avail themselves of it, if it was such a g
thing, in building that ship—make the experiment. It is no use paying $160,000 for a
chine which you cannot make use of at all.

Q. Was William L Hanscom constructor at the navy-yard at that time?—A. He was c
structor at the yard the first part of the time, and then he was ordered away.

Q. Was the constructor on the yard at the time the contract was made for the bendi
machine?—A. Yes, sir; he was constructor on the yard, and I think was on the board
one of the regular officers, and his brother was chief of the bureau. When I took comma
here the present chief of the bureau was constructor here, and Mr. Lenthall was then t
chief.

By Mr. HARRIS:

Q. Did you examine that bending-machine so as to form any opinion of its practicability
—A. I thought favorably of it.

Q. You were not a member of that board?—A. O, no.

Q. You appointed the board?—A. I appointed the board. I thought favorably of it, a
I have been surprised that it has not been used, after seeing the ship. Whether they receiv
unfavorable reports from this ship afterward which stopped them or not, I don't know.

Q. Was the machine looked upon at that time, as far as you know, among ship-build
and men connected with the Navy, as a practicable and successful thing?—A. I do
know about ship-builders, except those in the yard; they seemed to think it was a very g
thing.

Q. They were taken with a new invention, I suppose, and carried away with it—A. Y
I thought quite favorably of it. The only difficulty was that I thought it was illegal to m
a purchase of that kind and erect a building in the yard, because I think, according to l
we have no right to put any building in a yard without a special appropriation by act
Congress.

Q. Did you communicate that objection to anybody?—A. O, no; I think I would h
got a rap over my knuckles if I had, All I had to do was to obey orders.

Q. Do you hold it to be your duty to obey orders if the thing is in violation of law
A. You may call attention to it, if there is any irregularity. For instance, if timber is p
chased and the bills are brought to me for approval, unless the requisitions come from m
refuse to approve them, if I think there is anything wrong, and refer the question to
bureau; and then the responsibility rests with them, not with me. I have done my d

Q. You report irregularities to your superior officers, and then obey orders?—A. Yes,
I suppose you will find here cases where timber to the amount of thousands and thousand
dollars has been bought without a scratch of a pen authorizing the purchase, and Com
dore Nichols has refused point blank to pay the bills; and then the thing was referre
the bureau, and the bureau would admit that it was very irregular, but would order hi
approve the bills.

Q. In your experience a good deal of the business of the Navy has been irregular f
great many years, has it not?—A. O, very.

Q. What would you recommend in place of the system of open purchase and the p
chase by sealed bids, as now practiced?—A. I think myself the plan of advertising for se
bids in the newspapers in the locality where the articles are wanted is a good one.
instance, if you wanted to buy Manila hemp, you would advertise so many tons of he
wanted; that specimens would be found at the navy-yard, and sealed proposals would be
ceived up to a certain date. That would be fairer than to go into the market and buy
tons of hemp.

Q. Whether or not you would think it advisable that each leading article, like hemp, c
timber, and copper, should be advertised separately and given to the lowest bidder?—
Yes, sir.

Q. And that where a good many articles were advertised for, if the contract was given to the lowest bidder, taking the aggregate, the bidder should be obliged to furnish the precise amount advertised for of each article, without any variation?—A. Yes, sir; without any variation whatever. I think one of the great abuses in the yard is the appointment of what they call "writers" in the construction department. When I was in the yard there were some six or eight people called "writers." Mr. A or Mr. B had some person whom he wanted to get appointed, and he would ask the Secretary or some one else to have him appointed a writer in the navy-yard. He did nothing; the clerks performed all the writing that was required.

BOSTON, *March* 22, 1876.

PERCIVAL C. POPE sworn and examined.

By Mr. HARRIS:

Question. You are a son of Commodore Pope, late of the United States Navy?—Answer. Yes, sir.

Q. How long have you been captain of marines?—A. I have been in the Marine Corps fifteen years, coming November. I have been captain about six years.

Q. How long have you been stationed here?—A. I came home from sea three years ago, coming October. I have been here two years in February last.

Q. Where were you on your sea-service?—A. I was in the North Pacific and in the South Pacific. I was fleet marine-officer of the squadron.

Q. Have you made any attempt to ascertain the relative cost per day of marines as compared with Army soldiers?—A. No, sir; I cannot say that I have, for the simple reason that I could not get the data excepting by report; but, from my general knowledge, the marines cost a very little less than infantry soldiers; that is, in the sum-total, counting the clothing. The pay, of course, is the same as that of the infantry soldier, but the contract-price of clothing is, I think, a little less.

Q. What is about the price per day here in the Charlestown yard?—A. About eighty cents per man.

Q. That includes what?—A. That includes rations, pay, and clothing.

Q. Have you had any experience with marines as watchmen, guarding Government property on shore?—A. Yes, sir; a great deal of experience.

Q. Where?—A. At this yard, at the Portsmouth yard, and very slight at Washington. That was in my younger days.

Q. You have a set of civilian watchmen?—A. Twenty-one watchmen and three captains of the watch.

Q. That is the force in Charlestown?—A. Yes, sir.

Q. Do you know the wages paid to each class?—A. Two dollars and twenty-six cents per man to the watchmen, and two dollars and seventy-six cents a day to the captains of the watch.

Q. Those twenty-four men cover the three watches?—A. Yes, sir; eight hours for each.

Q. So that each man of those men gets eight hours out of every twenty-four?—A. He gets one day's work of eight hours out of the twenty-four. The watchmen arrange it so that they take two days on and one day off.

Q. Now, as compared with the civilian watchmen, what is your experience in using marines? Have you ever used them for that purpose?—A. Yes, sir; my experience is that they are more reliable and more trustworthy. The marines are a body of men who are entirely under military discipline. The corps is small, comparatively speaking, and the officers are thrown into very close communication with the men. For instance, we have here for guard duty, and for whatever exigencies they may be called upon, about eighty men. A marine goes on post at 9 o'clock in the morning with the guard and with an officer. He stays on until 9 o'clock the next morning. The post of that marine is visited always twice during the twenty-four hours by the officer of the day, and three times by the sergeant. The sentinel is relieved every two hours during the twenty-four by a corporal. A marine does not mount guard twice for the same post as a general thing. A man comes off from guard at 9 o'clock in the morning, and he is at liberty that afternoon until 12 o'clock, midnight, generally. The next day he goes on guard again, but does not know what post he is to have until returning from liberty. He cannot, therefore, connive with any outside party. He cannot say to a man, "I will be on this post to-morrow, and you come along here, and whatever you want you can help yourself to," because he does not know when out on liberty what post he is going on the next morning. He is put on post by the corporal of the guard, and is inspected before he goes on by a sergeant, and inspected when he comes off. A watchman comes into the yard, and he has four hours on and eight hours off; he relieves himself, and the watchman that comes off goes out of the yard. He is always on the same post, or knows where he is going, and knows at what time he is to be on that post. Within the past few months, the commodore sent up and said that we must put a sentinel on a cer-

tain post. It was thought that there was stealing going on there, but the watchman ha not been able to catch the parties. A marine was put on the post that day for the first tim and at night he caught the parties, consisting of two men who came along in a boat, passe by a wharf where there was supposed to be a watchman, and pulled in under the stern of ship past two vessels which were supposed to be watched by two ship-keepers, and to possession of some material that was probably put there during working hours at their han and the marine nabbed them. One of the men was sentenced to eighteen months' impriso ment, I think. I don't know what became of the other. That is one instance. Those p ties evidently had been doing that thing for some time. It was an exposed position, a the sentinel always has his beat from one point to another, and when these parties came there, as they undoubtedly had been doing before, this marine from that position was a to see them clearly and distinctly, and he arrested them.

Q. Did you become satisfied that that watchman connived at the theft?—A. There w no evidence one way or the other, but here was a watchman who was supposed to be a to see it, and should have been able to see it. How a boat can pull in from an open ro stead and pass by a wharf where there is a watchman, and land, without being seen, I ca not understand. The watchman has a house standing on that wharf, and a comfortable f in it. The watchman may not have been there. I do not know that he was. He m have been somewhere else, on some other duty. The marine has a little box that is abo 24 by 36 inches in circumference inside, and he must keep moving about in cold weather, else he will freeze to death. There is no place for him to sit down; he must stand up, a even if he is inclined to sit down, or leave his post, the officer of the day comes round on every day and once at night, and he cannot tell whether he is coming round at 1 o'cloc 10 o'clock, or 2 o'clock, or what time he is coming. The sergeant of the guard also is se around the yard by the officer of the day at irregular hours.

Q. With your present force at the Charlestown navy-yard, could you do the duties no done by those twenty-four watchmen?—A. No, sir; not with the present force.

Q. How much increase of force would be necessary if you were to do that?—A. We coul do it with a force of fifty men, and it would be, in my opinion, a saving to the Government.

Q. Would you require as many as fifty men to do the duties now done by the twenty-four watchmen?—A. Well, sir, we would require six men in the place of three watchmen. The watchmen go on for twenty-four hours, four hours on and eight hours off. Our men go on for twenty-four hours, and twenty-four hours off. Say, we take forty men. One watch man costs $2.26 a day, three would cost $6.78. The six marines cost a little over $4.80 besides giving us this strong force for any emergency.

Q. Do you think that it would be advisable, in the navy-yards, to substitute marines fo the force of civilians to do duty as watchmen? Would it be economy for the Governmen to increase the marine force sufficiently to do that?—A. Yes, sir; I think it would, if th force was properly organized; that is, if we had a patrolling-force instead of having regula sentinels. If we had a patrolling-force who would be visited by the officer of the day, an controlled by the officer of the day.

Q. Who controls these watchmen?—A. They have a captain of the watch, who is sup posed to do it. If some night, along, say, at half past twelve or one o'clock, some gentl man was sufficiently interested to walk around the navy-yard without its being known tha he was coming, I think the comparative efficiency of the two corps would be fully proven

Q. Do you have any of the Marine Corps out on duty in the night?—A. All the time.

Q. What duty do they perform in the night?—A. We have the regular sentinel-duty They are never taken off excepting in cases of fearfully cold weather.

Q. Are they on the extreme outside limits of the yard?—A. Yes, sir; they are, as far a we can put them with our present force, on the extreme points of the yard. We have the upon the lower end of the yard, at the sea-wall toward Chelsea; we have them at the oth end, toward the city, and we have them in front of the officers' quarters on the street lead ing to Chelsea bridge.

Q. So that the sea-side is substantially left to be occupied by these watchmen?—A. Ye sir. In talking with naval officers, I have hardly found an instance where the office would not prefer to have marines, for the simple reason that they have complete control o these men. These men cannot relieve themselves, which, in my opinion, is one very stron point, so they never can be away. They are marched around in a military manner, an relieved, and they are so often visited. They cannot go out of the navy-yard when the are relieved, as a watchman does; they can have no outside communications; they cann make any appointment and say, "I shall be at the lower ship-house to-night; you com in, and I will let you have what you want, and we will divide," for the reason that the ma does not know where he is going on post before going on liberty.

Q. What is your view of the necessity for marines on shipboard at sea?—A. I do n see very well how they could get along without them. They pick up Tom, Dick, an Harry, and put them on board a ship as sailors. They come on board without any disc pline at all, without any organization. The ship goes into commission with two or thre hundred men, and no one knows anything about the majority of them. They are sent o board the receiving-ship and drafted from there for a sea-going ship. You take a marin guard and put them on board, and you start from the very first with an organized body c men, who are disciplined, are reliable, and are known.

Q. So far as you are acquainted with the opinion of the commanders and the regular naval officers on board of ships, what is their opinion in regard to the necessity of the Marine Corps?—A. That it is absolutely necessary.

Q. Is there any division of opinion among naval men?—A. I think not, except possibly among some of the younger lieutenants; and some of the boys who have had little experience, have never had responsibility thrown upon them, have an idea that they could get along without them.

Q. Do you rely upon the marine force to protect the yard against fires?—A. Yes, sir.

Q. Are they trained for that?—A. There is a detail made every day of a sergeant and seven men. Those men are in charge of one of the steam fire-engines, excepting the steam part of it; of course, they have a fireman for that. The sergeant is the foreman of that organization. At night we have a detail of fourteen men in charge of two hose-carriages, and a hoseman, and an additional force to assist the other steam fire-engine. Some time in December there was a large fire adjacent to the navy-yard, so near that the sparks were covering the yard. The marines went to the engine to help to run the hose out, and ran the hose-carriages from the lower part of the yard and connected the hose with the hydrant, and were ready for any emergency; and they exercise regularly at fire-quarters. They are always in the barracks within the inclosure. At the time of the Boston fire, Mr. Hooper came over from the mayor, and asked the commandant for a force of marines, and the commandant sent for the commanding officer, and told him to turn out the command and send them to Boston. Mr. Hooper says, "Sir, how soon can we have them? Can you be ready in twenty minutes?" He replied, "Yes, sir; in twelve minutes after the first tap of the drum, if we cannot march those men out, issue ball-cartridges, and have them on the road to Boston on the double-quick, I am very much mistaken." They were taken from their quarters where some were sleeping, others differently occupied, armed, and equipped, ball-cartridges issued to them, and in nine minutes they were on the double-quick over to Boston. When they arrived at Boston, instead of taking volunteer soldiers, they called upon the marines to guard the subtreasury, and when they moved the mails from the post-office, they took marines as the guard. It was the same way at the Portland fire, and the same at the second fire here in Boston. You seldom see a better body of men in the service than the marines, from the simple fact, as I said before, that the corps is small and the officers are able to keep such a close supervision over them. One great improvement that could be made, in my opinion, would be to pay the men off once a month instead of every three months. The men are now only paid once in three months, and in the mean time they get out of money, and have to borrow at high interest, and those who do not borrow money, when they are paid off at the end of three months, get quite a little sum, and it makes them desert much more readily than they would if they were paid every month. Then the working force of the men, in my opinion, is too small. You take out the guard for the day, and if we are called upon in any emergency from outside from our regular guard-duty, we have not sufficient men for it. If we send a draft of sailors from here to New York, or anywhere else, we have to send a guard of marines with them, and that very often reduces our available force very much. The number of marines in proportion to the number of sailors on board a British man-of-war is about 5 per cent. larger, I think, than it is on board an American man-of-war. I was in a ship where we had nearly 400 sailors, and we had 50 marines for that ship, and an English ship, with a less number of crew, had 80 marines.

By Mr. BURLEIGH:

Q. Why do you think that 40 marines would be necessary to do the duty of watchmen on the yard where there are only 24 now?—A. For the reason that we make a regular detail. We have three men to a post. The watchmen stand double duty; they stand four hours on, and eight hours off; they go out and come in, and the marine goes on at 9 o'clock in the morning and stays until 9 o'clock the next morning as the regular guard. He must have a relief, of course.

Q. Is that an arbitrary rule?—A. No, sir; there is no rule about it, but it is the custom of the service, the same as it is in the Army.

Q. What saving will it be to the Government to put two men to do what one man has done heretofore?—A. Three watchmen cost more than six marines. We have to have men ready for any emergency that may arise besides their guard-duty. It is not so with the watchmen. Supposing we simply had just men enough for that duty, and we were required to send a guard on board ship, we would not have them.

By Mr. HARRIS:

Q. Suppose you take the 80 men you have now and keep them on their present duty, how many men would you want in addition to perform the service now done by the 24 watchmen?—A. You must take into consideration that we are keeping up nearly as many posts as the watchmen with the men we now have. In addition to that, if we take off the watchmen, of course we have got to increase the force proportionately. The watchmen are not the only ones who are doing guard-duty. We have six posts.

Mr. BURLEIGH:

Q. You have 80 men now?—A. No, sir; we have not 80 men; we have about 65 privates for guard-duty, besides non-commissioned officers, making 80 for all duties.

Q. Then one man is on duty 24 hours only once in 10 days?—A. O, no; every other day.

Q. How can it be possible?—A. We have three men to a post. You must take into consideration that, in addition to this duty, we have to have a number of corporals and a number of sergeants, and we must have, as I say, a relief force. A short time ago we had to send a draft of men to New York with a draft of sailors. If we had had barely force enough for that, we should have had to take off the sentinels to send that guard with those sailors, so that, I say, we must have an extra force, as we are called upon for many different kinds of duty.

By Mr. HARRIS:

Q. Twenty-four men now do the duty of watchmen?—A. Yes, sir.

Q. How many men would be required perform the duty of the 24 watchmen with the proper relief, and a surplus to meet emergencies?—A. That, of course, as I said before, would require a change, because if we put patrolmen on, we would put them on in the same ratio that the watchmen are; that is, we would put them on four hours, and give them eight hours off.

Q. How many marines would be necessary to do the work that the 24 watchmen now do, supposing they had to do nothing else?—A. I suppose it could be done with 40 men.

Q. You think 40 marines would be required to do the duty now performed by 24 civilians?—A. Yes, sir; that is, under the system that is carried on now.

BOSTON, *March* 22, 1876.

JOHN W. EASBY sworn and examined.

By Mr. JONES:

Question. What office do you hold under the Government?—Answer. Naval constructor.

Q. Where were you last stationed?—A. At Norfolk.

Q. You are stationed here now?—A. Stationed at Boston now.

Q. How long have you been at this yard?—A. Since the 26th of September, 1874.

Q. Where was the Adams built, and by whom?—A. She was built at East Boston, by Donald McKay.

Q. Has she been accepted by the Government?—A. She is not finished yet.

Q. The first contract I mean—A. No, sir; the first contract is not finished. She cannot be accepted until she is finished. She is not complete. She has been accepted thus far, and payments have been made according to contract.

Q. Had she been accepted by the Government before you reported here as naval constructor?—A. No, sir. Of course she could not have been, not being completed. She is not completed under the first contract, nor the second either, to the best of my knowledge.

Q. Was she completed when you reported her?—A. I have never reported her as being completed.

Q. You have the reports made on her, have you?—A. I have the estimates of money due. Certain parts have been finished and paid for.

Q. Have those estimates been reported by you to be paid?—A. Some of them.

Q. Have not all of them?—A. No, sir; because some were reported by Mr. Pook, my predecessor.

Q. Have there been any estimates made on her that you or Mr. Pook have not reported to be paid?—A. My impression is that John Hanscom, the assistant naval constructor, made one payment on first contract and one on second contract, as he was empowered to do.

Q. By whose order?—A. By a general order. The contract says, "To be done under the supervision of the naval constructor and assistant naval constructor," payments to be made on certificates, as I understand, signed by either the naval constructor or assistant.

Q. What was the contract on the vessel?—A. The original contract was $148,500; the first contract, it is called.

Q. What was the second contract?—A. The second contract was for $25,000. Those two contracts are all there were with Donald McKay. The Government has furnished the material on the second contract.

Q. Has any part of those contracts not been performed that should have been done by the contractor?—A. There are parts of the contracts which have not been performed, but by order of the bureau the contractor has not been required to perform them.

Q. Have you got those orders?—A. Yes, sir. The spars are specified in the contract, but not the boats. Mr. McKay contended that he was not to make the spars. I referred the question to the commandant, and he referred it to the bureau, and this is the bureau's reply:

"NAVY DEPARTMENT, BUREAU OF CONSTRUCTION AND REPAIR,
"*February* 25, 1875.

"SIR: Referring to your letter of the 23d instant, No. 39, with inclosures, relative to the spars, &c., for the sloop built under contract with Mr. Donald McKay, it was not contem-

plated by the original advertisement for this vessel that the contractor should furnish either the spars or boats; and the building instructions which accompanied the contract were intended to refer to the hull only, so far as the contractor was concerned. Consequently, Mr. McKay will not be required to furnish either the spars or boats.

"With regard to the quarter-galleries as those were to be omitted in sister-ships then under construction, it was thought advisable to dispense with them in Mr. McKay's vessel, which he was directed to do, making some slight changes in the cabin consequent thereon.

"Very respectfully, your obedient servant,

"I. HANSCOM,
"*Chief of Bureau.*

"Commodore E. T. NICHOLS, U. S. N.,
"*Commandant Navy-Yard, Boston, Mass.*"

Q. As you understand the contract and specifications, they provide that Mr. McKay should do this work?—A. Certainly In the absence of any orders to the contrary, I should have insisted upon his doing it; that is, all specified.

Q. Have you any account of the things that have not been done by the contractor on that vessel that should have been done by the contract and specifications, in your view?—A. I have no account, but I could pick them out. It is perhaps necessary to state that when a board of naval constructors met last April to make an estimate of the work required to be done, not covered by Mr. McKay's contract, they took up the whole subject, and decided what work was covered by the contract, and what work was not covered by the contract.

Q. Who comprised that board?—A. Mr. Hart, myself, (next in rank,) Mr. Furnald, and Mr Mintonye.

Q. By what authority was that board convened?—A. By order of the chief of bureau.

Q. It appears that you made a survey to determine what work should not be performed by the contractor?—A. No, sir. This letter, you observe, is dated February 25. The board met in April, and referring to this letter, we find that the chief says that the contract was intended to cover the hull only; therefore it was the province of the board to say what constituted the hull, and the board did say what constituted the hull, and what constituted outfits, and it was for the things that did not constitute the hull that the board made an estimate.

Q. It appears that the board was not asked to make an estimate upon what the contract called upon Mr. McKay to perform. You did not get any such order from the chief?—A. No, sir; we were to examine the Adams and see what work was not covered by the contract of Mr. McKay, estimate what it would cost, which we did Now, then, how were we to get at what was not covered by the contract? By reference to this interpretation of the contract by the chief, in which he says the contract covers the hull only.

Q. Did the contract and specifications read that they covered only the hull?—A. I forget exactly how they read. Let me explain that again, that I may make it as clear as I can. The duty of the board, as defined by the chief of bureau, was to ascertain what work required to complete the Adams was not covered by the contract. By reference to the chief's letter, written about two months before that, we found that he says the hull only was covered by the contract; therefore the board estimated the work aside from the hull, the outfits, such as boats, spars, &c., although the spars were in the specifications. We made our estimate from the interpretation put upon the contract by the bureau.

Q. You made it according to his order?—A. Yes, sir; that is to say, the interpretation of his order.

Q. You didn't make it according to the contract, and the specifications which form a part of the contract?—A. I think we could not have made it in that way, because we included in the outfit the spars, and the spars were included in the contract.

Q. Did he complete the hull according to the specifications and contract?—A. He has not done it yet.

Q. Have there been any omissions which you have not specified according to the first contract?—A. I think there are two or three. I will enumerate them all, including those which have been specified. Spars, for instance, which were covered by the first contract, we put into the second; ventilating pipes, covered by the first contract, and according to this specification, we put in the second; side-ladders, covered by the first contract, we put into the second; quarter-galleries are in the original contract, but they are not in the second contract. They were omitted altogether. To the best of my recollection, brass canopies are in the first contract only. They will be considered as done under the first: they were considered as outfits. The head-pump was in the first contract. The steering-wheel was to be made by the first contract. The board did not consider the steering-wheel as belonging to the hull, and consequently it was put among the things to be done to complete the ship, and when Mr. McKay was relieved from the work in the second contract to be done by the block-makers, he was relieved from making the steering-wheel. I will say that my impression is that force-pumps were also in the first contract, but I am not so sure about those. Towing-bitts are in the first contract, but by verbal authority of the bureau they were afterward changed into topsail-sheet bitts. That is a mere change; the expense is greater for towing-bitts than topsail-sheet bitts. The contract specifies that the fire-room stanchions shall be three inches in diameter. They were made four inches in diameter, because we found they were not strong enough. That is clearly an addition.

Q. Did he charge you extra for that?—A. O, yes; he wants to be paid extra for that He has a right to charge for that, but I don't understand that he should charge for it, and I will explain why. Coal-scuttles in the deck were to be cut to let the coal down into the coal-bunkers; and I told Mr. McKay that, in consideration of his increasing the size of the stanchions, we would cut the coal-scuttles to balance the account, as we did not want any extra bills. Cutting the coal-scuttles did not cost quite as much as increasing the stanchions.

Q. That was done as an offset?—A. Yes, sir; as an offset. We did not want any extra bills, and intended that as an offset. The advantage was rather in favor of the Government, I think. Nothing else occurs to me of any consequence.

Q. Does Mr. McKay complete the vessel ready for sea?—A. It takes both contracts to do that.

Q. How much do the contracts amount to when the vessel is ready for sea?—A. $173,500; $148,500 being one, and $25,000 the other.

Q. How much work has been done by the Government to assist him in the completion of that vessel?—A. The Government furnished the labor to get out the frame, sawed it out, and molded it, too, to the extent of $7,120.19, and also the galvanizing work—galvanizing the bolts to bolt the frame together. That amounts to less than $100. The Government had this work done, but it will be charged to Mr. McKay. The live-oak furnished by the Government by that contract cost $48,990.39. The second contract with Mr. McKay does not cover the making of the blocks, making the block-stops, nor galvanizing the block-stops. It does not cover any work the block-makers are to do. The chief said that all work that block-makers do, he was to be relieved from. In this navy-yard the block-makers make the steering-wheels. In the Norfolk yard, the joiners make the steering-wheels; and, as this ship was contracted for here and our block-makers make the steering-wheels, he was relieved, as I stated, from making the steering-wheels. Block-makers' work was decided to include all blocks, whether metal or wood. I will furnish the items of labor not covered by either contract.

Statement showing the cost of labor, at Government expense, on the Adams.

Shipwrights', sawyers', joiners', plumbers', and laborers' work on hull, cutting through bulk-heads on coal-scuttles on gun and berth decks; altering iron railing on forecastle-deck; putting in coal-scuttles, air ports in after water-closets; frames for coal-scuttles; putting in mainstay-plates and bolts; cutting and boring holes for automatic pump and ventilator; making scuttle for forecastle-deck for hoisting topmast; cutting ends of mizzen-channel to clear boat-davits; cleaning vessel, &c., &c., &c	$3,688 91
Block-makers', smiths', and painters' labor on blocks	6,368 38
Boat-builders' labor on oars, boat-hooks, and covering oars	189 07
Spar-makers' labor making spare spars	266 90
Ship-keepers' labor; watch on board ship	1,286 20
	11,799 46
Ship-keepers' labor	101 75
Shipwrights and laborers: 1st, docking ship and taking out of dock; changing bilge-cocks from port-side; cutting pump-well for main pump, &c	89 64
	11,990 85

We are at an expense here every day of some $3.61 for ship-keepers to take care of the ship, to keep it from burning up. That labor added, makes $11,779.46 up to the 1st of March.

Q. Could that vessel, in your opinion, have been built for the same amount of money in the Boston yard, provided you had worked the same number of hours?—A. Yes, sir; unquestionably; provided we had worked the same number of hours.

Q. Do you think you would have got a better ship?—A. That is very hard for me to say, for I did not inspect the ship, and did not see her until she was about ready to launch. The qualities of a ship are to be ascertained in the building of the ship; therefore I can't say as to that.

Q. How does the work on the Adams compare with the work done on the Essex, that was built at the Portsmouth navy-yard?—A. Favorably, as far as I can see.

Q. Is it reasonable to suppose that contractors will give the Government as good work as can be done by workmen in the navy-yard, working under the direction of the naval constructor?—A. No, sir; it is not reasonable.

Q. Was all the material furnished by the Government to build the Adams?—A. No, sir.

Q. What did Mr. McKay furnish?—A. He furnished all that the Government did not furnish. I can give you only a general reply to that. To answer it specifically I should have to take up the whole process of building the ship. He furnished everything that the Government did not furnish, as I understand it. He furnished, for instance, all the outside

plank, all the beams, and all the deck-plank; all the copper-fastening, all the iron-fastening and everything of that kind.

Q. Was he not to furnish everything but the live-oak by the first contract?—A. Yes, sir.

Q. Where is Donald McKay's yard situated?—A. Nearly opposite the navy-yard.

Q. Was any portion of the material used in the construction of the Adams worked out in the navy-yard?—A. Yes, sir. I so understand. That was before I came here.

Q. Can you give the committee what it was?—A. Getting out the frame. These orders seem to be the authority for doing that work, but the cost of doing it is to be charged to the contractor.

Q. Will you furnish the committee with a statement of all the work that the Government did on the Adams, and its value, and all the material except the live-oak?—A. I will ascertain that from the books.

"NAVY DEPARTMENT,
"BUREAU OF CONSTRUCTION AND REPAIR,
"*November* 1, 1873.

"SIR: The commandant of the Portsmouth yard has been requested to send to the yard under your command the molds and bevelings for getting out the frame of the new sloop of war of 640 tons building at that yard, and you will please direct that the frame of the new sloop of war to be built under contract with Mr. McKay be got out by these molds and bevelings.

"Very respectfully, your obedient servant,

"I. HANSCOM,
"*Chief of Bureau.*

"Commodore ED. T. NICHOLS, U. S. N., *Commandant.*"

Q. Is it charged and paid for?—A. We have not paid him all the amount in money. We paid him partly in material. We furnished him material and charged it to him.

Q. By whose order?—A. The chief of bureau. When he wanted material we furnished it to him by order, and charged it to him at our book-price. We have a bill against him of $27,918.67 on the first contract, which we charged him just the same as money. This bill will be increased by charging him for sawing out frame. That was for material furnished from our stores. We furnished him all the bolting-copper for bolts and all the sheathing-copper to sheathe her with, by order of the chief.

Q. Was the material used on the Adams and furnished by Government transported to McKay's yard, at East Boston, at his expense?—A. All that has been furnished him since I have been here has been transported at his expense.

Q. Can you tell how it was previous to your coming here?—A. I can, by examining the books, and by information which I can get in the yard. (I have since discovered the live-oak was transported at contractor's expense.)

Q. What has been the expense to the Government, outside of the contracts in building this vessel?—A. Getting out the frame, &c., $7,120.19; cost of live-oak, furnished, $48,990.39; making blocks and oars, ship-keepers, and making alterations, and making spare spars, $11,779.46. There was nothing said about spare spars in the contract. Afterward the chief said the ship should not have any spare spars, but it was too late; we had them made. Of course she will not take them, but the Government has been to that expense. Those torpedo-spars were commenced. It was not much, not more than two hundred dollars. Now we were to furnish the material for Donald McKay on the second contract. His contract was only to do the labor; all the material was to be furnished by the navy-yard, and the amount of that material furnished him by that order up to March 1, 1876, was $10,885.12. That material was delivered to him wherever it happened to be in the yard, and he hauled it over himself. If it was coal, he would go to the coal-pile and get it. If it was timber, he went to the dock and got it.

Q. Why should he have any coal?—A. We were ordered by the bureau to furnish him with coal to do his iron-work. That was a point I was not satisfied about, and I would not give it to him until we got an order from the Department, (I don't know whether it was from the Secretary or the chief,) that that was embraced in the material that was to be furnished. I never thought it should be furnished, and refused to let him have it, and so did the commandant, until we got that interpretation.

Q. Will you furnish that order, and how much coal you furnished him, and its cost?—A. Yes, sir. We furnished him files also. A file used up, you know, is used up forever. By order of the Department we furnished him files, coal, and oil. All those things, of course, we did not think we ought to furnish him until we got the authority to do so. We furnished him blacksmith-tongs by the same order. I thought that perhaps he ought to have the tongs, because the order was to furnish tools, but I did not think that coal was a tool by any means. I should say that a file could not be considered a tool, for this reason: When a ship-carpenter comes into the yard to work, he brings a chest of tools with him, but nobody expects him to bring files. When a blacksmith comes to work, he brings his own hammer and tongs, but he does not bring files, and nobody expects him to do it. I

furnished him, without any hesitation at all, the zinc required to galvanize his iron, just as much as the iron, but I thought it was rather too much for him to ask for coal, oil, and files, and I wanted authority,

"NAVY DEPARTMENT,
"BUREAU OF CONSTRUCTION AND REPAIR,
"*June* 10, 1875.

"SIR: In relation to the questions of furnishing materials, tools, and facilities to Mr. Donald McKay, required in his agreement to complete the United States sloops Adams and Essex, you will please deliver such articles, tools, &c., as are well known to be required to do the work called for on the vessels when not at the navy-yard, keeping an accurate account of and charging all materials used to the ship, and the tools, &c., to Mr. McKay, taking a receipt for their return, with the value of the same, and a statement from said McKay that if the tools are not returned, the amount shall be deducted from the last payment, which will be due when the vessels are completed. Mr. McKay will have the privilege of pursuing the work required by his agreement on these vessels while they are at East Boston receiving their machinery, and also to do such portions of the work at East Boston as is necessary to advance the work after the vessels are returned to the navy-yard. Please furnish Mr. McKay with a copy of this letter.

"Very respectfully, your obedient servant,

"I. HANSCOM,
"*Chief of Bureau.*

"Commodore E. T. NICHOLS, U. S. N.,
"*Commandant Navy-Yard, Boston.*"

Statement of the cost of coal, oil, and files, delivered Mr. McKay, for the United States sloop Adams.

12 $\frac{888}{2240}$ tons bituminous coal	$86 48
1½ gallons sperm-oil	2 49
5 gallons lard-oil	4 00
	6 49
9 $\frac{4}{12}$ dozen assorted files	79 64

"U. S. NAVY-YARD, BOSTON,
"*Naval Constructor's Office, April* 12, 1875.

"SIR: In obedience to your order of April 2d, 1875, we convened as a board at navy-yard, Boston, and have estimated the cost of completing the United States sloop Adams, covering labor only, for outfits, stores, masts, spars, &c., comprising all work coming under construction and repair, to fit said vessel for sea, not covered by the contract and specifications of Donald McKay, to build said vessel, and have to report as follows:

"Cost of labor for outfits, including miscellaneous labor for stores, &c	$15,275 00
"Masts and spars, including boat-spars	6,450 00
"Seven boats, including steam-cutter	4,800 00
"Blocks, including sheaving-bitts, chocks, &c	4,000 00
"Tanks	400 00
"Casks	300 00
"Furniture	2,000 00
"Total	33,225 00

Q. How does the work on the Adams compare in all respects with that done in the navy-yard?—A. In many respects it compares favorably; in other respects, it is not so good. I might as well state here that as a general thing the work is well done.

Q. After Donald McKay's first contract was said to have been completed, was she reported completed by the Government inspector in accordance with the contract, before the final payment and reservation-bills were made?—A. The first contract has never yet been reported completed, and he has never had his final payment on the first contract.

Q. Have the reservation-bills been approved?—A. No, sir; no reservation-bills have been paid him, nor has he had his final payment on his first contract. He cannot get any more money until the ship is ready for sea.

Q. Was the question ever raised, to your knowledge, as to whether the contract had been completed in all respects?—A. No, sir; it has not been raised, because nobody ever supposed it had been completed.

Q. Who was the Government inspector on the Adams when she was on the stocks, or up to the time the first contract was closed?—A. Mr. Pook was the inspector when she was on the stocks. I relieved Mr. Pook at this yard, but I. L. Hanscom relieved him as inspector of the Adams, and I relieved Mr. Hanscom a short time before the ship was launched.

Q. Were any bills paid on his first or any subsequent contract for extra work, detentions, or otherwise?—A. Not to my knowledge. I never heard of any bills of that kind.

Q. Was any estimate made of the cost of completing the Adams after the first contract?—A. Yes, sir.

Q. By whom?—A. By a board of naval constructors.

Q. Have you that estimate?—A. Yes, sir.

Q. Did the contractor do what you estimated?—A. No, sir; he did not, because he did not do the blocks. "Blocks, including sheaving-bitts, chocks, &c., $4,000." On the second contract Mr. McKay made the spars, but not the tanks and casks. Neither of those things did he furnish. I have a list in detail, which we made for our own satisfaction and information, of the things which were to be done, and this report to the bureau was made up from that list.

Q. That is what he did?—A. No, sir; we really don't know what he did: but it was our province to estimate what the ship would cost to finish, and we said that it would cost $33,225. Mr. McKay had a contract to finish her for $25,000, but he was not to make the blocks. The board of constructors had considerable controversy as to what was covered by the contract and what not, which we only decided by referring to the letter of the chief, saying that the hull only was intended to be covered by the contract. There is an honest difference of opinion among naval constructors where the hull stops and outfit begins.

Q. By whom was this estimate made, and by whose orders?—A. By the order of the chief of bureau.

Q. How much more, if anything, is paid to Donald McKay to complete the Adams, taking into consideration any work done in the navy-yard, than it could have been done for according to the estimate in the Boston yard?—A. According to our estimate, no more.

Q. How long will it take to complete her?—A. She could be completed ready for sea in a month. I don't know how long he will be.

Q. Can you give a correct statement of what the cost of that vessel will be when she is complete and ready for sea, with the crew on board in commission, and away from the yard?—A. A very close estimate could be made of what it will cost to complete her ready for sea.

Q. Do you know whether there has been any estimate of that kind made?—A. There never has been. We seldom make any such estimate.

Q. You never have been ordered to make any such estimate?—A. We never have.

Q. Was the Adams docked at the Boston yard, and at whose expense?—A. She was docked at the Boston yard the first time at the expense of the Government, but the second time the cost of docking will be charged to Mr. McKay. I was not here at the time. I was away on a board, I think at the Government's expense: because the second contract provides that he shall have the use of the dock.

Q. Was any additional amount paid for launching the Adams?—A. No, sir; not to my knowledge.

Q. Should there have been?—A. There should not have been. I am not aware that anything ever was paid. I think not. I never heard of such a thing before.

Q. Is there nothing of that kind on your books?—A. No, sir; we loaned the contractor articles, however. We loaned him chains, blocks, and other things required in launching the ship, by order of the bureau.

Q. At whose expense was the vessel coppered?—A. Mr. McKay's.

Q. Was he assisted in the work in any way?—A. She was coppered at the expense of Mr. McKay. Whether he received any assistance, I am unable to say, because I was away when she was coppered.

Q. Was that under the first or second contract?—A. That was under the first contract. I was absent at the time on the board of constructors appointed to examine the navy-yards.

Q. Do you know what bills were approved when you were away on that board?—A. I do not, but I do not think there was any. I will ascertain. (I have ascertained that one bill was approved by John L. Hanscom, and one by F. L. Fernald, for $5,000 each, on the Adams, and others on the Essex.

Q. Was Donald McKay furnished with any material from the construction-stores in the Boston yard that was not called for to be furnished by the Government under his first or any subsequent contract?—A. He was furnished and charged with material by order of the chief.

NAVY-YARD, PORTSMOUTH, N. H., *October* 29

Invoice of articles shipped by Theodore D. Wilson, naval constructor, United Ss on board the steam-sloop No. 1, Commander C. C. Carpenter, master, bound yard, Boston, Mass., and consigned to the commandant, all on account and r United States Navy Department.

Fore and main:

34 chain-heads.
34 bottoms of chains.
16 channel-stay heads.
16 bottoms of stays.
16 arms for stays.
4 heads for top-gallant back-stays.
4 bottoms for top-gallant back-stays.

Mizzen:

10 chain-heads.
10 bottoms for chains.
4 channel-stay heads and 4 arms.
4 bottoms for same.
44 ring-bolts for chains and channel-stays.

For main and mizzen:

72 chain-bolts and preventer-bolts.
64 Staples and plates for chains and channel-stays.
44 preventer-plates.
20 knees for channels.

38 double eyebolts.
38 train-tackle eyebolts.
207 Hammock-hooks.
80 port-hooks and 80 eyes for same.
95 ring-bolts for ports and two large stanchions.
43 stanchions, feet for poop and forecastle deck.
22 hatch-rings.
225 rivets for hammock-stanchions.
2 bolts and nuts for bobstay-plates.
1 clasp and two eyes for flying-jib boom.
2 pump-standards, straps and keys.
2 pump-brakes with keys, (complete.)
6 pump-connections.
21 breeching-bolts.
158 eyebolts.
25 ring-bolts.
54 bolts for channel-stay arms for main and mizzen.
Bowsprit, finished.
Jib boom, unfinished.
Jib-boom, flying, unfinished.
Channels, complete.
2 pieces bow-chocks.
Between-deck stanchions, partly done.
Fife-rail, partly done.
Pin-rail, partly done.
52 sections for wardroom and steerage, complete, except putting in banisten packed in boxes.
All cabin sections partially complete.
Plank for cabin and wardroom cornice partly worked.
3,500 B. ft., 1⅜ in bulkhead plank, finished.
3,000 B. ft., 1¼ in bulkhead plank, finished.
250 B. ft., hammock-rail, sheathing boards, finished.
15 pieces gun-cleats, (boards.)
22 oak stanchions, (boards.)
Head and gangway boards.
1 sky-light, finished, except glazing.
1 sky-light, unfinished.
Poles with wardroom, cabin, and steerage section marked.
Plan-boards of wardroom, cabin, and steerage cornice.
4 water-closets.
2 water-closets, bends.
13 port-light linings.
8 sea cock-couplings.

21 port-light drips.
4 sets main-pump boxes.
6 pieces main-pump pipes.
4 bulkhead gates.
1 brass butt.
4 butt-heads.
20 pieces for main pumps.
6 stanchions for sky-lights.
6 corner-pieces for butts.
20 corner-pieces for channels.
8 stanchion-sockets.
2 caps for bitt-heads.
16 pieces for shifting rail.
2 ventilators.
1 force-pump.
2 cast-iron bitts.
1 set forges for pumps.
3 slide-bolts.
2 magazine overflows.
2 deck-pipes.
2 pipe-covers.
2 brass balls.
1 belaying-pin.

T. D. WILSON,
Naval Constructor, United States Navy.

Approved:

A. BRYSON,
Commodore Commanding, United States Navy.

Q. Can you tell whether any was furnished previously to your coming here?—A. I can tell by referring to the books. He was furnished material on his first contract by order of the bureau, and he charged with the cost of it.

"NAVY DEPARTMENT,
"BUREAU OF CONSTRUCTION AND REPAIR,
"*January* 31, 1874.

"SIR: You are hereby authorized to deliver to Mr. Donald McKay, under approval of the officer supervising the construction of the sloop-of-war building by him under contract with this bureau, such articles of timber, lumber, iron, composition and copper as may be on hand in the yard under your command and can be spared, and as he may require, from time to time, to be used in the construction of that vessel, the cost of such articles to be charged to Mr. McKay, and deducted at Government cost from the payments under his contract. You are also authorized, in case he requires it, to have the bending of the water-ways, plank-sheers, and chocks, and certain galvanizing work for the vessel done, the cost to be charged against his contract in like manner.

"Respectfully, your obedient servant,

"I. HANSCOM,
"*Chief of Bureau.*

"Commodore E. T. NICHOLS, U. S. N.,
"*Commandant Navy-Yard, Boston, Mass.*"

Q. About when did the Essex arrive at the Boston yard from Portsmouth, N. H.?—A October 31, 1874.

Q. Was there any material received for her that had not been put in place?—A. Yes, sir.

Q. Can you state what it was, with the value of the materials and labor performed on it?—A. I can furnish a statement.

Q. Has the Government had any men employed on the Essex since she arrived at the yard?—A. Yes, sir; ship-keepers. The labor we have performed on the Essex since she came here is as follows: Shipwrights' labor on engine-kelsons, pillow-blocks, boring and cutting hole, block-maker's and smith's labor, making blocks, docking the ship, ship-keeper's labor, &c., $8,352.49.

Q. Has the work of completing the vessel been contracted out; and, if so, to whom?—A. Yes; contracted to Mr. McKay.

By Mr. MILLS:

Q. All that work was done by the Government?—A. Some of this was in process of being done while he was completing her, such as making the blocks, docking the ship, fastening the engine-kelsons, cutting holding down bolts, &c. The other parts, making the blocks and smith's work, we are doing as we have men, while he is going on.

Q. Before this work was contracted out, was any estimate made as to what it woc to finish her in all respects ready for sea?—A. Yes, sir; I produce a copy of that es

Cost of labor to complete the hull, including miscellaneous labor and outfits..	$42,
Masts and spars, including boat-spars	6,
To build seven boats, (those boats are commenced,) including steam-cutter....	3,
Blocks, including sheaving-bitts, chocks, &c	4,
Tanks	
Casks	
To complete furniture	1,
That furniture was commenced also. That is the report which we made to the chief of bureau, the items in the total amounting to	57,

Mr. McKay contracts to do items to the amount, according to our estimate, of $ His contract was for $46,000.

Q. Were the items in the estimate, in your opinion, sufficient to complete the shi The estimate made by the board, $57,799, was to complete the ship.

Q. You have omitted so much for the Government to do; with what you have omi the Government to do, and the work to be performed Mr. McKay, will that compl ship?—A. Yes, sir. Deducting all the doubtful items, that will complete the ship. the Essex came here from Kittery, she was in a very unfinished condition. Tails of were sticking out as if she had been only partly calked.

Q. Did you give the Essex credit for the material on hand in the hold?—A. Yes, part; as we say, for instance, "to complete the furniture."

Q. Who were the board that made this estimate?—A. Mr. Hart, M. Easby, Mr. F Mr. Mintonye, to mention them in the order they appear on the register.

Q. Was all the work to be done to finish the vessel contracted out?—A. No, sir.

Q. What was the value of the work that the Government reserved to do itself?—A. $8,500. That was our estimate of the cost. It may exceed that, for all I know.

Q. What facilities were furnished the contractor in doing the work?—A. All the f that he asked for under his contract, such as furnishing a shop to build his boats in, furnishing the use of the saw-mill to plane his timber when he wanted to plane it, nishing the labor. I think we furnished him one or two fires, if I mistake not, but as eral thing he did all his smith's work over at East Boston. He did not ask us very

Q. In your estimate, you estimated all those things, men for running the tools, facilities of the yard?—A. We estimated our labor. He hired the men for running th In the saw-mills, of course, he didn't pay the firemen, for we were running the m simply gave him a bench, and said to him, "Now send your men and saw it out." the use of our men and steam. It was not much of a job any way.

Q. If the Government had done the entire work at the Boston yard, could you ha it for a less amount than is now to be paid?—A. We could have done it for our es amount, in my judgment, $57,795. We thought it was a liberal estimate.

Q. What quantity of iron, copper, and other material has been shipped from tl within the past two years?—A. I don't think there has been anything but iron and shipped.

Q. By whom and by whose order?—A. We shipped a quantity of iron to John Ro order of the chief of bureau. The quantity I can state from the books. Coppe &c., was shipped to Washington navy-yard, some lead to Kittery.

Q. Do you know of any material that the Government rejected being afterward re —A. No rejected material has been received to my knowledge.

Q. Didn't Mr. McKay in his second contract agree to complete the vessel?—A. to complete her in all respects, except those reservations by the bureau.

Q. Were you ever asked if you would like to go to Japan by any one in the Depa —A. No, sir. I should be very sorry to be asked that question, because it would im they wanted to send me there, and that is the place of all others to which I do not go.

Q. Did you have any talk of sending any constructor to Japan or China?—A. there was a talk about it.

Q. When?—A. Just about the time the new constructors were made. There w new constructors made, and just about that time there was talk of what should with them. I regarded it as nothing but talk. It was said, "Well, we shall have some of the new fellows to China or Japan," and Hichborn was picked out as on youngest men, and as a first-rate man to send there; in talk, I mean. It was noth talk. I heard it from the line-officers. They would say, "You constructors have go there are now so many of you." It was nothing but talk. I did not regard it as a serious at all.

By Mr. BURLEIGH:

Q. Have you examined Mr. McKay's first contract on the Adams?—A. Yes, sir.

Q. Did he agree to furnish the material and labor to build the hull except the live-o

ber for the frame, and to deliver the ship at the navy-yard within nine months in that contract?—A. My recollection agrees with that.

Q. What is meant by "building the hull of a ship," among ship-builders?—A. To build the hull of a ship, among ship-builders, means everything which is not clearly considered as outfits.

Q. Does not the specification belong to and form a part of the first contract with Mr. McKay?—A. Yes, sir; it forms a part of the contract.

Q. Will you give us a sworn copy of that specification?—A. Yes, sir; I will have it made.

Q. Was there any labor or material to build the hull excepted in the contract or specifications?—A. Yes, sir; there was material excepted by the Government, the live-oak frame.

Q. The idea was to build the ship complete. Now, then, state what part of the material he was not to furnish to build the hull?—A. He was not to furnish the live-oak timber.

Q. Was there any other exception of labor or material in the first contract?—A. The live-oak timber is a prominent item, but I should have to look over the contract to see. I do not think there is any other exception than the live-oak timber in this contract.

Q. Are not these words used in the contract: "Nor is the omission in the specification of any detail or object necessary to carry into effect the intent and spirit of this agreement to be to the detriment of the United States"?—A. Yes, sir; that is so.

Q. Did Mr. McKay do all the labor on the ship?—A. No, sir.

Q. Who got out the frame?—A. The Government got the frame out.

Q. At whose expense was it?—A. The Government expense, but it is to be charged to McKay.

Q. Was the frame planed by the Government?—A. Planed and sawed, as I have been informed, but it is to be charged to McKay.

Q. Who lined out by the molds the live-oak frame?—A. That I have not been able to ascertain positively, but I will give it as soon as I can.

Q. Who paid those men who lined out the frame?—A. That I don't know; but I will ascertain. Men molding frame were paid by Government, but the whole is to be charged to Mr. McKay.

Q. Do you know the names of the men?—A. No, sir; all this was done before I came here. I should have to get the information from the clerks, master-workmen, &c.

Q. How much did it cost the Government for labor spent in getting out the frame?—A. Seven thousand one hundred and twenty dollars and nineteen cents; that is what I have been informed it cost the Government to get that frame out, but the cost is to be charged to McKay.

Q. Are not the bowsprit, bowsprit-cap, and placing the same, a part of a contract to build the hull, in the common acceptation of the term?—A. I think it is, in the common acceptation of the term.

Q. Is not the coppering in the specifications in the same manner as other items are in the specifications?—A. Yes, sir.

Q. Who furnished the copper, and at whose expense was the ship docked to copper, and who coppered the ship?—A. The Government furnished the copper. Donald McKay paid for it. It was charged to McKay.

Q. Was the coppering of the ship put in the second contract?—A. No, sir.

Q. Donald McKay paid for the copper under his first contract?—A. Yes, sir. I don't think there is anything about the copper in the second contract.

Q. Do you know that Donald McKay paid for that copper?—A. I know that he is charged with it.

Q. Do you know whether it has been taken out of his bill?—A. It has been deducted from the amount due him by the Government.

Q. And allowed?—A. That has got to be settled yet. It will be allowed.

Q. Is there any dispute in relation to it?—A. No, sir.

Q. At whose expense was the ship docked to copper?—A. My impression is at the Government's expense, though I was not here when she was docked. This expense will be charged to McKay.

Q. What would be the expense of docking that ship in a private dock, according to the usual terms?—A. I am not acquainted with the charges for docking a ship outside. I will ascertain that.

Q. Was the ship recalked in dock all over before coppering her bottom?—A. As I was absent at that time, on a board, I am utterly unable to say.

Q. Is it not stated in the specifications for building the Adams, that, "in the absence of any specification or detail, the vesse s building in the navy-yard by the Government will be the guide in completing the contract-ship?"—A. I don't think that is the exact language. The specification says, "In any omissions of detail, the vessels building in the navy-yard will be the guide."

Q. Does it not say, further, "In completing the contract-ship?"—A. No, sir; that is the end of it.

Q. That is, any omissions of details in the specifications?—A. It says, "In any omissions of detail." Of course it means in the specifications. It does not say so.

Q. Those specifications are attached and belong to the first contract ?—A. Yes, sir.

Q. Do you not understand that it is stated that everything in the first contract with M McKay, and the specifications belonging thereto, is to be done under Mr. McKay's first cor tract ?—A. I think that will be a difficult question to answer. There are a number of thing in the second contract.

Q. I don't want the second contract at all. I want to know what his first contract wa for. Do you understand that first contract as it reads ?—A. Unquestionably.

Q. Everything that is stated in the contract and in the specifications is to be done und thc first contract ?—A. Under that first contract, without orders to the contrary from th bureau. Whatever comes from the bureau is to be done.

Q. You understood that Mr. McKay was to do everything that was in this contract an those specifications ?—A. Yes, sir; and I should have made him do every one of them if I had not had orders from the bureau.

Q. You said to Mr. Jones that the first contract is not completed. Is there not a secon contract with Mr. McKay ?—A. Yes, sir.

Q. Is not some of the work that is in the specifications, and in the first contract, in th second contract ?—A. Yes, sir.

Q. What was the amount of the second contract ?—A. Twenty-five thousand dollars.

Q. Will you give the committee the amount of the work and material embraced in the sec ond contract that you believe was in the first:

Statement showing the estimated value of work required to be done under first contract, som of which is specified in said contract, and others covered by the term, "outfit of hull," ba which has not been done on said contract:

Specified work:	
Quarter-galleries	$2,000 0
Force-pumps were not put in by the contractor on his first contract. Cost labor, $461.50, material, $463.50	925 0
Side ladders	350 0
All ring and eye bolts	1,000 0
Ventilating-pipes	300 0
Steering-wheel	200 0
Canopies and companion-ways	211 0
Not specified, but supposed to be covered in the term "outfits for hull:"	
Hold-fittings	450 0
Capstan	603 0
Hammock-hooks and staples	150 0
Masts and spars are specified but are not considered as "outfits for hull"	10,556 5

Q. What amount of the work embraced in the first contract was put into the second cor tract, in your estimation, regardless of any orders to the contrary from the bureau ?- A. The amount of work and material embraced in the second contract of the Adams, part which is specified in first contract, and other parts seem to be covered by the provisions i said first contract to equip and fit the hull:

Masts and spars	$10,556 5
Side ladders	350 0
Eye-bolts of all kinds	1,000 0
Hammock-hooks	150 0
Hold-fittings	400 0

Q. Is the building of the spars in the specifications belonging to the first contract ?—A Yes, sir.

Q. In building the hull of a ship by contract, does not the ship-builder, according to th custom of ship-builders in the port of Boston, or adjacent ports, build the boats as a part the contract ?—A. I am not acquainted with the custom of ship-builders here as to that.

Q. Is it usual for the Government to contract with outside builders to build the hull an spars of a ship, as far as your knowledge goes ?—A. As far as my knowledge goes, cor tracts have been made with outside builders.

Q. I say usually.—A. I can't say that it is usual, except in emergencies. During th war, you know, we made lots of contracts.

Q. Is not the building of the hull and spars a usual form between merchants and ship builders in this vicinity ?—A. As I said before, I know very little of the custom in thi vicinity; but where I came from the hull and spars are built by the ship-builder.

Q. It is the usual method of making a contract, is it not ?—A. It certainly was.

Q. And that includes all appertaining to the hull and the spars, without anything belong- ing to them—the bare spars ?—A. Certainly: tha t is right.

Q. That is the way you understand it?—A. Yes, sir.

Q. After a contract is fulfilled for building the hull and spars complete, what is left to be done to fit a ship for sea besides the blocks, which includes the iron-strapping of them, the block-makers' work, and the rigging and sails, other than that which belongs to the same?—A. Do you want to know all the things in detail? There are a great many. I will give you my opinion in a word, regardless of the orders of the bureau. Here is a clause at the close of the specifications which says, "All work to be done in a workmanlike manner, and to conform to these specifications: and any omission in the specifications will not relieve the party of the first part of this contract from performing the labor necessary to complete the ship." In the absence of any further instructions from the bureau, I should have insisted upon that ship being completed ready for sea. Since giving this answer, I have observed in the contract that this closing clause is limited to the building and equipping the hull. Therefore anything outside of the hull, and outfits of the hull, will not be covered by this closing clause.

Q. Now, I will ask you this question, and I want you to answer it regardless of instructions from the bureau. After a contract is completed for building the hull and spars complete, what is left to be done besides the blocks, the strapping of them, the block-makers' work, the rigging, and the sails, to fit a ship for sea, other than that which belongs to the same, the provisions and supplies, and bedding for the officers and crew? Did or did not the first contract with Donald McKay, coupled with the specifications, provide for all things necessary for completing the hull and spars of a ship for sea?—A. Yes, certainly; that is, as far as hull and outfits of hull are concerned. The limitation in the contract is certain.

Q. Are not the spars in the specifications with the first contract?—A. Yes, sir.

Q. Are they not in the second?—A. Yes, sir.

Q. Is not the steering-wheel in the specifications with the first contract?—A. Yes, sir.

Q. Was not the steering-wheel included in the second contract?—A. There is no steering-wheel mentioned in the second contract. That goes into the block-makers' work.

Q. At whose expense was the steering-wheel made?—A. The Government's.

Q. And it should have been made under the first contract?—A. Certainly. I differed from my brother constructors in regard to that. I say it ought to have been made under the first contract, unquestionably.

Q. Was not the labor in docking the ship furnished by the Government?—A. I think so. Mr. Sampson, the foreman carpenter, can tell you exactly, as he was in charge of the ship when it was docked. The cost of docking the ship will be charged to McKay.

Q. Will you furnish the amount of the work and material omitted in the first contract and also in the second contract which the Government will have to do in order to fit the ship for sea, or else leave her undone?—A. Yes, sir. The work to be done to fit the ship for sea outside the contracts is as follows:

Sheaving-bitts and sheet-chocks, and all other work usually done by block-makers to hull and spars, including iron block-straps and iron blocks; also all work on tanks and casks, estimated cost $7,068.

In addition to the above, alterations are to be made, the estimated cost of which will be $1,000.

Q. Do the block-makers do the iron-work on the blocks?—A. No, sir.

Q. That does not belong to them?—A. No, sir.

Q. Does not the ruling of the chief of bureau on the second contract exempt Mr. McKay from doing all work properly belonging to the block-makers?—A. Yes, sir.

Q. Did not the chief also, when a controversy arose, exempt Mr. McKay from building the iron-work on the blocks?—A. Yes, sir.

Q. Is not the iron-work on the blocks equal in amount to the blocks themselves?—A. It is probably more.

Q. How much did you estimate for the blocks?—A. $4,000.

Q. That will make $8,000, from which Mr. McKay was exempted on those two items?—A. Not quite $8,000, I think.

Q. Will you give the committee a list of all the items in both the first and second contracts with Mr. McKay, on which there was any question, and the cost of each item, who decided the questions in dispute, and in whose favor they were decided, whether they were in the contract, the specifications, or both, and will you give us that in addition to the amount of work properly belonging to this first contract, and contracted for in the second, and which the Government, notwithstanding what there is in one or both of those contracts will have to do to complete the ship, irrespective of any orders from the bureau?—A. Yes, sir.

List of items in dispute in first and second contracts, with the cost of each, by whom and in whose favor were the questions decided.

"Masts and spars, by the chief, in favor of contractor."

"Oars and boat-hooks, 300, by the chief, in favor of contractor."

Weight of sheathing-copper, by the chief, against the contractor."

Q. Where was the live-oak from East Boston inspected, by whom delivered at the yard, and at whose expense?—A. It was inspected at East Boston.

Q. By whom?—A. The Government timber-inspector, during my absence.

Q. Is it usual for the Government timber-inspectors to inspect timber outside the yard?—A. No, sir.

Q. At whose expense was this timber brought to the yard?—A. I understand at the expense of the contractor, Mr. Swift. It certainly was not at the Government's expense.

By Mr. HARRIS:

Q. I want to call your attention to certain things which I find in the contract and in the specifications. I find in the contract for the Adams these words, "Mr. McKay will provide all the necessary material therefor, except the live-oak timber to be furnished by the Government." That is in the contract. I find in the specifications numerous descriptions of the form to which the live-oak is to be cut and hewed for the frame. I find the words, "Frame of live-oak timber and room." Do you know what that word "room" means?"—A. Certainly.

Q. Following that are numerous descriptions of the sizes to which the live-oak is to be cut. Would you, from the language contained in the contract and specifications, infer that all the work upon live-oak timber was to be done by the contractor?—A. Yes, sir.

Q. Is that your construction of the legal effect of the contract?—A. Yes, sir.

Q. Will you now turn to any correspondence with the Secretary of the Navy or the chief constructor of the bureau which authorized you, as the constructor here, or your predecessor, to get out the live-oak frame to dimensions?—A. This letter seems to be all that we have.

Q. Will you give the date of that letter?—A. The first letter we have on the subject is dated:

"NAVY DEPARTMENT,
"BUREAU OF CONSTRUCTION AND REPAIR,
"*November* 1, 1873.

"The commandant of the Portsmouth yard has been requested to send to the yard under your command the molds and bevelings for getting out the frame of the new sloop of war of 640 tons building at that yard, and you will please direct that the frame of the new sloop-of-war to be built under contract by Mr. McKay be got out under those molds and bevelings."

Q. Does that letter indicate to you that any work in getting out the frame by those molds and bevelings was to be done at Government expense?—A. No, sir.

Q. What is your next communication?—A. The next letter is January 30, 1874.

"SIR: Please have the frame of live-oak for the 640-ton vessel contructed for by Mr. McKay delivered to him without delay, keeping those men employed for that purpose at work without suspension."

Perhaps I had better state how this letter came about. As I am informed, an order came for the suspension of men about this time, January 30, 1874, and Mr. Pook wrote to the chief of bureau, and told him that if he suspended the men according to order, he would have to stop work upon the frame of Mr. McKay's vessel. In answer to that, he received this letter. That looks as though it was authorizing the men to be employed to deliver the frame. It says, "Please have the frame delivered to him without delay, keeping those men employed for that purpose at work without suspension."

Q. Do you understand that that is an instruction that you are to deliver the frame worked to the molds?—A. No, sir. The first letter is dated November 1, 1873. This is dated in January. Of course I never should have put any work on it. I would have delivered it to him.

Q. With those two letters, should you consider yourself authorized to do any work upon the timber?—A. No, sir; I should never have done it.

Q. Do you understand that under those two letters, or either of them, work on that live-oak frame was done in the navy-yard at the Government expense?—A. I understand that work on the live-oak frame was done at Government expense, but whether those letters were considered the authority for doing it, I am not prepared to say. The expense incurred will be charged to McKay.

Q. Now, will you look again and see whether there is not another letter in which the chief constructor speaks of the construction of the contract, in which he says that it was intended that the Government should get out the frame? Have you not already read such a letter today?—A. I do not think so, sir.

Q. Are those all the letters bearing upon that subject that you have?—A. All that I have been able to find up to this time.

Q. I understand you to say that the expense of getting out that frame, as shown by your books, was about $7,120.19?—A. Yes, sir.

Q. In your view of it, construing the contract properly, that was equivalent to a gratuity to Mr. McKay of that amount?—A. I am informed that the cost is to be charged to Mr. McKay.

Q. Now, passing from that subject, I find in the specification, on page 33, specific men

ion of the quarter-galleries, in these words, "Quarter-galleries, rims of white oak, to be fitted with bath-tubs and water-closets, to conform to the plan." You understand that that work was omitted?—A. Yes, sir, it was.

Q. Has it ever been done under the contracts?—A. No, sir; it was omitted entirely.

Q. By what authority was that work omitted?—A. By authority of the letter from the chief of bureau, February 25, 1875.

Q. Will you read that portion of it which relates to the quarter-galleries?—A. "With regard to the quarter-galleries, as these were to be omitted in sister ships then under construction, it was thought advisable to dispense with them in Mr. McKay's vessel, which he was directed to do, making some slight changes in the cabin consequent thereon."

Q. What in your judgment was the saving to Mr. McKay by that order?—A. On a rough calculation the saving to Mr. McKay was from $2,000 to $2,500. I should say about $2,000.

Q. Whether or not any change was ordered by the chief constructor which compensated for that deduction to your knowledge?—A. No, sir; no change was ordered to compensate for that.

Q. Would you consider that another gratuity to the contractor of $2,000 or more?—A. I should be constrained to do so, unless the chief should say that Mr. McKay should, according to the contract, make allowance in his bill for this omission.

Q. Passing now to page 34 of the specifications, I find this language: "Pumps of composition, diameter of chamber 9 inches, and force-pump to be fitted to work on berth and gun decks. The pipes for the head channel, to fit pumps, will be laid inside to cocks through bottom below the water-line, and the holes for those pipes will be cut in the joints of frame, and not in the room or space between the frame." Do I understand you that by any authority received from the construction department, Mr. McKay was released from compliance with that clause under his first contract?—A. He was released from compliance with part of it. By the first contract he was required to fit the bilge-pumps, those pumps 9 inches in diameter. My impression is that he was released, by verbal order, from the force-pumps. (I have since received a letter showing it.)

Q. Have you any letter showing that?—A. O, no, not on that specific subject; but the force-pumps, I think, were considered by this board as part of the work. That is my impression.

Q. What would be the advantage or gain to Mr. McKay, in your judgment, in round numbers, by his release from compliance with this provision?—A. I don't think he was released from anything except the force-pumps. If he was released from those, his advantage would be about a thousand dollars. Those force-pumps were five in number, and were worth about $200 a piece.

Q. It is your impression that he did not put them in under his first contract?—A. That is my impression.

Q. And that he was released from it by order of the Department?—A. Not in so many words. There is a verbal alteration to that which I will explain. When Mr. McKay went on with his second contract, we were to furnish the material. I asked the chief whether he understood that we were to furnish the material to McKay to make his force-pumps, or whether we were to consider the force-pumps as material and furnish them already made. He said as long as we had them made he might have them.

Q. How much did Mr. McKay get by that?—A. I think they were worth about a thousand dollars.

Q. That is another gratuity of $1,000, is it?—A. I don't know about that.

Q. Well, it is an advantage to him to the extent of a thousand dollars?—A. It is an advantage to him of from $800 to $1,000. That instruction to furnish him with force-pumps already made, instead of furnishing him the material to make them, is certainly an advantage to him of from $800 to $1,000. If material alone is furnished, it would be $400 to $500.

Q. But under this contract was he to provide the material?—A. Yes, sir; I consider that he was under obligation to furnish all the material except the live-oak.

Q. He did not furnish these pumps at all?—A. He furnished the composition pumps, the 9-inch main-pumps.

Q. Would you say that a thousand dollars would be all the advantage that he would derive from that?—A. Well, from $800 to $1,000; or, if material is found, $400 to $500.

Q. Did he make compensation for that by furnishing anything else?—A. No, sir.

Q. I find on page 35 of the specifications, under the head of "ladders and gratings," the following: "There will be sea-steps and side-ladders on each side of the vessel, fitted with galvanized iron stanchions and hand-rails." Did he furnish them under his first contract?—A. No sir, not the side-ladders; possibly he did the sea-steps.

Q. By whose authority were they omitted, and if you have that authority in writing will you produce it?—A. I have no authority in writing. They were considered by this same board as part of outfits, not covered by the contract covering the hull; consequently they went into the second contract.

Q. Did your board construe anything named specifically in the specifications of the first contract, as not coming within the contract?—A. Yes, sir.

Q. Did you do it of your own motion or by authority?—A. We did it under the construction put upon the contract by the chief of bureau, saying that the contract covered the hull only.

Q. Will you read that part of the letter which you say applied to this matter of the ladders?—A. That part of the letter says: "Referring to your letter of the 23d instant, No. 39, with inclosures, relative to the spars, &c., for the sloop built under contract with Donald McKay, it was not contemplated by the original advertisement for this vessel that the contractor should furnish either the spars or boats, and the building instructions which accompanied the contract were intended to refer to the hull only."

Q. Now, Mr. Easby, referring to those very building directions, you found these ladders named?—A. Yes, sir; these side-ladders.

Q. Did you agree with your associates on that board that the ladders were exempted by authority of that letter?—A. I did not. There is where I disagreed with my associates. I said that the side-ladders belonged to the hull. They said they did not; they belonged to outfits.

Q. Do you think you had any right, by the authority of that letter, to omit things which were specifically mentioned in the building directions?—A. If in our judgment they did not belong to the hull. It was simply a question whether they belonged to the hull or not.

Q. Then we have, first, Mr. Hanscom's construction of what he conceived to be the proper intarpretation of the contract; and then we have, second, the board's construction of the effect of Hanscom's letter.

A. Of what constitutes the hull; the disagreement in that matter came on that letter. I said that the side-ladders belonged to the hull; the other contractors said they did not belong to the hull, they belonged to outfit. I should have obliged him to furnish them

Q. Do you find anything in this letter authorizing the omission of anything that is in the contract and specifications?—A. Yes, sir, of course. It says it refers to the hull only. Th spars are referred to directly by the chiefs, and I find the spars specified in the specification. The chief says, therefore, in so many words: "The spars do not belong to the hull: an notwithstanding they are in the specifications, Mr. McKay shall not be required to furnish them." Now, then, we have this letter with the word "hull" underlined, and we are to determine, being led off by the chief, what does belong to the hull, and what not.

Q. So that, the chief having said that the spars, which are mentioned in the building directio ns, do not belong to the hull, you applied the same rule, and said the ladders did not belong to the hull?—A. Yes, sir; that is, a majority of the board did.

Q. To that extent, then, so far as this particular item goes, and so far as the spars go, the specific provisions in the contract and specifications were, by the authority of Mr. Hanscom, in that letter, ignored?—A. Yes, sir. As I said, in the absence of this letter, or any other authority from the chief, the specification covers the whole ship; that is, hull and outfits of hull.

Q. What, in your judgment, was the saving to Mr. McKay by those side-ladders?—A. $350, I think.

Q. I find on page 37, under the head of "ventilating-pipes," the following: "There shall be a ventilating-pipe leading from the aft end of the shaft-alley to the poop-deck; also forward there shall be a ventilating-pipe leading from the fore end of the berth-deck to the topgallant ferecastle." Were those put in?—A. No, sir.

Q. By whose authority were they omitted from the first contract?—A. Under the same construction of the hull.

Q. What, in your judgment, was the saving to the contractor by the rejection of that clause?—A. Probably about $200.

Q. Was there any compensation made for that omission?—A. No, sir.

Q. I find on the same page the following concerning the steering-wheel: "steering-wheel of locust and mahogany; the spindle to be of copper and composition." Was that put in?—A. That was not put in on his first contract.

Q. And rejected on this same letter?—A. Yes, sir; I made the same remark about that that I did about the side-ladders.

Q. What was the saving to him under that omission?—A. About $200.

Q. Was there any compensation for that omission?—A. No, sir.

Q. Now we come to the "masts and spars," on page 38, and the following is the language: "Masts and spars to be bark-rigged, the spars of the material usual in naval vessels, to be properly fitted with iron-work; all iron-work to be galvanized; all to conform to the plans." Those under your construction, and under the district authority of that letter, were treated as not found in this contract?—A. They were distinctly set forth.

Q. What was the saving to the contractor by that construction?—A. According to our estimate of the cost of them, $6,450. I think this included labor only.

Q. Was there any compensation allowed by him to the Government for that release?—A. No, sir.

Q. Now, I understand you that, in your view of it, nothing being said about boats either in the contract or the specifications, without reference to any specific instructions from the Department, you would have holden that he was bound to furnish all the boats required by that vessel?—A. Yes, sir, I should, by that last clause of the contract. I could not have got out of it.

(Since this answer was given I have examined the contract and think the last clause

referred to was modified by the words "hull and outfits of hull," and therefore did not cover boats.)

Q. Now, then, Mr. McKay, according to your understanding of the fair construction of this contract, gained in the fulfillment of this first contract the aggregate of the sums of these several reservations which I have mentioned, amounting to some $15,000, more or less?—A. I should think so. Under this sweeping clause at the close I should have held that the contract covered the whole thing, qualified, as I have said before, by the words "hull and outfits of hull."

Q. Do you know of any particular authority which the naval constructor at Washington has to vary or change a written contract?—A. No, sir; I know of no such power.

Q. Would you say that the change of such a contract, whereby a large advantage was given to the contractor, would be proper without making provision for equivalents or deductions?—A. As far as I know, it would not be proper. I think the law is quite explicit on that subject.

Q. Whatever was omitted on the authority of the chief naval constructor has had to be provided either by the Government itself or through a second contract with Mr. McKay, with the exception of those few things which were omitted altogether, has it not?—A. Yes, sir; whatever has been omitted is either to be furnished by the Government or by Mr. McKay, certainly.

Q. Have the quarter-galleries been supplied under the second contract?—A. No, sir; they were omitted altogether.

Q. Were the pump of which you spoke supplied under the second contract?—A. Yes, sir.

Q. At what expense, or what estimate of probable expense?—A. At an expense of from $500 to $1,000.

Q. Have the ladders been supplied under the second contract?—A. Yes, sir; I estimated that they were worth $350. I don't know what they cost him.

Q. Do you understand that the ventilating-pipes have also been supplied under the second contract?—A. They have not.

Q. Are they to be supplied by him, or the Government?—A. They are to be supplied by him; I am not sure whether under the first or second contract. That is a point in dispute. They are to be covered by one or the other.

Q. You understand that the steering-wheel has not been provided for in the second contract, but that the Government are to put it in under the head of blocks?—A. Yes, sir it is already made.

Q. You understand that the masts and spars have been provided for in the second contract?—A. Yes, sir.

Q. You understand that the boats have not been, and are not to be?—A. O, yes; they are in the second contract.

Q. Is that steam-cutter to be supplied under the second contract?—A. Yes, sir; that is built by McKay under the second contract.

Q. Since Mr. McKay entered into the second contract of $25,000, has he been released by authority of the Department from the execution of any of the things specified to be done by him?—A. I cannot call to mind any such release, except that we furnished the pumps complete instead of giving him the rough material to make the pumps.

Q. Mr. McKay made a contract, under date of April 7, 1875, it appears, to do some work to finish the steamer Essex, "in all respects ready for sea service," and he agreed to "furnish all the labor of every description required to be done under this bureau for completing the Essex, embracing therein the labor necessary to complete the hull and outfits, including miscellaneous labor for stores, &c.; also the labor required in making the masts and spars (including boat-spars) and in completing the furniture; it being understood that the work to be done by you is to be in accordance with the plans of the vessel now in the Boston navy-yard, and that sheaving of bitts and sheet-chocks, and all other work usually done by block-makers to hull and spars, is to be done by the Government as required, and at its expense; also, that all work on tanks and casks for the vessel, except transporting and stowing same, and all work on boats on the Essex, is in like manner to be done by the Government. But taking the boats for both vessels from the boat-house alongside, hoisting them on board, and properly stowing them, is to be done by you; also, hoisting on board and setting bowsprit and lower masts." Now, I will ask you whether or not Mr. McKay has been released from any portion of the work provided by that contract?—A. It does not occur to me that he has, except in this: that he has been released from furnishing the labor necessary to complete the pumps, say $500.

Q. Is there anything under the contract for the Essex which he has been released from except the labor on the pumps, which you now call to mind?—A. Other than that, I cannot think of anything just now.

Q. Would you say that the labor on the pumps for each vessel was $500?—A. Yes, sir; I should think it would be about that.

Q. Has there been any compensation allowed the Government or any deduction made on account of that release?—A. No, sir.

Q Are there to be any deductions made in the ultimate settlement?—A. That is more than I can tell.

Q. Ought there to be?—A. certainly.

Q. As far as you know, is it the purpose of the Government to claim deductions on those omissions?—A. I have no knowledge on that subject.

Q. Would you say that any settlement that did not take into consideration those things would be proper?—A. I should say that it would not be proper; and I might further say that if the settlement took into consideration the deductions, it should also take into consideration some little additional expense which he has incurred over and above his responsibility.

Q. If it was left to you to settle with him, would you settle without making proper allowances for additional work, and deductions for those things which have been omitted?—A. If it was left to me to settle it, apart from orders from the bureau, I should certainly require Mr. McKay to make allowances for things which have been omitted and allow him for things which he has had to put in which have cost him additional expense.

Q. Have you any knowledge which leads you to believe that it is not the intention of the chief of the Bureau of Construction to demand those deductions?—A. I have no knowledge on the subject one way or the other. We hold in reserve the last payment. A settlement will take place as soon as the vessels are completed, as the chief of bureau may direct. There is due Mr. McKay about $5,000 on the Essex, which will cover about all that is to be done; but there is about $19,000 due on the Adams, part being due on his first contract.

Q. What other omissions from his contract on the Essex have been made?—A. As I said before, I cannot think of anything just now; but as I had forgotten the pumps, I may think of something else by to-morrow morning.

Q. In every instance where an omission has been made, will you estimate the value?—A. Yes, sir.

List of articles omitted by the contractor on the Essex, and their estimated value.

Labor to make the pumps	$500 00
Labor to make the oars and boat-hooks	300 00

By the CHAIRMAN:

Q. Has the steam-cutter been supplied to the Essex?—A. No, sir; Mr. McKay has nothing to do with the boats of the Essex. I understand they are not building a steam-cutter for the Essex.

By Mr. HARRIS:

Q. "And that sheaving the bitts and sheet-chocks and all other work usually done by block-makers to hull and spars is to be done by the Government as required, and at its expense; also, that all work on tanks and casks for either vessel, except transporting and stowing same, is to be done by the Government." Now, the tanks and casks for both vessels are mentioned there. Were not the tanks and casks to be supplied to the Adams under the first contract by Mr. McKay?—A. I think they were not in that contract.

Q. In the absence of any detail in the specifications, would they not come properly under the first contract?—A. No; because they are not part of the hull or outfits of hull.

Q. Would the hull be complete, ready for sea, without tanks, any more than without spars?—A. This covers the whole ground, tanks and all. In other words, I construe this clause to mean this, that everything that Construction Department does to war-ships in the navy-yard shall be done by Mr. McKay; that is all covered by hull and outfits of hull.

Q. And that includes casks and tanks?—A. No. The clause I refer to is the following: "All work to be done in a complete and workmanlike manner and to conform to the plans and specifications, and any omission in the specifications will not relieve the party of the first part from furnishing the labor necessary to complete it. In any omission of detail the vessels building in the navy-yard will be the guide."

Q. How much would those tanks and casks cost?—A. We put the tanks at $100 and the casks at $300.

Q. How many tanks were there to be?—A. Four.

Q. Has any compensation ever been made for them?—A. No, sir; Mr. McKay understood the matter quite well, because he told me several times, "I have stepped into construction shoes." "All right." "Whatever construction does, I do." "All right again." Therefore, as whatever construction does is required by that last clause, whatever construction does in building a ship, the contractor is to do, (so far as relates to hull and outfits of hull.)

Q. Now, I want you to turn to your records and show the several payments made on account of the Adams under either contract.—A. I can show the several payments in detail by referring to the books; but I can give you what I have here and you can see if that will answer your purpose.

"Mr. McKay to the United States Government, Dr.

'To cash paid on first contract	$105,555 00
'To material paid on first contract	27,918 67"

Q. Does that include the copper?—A. Yes, sir.

Q. Does it include everything furnished for that vessel?—A. Yes, sir; everything we were directed by the chief of bureau to furnish him, and charge him with. Now we have "smiths', iron-platers', and brass-founders' labor," which we did at Mr. McKay's request for him as being more convenient, and which we charged to him, amounting to $481.70. Total payments on the first contract, $133,955.37. His contract was for $148,500. The balance due on the first contract is $14,545.63. We have paid him on the second contract, cash, $20,000.

By Mr. MILLS:

Q. Have you given the Government credit for the labor performed in getting out that live-oak and molding that frame?—A. We have charged that as labor furnished by the Government.

By Mr. HARRIS:

Q. Not to Mr. McKay?—A. O, no, indeed; that labor was performed by the Government, as I understand, without any charge to Mr. McKay.

Q. That $7,120, for getting out the frame, was not charged in that account against Mr. McKay?—A. No, sir; but it is by direction of the chief to be charged.

Q. Nor are the spars nor the other items which we have spoken about?—A. No, sir; he had nothing to do with the spars.

Q. In your judgment, should they be charged to Mr. McKay?—A. This work for getting out the frame should be, if he wanted us to do it; but, probably, if he found he had got to pay for it, he would not have got us to do it at a cost of $7,000. He would have got it out cheaper.

Q. Nothing is charged to Mr. McKay but the amount of money you have named, the material furnished, and some little labor?—A. That is all.

Q. Now, then, under the second contract, you have paid Mr. McKay $20,000?—A. Yes, sir.

Q. Leaving a balance of about $5,000 on his contract?—A. Yes, sir.

Q. That balance of about $19,000 will pay all that is due him on the Adams when he has completed his contract?—A. Yes, sir; a deduction has now to be made for work done in sawing out frames, &c.

Q. How much more do you imagine it is going to cost to fit the Adams for sea after Mr. McKay's contract is fully completed, according to instructions from the Department?—A. It depends entirely upon what amount of work we do on the Adams. We can let her go as Mr. McKay finishes her, and it would cost nothing.

By Mr. BURLEIGH:

Q. How much more, as you fit vessels for use, would you have to spend on her?—A. As I fit vessels for sea, I should have to spend three or four thousand dollars. There is where the contract system is a very bad system. The contract system allows no improvements. We improve on our vessels continually.

Q. Don't you know that in the absence of any detail, the vessels built in the yard are to be the guide?—A. Yes, sir.

Q. Would not that cover it?—A. No, sir; because a vessel built in the yard this year will not be a guide for a vessel built in the yard next year. We are improving on the outfits constantly.

Q. Would you put more fittings on this ship than on the Vandalia?—A. Not at all.

Q. Then, does not that cover the whole question?—A. The Vandalia is a different class of vessel. We could not make him put the fittings on the Adams that we put on the Vandalia, because it is a different class of vessel. The Wachusett is more in accordance with his class of vessel. I could put several thousand dollars more on the Adams, and would like to do it, if I had a chance, after he gets through with all that can be required of him under his contract.

Q. Then you would put several thousand dollars more on her, to suit your views?—A. Yes, sir; to suit my views. I do not want to be debarred from improvements because of contract-work.

By Mr. HARRIS:

Q. Now, will you state what has been paid on the Essex?—A. On the Essex we have paid Mr. McKay $41,000 in money, and we have paid him in ship-smith's labor, which he wanted us to do for him, $23.04, making $41,023.04; and the balance due to complete his contract is $4,976.96.

By Mr. BURLEIGH:

Q. Is that sufficient to complete her?—A. O, yes, sir; and more too.

Q. In construction, do you step the masts?—A. Yes, sir.

Q. Do you make and put the tops on?—A. We make the tops. We don't put them on. Sometimes we put them on and sometimes we don't. There is a different style in different yards.

Q. Did he make the tops?—A. Yes, sir; we step the masts always; but in some yards equipment puts the tops and trestle-trees on, and in some navy-yards, construction.

Q. The trestle-trees are put on before the masts are stepped?—A. Not always.

By the CHAIRMAN:

Q. I see here that by the contract with Mr. McKay for the completion of the Essex he binds himself "that he will furnish all the labor required to be done under this bureau for completing the Essex, embracing therein the labor necessary to complete the hull and outfits." Have the hull and outfits been completed?—A. No, sir.

Q. How much do they lack of it?—A. They lack in labor about a thousand dollars.

Q. Why should not that first contract have been finished before this time? It was given three years ago, and it was to be completed in nine months.—A. I don't know of any reason except hearsay reasons.

Q. What hearsay reasons?—A. That he cannot get his money, and is not in any hurry to finish the ship; that he gets his bills through, but does not get his money; he gets his bills through this navy-yard and there he stops.

By Mr. BURLEIGH:

Q. Has Mr. McKay received all the money he is entitled to on both contracts by their terms?—A. Yes, sir; all he is entitled to, as far as making out his bills is concerned, of course.

By the CHAIRMAN:

Q. Do you know whether Mr. McKay has been relieved from the performance of any work on the hull and outfits of the Essex?—A. I cannot call to mind any other than what I have already stated.

Q. Do you know whether there was any advertisement for the completion of these two vessels, the Adams and Essex?—A. No, sir; I never heard of any.

Q. Were you ever called upon by Mr. Hanscom to have any inspection of those boats made before he paid Mr. McKay? Would it not have been proper for you, as inspector, to have reported the progress of those vessels?—A. No, sir; no further than signing his certificate. Signing the certificate is a report that such work was done. I make a report once a month of the condition of all vessels, and in that report the Adams and Essex are mentioned with other ships.

Q. Were you here when the Vandalia was built?—A. I was here just when she was about ready to be launched.

Q. Do you know whether there was any labor charged to the Vandalia that was not put on her?—A. No, sir; I cannot say that I do. I launched the ship.

Q. When did you come here to report for duty?—A. September 26, 1874.

Q. Were you here during the months of October and November, 1874?—A. Yes, sir.

Q. What was the extra amount of labor that was brought into the yard during the months of October and November charged to?—A. It was charged to the labor to which it was applied. Part of it was piling up live-oak timber and other timber and plank; breaking up the old ship Virginia, which had been commenced; working on the Vandalia, on which we were then engaged; and perhaps some other work which is not in my mind just now.

Q. You don't know whether any of that work was charged to the Vandalia?—A. O, yes; some of it was. We didn't charge any to the Vandalia that was not performed on the Vandalia.

Q. Some of that labor was put to work on the Vandalia?—A. Yes, sir; I think likely it was. There were ship-carpenters at work on the Vandalia at that time, to the best of my recollection. We had launched the ship and continued to work on her.

Q. Do you know anything about the building of the Intrepid here?—A. Nothing personally; she was launched before I came here.

Q. Who superintended the building of that vessel?—A. Mr. Pook built her.

Q. Will your books show anything about the building of that vessel, the accounts, &c?—A. I suppose so.

Q. You are acquainted with that vessel?—A. I have seen her; that is about all. I saw her launched. I was on business here from the chief of bureau the day she was launched.

Q. How would she compare with the Adams and Essex and vessels of that class?—A. She was a different style altogether. You could hardly draw a comparison between the two.

Q. Larger or smaller?—A. I am not sufficiently acquainted with her dimensions to say. She was a different style of vessel altogether, being a torpedo-boat, and these are cruising vessels.

Q. What amount would you think would have been necessary to have built that boat?—A. I cannot say off-hand. She is an iron boat, and to estimate the proportion of labor I should have to get her dimensions and specifications.

Q. Would you think that $247,000 was an extraordinary charge for the labor on her?—A. At a rough guess, and considering what the labor on our ships costs, I would not say that it was.

Q. The labor on the Adams and Essex is nothing like that?—A. The Adams and Essex

are smaller, I think; but, as I said before, this is the roughest kind of an estimate on my part. She could not be compared, as to her cost, with the Adams or Essex. She could be more properly compared with some of our monitors built during the war.

Q. Do you know how much live-oak timber you have here on the yard?—A. Yes, sir. I have the amount of live-oak timber we had on hand in September; but we have received some since.

Q. Can you tell me how much of that live-oak timber is in the wet dock?—A. No, sir; I can only guess at it. It is, comparatively, a small quantity.

Q. What is the capacity of that dock? Will it hold more than there is in it?—A. A great deal more.

Q. Why is it not put into the dock?—A. Because we have not the labor to do it.

Q. Do you think it is proper for the Government to buy live-oak when they have not the men properly to stow it?—A. I think both wants ought to be provided for at once.

Q. Is not that live-oak likely to go to waste?—A. It is deteriorating.

Q. It is not under cover?—A. Some is and some not.

Q. Was this live-oak required by requisitions from your bureau?—A. No, sir.

Q. How did it get here?—A. It came by an order from the chief of bureau to the commandant, directing him to receive such a quantity of live-oak.

Q. Did the chief of bureau negotiate for the price?—A. He sent us the price that we should make out the bills for. I speak of the live-oak that has been received since I have been here.

Q. What is your idea about the prices paid for timber at this yard; are they high or not?—A. They are very high, I am sorry to say.

Q. Most of the timber you receive here is by orders from Washington, from the Bureau of Construction?—A. I cannot say that, except with regard to the live-oak.

Q. Most of your live-oak is received by orders from Washington?—A. Yes, sir; the contracts are made in Washington for live-oak, as far as I know, altogether, and we receive it according to the price sent us from the bureau.

Q. You make no requisitions here for it?—A. No, sir.

Q. What do you give for live-oak? Have you got the prices?—A. No, sir; I have not got them here. When I spoke of high prices I referred particularly to white oak.

By Mr. BURLEIGH:

Q. Is your white oak bought at what you consider very high prices?—A. Yes, sir; it is high-priced timber.

Q. Considering the market-rate?—A. I don't know the market-rate in Boston.

Q. Is there not a market-rate in Boston?—A. Yes, sir; but I have no occasion to ascertain it.

Q. Then why do you say it is very high?—A. As compared with other places.

Q. Such as what?—A. Such as Norfolk.

Q. How much is the difference?—A. We have a yearly contract now for 50 cents a cubic foot for timber delivered here. I am not sure what it is in Norfolk at this time, but I judge about 30 cents.

Q. Do you think that 20 cents a cubic foot is more than the freight?—A. O, yes; but that is a contract given to the lowest bidder.

By Mr. MILLS:

Q. Do you know that?—A. I know 50 cents is the contract-price, but I don't know about the price at Norfolk.

Q. Do you know that the contract was given to the lowest bidder?—A. O, yes; I know that the chief of bureau so stated. We have an open-purchase contract that tops that, however, considerably; and that was what I had in my mind when I spoke of the high price.

Q. What is that?—A. Ninety cents a cubic foot.

Q. What sort of timber?—A. White oak.

Q. How large timber?—A. From 12 to 16 inches square, and running up, I suppose, from 30 to 45 feet long.

Q. Is the quality of the timber the same as that furnished by the yearly-contract man?—A. Yes, sir; about such as this other man furnishes for 50 cents a cubic foot.

Q. Who is the yearly-contract man?—A. That is McCullough, who lives at Norfolk.

Q. Who furnished this timber at 90 cents?—A. Mr. Trickey.

Q. Is not Mr. Trickey's timber better than McCullough's?—A. No, sir. There is no better timber than that which comes from Norfolk. Mr. Trickey's timber looks like very good timber. I have no objection to the timber. This contract with Mr. McCullough is a yearly contract. I had an order to prepare timber for the Miantonomoh, to bend from her rail to her keel, and I made an open-purchase requisition. I had not sufficient quantity of timber in the yard there, and made an open-purchase requisition for that timber, and it was sent here. The price was fixed while I was away, and when I got back I found the timber had been received, or about 7,000 feet had been received. There were 8,000 feet in all, and I would not have known anything about it except that there was another bill came in for the

additional 1,000 feet. Of course, when a thing is done, I have no control over the price. That timber was received at 90 cents a cubic foot. I asked Mr. Patee how they came to buy this timber at 90 cents. He said, "I guess that is all right, for the paymaster advertised for this timber and put on his bill, 'lowest bid.'" The presumption is that 90 cents was the lowest bid; but still, that "lowest bid" is a very high price. I have got to pay Mr. Trickey for nearly 1,000 feet of that yet.

Q. Could you ascertain the price at which you could buy that same kind of timber at open purchase?—A. Yes, sir; I had estimated that at 75 cents.

Q. Did you know you could get it for that?—A. As near as I could find out, I could. When I make an estimate for timber, or anything else, I send around and find out what I can get it for, and put that upon my estimate; but when the requisition comes back approved and goes to the paymaster, he advertises for the timber, and if the lowest bid he gets is 90 cents he takes it, whether it is over my estimate or not.

By the CHAIRMAN:

Q. How much timber has Mr. Trickey delivered to you for the last two or three years?—A. I can give you a statement of that.

Q. Will you furnish the amount of timber delivered during the last three years, the kinds and quality, by whom delivered, at what price, and whether by open purchase, by advertisement, or annual lettings?

Amount of material received in construction department, navy-yard, Boston, on contracts, open-purchase requisitions emanating from naval constructors, and Department orders from July 1, 1873, to March 1, 1876.

Date.	Yearly schedule contracts.	Open-purchase requisitions emanating from construction department.	Department orders.
1873-'74	$102,572 41	$135,928 72	$134,293 11
1874-'75	26,050 75	19,210 51	253,931 76
1875-'76	24,766 59	15,782 89	188,178 53
Total	153,389 75	170,922 12	576,403 40

NOTE.—August 22, 1873, there was received on contract by order of the Department $11,777.50 of plate-iron. October 4, 1873, there was received on contract by order of the Department two wrought-iron brackets, amounting to $2,629.50.

Q. What about your pine timber; about how high will your purchases average?—A. I have not had occasion to examine that. I have not required any.

Q. Who delivers your pine?—A. I think the last lot was delivered by Trickey & Jewett.

Q. Do you know of any property on the yard belonging to any other owner than the Government of the United States?—A. Yes, sir.

Q. State what that is and to whom it belongs.—A. There is a lot of stuff on the yard belonging to different parties rejected. There are 125 white-oak knees, the property of Mr. Trickey. Seventeen were rejected October 25, 1873; 29 rejected October 22, 1874; and 79 rejected November 20, 1874. There are 133 white-oak knees, the property of Mr. Keany, rejected because I had no orders to receive them. They have never been inspected at all, and I don't know anything about them. Eighteen hickory butts, the property of J. Trickey, rejected April 26, 1873. Five hickory spars, the property of J. Trickey, rejected April, 1873. Five thousand feet 3-inch boards, white-pine plank, the property of Mr. Durgee, rejected December 18, 1873. That is a recent delivery. We rejected them and he has not taken them out of the yard yet. Two hundred sticks of live-oak, the property of W. C. N. Swift, rejected at various times since 1872.

By Mr. BURLEIGH:

Q. Is that property cared for?—A. No, sir; it is rejected stuff—good for nothing. It does not belong to the Government. I have been trying to get him to take it out for months, as well as others. Twenty-six spruce spars, the property of S. S. McCullough, rejected February 14, 1876. One thousand feet ash, the property of Southard & Co., New York, rejected February, 1876. I think they will take that out, because they have just removed some other rejected timber. Two sticks white timber, the property of Mr. Trickey, rejected March 6, 1876. Sixty-six sticks white-oak timber, the property of S. S. McCullough, rejected March 18, 1876. Those were rejected a few days ago, and, of course, he has not had time to remove them. That is the amount of rejected material on the yard not belonging to the United States.

Q. Why is it, when property is rejected, that it is permitted to lie here for years?—A. It is because the contractors will not take it away. We have made several efforts to make them take it out. The last effort the commandant has instructed me to make is this: For instance, Mr. Trickey will have a bill due him as soon as Mr. Sprague gets through measuring the timber. Before the commandant approves this bill, he will notify Mr. Trickey that this rejected timber must be removed before he will approve it. He will try to have it removed in that way. There is nothing due Mr. Swift, and I don't know whether he will get his timber out or not.

Q. Now, does it occur frequently, or infrequently, or at all, on your yard, that when timber has been once rejected, you have orders from Washington to receive it?—A. I have never been so ordered.

Q. Has any other department been ordered to receive it?—A. Not that I know of. I speak now of this yard. The only instance of that kind that I know of is this: I rejected a lot of timber in the Washington navy-yard when I was stationed there, and I know that timber was afterward sold to another department; but it might have suited there. I rejected it because of roughness. I did not reject it for rot, but because it did not conform to our specifications; it did not suit me; but it might have suited some other department.

Q. Has not some of this timber which was rejected along in 1871-'72 been subsequently used in the yard under orders from the Department?—A. I don't know of any such case.

Q. Do you know of any timber lying on your yard that you have been ordered to permit to be brought into the yard, but which has not been received or inspected, or paid for by the Government, but is still owned by the parties?—A. No, sir. The statement that I have made covers all that I know of.

Q. Has not Mr. Swift got some live-oak here that has not been rejected, but which he has been permitted to store here?—A. He was permitted to store a little live-oak here winter before last.

Q. What has become of that live-oak?—A. It was subsequently measured and received. That is uncovered now.

Q. Have you at any time been directed, from Washington, to receive live oak from parties, and put it in your wet-dock and take care of it, when it did not belong to the Government?—A. No, sir. I will tell you what live-oak has been put in the wet-dock. When Mr. Swift was removing live-oak from East Boston to the navy-yard, he got permission from the chief of bureau to dump it over into the wet-dock, immediately from the vessel, without putting it on the wharf. I happened to be in Washington on my way home just about that time, and hearing of this order, I observed to the chief that I did not think that was a good plan; I wanted to look at the timber myself, and I was sorry that he had given such an order. He said, "Well, tell Swift to leave it on the wharf." I told him that I wanted to look at it, so that I could put the different pieces together. When I got back I told Mr. Swift I wanted him to put it on the wharf, and he did so. It was only a small quantity that was put into the dock. It was over in East Boston a number of months before it was brought over.

By Mr. BURLEIGH:

Q. Is not that timber deteriorating?—A. Certainly it is. I want the labor to put it into the wet-dock now.

Q. How long can it remain uncovered without being ruined?—A. It would take a good many years.

By Mr. MILLS:

Q. Would it not crack in cold weather?—A. Yes, sir; it is injured more by that than by rot, and for that reason we ought to have it overboard as soon as we can get it overboard.

Q. Would it not deteriorate very much in two winters?—A. No, sir; it might crack, so that we would have to reduce it considerably in order to use it.

Q. How much would you have to reduce it?—A. It would depend upon the uses to which we wanted to put it. I might have to cut two feet off the end to get rid of some bad places and cut two inches off sideways.

Q. Do you know of any boats in this yard belonging to private individuals?—A. There is a boat moored here in one of our docks.

Q. Is it taken care of by the Government?—A. I don't know what care is exercised.

Q. Is it not under canvas provided by the Government?—A. I believe it is. I have nothing to do with the canvas.

Q. Whose boat is it?—A. It is the America, belonging to General Butler, I understand.

Q. Has any labor been done to that boat by anybody?—A. I don't know. I can speak certainly of construction—nothing.

Q. Do you know whether any small boat has been made for this America?—A. No, sir; not to my knowledge. I heard there was a boat built here for General Butler; but what it was for, I don't know.

Q. Who would be likely to know?—A. The boat-maker, in the absence of Mr. Pook.

Q. Who is he?—A. The boat-builder is Mr. Rigby.

Q. Was he here at that time?—A. Yes, sir; he told me about the boat. I didn't know anything about it.

Q. How came that boat to be sent to the navy-yard?—A. I don't know anything about that, because she came here while I was away.

Q. Has she been here for some time?—A. I cannot say; it is not a very unusual thing to allow citizens to keep their boats in the yard. I think there is a little yacht that is moored up there in addition to the America.

Q. Whose is it?—A. I don't know the owner. Her name is the Tempest. It is not an unusual thing to allow a citizen to bring his boat here, if it is not in our way. The Tempest has been here two winters.

Q. What is your opinion about the clerks and writers in this yard; are there more than are necessary?—A. In construction there are decidedly more than are necessary.

Q. How many could you dispense with?—A. More than half of them, counting all who have been ordered on.

Q. Can you state how many you have?—A. Three clerks and four writers.

Q. Why do you not dispense with those you have no use for?—A. I do, as far as I can, by suspending them. I am not allowed to discharge them, being appointees of the bureau. I have four suspended now.

Q. If you inform the bureau that you have no use for them will they not allow you to discharge them?—A. I can inform the bureau, but I cannot discharge them, because the bureau send those writers here: but when I have no use for them I suspend them.

Q. Have you, in any cases, received orders not to suspend them, but to carry them forward on the roll?—A. Yes, sir; I do sometimes. I have suspended persons and they have been ordered back.

Q. What are these surplus people doing as clerks or writers—anything?—A. O, yes; I keep them at work doing something; but of course two men are doing one man's work.

Q. What pay do they get?—A. The writers get $3.25 a day.

Q. Do you know of any other surplus officers about this yard that could be dispensed with?—A. I am only competent to judge of my own department, I think.

Q. Are there any others in your own department that you can dispense with?—A. Yes, sir.

Q. Name them.—A. I could dispense generally with the men who have been sent here for store-hands, and some I have discharged on my own account; but sometimes they are sent here, and I have not the privilege of discharging them. I found a number of store-hands here, and as soon as I could get at it, I decreased their number as rapidly as I could do it.

Q. About how many of those have you now?—A. I have cut them down pretty low now. I discharged them all: but one has been re-instated lately.

Q. Are there not more officers on this yard than laborers, in proportion to the work to be done?—A. Of course there are at present; but we are in a broken state now. Our money is all gone. We can only spend two thousand and some hundred dollars a month in our department.

Q. Do you know of any abuses in the Navy Department for the service here that you can call to the attention of the committee?—A. The abuses, as far as I am concerned, would be confined to the construction department. The abuses in my department are chiefly having men commonly called "dead-heads;" and such men I would get rid of—men who have very little or nothing to do for their money. These are the abuses which we have to contend with, and that is the reason that our work is made to cost more than it ought to cost—because men are put in here who are doing nothing, or next to nothing.

Q. Have you perfect discipline and control over these men who are here by authority over you? For instance, Mr. Hanscom orders you to take John Smith on your rolls as a clerk, perhaps; he keeps your accounts, makes out your bills, and all that; while that man is responsible to Mr. Hanscom, and not to you, have you perfect control over him?—A. Yes, sir; I have. If that man does not do as I want him to do, I suspend him.

Q. Suppose he reports the fact to Mr. Hanscom, and he orders you to put him back in his place.—A. I suspend him until I receive orders from the bureau to take him back. If I receive such orders I have to do it: but, notwithstanding, I make him do his work. I don't hesitate to exercise my authority if he is appointed by the bureau. The men know that very well, and they know that it will not do for them to commit any flagrant act, because the bureau would not sustain them in it. They are under my control. There is no question about that; but the trouble is that there are too many of them.

Q. How many parties have you to take charge of your timber, measure it, and inspect it?—A. We have Mr. Sprague for timber-inspector, and he is responsible for all timber inspected.

Q. Do you have any check upon him; do you know whether he measures his timber correctly?—A. Yes, sir; when I am present myself I am a check upon him. I am not present when he is measuring, but I go over it with him after he has inspected it, and measure it by my eye; I can tell pretty well by that. If I find a log that is put down as forty feet long when I think it is not over thirty, I call his attention to it and have it remeasured.

Q. Do you find any mistakes of that kind?—A. No; but it has been my misfortune since I have been here to have had very little opportunity of going over with him. I have been generally away when this has been done. The last timber that I received from Mr. McCullough is nearly the first that I have gone over with satisfaction to myself. I have had Mr.

Sprague measure the length, breadth, and thickness of each log, and I have gone over the figures with him. In some cases I have cut him down and sometimes I have put him up, because in some cases his measurement was against the contractor. As a general thing, he is pretty correct.

Q. Who is your gate-keeper?—A. I have nothing to do with him; Trickey, I believe his name is.

By Mr. HARRIS:

Q. State whether or not you have any information or ground for suspicion that any timber has been received by Mr. Sprague as of greater measurement than it would actually hold out. —A. I cannot say that. The only thing that I can accuse Mr. Sprague of is some little carelessness, so that when I went over the live-oak timber with him on my return, (that part which Mr. Swift had put on the wharf,) I had one or two pieces rejected which I thought he had not exercised correct judgment in receiving. He may differ from me to this day, and say his judgment was correct.

By Mr. MILLS:

Q. Did you observe anything that showed any fraudulent intent on his part?—A I think not.

Q. Are there any facilities for clandestinely removing timber or other material out of the yard?—A. No, sir; I think not. The timber-inspector, unless the naval constructor is present, has no check upon him. If the naval constructor did not go over the timber himself with the timber-inspector, the timber-inspector has no sufficient check upon him, because the timber-inspector is a man on low pay. He receives an immense amount of timber through the year, and if a corrupt contractor should want to purchase him, why, really, they could conceal it. The check on the timber-inspector is the naval constructor. This timber is all put in our books, and the length, breadth, and thickness of each stick is on record. I can turn to the length, breadth, and thickness on my books and see whether the calculation is made correctly; but it is absolutely necessary for me to be here when the timber is received. In my absence, I cannot do that, and unless the assistant constructor or the foreman of the carpenters will be a check on the timber-inspector, he has no check.

Q Could not the services of the timber-inspector be dispensed with, and you or some other officer do the same work and do it as well?—A. That would amount to making some other officer the timber-inspector.

Q. Could not some other officer do the duties of his office and act as timber-inspector, without any detriment to the public service?—A. No, sir; we could not dispense with the timber-inspector.

Q. Could not some of the clerks who are sufficiently familiar with that business measure the timber when it comes here? How often do you need the services of a timber-inspector?—A. The timber-inspector not only receives and inspects the timber but he keeps an account of the uses to which the timber is put. When any is used, the quarterman of the shipwrights reports to him, "I have taken a dozen or twenty pieces of timber," and the timber-inspector charges it on his book: "Delivered the Vandalia, Adams, or Essex, so and so." He keeps that account from day to day. He is really the clerk who has charge of the timber.

Q Do you know of any officer connected with the Navy who has received any present or any gift or property or money, or the representative of either, from any individual for the performance of any duty or to influence his action?—A. I cannot say that I do. I know of no such case. I have heard rumors, but with no names connected with them.

Q. Do you know of any officer of the Navy who accepts commissions, in making purchases or anything of that kind, from the parties of whom he purchases?—A. No, sir.

Q. Do you know of any assessments being levied by anybody for partisan or other purposes on the officers or the employés in your department?—A. Not of late years. In former years, I knew of assessments being levied on the men and attempted on the officers. The officers generally treated them with contempt. I am afraid the men had to "pony up." The last instance of that kind that came to my notice was in Norfolk, perhaps four years ago. The only notice I got directly was to come forward to some association in Philadelphia and bring my $20 with me. They never got the $20.

By Mr. HARRIS:

Q. Do you know of any vessels being repaired at any navy-yard where you have been employed where more than $3,000 were expended without the report of a board, according to the provisions of the Revised Statutes, section 1538?—A. The only cases that occur to me are those of the vessels that we are repairing by building new vessels in their stead. I do not know that a board was not called on them. I was never on such a board.

Q. What vessels have been repaired at an expense of more than $3,000, either by rebuilding or by general repairs?—A. The Marion is one, at the Kittery yard; the Vandalia, at the Boston yard; the Swatara, at the New York yard; the Quinnebaug, at Philadelphia; the Nipsic, at Washington; the Galena, at Norfolk; and the Tallapoosa, at Baltimore. I think there are some in California, but I don't know positively.

Q. Were these vessels that you have named rebuilt entirely, or any of them?—A. Of the

vessels that I have named, as far as I know, the Marion, Vandalia, Swatara, Quinnebang Galena, and Nipsic, were all broken up, and new vessels built.

Q. Was any portion of the old vessels used in the reconstruction of the new ones?—A. don't know whether there was or not except in the case of the Galena, which I built, at Nor folk. I know there was not in that case.

Q. Do you know whether the provision of law in section 1538 of the Statutes was complie with in the building of those vessels?—A. I do not know.

Q. Would you know if it had been?—A. Not absolutely. It might take place while I was absent from the yards.

Q. Would that board necessarily be organized at the yard where the vessel would be re built?—A. I think it would. They have surveys at our navy-yards not infrequently.

Q. Have you named all the vessels which have been repaired at an expense of over $3,000 —A. No. We repaired the Wabash at an expense of over $3,000; but I think there was board in that case.

Q. Do you know any other instances where the statute was disregarded?—A. One othe occurs to me. We repaired the Mahopac at Norfolk. I am not certain whether we had board or not.

Q. To what extent was she repaired?—A. It cost over $100,000.

Q. When was that done?—A. Just at the time of the Cuban excitement. She was read for sea about the time we expected trouble with Cuba. That was a couple of years ago.

Q. Was her hull preserved?—A. Yes, sir; she was repaired, really.

Q. Have you any doubt that the proper board ordered it?—A. I think it is very likely that they had a proper board. I cannot say positively.

Q. Have you known of any order by the President that a vessel should be sold, as provided in section 1540?—A. No, sir; I don't know of any such order. But if there was any such order, would it not come to us from the Secretary of the Navy?

Q. Under the next section of the statute the Secretary of the Navy is "authorized and directed to sell at public auction such vessels and materials of the United States Navy as in his judgment cannot be judiciously used, repaired, or fitted out." Do you know whether any vessels have been so d by the Secretary of the Navy without advertisement, as provided in this section?—A. The only case that I have a distinct recollection of is that there was a double-ender advertised to be sold at the Washington navy-yard, and she was withdrawn and afterward sold at private sale.

Q. How long ago?—A. Perhaps six years ago. That was the Shamokin. I think she was offered for sale, and withdrawn because they could not get money enough. I think she was afterward sold at private sale.

Q. Do you know what she brought?—A. My impression is about $17,000.

Q. She was a double-ender iron-clad?—A. Yes, sir. I think that was the price. That is my recollection of it. I know I thought it was a shame to sell her.

Q. With regard to those vessels sold here, what were their names?—A. The Shawnee was one: I have forgotten the name of the other.

Q. Were those sold first at auction?—A. I understood so. I had nothing to do with it, however.

G. Do you know who the bidder was?—A. I understood that they were bid off by Mr. Nat. McKay.

Q. Did you understand that that sale was carried out?—A. No, sir; I understood that it was not carried out.

Q. Were those vessels afterward sold at private sale?—A. No, sir: the first I knew of it afterward was we got an order from the chief of bureau telling us that the vessels would be broken up.

Q. You know of no law to prevent the Secretary of the Navy from ordering any vessel to be broken up?—A. Is there any law authorizing him to break up any vessel?

Q. That is a question you put to me. I asked you if you knew of any law to preven him from doing it?—A. I am not familiar with any such law, sir.

Q. In your judgment, do vessels sold at auction ever bring what they are worth to breal up?—A. Sometimes they do, but very rarely.

Q. Did those two vessels which are now being broken up, in your judgment bring a much at auction as they will yield the Government in breaking up?—A. That I cannot say The chief of bureau claims that they will. I have never examined to see whether they wil or not. I can mention a case where a vessel sold for quite as much as she was worth, th Saint Lawrence, at Norfolk.

Q. Would it not be for the best interests of the Government if several vessels now on th stocks in this yard, or afloat, were sold at auction to the highest bidder?—A. I think i would be a good plan to try to sell them in that way, and if I could not get money enoug for them, I would break them up in the yard. It would be according to the amount of mone I could get.

Q. Won't you name the useless vessels on the stocks and afloat?—A. The Connecticut is one She is one of the spar-deck sloops, a class of vessels commenced during the war.

Q. Is she finished?—A. No, sir; she is very well underway. She was commenced during the war, and has been lying there ever since.

Q. Is she fit to be finished?—A. No, sir; she is rotten, and ought to be broken up.

Q. Do you think you would get as much money by breaking her up here at the expense of the Government as it would cost to do the work?—A. No, sir; I don't think anybody would buy that vessel; but we might receive bids to break her up by contract. That is, "What will you give me for the privilege of breaking that vessel up and taking all the material?"

Q. That is, you might sell her to an individual to be broken up, and realize something?—A. Yes, sir.

Q. You think she should be sold rather than broken up?—A. I would prefer to try that way.

Q. What other vessels?—A. The Virginia is another one. She should be broken up because she is about half broken up now. She is an old ship that was commenced in 1817.

Q. Whether or not, in your judgment, before the work of breaking her up commenced, it would not have been wisdom on the part of the Government to have finished her and put her afloat?—A. In my judgment it would. Perhaps my judgment is not good.

Q. For what purpose?—A. For a receiving-ship. She would have made a splendid receiving-ship.

Q. Is she sound?—A. Yes, sir; she is pretty generally sound—a great deal more so than the Connecticut. She was built of live-oak, and is in pretty good condition now.

Q. What would it have cost to have put her in condition for a receiving-ship before the work of breaking her up was commenced?—A. I should think $50,000, at least.

By Mr. BURLEIGH:

Q Have we not plenty of unseaworthy ships that would answer the purpose of a receiving-ship?—A. I don't know about that. I do not like to have a rotten receiving-ship. I think we want sound and healthy ships for that service. We have several receiving-ships which I doubt the propriety of using for that purpose.

Q. How much do you estimate the cost of breaking up that ship has been and will be before it is completed?—A. I don't know how much it has cost, but I think it will cost $10,000 to complete the breaking up.

Q. In breaking up such a vessel as that, what does the Government get that is valuable?—A. Nothing but the copper. We get the old iron, to be sure, but it amounts to nothing but scrap-iron. It does not pay for the getting. We get chiefly bolt-copper.

Q. Is there much of it in that ship?—A. Very considerable.

Q. Will the copper pay for the destruction of the vessel?—A. There is about $20,000 worth of copper in the vessel.

Q. Do you think any individual could afford to pay money to the Government for the privilege of breaking that vessel up, he to have the material?—A. Yes, sir; I think it would pay a man to do it.

Q. What other vessels do you think should be broken up?—A. Those are the only vessels that are on the stocks here. There is another one on the stocks—the Pennsylvania—but she is too good to break up.

Q. What is she?—A. She is the same as the Connecticut—a spar-deck sloop. She is roofed over, but her sides are exposed to the weather. Her frame is of white oak, and she is in pretty good order.

Q. Would you finish or sell her?—A. I would not do anything with her. I would like to keep her in reserve, in case of emergency. I would not finish her now, because we do not want her; but in case of emergency, she could be finished in six months—less time than we could build a new vessel. I would keep her where she is. Of vessels afloat, we have the Java—very rotten indeed. She ought to be broken up, if we could not sell her for enough to justify a sale. She has got a splendid engine in her; but if we could not sell her for a proper sum, then she ought to be broken up. I would recommend trying to sell her first.

Q. How much ought she to bring?—A. She ought to bring $50,000.

Q. Could that vessel be converted into a ship for the merchant service?—A. No, sir; but her engines are good. Her hull is rotten—white-oak.

Q. Does it now cost the Government something to take care of such a vessel as that?—A. Yes, sir; they are at the expense of ship-keepers every day to keep it from burning, and of steam-engineers to see that the machinery does not go to ruin.

Q. What do you suppose the actual cost of taking care of that vessel is?—A. The cost of the ship-keepers is $32.50 a day, at present. We have nine at $2.50, one at $4, and two others at $3 a day. We have got them as low as we can get them

Q. What other vessels have you here?—A. The Niagara. She is in rather better order than the Iowa; still, she is not fit to be repaired; she ought to be sold or broken up. Then we have the old receiving-ship Ohio, which ought to be sold or broken up. She has been a receiving-ship, I believe, for about twenty years, but last year we were ordered to put the Wabash on as receiving-ship and let the Ohio remain in ordinary. I think she ought to be disposed of by sale, if possible. I would try to sell them in all cases, and, if we got money enough, let them go. That is the easiest way to dispose of them; but, rather than give them away, I would have them broken up in the yards.

Q. Would anybody pay any money for the Ohio?—A. O, yes. The Ohio is a copper fastened ship, and in those days they put in heavier copper than they do now. As the St Lawrence sold for $17,000, I have no doubt the Ohio would bring $25,000, just to be broke up.

Q. She is not good for anything else?—A. Nothing else.

Q. She could not be sent to sea?—A. O, yes; but it would not pay to do it.

Q. She is a 74-gun frigate?—A. We do not use that class of vessels now. She is calle a second-rate sailing-ship.

Q. Are there any other vessels that you think should be broken up or disposed of in som way?—A. Yes, sir; there is another vessel, which we have condemned. She is in a shi house here. She is a vessel of a class that we commenced to build just as the war w a about being closed. One of them is in the Kittery yard, and one has been broken up the Philadelphia yard. I think there is another one in the New York yard. The one have here is called the Oregon. She was intended to be a double-turreted iron-clad. S was condemned long ago, and I think she ought to be broken up.

Q. Condemned for what reason?—A. Rottenness. She is built of white oak.

Q. Has she got her engines in her?—A. Partly. She has got considerable machinery her. She ought to be broken up, so that we can have the use of the ship-house. I wou not let any contractor come into the yard for her, nor for the Virginia. I think it would b better to break her up.

Q. You say you would not allow contractors to come into the yard to break up vessels o the stocks?—A. Yes, sir.

Q. What is the objection to it?—A. They have to be watched. I do not mean the contractors themselves, but their men. They have to be watched very closely, and then they make way with some of the property.

By Mr. HARRIS:

Q. You don't know whether or not any vessels have been sold at auction or otherwise, where the proceeds have not been properly covered into the Treasury?—A. I do not.

Q. Section 1544 provides "that laborers shall be employed in the several yards by the proper officers in charge, with reference to skill and efficiency, and without regard to other considerations." I want to ask you whether that provision of the law is strictly complied with?—A. It is complied with as far as it is in the power of the naval constructor to see that it is complied with. A naval constructor, for instance, is ordered to the Boston navy-yard. He does not know whether Smith is a ship-carpenter or a blacksmith. He is ordered to do certain work, and is told that he may spend $30,000 a month. The naval constructor says to the master-carpenter, "Send in requisition for the number of carpenters I designate," and so on through the other Departments. He says to Mr. Sampson, "I want you to send me a requisition for twenty-five shipwrights." Mr. Sampson knows all about the men in this vicinity. The naval constructor does not know anything about them. Of course he signs the requisition that the master-carpenter sends in, the master-smith, the master-joiner, or the master-laborer. They all send in requisitions for the number of men which the contractor designates, without mentioning names. He cannot designate any names. He is a strange and does not know the names; and on the strength of the good faith of those mechanics those men are taken in. The naval constructor may find out afterwards that those master mechanics have betrayed the confidence which he reposed in them, and he does not trus them any more. The naval constructor instructs Mr. Sampson to employ twenty-five ship wrights; Mr. Dwight to employ twenty-five blacksmiths; but when you come down to th laboring men, anybody, who is an able-bodied man, is supposed to be a laborer, and we d not care who they are.

Q. Do you consider the mode which you have described to be the proper mode for th employment of laborers under the provisions of that statute?—A. Yes, sir; unquestionably

Q. Whether or not laborers are ever forced upon the officers of the yard by other persons —A. Laborers may be forced upon the master-mechanics, for aught I know to the contrary they are not forced upon me. The master-mechanic comes in communication with th laborers.

Q. Would you consider an order from the Department at Washington to employ a certai person as a laborer a violation of your rights under this statute?—A. No, sir.

Q. Why not?—A. Because we are put here to obey the orders of our superior officer We are not supposed to go behind their orders.

Q. Will you listen to the language: "Laborers shall be employed in the several yard by the proper officers in charge, with reference to skill and efficiency." Now, sir, woul you consider that law as giving the officers in charge the entire power over this question?—A. No, sir; I construe the law to mean this: that they are to be employed with referenc to their "skill and efficiency." I instruct Mr. Sampson to employ the shipwrights, and take it for granted that Mr. Sampson will not send me a man who is not a shipwright; an if I find he is not, I disrate him and make him a laborer, or discharge him altogether.

Q. You would not employ any man under the direction of the Secretary of the Navy, un less you found that he was a proper man, so far as skill and efficiency are concerned, woul you?—A. I regard the order of the chief of bureau, or Secretary of the Navy, as far as

am concerned, ahead of anything else. If they choose to give an order contrary to that law, the responsibility rests upon them.

Q. The question is, do you think that the Secretary or the chief of bureau has the power, under that law, to employ any laborer for your yard?

By Mr. MILLS:

Q. In other words, do you feel that you are bound to obey the Secretary of the Navy when you know that he is violating the law?—A. I am not supposed to know the law. I am supposed to know this law above all others, that I am subject to the order of the Secretary of the Navy. My commission tells me that I must obey his orders, or I infer that. If I choose to protest afterwards, I may do it, but the order must be obeyed.

By Mr. HARRIS:

Q. Whether or not you would consider that he was in violation of that statute if he employed a man and sent him here?—A. I hardly think I should. I think the Secretary of the Navy is as an officer of this yard and all other yards.

Q. You think he would be considered a "proper officer in charge of the yard?"—A. I do not know but what he would.

Q. In your experience, do the Secretary of the Navy and the chief of bureau order men to be employed here?—A. They do.

Q. And you obey their orders?—A. Yes, sir.

Q. Claiming the right to suspend the men whenever you see fit?—A. *Suspend* only, not discharge, unless the chief says on his order, "This man is not to be suspended without authority from this Department."

Q. Would you not exercise the right to suspend that man if you found he was totally incompetent?—A. I could not do it under that order. If the chief of bureau sent me an order to employ a certain man as a writer, and says that he is not to be suspended without authority from that Department, and I found that he was incompetent, I should pay him, but not let him do anything. If he became abusive, I would suspend him without a moment's hesitation.

Q. You would say that the Secretary of the Navy has power to put a man here whom you cannot, by your own order, remove or suspend? Do you usually find that direction comes with the order, that you are not to suspend the person without an order from the Secretary?—A. I think the Secretary has that power.

Q. You consider that you have not the power to suspend a man who comes with such an order?—A. No, sir; that would be the power to disobey the order of the Secretary, which power I have not. The order of the Secretary is to be obeyed. I cannot get out of that. I have insisted upon that to the men under me, that my orders must be obeyed. I am responsible for giving the order, as the Secretary is for the order he gives me.

Q. "Salaries shall not be paid to any employés in any of the navy-yards except those that are designated on the estimates. All other persons shall receive per diem compensation for the time they are actually employed." Do you know whether any salaried officers are employed here who are not named in the estimates?—A. All persons in the construction department receive per diem compensation, but there are three in the construction department who receive what is called per diem compensation, but it is managed so as to amount to so much a year. Formerly, Congress designated that there should be a store-clerk, construction-clerk, and possibly draughtsman and time-clerk at the navy-yard, Boston. Now, I believe the Secretary designates what we shall have here. We pay three men out of that fund; there is a certain fund aside from the general appropriation, out of which those men are paid; they are in one sense salaried men, because they lose no time.

Q. Are there any sinecures here; men who do not do any work for what they receive?—A. O, no, sir.

By Mr. MILLS:

Q. Do you know any man who draws pay on two rolls?—A. No, sir. Every man who is on our rolls has to be here from bell-ring to bell-ring, whether he has anything to do or not. He cannot get out unless by order of the commandant.

Q. Has any workman been discharged on account of his political opinion?—A. Not that I know of. It might have been done without my knowledge.

Q. Were you here the latter part of the year 1874, during the contest between Mr. Banks and Mr. Gooch?—A. Yes, sir.

Q. Do you know whether any additional force was ordered with reference to that election?—A. I know that additional force was ordered on just at that time.

Q. By whom?—A. The chief of bureau.

By Mr. JONES:

Q. Do you know of any one who has collected any money for presents since you have been in this yard?—A. No; I have not collected any myself, and do not know of anybody else who has.

BOSTON, *March* 24, 1876.

J. W. EASBY recalled.

By Mr. BURLEIGH:

Question. Mr. Easby, you promised the other day that you would give the committee the value of all those things given to Mr. McKay as gratuities—such things as you considered by the contract he was obliged to do, but which the Chief of Bureau of Construction and Repair let him off from doing. Have you prepared that statement?—Answer. In order to answer this question and prepare the statement required, it is necessary to call the attention of the committee to the following language on page 2 of the first contract for the Adams, viz: "and will build, equip, and fit the hull," &c. And to the following language further on, on the same page: "Nor is the omission herein of any detail or object necessary to carry into effect the intent and spirit of this agreement," &c. It will be seen that the last claim is not so sweeping in its effect as it appears at first sight, but is qualified by the preceding language.

STATEMENT.

Labor and material on masts and spars, estimated at	$10,566 [illegible]
Labor and material on quarter-galleries, estimated at	2,000 [illegible]
Labor and material on force-pumps, estimated at	925 [illegible]
Labor and material on steering-wheel, estimated at	200 [illegible]
Labor and material on side ladders, estimated at	350 [illegible]
Labor and material on sheaving bitts and chocks, estimated at	100 [illegible]
Labor and material on eye-bolts of all kinds, estimated at	1,000 [illegible]
Labor and material on hold fittings, estimated at	400 [illegible]
Labor and material on hammock-hooks, estimated at	150 [illegible]
	15,691 56

NOTE.—The cost of labor, sawing out frame, &c., will, by order of the chief of bureau, be charged to the contractor; the amount is $6,928.80. The amount at first stated when it was supposed the Government was chargeable with the whole cost, was $7,120.19, but the difference between this sum and $6,928.80 is rightly chargeable to Government for ship-keepers, cost of first dockage of ship, and by alterations required, for which the contractor was not responsible.

The list required, therefore, would seem to embrace all omissions in building and fitting out the hull, and in addition to these the articles mentioned in the specifications which have been omitted, whether they belong to hull and outfits of hull or not.

Q. In your charges to Mr. McKay for lumber have you specified the different qualities and kinds of lumber that you let him have?—A. Yes, sir; I always do.

Q. Did you sell him any white-oak plank?—A. Not I, but my predecessor did.

Q. For what purpose?—A. Planking the ship.

Q. Do you remember the price of that plank?—A. The first item is 648 cubic feet white-oak stocks, $60.

Q. What do you call plank-stocks?—A. The logs ready to saw up into planks.

Q. How much would the plank be worth sawed out of those stocks?—A. I have the plank here, sir. A little below that item is 21,559 feet white-oak plank, $95 per thousand, 9½ cents a foot, board-measure.

Q. In what part of the ship were those used?—A. They were white-oak plank to plank the ship.

Q. Were they to go forward or aft; or was she planked in part with pine plank?—A. No, sir; she was planked with white oak.

Q. Did the planking of the ship outside cost as much as that, take it throughout?—A. We charged him just exactly what we had on our books.

Q. What was the market-price of white-oak plank suitable to plank a ship at that time?—A. I judge that was not far from the market-price at that time. White-oak plank was very high then, and is very high now in Boston, and we are paying, as I said the other day, 90 cents a cubic foot for plank-stocks.

Q. You know that was an extra price, don't you?—A. It was an extraordinary price; 50 cents may be called the regular price for plank-stocks.

Q. Can you tell me why Mr. McKay paid you such prices for white-oak plank? Why did he pay you 95 cents when, as you say, the market-price was 50 cents?—A. No, sir; I spoke of the market-price of stocks. I have no knowledge of the market-price in Boston of white-oak plank. Let me state right here that when we get white-oak plank on open purchase it is for the paymaster in Boston to buy the plank.

Q. What is the market-price for white-oak plank to-day in Boston, or at Norfolk—for much of the plank-stock comes from there, don't it?—A. To the best of my knowledge, the price of white-oak plank in Norfolk is from $50 to $60 a thousand. Much of the plank-stock comes from that section of the country.

Q. Would not the same difference obtain at the time Mr. McKay bought this plank of the Government between the price of that in Boston and the price in Norfolk?—A. I should think it would.

Q. Would it not have been greatly advantageous for Mr. McKay to have bought his plank at that time in Norfolk rather than to have bought them of the Government?—A. I will tell you what Mr. McKay says.

Q. I don't ask you what he says; I ask you for your opinion.—A. If you will let me state what he says, it will show you that that will answer the question.

Q. I want your opinion.—A. Please ask the question again.

Q. You say that the price to-day in Boston would be 95 cents for white oak, and it is 50 cents or 60 cents in Norfolk. Now, I ask you if the same difference of price for white-oak plank between Norfolk and Boston obtained at the time you let Mr. McKay have this plank as obtains to-day?—A. I think likely.

Q. Under those circumstances, can you conceive why Mr. McKay should have paid that price, so much higher than he could have obtained the same material for at Norfolk?—A. I will have to state in detail as to that. A large portion of this plank Mr. McKay has returned to the Government. When the ship was finished, he informed me that he had a great quantity of white-oak plank left. I asked him why he didn't use it; he said that he wouldn't use it because it cost more than he could get it for elsewhere, and he bought other plank at much less price and used that.

Q. Do you mean to say that he came to the yard and culled out his plank and rejected the rest?—A. I don't say that.

Q. Was not that the result?—A. No, sir. Mr. McKay received all the white-oak plank that he required, and of course he selected such as he did require, and when the ship was completed he informed me that he had a large quantity of our white-oak plank that he wouldn't use, because it wouldn't pay him to use it.

Q. Was what he returned to you of as good average quality as what he took away?—A. Certainly; because he would not take any out of the yard but what was good He said that it worked to so bad advantage that he wouldn't use it, and he bought plank himself. That was his reason for not using it.

Q. That is, he culled in the first place from the Government stock, and then, finding that he had selected rather a bad cull, he rejected a part and paid somebody else to complete his cull. Is that what you mean?—A. I mean that he actually returned us plank. I know he returned us plank.

Q. Some of the foremen in the yard have testified that they have loaned Mr. McKay, under your orders, a large quantity of tools?—A. Yes, sir; that is so.

Q. Will you state why he has had so many, and why he has not returned them after so long a time?—A. We had an order from the chief of bureau to loan him the tools, and keep a correct account of all the tools lent, and, upon the completion of the work, if he does not return those tools, they are to be charged to him. The work is not yet completed, and he has a large number of tools to return yet. He required an immense number of tools; there is no question about that.

Q. The work is not yet completed on what ship?—A. His work is not done on either ship.

Q. Why not?—A. Because he does not choose to do it in a hurry.

Q. Have you placed any obstructions in his way?—A. No further obstructions than this: The making of the blocks devolved upon the Government, and there is some of his work which he cannot complete until the blocks are made.

Q. Such as what?—A. Such as steering-gear. He cannot finish that until the blocks are made.

Q. Why do you not make the blocks and get out of his way?—A. Because I have no men to make them. Our men here have been taken away from us. Our work is stopped by order of the chief.

Q. Is there anything in regard to the rigging of the ship by which he is hindered?—A. I think not. There is another thing that he is hindered by. During my absence at the South, or on this board, when another naval constructor was sent here to inspect the work, changes were made in the davit-hangings. When changes are made, of course the Government has to make them, Mr. McKay having nearly completed them.

Q. Did those changes meet your approval?—A. No, sir.

Q. How long was that assistant constructor here?—A. Three weeks, I think. He was full contractor.

Q. Who was he?—A. Mr. Fernald.

Q. Don't you think it was rather a breach of courtesy in him to change your work while you were gone so short a time?—A. Unquestionably. I have no hesitation in saying that I thought so.

Q. By that breach of courtesy did he not put the Government to expense?—A. I think he did. We have got to make this change yet because it is not completed. Consequently, Mr. McKay cannot finish his boat-davits in consequence of that change which was made by the constructor.

Q. Where were you?—A. On this board of naval constructors, going round to the yards.

Q. Do you think that board was profitable to the Government?—A I think it was. A board of naval constructors obtains a great deal of information, which will be for the benefit of the Government.

Q. In some things it was unprofitable?—A. Yes, sir; I think it was unprofitable for some to be taken from this yard. There is no question about that.

Q. If you struck the balance, would there be a loss?—A. I suppose, if we look merely at its immediate influence, the result would be a loss to the Government, but we must look a little beyond that. I get a sort of education by visiting the various yards, and that education is for the benefit of the Government. You cannot take it away from me. I expect to remain in the service as long as I live, and whatever knowledge I obtain goes to the Government.

By Mr. MILLS:

Q. Was there anything else done by that constructor during your absence that met your disapproval, or that you would not have done if you had been here?—A. Yes, sir.

Q. What else was done by that constructor that you would not have done if you had been here?—A. Before I left I directed that the main-stays near the smoke stack should go out to the sides of the ship, and go out to the water-ways. When I came back I found the iron-work had been put in, and the main-stays brought in amidships. I asked the assistant constructor by what authority that had been done, and he said, "By authority of the bureau." That is a thing which I would not have done, certainly.

Q. Did that necessitate an expense to the Government?—A. Yes, sir.

Q. How near does the main-stay come to the top of the funnel?—A. It runs over the top of the funnel; at the nearest point it may be 18 inches from the funnel, which was shortened to allow it to be put there, but at the time I directed that it should be carried out of the side of the ship, Engineer Stewart said he couldn't shorten his smoke-stack without destroying the draught of the furnace.

Q. Will not these main-stays be heated by the funnel when the ship is under steam?—A. Yes, sir.

Q. Did Mr. McKay get any benefit by these changes?—A. I scarcely think he got any benefit, because the iron-work contracted to be done was completed, as far as one of the vessels was concerned.

Q. You think the Government was at the expense of these changes without any benefit to Mr. McKay, and without any benefit to the Government?—A. Without any benefit to the Government, unless it was a benefit to have the main-stays lead amidships; but you will see, of course, that when the main-stays were shifted from the position in which I placed them, nobody could expect Mr. McKay to put them in the other place and be at the expense of the iron-work; consequently the Government did the iron-work.

Q. Was there any timber received while you were absent that you would not have received?—A. I think there was some; I can't tell how much, because I have not looked it over closely enough. I think there was some received which I should not have received. There was a difference of judgment.

Q. Was any timber received on inspection outside of the yard while you were gone?—A. I am not quite sure whether it was or not. Timber was inspected at East Boston while I was away, but I think that part of it had all been delivered here, and part after my return, and the bills were made out after I came back.

Q. The inspection was had while you were away?—A. Yes, sir.

Q. Would you have inspected the timber outside of the yard if you had been here?—A. No, sir; I must say, right here, that the commodore decidedly refused, and very properly, to have the bills made until it was delivered in the yard.

By. Mr. BURLEIGH:

Q. Did they ask him to do it?—A. Yes, sir; that is, he understood they wanted him to do it; Mr Swift wanted his bills made. That was the object in having the timber inspected at East Boston; it did not avail anything, because the commodore said he would not do it, and he did not do it; and I told Mr. Swift, when he came for his bills, "You cannot have them; the commodore has decided that that timber is to come on the yard before the bills can be made out, and it has got to come here." It took him two or three weeks to get it here, and the bills were not made out until it came here; but it had been measured outside the yard.

Q. These main-stays that were moved from outside to lead amidships were made of wire-rope, as it is called, were they not?—A. Yes, sir; I think there is chain over the smoke-stack part. I think there is a piece of chain over the smoke-stack, but I am not quite sure; but when we have hemp-rope main-stays, of course, we have that part of chain.

Q. What was the objection to the main-stay, if it was made of chain, being 18 inches above the top of the funnel?—A. There was no objection.

Q. Would not the stays be better laid amidships than laid in the water-way?—A. I think they would.

Q. Then you conceive that the alteration was, to say the least, more ship-shape?—A. As far as the sailing qualities of the ship were concerned, the alteration was for the better; but as far as steaming was concerned, we lost draught by being obliged to shorten the smoke-stack. The smoke-stack was shortened several feet to make it come below the stays.

Q. How many feet?—A. I think as much as four, five, or six feet.

Q. Did the engineer say it would not do to shorten it?—A. Mr. Stewart—either Mr. Stewart or Chief-Engineer Debalin—told me that he preferred to have the funnel just where it was laid down on the plan, where the top of the smoke-stack came about on a level with the main-yard. You will see in a moment that if you are going to have the funnel up there, you must have your main-stays go to the side of the ship.

Q. How far is the smoke-stack from the main-mast?—A. From 12 to 16 feet.

Q. Do you know exactly how much was cut off from that funel?—A. I don't know; it was six feet and upward. I think the engineer said that it would interfere with his draught; that is, he informed me that he must have draught to get steam.

Q. Is there really any objection to putting the stay in the water-way?—A. It is more convenient to have it amidships; that is the main thing.

Q. Would it have been in the way of the men going fore and aft on the deck?—A. Not much; we put in the water-way in many instances.

Q. It is a common thing to put the stay in the water-way?—A. Yes, sir; it was to acommodate the steaming of the ship that I put them where I did.

By Mr. MILLS:

Q. You stated that Mr. McKay had been paid over $100,000 for building the Adams; where did you get your knowledge of that amount of money paid?—A. From the certificates furnished by the naval constructor.

Q. Should not those payments appear on the books of the chief accountant of the yard?—A. My opinion is that they should appear there: but I don't know what instructions Mr. Pook had.

Q. Is it not usual for all the payments made on the yard to appear in the chief accountant's books?—A. I think it is; so much so that when I took charge, the first payment that was made, I referred it to the commodore. I preferred that he should take some of the responsibility with me. I understand those payments have never come to the commodore at all.

Q. Is not that contrary to the rules of the yard?—A. It is contrary to the custom; I don't know any rule about it.

Q. Have you known of any other instances of such magnitude where that custom has been deviated from?—A. No, sir.

Q. Then it seems that the mode of paying the expenses for building this vessel was different from the mode that had been pursued previously in paying bills contracted here at the yard?—A. As far as I know, it was different.

Q. That is, the constructor on the yard, without the indorsement of the commandant of the yard, sent the bills to the Chief of the Bureau of Construction at Washington; he approved them, and a warrant was drawn for the payment?—A. I think that the constructor simply signed the bills and gave them to the contractor, letting the constructor put them through and send them to Washington for the approval of the chief.

Q. It was left for the constructor here to sign them, and then for the chief to approve them, instead of the commandant of the yard approving them, as is the usual custom?—A. Well, according to the custom, after the commandant of the yard had approved them, the chief would still have to approve them; the commandant's name was left out.

By Mr. HARRIS:

Q. State whether or not you have known of any contract of this character before.—A. Not exactly of this character. We built ships during the war which I inspected and examined, and I approved the bills, made in triplicate, according as it has been done here, and the commandant, either of the station or the navy-yard, approved them, and then they would be sent to the bureau. For instance, we built three gunboats at Philadelphia, and Commodore Gregory had charge of all the gunboats, and this formula was pursued with regard to the payments upon all those boats. I had better mention what I mean by contracts "not exactly of this character." Under McKay's contract, the Government was to furnish material and McKay the labor. In the contracts made during the war, the contractor furnished everything.

By Mr. BURLEIGH:

Q. As far as this yard was concerned, from the nature of this contract, was any less supervision required by the commandant of the yard than in ordinary cases?—A. I think not; I don't see that there was.

Q. You stated the other day that you would get what the expenses would be for docking the vessel and coppering her outside; have you got that?—A. Yes, sir.

Q. What was the amount?—A. I have got it per ton. I have sent over to East Boston and got the rates of the two docks there, and the item that applies to this vessel reads: "Side-wheel steamers and propellers of 175 feet in length and over, 35 cents per ton for docking; 10 cents per ton for each lay-day, not exceeding four, and afterward 15 cents per ton per day." The rates of the other docks are precisely the same.

Q. What would the docking have amounted to on this ship for the purpose of coppering her, provided Donald McKay had done it outside?—A. $681.47.

Q. Do you know that he would have had to pay this expense if he had done it of the Government from your researches?—A. From my researches he would have pay according to the number of lay-days, and the only way he could lessen the would be to have a less number of lay-days. I would observe that they sometimes vessel and copper her in a day.

Q. You think it would have taken about four days?—A. Yes, sir? I think it wou

Q. How much did the Government actually pay out for the purpose of docking thi —A. $220.22; and that we are going to charge on Mr. McKay's bill, as the thing now in the absence of any further instructions.

Q. Have you charged it on his bill?—A. No, sir; I have not, because this w done while I was away. There was no change made at the time; but we have not with Mr. McKay yet, and I am going to charge it whether he demurs to it or not.

Q. In launching the ship, did Mr. McKay have his ways from the yard?—A. rowed chains, hawsers, &c.; but no way.

Q. Any charge made for the use of them?—A. No, sir; he borrowed them; w make any charge in such cases.

By Mr. MILLS:

Q. Do you lend them to everybody?—A. It is not unusual to lend them to priv ties, by order of the Department.

By Mr. BURLEIGH:

Q. Will you furnish to the committee a statement of the tools and everything t McKay borrowed, which he has not returned?—A. Yes, sir; It is as follows:

List of tools, material, &c., loaned Mr. D. McKay in building the Adams and Esse statement showing the amount returned and the balance due.

Q. Could not Mr. McKay, in your opinion, have bought his timber and materials for less money outside of the yard than he paid at the yard?—A. I think he could have bought some of it for less, and some of it he could not.

Q. You think it was an advantage to him to buy some of it at the yard?—A. Yes, sir.

Q. Why was it an advantage?—A. Because I think it is likely that some of our material, white pine, for instance, is cheaper than the same quality can be bought for outside. We buy white pine lumber, for instance, at 50 cents this year; we buy white-pine lumber for 30 cents next year, and all the white pine on our books is put down at 40 cents. Now, if Mr. McKay comes in and says, "I have got authority from the bureau to get 10,000 feet of white-pine lumber," we charge it to him at the price it stands on our books. He may get some that cost us 50 cents a foot.

Q. That gives him liberty to buy according to his advantage, either of the Government or outside?—A. Yes, sir. We went over to East Boston this morning to ascertain about the white-pine lumber that somebody said Mr. McKay had stowed over there. We found that he had about 18,000 feet of white pine, which he said was furnished him by Mr. Pook on his first contract. Instead of returning that lumber when the ship was finished at the yard, he chose to keep it and pay for it. I take it for granted that he got that white-pine lumber cheaper from the yard than he could have got it outside, or else he would not have kept it.

By Mr. JONES:

Q. Why should he have been allowed to take 18,000 or 20,000 more of white-pine lumber than he needed?—A. 18,000 is not a great excess to be left after a ship is completed, taking into consideration the fact that some of the work requiring white pine was afterward changed to use yellow pine. He returned the white oak he did not want.

Q. Is not that white pine worth $60 or $70 a thousand outside?—A. I think it is. It is very fine lumber.

By Mr. HARRIS:

Q. At what rate did he get it?—A. He paid $60 a thousand for a portion of it. That is not the kind of pine lumber there to-day. We found generally 2-inch white-pine lumber over there. I merely mention that as an illustration of the fact that lumber is sometimes furnished from the yard cheaper than it can be bought outside. Our white-pine stage-plank is 4½ cents. That is inferior stuff that we had orders to lend him, and if he did not return it to charge it to him. 8,317 feet he did not return, and we charged it to him.

By Mr. MILLS:

Q. Is that all the pine you found over there; did you make a correct measurement of it?—A. That is all we found. We did not make an accurate measurement, but we measured the piles by the eye and calculated there were about 18,000 feet; and when we met Mr. McKay he immediately entered into an explanation, without our saying anything to him. He says, "I have got 18,000 feet of white pine stowed over there, and I will tell you how I got it," which showed that our rough estimate was about right.

By Mr. BURLEIGH:

Q. Have you ascertained whether coppering the bottom of the Adams is paid for or allowed by Mr. McKay?—A. Yes, sir; that is charged in this $27,000.

By Mr. MILLS:

Q. Mr. McKay said last night that he thought he owed the Government about $33,000, and had been told so, and you have only got him charged with $27,000.—A. I don't know who told him so.

Q. Do you think that, with the amount of lumber that you furnished him he could have built that vessel and had that large surplus left? You furnished him only $27,000 worth, and he has got 18,000 feet of pine lumber left.—A. No, sir; that was not it. I did not furnish this white-pine lumber.

Q It was from the yard?—A. Yes, sir.

Q. I mean the Government when I say "you."—A. Yes, sir; $27,000 is a large amount of money for these extra things. We did not furnish him with all the lumber. Some of the lumber, plank, &c., he bought himself. I asked him about the yellow-pine logs that somebody said he had got. That, probably, was for water-ways—heavy pieces. He said he never got a stick of it from us, but bought that all outside. If a contractor is to have authority from the Navy Department to come here and take our stuff and carry it over to East Boston, and we are to give him stuff whenever he calls for it, we are at his mercy, to a certain extent.

Q. Will you give the committee the items of the materials that you furnished Mr. McKay, that you have charged?—Yes, sir. The following is the list of lumber and timber material:

Material delivered Donald McKay.

Appropriation: Eight steam-sloops.

1875.			
May 22.	648½ feet white-oak plank-stocks	$0 60	$389 10
	825 locust treenails, 30 inches	05	41 25
	2,000 white-oak wedges	05	100 00
	2,054 feet, board-measure, 2-inch white-pine plank, No. 2	06	123 24
	21,559 feet, board-measure, white-oak plank, per M	95 00	2,048 10
	3,888 feet, board-measure, 4-inch yellow-pine plank	07	272 16
	14,825 feet, board-measure, 5½-inch white-oak plank	08	1,186 00
	4,025 feet, board-measure, 1-inch white-pine boards, No. 1	06	241 50
	2,904 feet, board-measure, 5½-inch white-oak plank	08	232 32
	5,000 feet, board-measure, 1-inch white-pine boards, No. 1	06	300 00
June 4.	16,486 feet, board-measure, 1 and 2-inch white-pine plank and boards	06	996 16
	1,000 white-oak wedges	05	50 00
	162 cubic feet white-oak plank-stocks	60	97 20
9.	26 white-oak knees, limb and roots	..	331 58
11.	1,611 feet, board-measure, 1-inch white-pine boards, No. 1	06	96 66
	2,073 feet, board-measure, 3-inch white-pine deck-plank	05¼	108 83
12.	25 white-oak knees, limb and roots	..	353 01
13.	366½ cubic feet yellow-pine plank-stocks	..	206 75
	293½ cubic feet white-oak plank-stocks	75	220 13
20.	11,265 feet, board-measure, white-pine deck-plank	05¼	591 41
	8,677 feet, board-measure, 1-inch white-pine boards, No. 1	07½	650 78
23.	2,005 feet, board-measure, 3-inch white-pine plank, No. 3, stage	06½	130 33
	201 cubic feet white-oak plank-stocks	75	150 75
	1,052 feet, board-measure, 1-inch black-walnut boards	08½	89 42
1874.			
June 27.	7,115 feet, board-measure, 1¼-inch white-pine plank, No. 1	06	426 90
	2,515 feet, board-measure, 2-inch white-pine plank, No. 1	06	150 90
	234¼ cubic feet white-oak plank-stocks	75	175 88
Oct. 1.	8,317 feet, board-measure, white-pine stage-plank, No. 3	04½	374 27
	9,019 feet, board-measure, 1¼-inch white-pine plank, No. 1	06½	586 23
Nov. 7.	154 white-oak knees, limb and root	..	2,406 61
1875.			
Oct. 15.	100 feet, board-measure, 3-inch yellow-pine plank	07½	7 50
			13,127 97

CR.

11,624 feet, board-measure, white-oak plank	09½	1,104 28
9,916 feet, board-measure, white-oak plank	08	793 28
9,786 feet, board-measure, white-pine plank, stage, No. 3	..	486 33
2,620 feet, board-measure, yellow-pine plank	07	183 40
6,850 feet, board-measure, white-pine plank, deck	05¼	359 62
814 cubic feet white-oak plank-stocks	..	535 50
600 locust tree-nails	55	30 00
3,264 feet, board-measure, 2-inch white-pine plank	06	195 84
6,727 feet, board-measure, 1¼-inch white-pine plank	06½	437 26
1,322 feet, board-measure, 1½-inch white-pine plank	06	79 32
		4,204 83

Q. How much did the galvanizing of the iron by the Government, which Mr. McKay should have done under his first contract, cost?—A. I think it is less than $100.

Q. Have you ever been asked to furnish a detailed statement of the items of labor and work done by the Government, and to be done on the Essex and Adams respectively, and to estimate the cost of labor in each item?—A. That would be a big job to get up, but I can make a close approximation to it on the spot. I think I said in Washington that it would cost $1,000 to finish the Adams and $4,000 to finish the Essex, on the part of the Government. We have got Mr. McKay's bill, and we know just exactly what the ship is going to cost, provided those estimates of $1,000 and $4,000 are right.

Q. I asked you to furnish the items about which a dispute arose; who decided the questions, and in whose favor. Can you furnish them now?—A. I found only one item on the second contract, and that was the item of ours for the boats. He has been released from that on the second contract. It is a small matter, but it was in his favor.

Q. Was any of the iron-work that came here on the Essex, and not attached, used on the Adams?—A. Not that I know of; I don't recollect about that.

Q. How long did you say you had been on the yard as constructor?—A. From the 26th day of September, 1874.

Q. Can you tell whether any vessels were being built on the yard when you came here?—A. The Vandalia was being built, and was nearly ready for launching at the time I came.

Q. Can you tell the committee whether or not the bending-machine was used, and if used, to what extent?—A. The bending-machine has been chiefly used since I have been here in bending timbers for the Miantonomoh and class.

Q. When was the first time you used the machine?—A. I think the machine was in use when I came, bending some things.

Q. For what purpose?—A. For the Vandalia; that is my impression.

Q. Before you came to this yard had you heard of machines for bending timber for ship-building?—A. I had heard of such machines.

Q. When were those machines in existence that you had heard of?—A. I had heard of the fact of timber being bent for thirty years past.

Q. Did you hear of it being bent for the knees of ships?—A. I think the first that I ever heard of timber being bent for the knees of ships was that bent for Mr. Griffiths.

Q. How long since?—A. Probably four or five years ago: not a great length of time.

Q. Didn't you know there was a bending-machine in New York twenty years ago for bending timber for the knees of ships?—A. I have heard of such a machine. I think I heard that Mr. Lenthall condemned the whole thing. That is about all I heard about it.

Q. You never heard about the durability of timber bent by such machines?—A. No, sir; I never heard anything about it.

Q. Do you know whether you had formed any opinion before you came here, in regard to the bending-machines?—A. Yes, sir; I had formed an opinion from what I had heard of it.

Q. What was that opinion?—A. It was adverse to it.

Q. Has the machine been used recently for bending timbers?—A. Yes, sir.

Q. For what purpose?—A. For the Miantonomoh, Terror, and class.

Q. For sheathing them outside?—A. Yes, sir.

Q. Do you approve of that purpose?—A. No, sir.

Q. In bending timber for this purpose, is the grain of the timber damaged and the timber weakened?—A. Yes, sir.

Q. Did you require the timber used for this special purpose?—A. Some of it.

Q. What did the timber cost?—A. Some of it that I required for that special purpose cost 90 cents a foot.

Q. What would timber, naturally curved, of the proper size, worked out for this purpose, cost, in ordinary lengths?—A. It would cost about 40 cents to buy it, and the other fifty would about work the shape out of the rough wood.

Q. Would that timber have been stronger than this timber that is bent?—A. Yes, sir: but I must explain here a little. I do not want the committee to understand that I think a frame made out of short pieces of timber is as good as a frame made in one continuous length from the heel to the rail; but a frame of live-oak, made of short pieces of timber, is infinitely better than a frame of white oak made of pieces extending from the heel to the rail.

Q. Could not such timber, with such skill as you have, have been bent sufficiently for the purpose without the use of the bending-machine?—A. Yes, sir; to some extent.

Q. You have said that bending this timber injured the grain and weakened the timber. The natural timber would not be weakened in breaking the joints and sheathing over it. Could you not, by your skill, fasten the pieces so that the timber would be as strong as timber bent by the machine?—A. The probability is, that while the ship was new the bent timber would be the stronger; but in a few years, when the timber began to decay, the timber that is not bent, being live-oak and perfectly sound, would be the strongest. But then there is another point right there. The experience of thousands of years has shown that a ship well built of short pieces of timber to make up the frame, is sufficiently strong for all purposes to be at sea.

By Mr. JONES:

Q. Cannot these iron ships that you propose to cover with wood be covered with white-oak timber that you can buy at 40 cents cheaper than you can take this straight timber and bend it in the machine and put it on?—A. I think they can.

By Mr. BURLEIGH:

Q. You said you did not approve of the purpose for which this bent timber was to be used to cover the bottom of the Miantonomoh.—A. I did not say the purpose; I said the plan. I do not approve of that plan of covering, because the timber will rot eventually, and it will be very difficult to keep the ship so tight that the salt water will not be confined in that open space, and consequently the iron will oxidize and be destroyed almost as if it was exposed to the water at once, directly.

Q. Won't it more?—A. Possibly more.

Q. Is there any possibility of getting at the bottom to clean it and paint it?—A. No; they don't want to paint it. Probably before we plank the ship that space will have to be filled solid and caulked to prevent the water from accumulating.

Q. Will that prevent it?—A. O, yes, that will prevent it.

Q. So that no water will get at the iron-plating of the vessel?—A. No water will get at the iron-plating of the vessel, I think; how can it?

Q. Did you ever know a ship that did not leak?—A. I believe I have.

By Mr. HARRIS:

Q. While you say you do not approve of the plan of covering an iron ship with wood, do you know of any better way, if you are going to do it, than to use bent timber to do it with?—A. I object to the plan of covering with wood.

Q. That is not the question; the Government have adopted that plan for certain vessels; now, can you cover the Miantonomoh cheaper or better with wood worked out by tools than you can by timber which has been bent in this machine?—A. Taking everything into consideration, that is, the destruction of the grain of the timber by this bending process, I would rather work out the timber by hand, or saw it out without bending it, than to put it on the vessel in that manner.

By Mr. JONES:

Q. You think it would be cheaper for the Government?—A. In the long run it certainly would, taking everything into consideration. I was asked in regard to the material sent from the yard. By a letter dated June 12, 1875, we got authority from the bureau to send the iron that belonged to the Oregon to John Roach. The amount sent under that order was $1,444\frac{242}{2240}$ tons plate armor. In a previous letter, dated September 14, 1874, the chief says: "You will please direct that the material and fixtures belonging to the Miantonomoh be collected and inventoried and sent to John Roach, Morgan Iron-Works, New York, by the first opportunity with a Government vessel." The amount of that material was $754\frac{395}{2240}$ tons side-armor and deck-plating.

By Mr. HARRIS:

Q. I notice that Mr. McKay was charged May 22, 1875, with 21,559 feet white-oak plank, at $95 a thousand—$2,048.10. He is credited with 11,624 feet white-oak plank, at 9½ cents a foot—$1,104.28; do you understand that that which he returned was the same embraced in the item which he bought?—A. Yes, sir; there are other items of the same kind along down the page.

Q. What I want to find out is whether the lumber which you received back was as good on the average as that which he received?—A. Yes, sir.

Q. Was there any culling or selecting, as far as you know, which left this 11,624 feet less in value per foot than the 21,000 feet which he received?—A. I think not; I think he culled and selected it merely to suit his dimensions.

Q. Where was the culling and selecting done?—A. In East Boston, over on his yard.

Q. Did he cull and select it here before it went to East Boston?—A. I understand he did.

Q. Then if he culled and selected it here, he got a good cull here?—A. Yes, sir.

Q. Did these pieces come back cut?—A. No, sir, not to any extent; and I understand that, when cut, deduction was made; if there was any piece came back cut, he was charged with the balance; but as a general thing this timber came back in long pieces, just as they were taken. I would say here that I was a little surprised that such good stuff should be sent back, but Mr. Hersey, his foreman, said that it would not work to advantage.

Q. So far as you know, was what he took better than what he returned?—A. I judge it was all good, for he took it for good. My impression is he selected it because the dimensions suited him better.

Q. Was the lumber he sent back worth 9½ cents a foot?—A. Yes, sir; just as much as it was when he took it.

By Mr. BURLEIGH:

Q. Was it not a great advantage to Mr. McKay to have a selection from a large pile of plank, and to be able to take just what he wanted to suit his purposes?—A. Very great.

Q. Could he have done that if he had bought his lumber outside?—A. Not without paying an additional price for the privilege.

By Mr. HARRIS:

Q. I notice that there were 9,916 feet of white-oak plank returned and charged at 8 cents a foot, and that he received at one time, 14,825 feet at the same price, 8 cents a foot; and also received, on another occasion, 2,904 feet of white-oak plank at that same price; do you know whether this had been cut or culled?—A. There was none came back, to my knowledge, that had been cut to any extent.

Q. I find him credited with 9,786 feet of pine plank stage at 3 cents a foot; are you sure he received any at that price?—A. I am not clear about that. (This 9,786 feet is No. 3 plank, but at more than 3 cents a foot.)

Q. If you received it back at 3 cents a foot, did you make a deduction for its use and injury?—A. It has not been, to my knowledge, received back at a less price than it was charged. If it has been, then clearly the clerk has not done what he was ordered to do. The directions were, that when he delivered the stuff he must be credited with just exactly what we charged him, except in the matter of copper.

Q. I find 2,005 feet 3-inch plank charged at 6¼ cents for staging. I find he returned 9,786 feet of pine-plank staging apparently at 3 cents. The total is $486.33; 2,620 feet yellow pine at 7 cents a foot, $183.40; 6,850 feet white-pine deck-plank at 5¼ cents, $359.62; 814 feet white-oak plank-stocks, $535.50; 600 locust treenails at 5 cents, $30; 3,264 feet 2-inch white-pine plank at 6 cents, $195.84; 6,727 feet 1¼ inch white-pine plank, 6½ cents, $437.26; 1,322 feet 1½-inch white-pine plank at 6 cents, $79.32. Was all this material which he returned to you received as of the same kind, quality, and value as that which was delivered to him?—A. Yes, sir; that was the understanding.

Q. Do you suppose it was equally as good?—A. I believe it was. I believe he returned the identical stuff. The orders were that he should be credited just what we charged him.

Q. Have you any idea that in selecting from the quantity taken he selected the best stock?—A. I have no doubt he did.

Q. To that extent, then, the Government was injured by furnishing him the plank?—A. I don't think the Government was injured at all. He selected the best as we should select the best if we were building a ship.

Q. He had the privilege of selecting the best, taking what he thought necessary and returning the balance?—A. Yes, sir; we should have done the same in the yard. I think that was fair if the Government gave him the stuff at all.

Q. This was merely a sale by the Government to him, and he had the privilege of picking out what he wanted from the Government stock and returning what he did not use. There was some advantage to him in that respect, was there not?—A. There was some advantage.

Q. Do you know by what law or authority the oak or pine plank or lumber of any kind was sold to him under the contract?—A. Yes, sir.

Q. Who authorized you or your predecessor to sell lumber to him?—A. The chief of bureau conferred that authority.

Q. The contract does not give him that right, does it?—A. Not that I know of.

Q. Now, would you say that the system of allowing outside contractors to supply themselves from the Government stores is a good system?—A. No, sir; it is a miserable system.

Q. Suppose you were to go on with the contract system to a very large extent, abandoning the Government work here in the yard entirely, and were to furnish the contractors just what they might want, would not the Government be a large loser by the operation?—A. Yes, sir.

Q. All remnants, bad lumber, lumber not adapted to the work, would ultimately be left on the hands of the Government, wouldn't it?—A. Yes, sir; but bad lumber would be left on the hands of the Government anyhow, whether we did the work, or anybody else.

Q. Do you consider that there is any authority on the part of the naval constructor to authorize the sale of anything that belongs to the Government to outside parties, even though they have made contracts with the Government?—A. There is no authority on the part of the naval constructor.

Q. Well, is there any authority on the part of the chief of bureau?—A. I think, under the Secretary of the Navy, there is. Apart from the Secretary of the Navy, I think not; but by order of the Secretary of the Navy, I should think there was authority.

Q. But you still think it a bad system, liable to abuses, and involving a loss to the Government?—A. Yes, sir.

Q. Don't you consider white-oak plank which the Government have paid 95 cents a foot for, brought here and stored until it is perfectly dry, and in the best possible condition to go on to a ship, worth more than any lumber which a constructor could buy outside in quantities sufficiently large for his purpose?—A. For planking a ship above water it is; for planking a ship below water, it is not.

Q. Do you not consider that such lumber as that gains in value in the hands of the Government, when properly taken care of for a period of time?—A. For a period of time it does.

Q. Should you consider a vessel built of that lumber would be a little better for the Government?—A. Far superior.

By Mr. JONES:

Q. Were any bills made and approved on the Adams or Essex, when you were away on that survey, by the acting constructor of this yard?—A. On the first contract there were no payments made while I was away. On the second contract there were two payments made.

Q. To what amount?—A. November 1, 1875, by John F. Hanscom, $5,000: November 10, 1875, by F. L. Fernald, $5,000. That is all on the Adams. On the Essex there were made while I was away the following payments: September 21, by John F. Hanscom,

$5,000; November 1, by John F. Hanscom, $5,000; November 19, by F. L. Fernald, $5,000. All the other payments were made by myself.

Q. By whose orders were those bills made?—A. In the absence of the naval constructor, the assistant naval constructor, by the terms of the contract, had authority to certify the bills.

Q. Did your assistant constructor make them himself, or was he ordered to make those bills?—A. I do not know how it was done. When Mr. McKay wants a payment he makes out a bill himself.

Q. If you had been here should you have approved those bills?—A. It is impossible for me to tell whether I should or not, because before I approve a bill I examine the condition of the work, to see whether he is entitled to payments.

By Mr. BURLEIGH:

Q. It was not an over-payment?—A. I think not. I have approved one bill within two weeks. It depends upon the amount of work done whether they were due or not.

Q. Did I understand you to say that McKay received nothing for launching the Adams?—A. Nothing, except a loan of some chains and other fixtures used in launching.

By Mr. HARRIS:

Q. What, in your judgment, would be the cost of launching that vessel?—A. In the manner in which they launch vessels at East Boston, it could be launched for about $300. In the navy-yard it would cost more money. They launch there in a manner which we could not afford to risk, but still they get them off, sometimes safely and sometimes not; but I suppose, in nine cases out of ten, perhaps more, safely. It is rarely that you hear of an accident; but when one accident like that happens to a naval constructor it is likely to fix him, and therefore they cannot afford to risk it.

By Mr. MILLS:

Q. You said that on November 1 and November 19 two payments were made, one on the Essex and one on the Adams, of $5,000 each time, making $20,000. Do you think those boats were sufficiently advanced in that short time, eighteen days, to have entitled Mr. McKay to receive those payments?—A. It is not impossible that that should be the case.

Q. I know you might put 2,000 men on them and finish them in a few days, but I am talking about what you know of those boats, and the condition in which they were when you left here, and in which you found them when you came back.—A. From the condition in which I found the vessels when I came back I should say, on the whole, the Adams being very nearly completed and the Essex not far behind it, that the payments were properly made.

Q. Had there been $10,000 worth of work done on the Adams during those eighteen or twenty days?—A. No, sir; that is not the way to estimate it. It is the amount of work done according to his contract. If he gets $10,000 for doing $5,000 worth of work, we must pay him the $10,000. I may think he has only done $5,000 worth of work, but if the contract says $10,000 we must pay it to him.

Q. Where was Mr. Fernald at the time he was sent to take your place while you were away?—A. He was at the bureau assisting the constructor at Washington.

Q. Was he sent here to act as naval constructor by the chief until you returned?—A. Yes, sir; part of the time; the other part Mr. John F. Hanscom was here.

Q. Mr. F. L. Fernald is a brother-in-law of the chief, is he not?—A. He is a nephew of the chief, I believe.

Q. Did not one of the Fernalds marry Isaiah Hanscom's daughter?—A. Not that I know of.

Q. Have you not been called on to approve an account of Mr. McKay for payment?—A. Yes, sir.

Q. And you have done so?—A. Yes, sir.

Q. By whose order?—A. It did not require any order, only the general order. When I think the work has progressed to a sufficient extent to authorize payment, I make it.

Q. When you look over the condition in which the Government has been placed by Mr. Hanscom by the payments which he has required to be made, and the amount of work from which he has released the contractor, don't you think you would be justified in withholding some of the payments until the Government settles with this gentleman?—A. No, sir; I am justified in withholding the last payment on the Essex because the last payment is small—about $5,000—and he can finish the work now to be done for about $2,500. I think I have secured the Government abundantly.

Q. Don't you think that the Government will desire to have that $22,000 worth of work from which Mr. Hanscom has released this man investigated, and compel him to pay it?—A. That is on the Adams. There is nothing due on the Adams until the vessel is completed.

Q. How much is due on the Adams?—A. Fourteen thousand and some odd dollars on the first contract.

Q. When you have charged him with the $27,000 worth of timber which he has received, then how much is due?—A. Fourteen thousand and some odd hundred dollars on his first contract, and about $5,000 on the second. There is about $19,000 due him on the Adams.

Q. Then he owes the Government $22,000?—A. No, sir; not by the present ruling of the chief.

Q. Don't the letters say that the frame is to be delivered to him?—A. Yes, sir.

Q. The contract said not a word about the frame, did it?—A. No, sir; the contract says deliver him the timber.

Q. That is the frame, isn't it?—A. The frame timber.

By Mr. HARRIS:

Q. Suppose you had before you the plans and specifications of a ship of a certain size, which was to be built in this yard, and you had instructions to select the frame for that vessel; in selecting it, would you select a piece of timber adapted to each piece of the frame?—A. Yes, sir; as nearly as possible.

Q. Saving, waste, and all that?—A. Yes, sir.

Q. And that you would hand over as the frame?—A. Yes, sir.

Q. But Mr. Hanscom in this case has not only done that, but he has ordered a certain amount of work to be done on the frame; that is, he has made the frame?—A. Yes, sir.

Q. What advantage or disadvantage was the alteration in the hatches?—A. I think it cost him $125 more to do the work when it was so ordered. I will read the order for it:

"NAVY DEPARTMENT,
"BUREAU OF CONSTRUCTION AND REPAIR,
"*March* 1, 1875.

"SIR: Referring to the drawings and specifications for the sloop-of-war Adams, building by Mr. D. McKay, under contract, the corners of the iron hatches were to be of angle-iron. It is deemed advisable to have these corners of composition, as in the sister ships, which corners will be furnished by the Government, the contractor allowing the cost of iron corners, provided the work is equal in both cases.

"The after hatch also, which by the plans and specifications is to be of wood, will be of composition, the plates to be furnished by the Government.

"Respectfully, your obedient servant,

"I. HANSCOM,
"*Chief of Bureau.*

"Commodore ED. T. NICHOLS, U. S. N.,
"*Commandant Navy-Yard, Boston, Mass.*"

BOSTON, *March* 23, 1876.

WILLIAM HICHBORN sworn and examined.

By Mr. JONES:

Question. What is your occupation?—Answer. Foreman ship-joiner in the navy-yard.

Q. How long have you been employed there in that capacity?—A. Since June, 1861, excepting an interval of eight months in 1869.

Q. Do you know of any rejected articles being received in your department?—A. No, sir.

Q. Were you present when the bending-mill was built?—A. Yes, sir; I was.

Q. Did the Government build the building?—A. No, sir; it was built mostly by the contractor, I should say.

Q. Who was that?—A. Mr. Griffiths put in the machinery, but whether he built the building or not, I don't know; but it was built by contract at the same time he put it in.

By Mr. BURLEIGH:

Q. Did you do any joiner work on that building?—A. Yes, sir; I did some.

By Mr. JONES:

Q. What did you do?—A. I planed out in my joiner's-shop a good deal of the stuff and got out the molding for the roof, and finished up the engine-house inside.

By Mr. BURLEIGH:

Q. The material for the whole of that building was furnished by the Government, was it not?—A. That I cannot say.

Q. Where did you get your stock?—A. I got mine from the Government; sent down to the timber-inspector and got it.

By Mr. JONES:

Q. How much work did you do on that building, putting it all together?—A. It was extended over so long a time that I cannot tell. They kept sending stuff to the joiner's shop to be planed, and various things the whole time, almost every day, for three or four months.

By Mr. BURLEIGH:

Q. Didn't you get out the windows?—A. No, sir.

Q. Nor the sashes?—A. No, sir.

Q. Nor the doors?—A. No, sir.

Q. State what you did get out.—A. Well, I did the planing, sawing, and such like as that, and the moldings around the roof I recollect particularly about, because there was a large hole. I finished up the engine-house, and sheathed the steam-pipes, and the engine, and all about the machinery inside there. The engine-house was of brick, outside of the main mill, and I finished it up, sheathed and paneled it all. I finished it up nice.

Q. Didn't you plane and match the boards for the outside?—A. I am not sure about that. They sent so much there that it would be a question of memory on that point.

Q. Don't you know how the walls of that building were built?—A. Why, it is a common frame building boarded in.

Q. Do you know whether the boards were matched and planed or not?—A. I cannot say.

By Mr. JONES:

Q. Did you keep any account of the time you worked on it, and the material furnished by the Government?—A. No, sir; I didn't keep any account. That is, my monthly report to the constructor showed what I was doing.

Q. You were not ordered to keep that separate?—A. No, sir; it all went into general purposes.

By Mr. BURLEIGH:

Q. Was it not charged to Mr. Griffiths?—A. No, sir: it was not charged to Mr. Griffiths.

Q. Don't you think you did all the planing and joining of the boards that he used in that building in your shop?—A. No, sir; I don't think I did the whole of it.

Q. Where else could he get it done?—A. Well, he might have got it done outside. There are plenty of planing-mills outside.

Q. Did you, or your hands, go into the building to do any work?—A. Not in the building to do any work, except the engine-room. The ship-carpenters worked on it a good deal. They didn't call upon my gang, although it would more properly have come into my department; but they didn't call upon me.

Q. They did call upon you to do some planing?—A. Yes, sir; they did.

Q. Whatever could be done in the shop they called upon you to do?—A. All I did to the building, you might say, outside of finishing off this engine-room, which was a special joiner's job, was to case the steam-pipes, the crooked elbows, where the steam goes through, and sheathe it all up and finish it off, and finish the windows and doors. I got out a good deal of the work for them to put together. They kept sending to me all the time; but I should not judge I did the whole, because it was a pretty big job. It is a large building.

Q. Didn't you case the windows in the main building?—A. That is only a rough concern any way. The building is not finished inside.

By Mr. JONES:

Q. Can you tell by your books about how much labor you did on that building?—A. I don't think I could separate it from the other accounts, for it went into general purposes. I mentioned the different jobs I was doing, costing so much.

Q. By whose orders?—A. The naval constructor's orders.

Q. Who was naval constructor at that time?—A. In the first place, what first attracted my attention to it was my man saying, "They keep sending stock to do." I says, "You shall not do anything." The next thing he said to me was, "Mr. Hanscom, the naval constructor, has come and told me to do it. "Then," I said, "I suppose you must do it."

Q. From whom did you get your orders to finish off the engine-house?—A. From the naval constructor, Mr. Hanscom; that was a verbal order. He used to see me and tell me to do thus and so, and would not give me anything in writing.

Q. How many men would you put on to this work at a time?—A. There would be two or three men and laborers at work on our planing-machinery; perhaps they would send up half a day's work, and they would do that, and then they would have work for a dozen different shops.

Q. I want you to get at about the average number of men you kept on this work for that building every day?—A. I should not think it would average—to divide it up—more than a day's work that they sent for every day; that is, aside from the engine-room. I had 12 or 20 joiners down there several days.

Q. How many men did you have there?—A. I recollect that myself and my foreman talked it over, and we thought the work we did inside the engine-house and around there amounted to about $700.

Q. How much labor did you do up at the shop; as much more?—A. That included getting out all of my stock, and going down there and doing the work.

Q. Can you not give an estimate of how much all the work you did on that building amounted to?—A. I should say all the work I did for them in planing and sawing, the work on the engine-house, and all, would not vary many dollars from a thousand dollars, to the best of my judgment.

By Mr. JONES:

Q. Do you know of any money being raised to give any officer or any member of h family presents?—A. I don't suppose I know any more than every man in the yard know that they gave a present to Naval Constructor Wm. L. Hanscom, or his wife, Mrs. Hanscom.

Q. How much did you raise for that purpose, or how much was raised?—A. Betwee eight and nine hundred dollars; that is, the executive committee told me that that was th amount they had.

Q. Do you know what they gave her?—A. I was invited to the house in the evenin and saw the presents there; a thousand men saw them.

Q. Well, what were they?—A. I cannot seem to think, except a camel's hair shaw Whether it was a necklace or a diamond ring—I cannot seem to think of anything excep the camel's hair shawl. I know I saw that. It laid on the table for everybody to see.

By Mr. BURLEIGH:

Q. Who were the largest contributors to that present?—A. I cannot say; I know noth ing of the details about that at all.

By Mr. HARRIS:

Q. Did you not get the contribution from your gang?—A. There was a contributio handed in to me from my gang; but the thing was not very popular with my gang, an the sum was rather insignificant.

Q. Didn't you collect it?—A. Yes, sir. I didn't go around and ask anybody. The handed it in to me. I don't know that they knew that they were giving a present to Mrs Hanscom. There was something said about marching down with a band of music, an those who wanted to contribute could contribute for the music, and a man might have con tributed to the music, or the present, or anything else he saw fit to ease his conscience or I don't know in regard to that. I extended an invitation to my own men to call at Mr Hanscom's house, at the request of Mr. Hanscom. Before I called the roll, I said that Mr Hanscom was going to have a tin-wedding and wanted all the men to visit him who woul in the evening, and then I told them what the committee had told me—that there was to b a band of music and they would meet at a certain place.

Q. How long was this before Mr. Hanscom left the yard?—A. I think a very short tim He was not there a great while, anyway. He came there from California, staid a while, an then went off.

By Mr. JONES:

Q. Do you know of any furniture being improperly taken away from the yard by an officer, or any member of his family, or any one else?—A. I don't know hardly how to an swer that. We have made furniture for the constructor's house, and I suppose it is ther now; I don't know. I have not been to the building.

Q. Do you know whether any furniture was taken away improperly, that belonged to th Government?—A. The assistant constructor, Mr. Fernald, (I believe he was assistant con structor at the time,) sent to the joiner-shop and got a nice desk that was made for one of th ships.

Q. What did he do with it?—A. He carried it to his house. I rocollect it, because h got my quarterman to alter the cornice of it to go into a recess; but it was the understand ing that he should fetch it back again.

Q. Was his house in the yard?—A. No, sir; it was outside. I know I had to make an other desk to replace it when the ship went off.

Q. Do you know whether that desk has been brought back or not?—A. It has not com back, to my knowledge, since I have been there.

Q. Do you know of anything else?—A. No, sir.

Q. What was the value of that desk?—A. Perhaps it was worth seventy or eighty do lars.

Q. Do you know, or have you heard any of your men state, when you have sent them t pack furniture for anybody else who was leaving the yard who had been in the employme of the Government, that they had taken any of the furniture away with them that belonge to the Government?—A. I know I have made furniture for the constructor's house—blac walnut bedsteads and such things as that. I should not have thought of it if you ha not asked me. There were two black-walnut bedsteads made, and one of the men wh worked on them happened to be at the constructor's house, and he told me there wasn't bu one there now. I think that constructor was William L. Hanscom.

By Mr. BURLEIGH:

Q. Was that after Mr. Hanscom left?—A. Yes, sir.

By Mr. JONES:

Q. Did you make any bureaus or drawers or cases?—A. I don't know. I was contin ally doing something for the constructors in that line, and they most generally borrowed fu

niture belonging to the ships to be sent to the house. Sometimes they would order me to send a man down for it, and sometimes the store-keepers. They were absolute in those hings. I had nothing to do with it.

Q. Were those things generally brought back?—A. I cannot tell about that, as I did not charge them. There seemed to be more borrowing than there was fetching back, as a general thing, always; but I could not make any point in regard to that.

By Mr. HARRIS:

Q. Were you ever startled by anything being brought back?—A. No, sir.

Q. You would have been if you had seen it, would you not?—A. If it had been of any importance, I should have been rather surprised to have it brought back.

Q. You speak of the constructor; do you know of any one else?—A. Well, the constructor was continually borrowing furniture belonging to the ships, and all the officers around the yard; of course with the understanding that it should be brought back.

Q. Did the officers bring the furniture back?—A. Sometimes they did, I guess, and sometimes they didn't.

Q. Do you know who those officers are?—A. No, I can't tell. Such things have been going on for fifteen years, more or less. It is a kind of custom to lend around.

Q. The furniture of ships is borrowed by the officers?—A. There are lots of ships laid up at the yards, like the Niagara, which will probably never go to sea, and sometimes we take some of their furniture and put on board another ship. It is a kind of scattered arrangement; not much of an arrangement, any way.

By Mr. BURLEIGH:

Q. Do you recollect taking any of this stuff and putting it on board any new ship that went away?—A. Yes, sir; I have hunted it up, and anything that was suitable I have put on board the new ships. When they built the torpedo-boat, I hunted up nearly all the furniture that was put on board of her.

Q. Did you go into the officers' quarters for it?—A. No, I took it out of the shops, where it was. It wouldn't be a very popular thing for a man to dig around in an officer's house and pull out anything.

Q. Do you select your men in your own department?—A. As a general thing I do; but not as an absolute thing.

Q. Who selects them for you?—A. There are a considerable number of men sent from Washington by the chief of bureau.

Q. Does he fix what pay they shall have?—A. Yes: the order most generally comes in that way. In some cases, when they are not good for anything, it says, "First-class pay." I never have had half so much in that line as I think the other foremen have. My gang is a different class of men—rather an intelligent set of men, ship-joiners are; different from iron-workers, boiler-makers, iron-platers, &c. I don't think I have been troubled in that line nearly so much as I have learned other foremen have in my association with them.

Q. Do you feel at liberty to discharge a man of that kind who is sent to you by orders of the Department?—A. The constructor at the yard has always interpreted it in this way: that if a man was sent we obeyed the order if we set him at work, and if his services were not required he should be discharged, unless there was a special order that he should be employed, which sometimes comes.

Q. You have sometimes had special orders that they should be employed and not discharged?—A. Yes, sir; I have. I have had one or two of that kind.

By Mr. JONES:

Q. Were they of that class—the highest pay and the poorest workmen?—A. One of them was the poorest workman I had.

Q. Do you know of any bribes or money being paid to any officer?—A. No, sir.

Q. Do you know of any abuses around the yard that are detrimental to the Government?—A. No, sir; I don't know of any special abuse.

By Mr. BURLEIGH:

Q. The Government did not own Mr. Fernald's house outside the yard?—A. No, sir.

Q. How does contract work compare with Government work in your department?—A. I think it is very inferior to the Government work in the judgment of all my men, and it seems to be an honest judgment, too. My men are continually calling my attention to the defects of it.

Q. Did the Government furnish the tools and the materials to the contractors from your department in building the Adams?—A. Yes, sir; I had an order from the constructor, Mr. Easby, to let them have any tools and allow them all the facilities they wanted; but they did not call upon me for anything, except as a joiner might have borrowed a pair of match-planes for an hour or two, and I kept a sharp lookout for them and they came back again. They didn't carry anything out of the yard from my department.

Q. Did you plane any lumber for the Adams?—A. No, sir.

Q. Did you work on it at all?—A. Yes, sir: I worked on the Adams.

Q. While she was over in East Boston?—A. No, sir; since she has been to the yard. Some alterations that were decided did not belong to the contractor, they told me to do—making sky-lights, &c.

Q. How did the Burnetized timber operate, in your opinion?—A. Terribly bad.

Q. Was it as good as coal-tar?—A. No, coal-tar would have been a beauty to it. It was terrible.

Q. In what particular?—A. It seemed to kill the life of the wood, and it shrunk terribly, so that one of the seams opened an inch and five-eighths, and the calker wedged them up with pine wedges. Then the wood shrunk and bulged out, which required me to plane the ship all over. I did the joiner-work twice. I had to keep laborers scraping the stuff off on the outside, and then my men would plane it. Then when they were painting her they would keep calling on me, because the stuff would come through, so that I had to do the work two or three times.

Q. You say you did some of the joiner-work on the Adams, and also on the Essex?—A. Yes, sir; the alterations that the constructor, Mr. Easby, decided did not belong to the contractor he ordered me to do, such as altering the store-room, or dispensary, or cutting a door through and building sky-lights. They were going to have a railing and they concluded to have a sky-light. So that made a change and he ordered me to do it.

Q. After doing this work, did you make charges for it?—A. I charged so many days' work, amounting to so much for each vessel, in my monthly report.

Q. You kept each vessel separate?—A. Yes, sir.

Q. Do you know what amount any one of those alterations would be?—A. I should think what I did, if I finished what I left when they suspended us two months ago, would amount to about $500: I mean on both vessels—the Adams and the Essex. I cannot seem to subdivide the work. I know one alteration was having two skylights made.

Q. You think, then, it would be about $250 to each vessel?—A. Yes, sir, I do; but I think it would be more on one than on the other. I think the two would amount to about $500, as far as I have done and set out to do.

Q. Do you know whether there was any board called to survey those vessels and recommend any changes?—A. No, sir; I do not.

Q. Did you do any portion of the work for Mr. McKay on the Adams in your shop?—A. I did very little. By an order from the constructor's office I turned some lignum-vitæ buttons, which amounted to a day or two's work, and charged it; made a report, and sent it back to the constructor's office.

Q. Those were for the lockers and wood-work inside the vessel?—A. Yes. There was one vessel for which he said the Government furnished the material.

Q. Have you given all the work you have done on those vessels?—A. Yes, sir. I know of nothing but what I have told the committee. It is known, of course, to everybody there. Mr. Fernald, the constructor, came there temporarily, and ordered an alteration made in the skylight.

Q. When was that?—A. He came and staid a week some three months ago. He came when Mr. Easby was in Washington on some kind of board, or some other business.

By Mr. JONES:

Q. Have you any papers, or any information that you can give to the committee, that will be of service to the Government?—A. No, sir.

BOSTON, *March* 23, 1876.

SAMUEL DWIGHT sworn and examined.

By Mr. MILLS:

Question. What position do you hold in the yard?—Answer. Foreman of shipsmiths.

Q. How long have you held that position?—A. Four years.

Q. Do you know of any tools from this yard furnished Mr. McKay to build his vessel with?—A. Yes, sir.

Q. Who let him have them?—A. I did; from my shop; delivered them to him.

Q. Have they been delivered to you?—A. No, sir.

Q. How many tools of this yard has he now?—A. I can tell you just what he has had from my shop. There is one list of a part of them, [producing list.]

Q. Just read off the tools—A. [Reads.] "List of tools lent to Donald McKay for use on sloop-of-war building at East Boston, (that is, the Adams:) One anvil, 1 cast-iron sow, 30 pairs of tongs, 1 forge shovel and rake, poker and ladle, 57 top and bottom swedges, 22 top and bottom filers, 1 coppering-tool, 1 countersink, 6 flatters, 2 set-hammers, 26 pins and punches, 15 heating-tools, 1 rasp, 22 chisels, 2 sledges. Delivered June 9, 1874, as per order of naval constructor. Attest: Samuel Dwight, foreman of shipsmiths." There is the order I received for it. It is signed by Mr. Pook.

Here is another list:

"MAY 25, 1875.

"List of blacksmith's tools lent Donald McKay: Four punches; 14 top and bottom filers; 9 flatters; 2 pins; 4 set-hammers; 13 top and bottom swedges; 16 straight swedges; 18 chisels; 7 sledges; 30 pairs of tongs; 1 anvil; 1 cast-iron sow."

Those were the two lots I delivered; one by order of Mr. Pook, and one by order of Mr. Easby.

Q. Are those all the tools you have delivered him?—A. Yes, sir; it is all he has taken out of the yard. I have let him have a few swedges for driving his bolts with since he has had the yard.

Q. Has anybody else delivered him any tools on the yard?—A. Not that I know of.

Q. Have any of those been returned?—A. Not unless they have been returned since I have been suspended; but up to the 12th day of January they had not.

Q. What was the value of these tools? I suppose you made some estimate of the value of them?—A. No, sir; I did not make an estimate. I should judge that it was in the neighborhood of $600, somewhere about there. I should not want to say within a hundred dollars. I merely did as I was ordered, and he came there and took the tools.

Q. Of course you are not to blame. Did you do any ship-work for the Adams in the shop?—A. Yes, sir; I got out the shapes that he required—*i. e.*, the work that was done with bloom-iron; that was made of scrap instead of old iron.

Q. Who furnished that iron?—A. The Government furnished the iron, and I got out the shapes under the hammer that were required to do his heavy work, weighed it, and kept the account of each and every shape, and turned it into the constructor's account.

Q. Have you a memorandum of that?—A. I don't think I have. I think it is on the shop-ledger. The time is all charged to general purposes. I think it could be picked out.

Q. The time was not charged directly to Mr. McKay?—A. No, sir; charged to the Government. Then I made the bill of work that I did for him. I made the bill to the Adams.

Q. Including the labor?—A. Yes, sir; including the labor—the material and labor—and turned into the store for the Adams, stating it. Then he had to make a requisition and draw it out of the store.

Q. Who had to?—A. Mr. McKay.

Q. You charged for it at its actual cost?—A. Yes, sir; charged for it at its actual cost to a cent, as near as I could get at it. Then there were the alterations; and work that he would do in East Boston came over here, and the constructor would decide to alter. I had to make the alterations. It cost some considerable money.

Q. Was that charged to Mr. McKay?—A. No, sir; it was charged direct to the ships, and the ships paid for it.

Q. To what ships?—A. The Adams and the Essex.

Q. While the Adams was at East Boston did you do work of that kind?—A. On all ships that I drew.

Q. And that was not charged to Mr. McKay?—A. Not so far as I was concerned.

Q. Why didn't you charge that to Mr. McKay?—A. I had no orders to do anything of the sort. My orders were to do all alterations that were required after he had once done the work. My orders from the constructors were to do such alterations, without any further ceremony.

Q. Did you understand that the Government was to do that work from Mr. McKay without charge?—A. The alterations; that was the understanding I had, though I never had any conversation with the constructor. He merely gave me verbal orders to do certain alterations, and I did them.

Q. Was it alterations of your own work that you did not make fit?—A. No, sir; nothing to do with me, but his work.

Q. Did you alter his work so that it would fit?—A. Yes, sir.

Q. And in building that ship, if he did not make it fit right, he sent his iron-work to you for alterations, and you altered it at the expense of the Government?—A. No, sir; I did not say so. I say after he had done his work and it was put on the ship, the constructor, or whoever was superintending the work, ordered an alteration in a certain piece of work and it was sent to my shop and I did it without charge. I am not saying that I ordered it done on Mr. McKay's work for him. I don't think that would be hardly justifiable. He had made the work, and made it according to the plans and specifications, and it did not suit the constructor. We make a set of molds, for instance, for the boat-davits, placing them on the ship according to the drawings. After they get them made and place them there they find that the place will not work. In shifting them six feet farther aft or farther forward they have to alter the iron-work.

Q. In cases, then, where Donald McKay had done the work according to the specifications, and then the constructor found that the specifications were wrong, and had to make an alteration, how was that?—A. That I could not say. I could not say whether it was the specifications that were wrong.

Q. Now, in regard to those borrowed tools. Did you have to make other tools for the purpose of doing your own work, in consequence of the absence of these?—A. There are sixty

pairs of tongs there in that list, and of course he took the best in the shop, and of course sixty pairs of tongs are a great item in my shop.

Q. How much was the Government damaged by reason of having to make more tools to take the place of those that were taken away by Mr. McKay?—A. It cost more for labor than for anything else.

Q. You said you had to make as many tools in value as those he carried away were worth. —A. With the exception of the cast-iron sows and anvils, which of course I might not have to make. But my set-hammers, tongs, &c., I had to make.

Q. Did you at any time call upon Mr. McKay, or any of his agents, to bring back the tools that he had borrowed?—A. No, sir.

Q. Did you make requests upon your superior officer?—A. No, sir; I told Mr. Easby. The last lot of tools that were carried out, he sent me this order, which says, "Let Donald McKay have what tools he may select," but not to let him have any that would leave me in bad shape in case I had anything to do. I went and reported to him that, if he took the tools, of course it would leave me short. He said he must have them, and he came and took them, and selected what tools he wanted. Then I made a list of those tools and returned it to the constructor; so he had a list of all tools that were taken from my shop, in the constructor's office.

Q. What workman would be likely to let him have those tools which were mentioned by Mr. Gaddis, such as jack-screws, clamp-screws, &c.?—A. The head carpenter.

Q. What is his name?—A. Sampson.

Mr. MILLS. He spoke about it when he was before us a while ago, and said they had not been returned.

By Mr. HARRIS:

Q. Now, we were trying to get at, from you, what you meant by saying that certain alterations were made by you without charge to Mr. McKay; and you made the remark that when Mr. McKay had done his work, and the constructor required it charged in the iron-work, you made the change and charged it direct to the ship; and then you illustrated by saying that if the davits to the boat had to be moved five or six feet, then the iron-work had to be changed to meet that difficulty?—A. Yes, sir; very often.

Q. Now, did that change become necessary by the defective manner in which Mr. McKay had done it, or did you mean to say that it became necessary by means of the change of plan wholly?—A. By reason of the change of plan. I think every davit-hanger we altered after it had been made and fitted on once.

Q. Why did you alter them?—A. Because by order of the constructor they made changes and shifted them forward and shifted them aft.

Q. Why were they shifted forward and aft?—A. That I could not tell you.

Q. What change had to be made in the davits other than moving the step?—A. The two aft davits on each side are carried up on top of her quarter-deck, and it is necessary to shorten them, and some of them that were shifted a little forward where she tumbled in it was necessary to lengthen or shorten, and where they shifted them amidships, where she tumbled in it was necessary to lengthen them, so that the boatmen could drop down clear of the guns.

Q. Where was this done?—A. In East Boston. It did not suit the constructor.

Q. All that you made alterations of was stated in the specifications. I understand you that after the ship came here you were directed by the naval constructor to alter some work which had already been completed over there?—A. Completed by Mr. McKay, and brought here.

Q. So that it did not make much difference whether it was the first or the second contract. It was once done, and it was thought to be necessary by the constructor to alter it, and you did it under the naval constructor's direction?—A. Yes, sir.

Q. Now, do you know whether those alterations became necessary by the mistakes of Mr. McKay?—A. I should say not, because the davit-hangers were made just as I make them here, and were made perfect.

Q. Perhaps they were put in the wrong place?—A. That I cannot answer; they were made by Mr. McKay, and were made perfect, just as I would make them here exactly.

Q. But you are not informed whether Mr. McKay placed them in the wrong places by mistake?—A. They were not put in the wrong places. The change was by order of the naval constructor, shifting the boats farther forward or aft, so as to clear the guns.

Q. Was it not Mr. McKay's fault in putting them where the guns could not be moved?—A. There was not one put on the ship. In the first place, he worked from wooden molds. They take it and set it up upon the ship; place the wooden davit-mold in the hanger, and see if it was right. If they pronounce it right, he goes on and makes them. In this instance they pronounced it right. He made his hangers and brought them over here. He put them on and set them up there, and the constructor says, "I want to have them 6 feet farther aft." Then it was necessary to make the alterations.

Q. Then the alterations, in your judgment, were without fault on the part of Mr. McKay?—A. Yes, sir.

Q. Then it properly belonged to the Government to make the alterations?—A. That I could not say; the Government ordered them altered, and I altered them.

Q. If the constructor altered his plan, the Government should pay the cost of the change. How much in amount do you think all that work, which was rendered necessary by the changes which you made, would cost? Take the davit-hangers, for instance.—A. I altered all on the Adams. I could not tell younow, but I could give you the full amount from the books.

Q. Can you give us within $100?—A. Well, I should say $150.

By Mr. JONES:

Q. Do you know of any articles received after having been once rejected in your department?—A. No, sir.

Q. What is the quality of the iron in your department?—A. Well, sir, we have generally the very best of iron. There has not been a great deal of iron come into the yard since I have been foreman. But during my foremanship we have manufactured iron down in the rolling-mill which was of extra quality. I had some 150 tons of scrap, which I turned over to the engineers, and they rolled it and got a good quality of iron.

Q. You have received iron from outside parties?—A. Yes, sir.

Q. What has the quality generally been?—A. It has been good.

Q. I suppose you don't like to work poor iron?—A. No, sir; I do not.

Q. How does the contract-work on the Adams and the Essex compare with the Government work?—A. That is rather a hard question to ask me.

Q. I should think that was a good question to ask you as being related to your department?—A. The majority of it would pass muster; there is no doubt about that. It is no such work as we are obliged to do here, that was done on the Adams, because they want good work here if it costs more money. They will have it. We must be more particular about the work and have it in better shape. I don't say that it is any stronger. Probably we can get work that will answer the purpose strong enough, but not finished as we finish it here.

Q. Under what constructors have you served?—A. Under William Hanscom, Mr. Pook, Mr. Easby.

Q. Do you know of any abuses around the yard?—A. No, sir; I do not. I know of none in my department.

Q. Do you select all of your own men?—A. In part I do.

Q. Who selects the other part?—A. Generally heretofore we go up there with our requisition and our request to employ a certain number of men, and sometimes the constructor says, "We would like to have you employ so and so," and we take them.

Q. Does anybody outside of the department have anything to do with it?—A. I never allow any one to interfere with me.

Q. Any men put on by order of the Department?—A. Yes, sir.

Q. Are they good men?—A. No, sir.

Q. How many have you ever had in your department, at any time, from such source?—A. I have had three or four at one time. I had two men put on that were not what they should be.

Q. How were they to be rated?—A. As blacksmiths.

Q. Do they all rate at one grade?—A. No, sir.

Q. Is that the best grade?—A. We have heavy forgers—first-class and second-class.

Q. Were those men put in to you as first-class?—A. No, sir; second-class.

Q. You did not consider them capable as second-class?—A. They were not capable as sixth-class or sixteenth-class.

Q. Couldn't they blow and strike?—A. That is about all they could do.

Q. What pay did they receive?—A. The pay was $3.26 a day.

Q. By whose order was it done?—A. By the chief of the bureau, Mr. Hanscom. The order was thus: "By order of the Navy Department you will employ" a certain man, "as second-class blacksmith." That is the order I would receive from the Department.

Q. Do you know of any money being raised from the employés to make any officers or their wives presents?—A. I do not, sir.

Q. You don't know of any one in your employ being assessed for such purpose?—A. No, sir.

Q. Are you sure that there has never been any assessment on your men, or anybody in your department, for such purpose?—A. There has not been any that I know of.

Q. Do you know of any one that came to any man in your department to raise money?—A. I do not.

Q. Did you know of any money being raised?—A. I have heard at the time, but I took no stock in it; I did not raise any.

Q. Did you hear how much there was raised?—A. I did not, sir.

Q. Did you hear what it was raised for?—A. I did not. I did not take any hand in it whatever; I had nothing to do with it in any shape or form.

Q. What was John F. Hanscom's business when he was here?—A. He was assistant naval constructor, to assist the naval constructor in his business. He was appointed by the Department, I presume.

Q. Has he passed any regular examination for that?—A. I think he has. I see an order to employ him at $5.26 a day, July 25, 1874. That was previous to his being appointed; and Charles H. Sprague had $1,500 a year.

Q. Did you furnish the contractor with any material?—A. I have furnished him with material such as we made for shapes. I drew all shapes that were made of bloom-iron that he required. I could not give you any idea of how much that amounted to. I kept the correct cost of labor and material.

Q. Have contractors made use of your shapes and tools?—A. They have made use of tools, but not of shapes.

Q. Have they not under your last contract?—A. Not to any amount—not to use the shape half a day.

Q. How did they leave those tools?—A. What tools they used in the shop they left all right; those left over at East Boston I have never seen since they went.

ADAMS HULL.

July, 1875.—4 deck-stanchions, 416 pounds, ref'd, labor, $28.72.

August, 1875.—Altering stanchions, labor, $7.

September, 1875.—Truss-bolts for capstan, 40 pounds of ref'd in labor, $5.76.

October, 1875.—Stay-bolts and plates, labor, 46½, $111.55.

November, 1875.—Altering strong-backs and davit-hangers, tidding-bolts, and cutting jack-stay rods: labor, $107.43; spars: altering band-whiffs and fairleaders, $33.84.

December, 1875.—Hull: altering davit-hangers, strong-backs, and shot-racks, $103.60; spars: joints and bands for swinging-boom, $26.04.

ESSEX HULL.

July, 1875.—2 deck-stanchions, 430 ref'd, labor, $19.30.

October, 1875.—Stay-bolts, labor, $44.16; Essex spars: jib-boom bands, labor, $5.76.

November, 1875 —Fairleaders, labor, $10.28.

December, 1875.—Hull: altering davit-hangers, strong-backs, and shot-racks, labor, $78.78; spars: bands for swinging-boom, $11.52.

GENERAL PURPOSES—FOR ADAMS AND ESSEX.

August, 1875.—8 davit-shapes, $166.34; six (6) fids, 1,300 pounds, $103.

September, 1875.—Shapes and gaff-slides, 218 pounds, $33.59.

November, 1875.—Davit-hangers, 1,186 pounds, $183.88; bumpkins, 518 pounds, $25.30; 8 strong-backs, 1,426 pounds, $99.82.

Total, $1,205.67, hull and spars.

BOSTON, *March* 23, 1876.

CHARLES H. SPRAGUE sworn and examined.

By Mr MILLS:

Question. What position do you hold in the navy-yard?—A. Inspector of timber.

Q. How long have you been inspector of timber?—A. Three years.

Q. By whose influence were you appointed to that position?—A. Benjamin F. Butler, Mr. Hooper, and William A. Simmons, collector for the port of Boston.

Q. Is it your duty to superintend the examination or inspection of timber received into this yard?—A. Yes, sir.

Q. Have you done so?—A. I have, sir.

Q. Do you know anything about any timber that has been received into this yard without authority of law?—A. I do not.

Q. Do you know of any timber received into this yard that was not contracted to be received here?—A. No, sir.

Q. Do you know of any timber received into this yard that was improperly measured and received for a larger amount than the real amount?—A. No, sir.

Q. Do you know anything about the last lot of live oak delivered here that Constructor Easby rejected?—A. No, sir. I know that of the last cargo of live-oak there was some part rejected by himself and me.

Q. Do you know whether or not that was afterward received?—A. It never has been received.

Q. Is it here on the yard still?—A. Yes, sir.

Q. To whom does it belong?—A. To W. C. L. Swift, of New Bedford.

Q. Do you know anything about the timber that was delivered to Donald McKay?—A. Yes, sir.

Q. Do you know how much was delivered to him?—A. No, sir; I cannot tell, only by the books. The books will show.

Q. How was that timber delivered?—A. Well, it was delivered by the order of the naval constructor.

Q. Was it on the vessel?—A. It was delivered to Donald McKay.

Q. Was it on the yard?—A. Yes, sir; it was on the yard.

Q. At whose expense was it transported to his yard where he was building the Adams?—A. I suppose at Donald McKay's expense.

Q. Didn't you haul timber to the wharves with Government teams?—A. Nothing that I had anything to do with.

Q. In receiving live-oak timber, what are your classifications of timber?—A. Well, there are three classes of timber.

Q. What are they?—A. There are "straight," "curved," and "principal."

Q. What do you give for straight timber?—A. Well, there have been different prices; different contracts; a very small difference.

Q. Now what is the usual price that you give for straight timber?—A. I couldn't give it to you correctly. I could give it somewhere near correctly. I think it was $1.55 a foot for straight live-oak timber; curved timber $1.73 or $1.75, and for principal timber $2.10. (They call it "principal.")

Q. Is the timber you have been receiving properly classified for ship-building, or is it mostly straight?—A. It is properly classified.

Q. You get a proper amount of each of those classes?—A. No, sir; timber is put in here as promiscuous timber, thus roughly hewed out, in all kinds—that is, straight, curved, and principal.

Q. Is that a fourth-class "promiscuous timber?"—A. No, sir.

Q. What do you mean by the Government contracts for so many thousand feet of promiscuous timber?—A. When it arrives here in that shape, I go to work and classify it. When I survey it, the first stick I take is a straight-stick. That I survey as a straight stick and register it as a straight stick. Then another stick that will come along will be a curved stick—*i. e.*, one that is entirely curved, from twelve to thirteen inches or more, suitable for a portion of the frame or anything of that kind. That is reckoned as curved timber and is received as curved. Then the principal large pieces are received as principal pieces—*i. e.*, anything that will mark a keelson, stern-post, or stem.

Q. Now, of the live oak that you kave been receiving, what proportion is straight timber?—A. Well, I don't know as I could give you a correct answer to that without looking over the amount, &c. Every piece of timber is registered what it is, so that the books will show just the quantity of straight. curved, and principal that we have; what proportion I could not give you now.

Q. You never have received any as principal timber that was straight timber?—A. No, sir.

Q. Nor as curved timber that was straight timber?—A. No, sir.

Q. You have been particular to classify each piece of timber according to its merits?—A. I have, sir.

Q. In measuring your timber to deliver to Mr. McKay, were you equally particular?—A. The timber was delivered to him as it was measured when it goes into the yard. Every stick and plank and piece of timber received into this yard is marked, and is delivered by the registry. It is not surveyed again, but it is delivered to him in the yard as it would be if it were to be used in the yard and received.

Q. Are you accurate in your measurement of the lengths of timber?—A. Yes, sir. I have myself been in the habit of figuring every stick that is surveyed. I figure it by the contents, without referring to any measurement or book, and then I have had a clerk who figures it over very accurately, one piece after another, so as to be very particular and careful not to have any mistakes.

Q. Do you know of any timber or material belonging to the United States on this yard that has been taken from this yard and delivered to any person, except by orders of your superior officers?—A. I do not, sir.

Q. Do you know of any money that has been collected in this yard for the purpose of making presents to any officers of the Government or any portion of their families?—A. No, sir; I don't know as I do. I never have taken any myself. I don't know whether anybody else has.

Q. Do you know of any officer on duty who has given any money or property, or the representative of either, to any person for the purpose of procuring a place here?—A. No, sir.

Q. Did you give anything to any person for the purpose of procuring your place?—A. No, sir.

Q. You don't know of any person who did?—A. I do not, sir.

Q. Do you know any officer of the Navy who has accepted any presents from anybody outside of the Navy for the purpose of influencing his official action in any respect?—A. I do not, sir.

By Mr. HARRIS:

Q. Where are you from?—A. Well, sir; from Maine formerly.

Q. Were you a resident of Massachusetts at the time you came into the yard?—A. O, yes, sir.

Q. Where had you resided?—A. I resided at Medford when I obtained the position.

Q. Were you a ship-carpenter?—A. Yes, sir.

Q. For how many years?—A. When I was apprenticed I went to the trade of ship-carpenter.

Q. What is your age?—A. I am forty-three, sir.

Q. Since you have been here have you had the charge of measuring and accepting the ship-timber?—A. Yes, sir.

Q. And you say that in receiving it you have given the exact measure, according to the class, to every person who has brought timber here?—A. Yes, sir.

Q. Did you keep a record of the timber delivered to Donald McKay for the construction of the Adams?—A. No, sir; that was kept at the store.

Q. Who kept the record?—A. I presume the store-keeper. My account was all sent to the constructor's office, and approved by him.

Q. Don't you have charge of delivering the timber to the ship-carpenter here in the yard?—A. If he requires a stick of timber, I have. But the carpenter of the yard has the privilege of taking such timber as he wishes, (Mr. Lampson,) and returning the account to me, and I return the account to the constructor.

Q. So that if the ship-carpenter here in the yard required a stick of timber, he would go and take it from your store without calling upon you?—A. Yes, sir.

Q. Would he take it by the registry-number?—A. Yes, sir; and give an account of it.

Q. Now, who delivered the timber—the live-oak frame—which went to construct the Adams?—A. I suppose I delivered myself the most of it. I delivered that to the carpenter of the yard, Mr. Lampson.

Q. I suppose in the drawings for the Adams every stick was shown?—A. Not to me.

Q. You don't know about that?—A. No, sir; I had nothing to do with that.

Q. In delivering timber for the frame of the Adams did you deliver upon any requisition or order?—A. Upon order, sir.

Q. From whom?—A. From the naval constructor.

Q. Did you deliver such pieces as that order called for?—A. The order called for what timber they needed. The parties who molded the frame would select the sticks. I delivered in a rough state to the carpenter of the yard, for the carpenters that were getting out the frame. I delivered to the ship-carpenter of the yard.

Q. Did you ever deliver any live-oak timber to him for that ship?—A. Yes, sir.

Q. State what.—A. Some few sticks that he took in a rough state after the frame was got out.

Q. What part of the vessel was it for?—A. I don't know; but I delivered one or two sticks in the rough state.

Q. Not many?—A. No, sir.

Q. Did you charge them to him?—A. Yes, sir.

Q. You reported them to the constructor?—A. Yes, sir.

Q. Do you say that in all the deliveries of ship-timber to Donald McKay—take live-oak first—you charged him with the exact number of feet that he took?—A. Yes, sir; I charged him with the exact number of feet that he took; the exact number according to what was in the yard.

Q. Now, did you deliver any that was carried out of the yard to his yard in East Boston?—A. Yes, sir; there was some small lot—a very few sticks. I kept the aggregate account of that.

Q. Then you say that, so far as you know, you delivered all the live-oak timber which went into the construction of the Adams?—A. Yes, sir.

Q. Did you deliver any other kind of lumber to Mr. McKay during the process of the construction of that vessel?—A. Yes, sir.

Q. What was it?—A. White-pine lumber, white oak and white-oak knees, and yellow-pine plank. That is all that I can remember. I was thinking that there was some ash-but I am not certain about that.

Q. In delivering white-pine lumber in the shape of pine boards, you delivered lumber that had not been registered, of course?—A. I delivered lumber that was marked and surveyed.

Q. When you take white-pine lumber upon the yard in the shape of boards or plank, do you make any registry of each piece, or do you simply make a registry of the whole number of feet, each piece being marked?—A. Yes, sir; the whole number of feet, of the number of boards. The number of feet of each board is marked, however.

Q. Now, in receiving pine lumber and other lumber, except ship timber and plank, and that timber which is registered in your book, each piece by itself, in receiving that you reckon it by the thousand feet and mark each piece, do you?—A. Yes, sir; it goes in as so much a thousand.

Q. Do you mark and survey it?—A. Yes, sir.

Q. Do you survey all the lumber received?—A. Yes, sir.

Q. If you should receive a cargo of white-pine boards, would you survey and mark each piece?—A. Yes, sir; every board.

Q. Now, in the delivery of such lumber to Donald McKay, did you deliver by the mark by which you surveyed?—A. Yes, sir; by the mark, sir.

Q. Have you charged to Donald McKay all lumber delivered to him or his agents according to the exact measure?—A. Yes, sir; all that he has received from this yard.

Q. Do you know whether you have delivered it all yourself?—A. Well, so far as I know. I don't know of anybody else delivering it.

Q. Have you any knowledge or information that Donald McKay has received lumber to go into the construction of the Essex, the Adams, or the Enterprise which you yourself did not deliver?—A. I have not, sir.

Q. You have no idea that there was any such delivery?—A. No, sir.

Q. And you say now that in delivering that lumber, you have invariably charged it to him, exactly according to its previous survey?—A. Yes, sir.

Q. Have you not been told, and have you not learned that Donald McKay received a large amount of lumber from this yard with which he was never charged?—A. No, sir.

Q. Has that story been told you?—A. It never was told me; no, sir.

Q. Have you heard it?—A. Yes, sir; I heard a rumor outside, among outside parties, who I presume didn't know.

Q. Have you a knowledge of how much lumber, as distinguished from timber, he received for the construction of the Adams?—A. I cannot give you the exact amount.

Q. Give us within ten thousand feet.—A. I should think about eighty or ninety thousand feet, or somewhere in that neighborhood.

Q. Was it for the Adams?—A. I think so.

Q. Now, what did that lumber consist of?—A. I guess I am a little high. I will not set it quite so high. It was in the neighborhood of 70,000 feet.

Q. Have you the record of it that you can produce before the committee?—A. No, sir.

Q. Who has it?—A. It is at the store or on the books.

Q. Have you no idea how much lumber was required to construct the Adams?—A. No, sir; I have not.

Q. Do you know whether you delivered more or less than the probable amount required for the construction of that vessel?—A. No, sir.

Q. You simply delivered all he called for?—A. I delivered what the naval constructor called for—what I had orders to deliver.

Q. Did you ever deliver upon any order except that of the naval constructor?—A. No, sir.

Q. Did you deliver lumber at the time that the naval constructor now in charge was absent?—A. I think there has been, sir, some.

Q. Who was then present occupying his place?—A. I think some has been delivered when Mr. Hanscom was here, and I am sure there was some delivered while John Hanscom had charge. He was assistant constructor here. When he had charge I think there was some that went out.

Q. Then all you say is that you never have allowed any lumber to go out without making return to the exact number of feet, according to the previous surveys?—A. That is it, sir.

Q. Of any kind?—A. Yes, sir; of any kind. I would state that always, in delivering lumber to Mr. McKay, I have always had an order from the naval constructor, in writing, to return immediately to the office the amount delivered, that the passes might be made properly and looked after before it was passed out by the constructor.

Q. Who was your assistant?—A. I had no real assistant but John B. Symonds, who was not reckoned an assistant, however, but a man employed by the master carpenter to assist in delivering and taking account of stuff that he required, and he used to return the accounts to me sometimes of what Mr. Lampson used.

Q. And you used him to assist you in taking a survey of lumber to deliver to Donald McKay?—A. Yes, sir; he was with me.

Q. Did you have a man named Simon McKay, brother of Donald McKay, in your employ?—A. No, sir.

Q. You know of such a man?—A. Yes, sir.

Q. What was his place in the yard?—A. He was employed as ship-carpenter to assist, I think, in getting out the frame of the ship.

Q. Did he at any time have the charge of lumber or the delivery of it?—A. No, sir; not to my knowledge.

By Mr. JONES:

Q. What was your business before you were appointed timber-inspector?—A. I was ship-carpenter in the yard.

Q. How long had you worked at ship-carpentering?—A. I worked I think about a year and a half previous to my appointment as inspector of timber.

Q. In a ship-yard?—A. It was in this yard, sir.

Q. How long did you ever work in a ship-yard?—A. Ever since I was sixteen years old.

Q. Do you understand all about the different classes of timber, live-oak, white oak, and all the material that might be required for this yard?—A. I think I do, sir.

Q. How many cargoes were there received at this yard last summer of live-oak, by permission to be received here; not delivered, you understand, but received on the yard?—A. It would be impossible for me to give you the exact number, sir.

Q. How many do you think? I am going back to last summer now. I mean that which was brought from East Boston, in the hold.—A. I think in the neighborhood of ten cargoes.

Q. Do you think there was in the neighborhood of ten cargoes that Mr. Swift was allowed to store upon this yard?—A. O, no, sir; I didn't understand your question.

Q. I mean not furnished under a contract, but put here without a contract.—A. Four or five cargoes.

Q. About how many cubic feet is there in a cargo?—A. It depends upon the size of the vessel.

Q. Well, usually.—A. Well, from six to ten thousand cubic feet—in some vessels that have brought timber here, one vessel in particular, a flat-bottomed and very large three-masted schooner, the Witch Hazel, used to bring about 11,000 cubic feet. But the average of them brought about six to seven thousand.

Q. Was she one of those schooners that brought timber here, which timber Mr. Swift stored on the yard by permission, and landed here by permission?—A. No, sir; she left her cargo at East Boston.

Q. It was delivered here afterward, was it not?—A. Yes, sir.

Q. How many cubic feet should you say was delivered here, that was not sold to the Government at the time it was delivered here, brought from East Boston in the hold—upon a rough estimate?—A. The East Boston timber was contracted for when it was delivered in the yard—contracted for by the Government when it was delivered in the yard.

Q. You think there were about five or six cargoes that lay here that were not contracted for?—A. Yes, sir.

Q. Was there not a large amount of live-oak received last summer when the constructor was away on the board of survey?—A. Yes, sir.

Q. By whose orders did you receive and inspect the live-oak timber then?—A. By order of the assistant naval constructor, who was in charge.

Q. What was his name?—A. John Hanscom.

Q. Was he appointed assistant naval constructor then?—A. I think he had got his appointment by that time, but he had been acting as constructor for some time before that; but before that he acted as assistant constructor.

Q. Who was acting as naval constructor at this time when the live-oak timber was received?—A. John Hanscom gave me orders, sir, and inspected. He was assistant constructor, I think.

Q. Do you know how many thousand feet of live-oak timber was received at that time, say in the absence of the present constructor, at this yard?—A. Somewhere in the neighborhood of 75,000 feet, I should say.

Q. Is not John B. Symonds the assistant inspector?—A. No, sir; not that I know of.

Q. Did he not deliver any lumber to Donald McKay?—A. Not without my knowledge, that I know of.

Q. You don't know at any time of his making any deliveries?—A. No, sir; I don't know of any.

Q. Or lumber of any kind?—A. No stick of any kind, to my knowledge.

By Mr. BURLEIGH:

Q. Is what is usually called and delivered as promiscuous timber all billed at the same price?—A. No, sir.

By Mr. HARRIS:

Q. How is it billed? Does a schedule come with it showing what it is?—A. If you will

allow me to say it, I will say that it is billed at different prices, according to the quality. It is received as promiscuous timber, and I think it is billed—[interrupting himself]—I don't understand the question exactly, but the timber is billed according to the kind received, *i. e.*, straight timber is billed as straight timber at one price, curved at another price, and principal at another price. It all goes in as promiscuous at the yard, and bought by the Government as promiscuous; every stick is registered.

Q. Is it so when it comes here?—A. No, sir; after I finish my survey every stick is registered, and this on the dock is registered, and the number of feet that each stick contains. I register it as straight, curved, or principal, and the bills are settled that way.

Q. Are the bills made before your survey is made?—A. No, sir.

Q. So that when the timber comes into the yard it comes in as promiscuous timber?—A. Yes, sir.

Q. And upon your survey the bill is made?—A. Yes, sir; upon my survey to the constructor.

Q. Now when it comes in is it classified at all?—A. Not at all, sir.

Q. Do you receive in any form, from the contractor, a bill setting forth the number of cubic feet delivered?—A. No, sir.

Q. So that it is tumbled on to the yard, and then from your survey the bills are made?—A. Yes, sir.

Q. In the different classes?—A. Yes, sir; in the different classes. When the bill is made there are so many sticks of principal, so many sticks of straight, and so many sticks of curved.

Q. So that the contractor has no means of making his bill until he gets your statement of the survey?—A. No, sir.

Q. You said previous to the time you were appointed timber-inspector you were store-clerk of this yard?—A. Yes, sir.

Q. Do you get more pay as timber-inspector than you did as store-clerk?—A. The same amount, though the salary was reduced while I had the place. My first salary was $1,500, the same as it is now.

Q. When you were changed from store-clerk to inspector, did you get more pay as inspector than you had received previously as store-clerk?—A. It didn't go that way. I lost my place in the store and went then and worked at my trade as ship-carpenter. Then after I worked here a year and a half I received my appointment as inspector of timber.

Q. You had some friends who helped you get the place?—A. Yes, sir; General Butler, Mr. Hooper, and Mr. Simmons, the collector of the port.

By Mr. HARRIS:

Q. Which did you mainly rely upon?—A. Well, I was well acquainted with all three. Mr. Simmons, I suppose, was my most intimate friend. Mr. Hooper was an old friend of mine, however.

By Mr. JONES:

Q. You say you are a thorough carpenter, and understand all about timber. Do you consider the live-oak timber and the white-oak timber and the pine lumber, and all the materials now on this yard properly taken care of?—A. No, sir; I do not.

Q. In what respect are they not?—A. In my opinion, sir, every stick of live-oak timber in this yard should be docked.

Q. How is it with regard to the white oak? What should be done with that?—A. Well, it is well to dock white oak. With proper sticking white oak is very good. Yellow pine and pine lumber should certainly be stuck, and in the sheds.

Q. Have you got proper facilities for taking care of that timber, as you state it should be properly taken care of?—A. I think we have plenty of dock-room, sir, to dock our live-oak. If the white oak should be piled up and stuck in the yard properly, it would be a saving to the Government of a good deal of money. We have some live-oak in the yard that has been properly taken care of, if you will allow me to state this. Some great number of years ago it was docked, and remained in the dock some ten or twelve years. Afterward they wanted to fill up the dock, and they took that timber out, and put it in the timber-shed—properly put it in where it was dry, and it is the best-looking timber that you ever saw. There is not a crack or a shake in it. I think that is the proper way, and that circumstance proves it to my satisfaction.

Q. Is not that the way generally known to ship-carpenters?—A. Yes, sir.

Q. You mean that it all should be docked first?—A. Yes, sir; and then remain, and be put into the timber-sheds and where it is dry, away from the weather.

Q. So you say that the live-oak timber now in the sheds which has never been docked, should be taken out and docked?—A. Well, I think it would be better for it; but still I think it is well enough where it is.

Q. You made the remark that all the live-oak timber on the yard should be docked?—A. I meant all that lay about the yard. There is a great amount of it lying about the yard.

Q. How many cubic feet should you think there was of live-oak lying about the yard at the present time?—A. I should think there was about one hundred and fifty thousand cubic feet of timber around.

Q. Do you say that it is unprotected?—A. No, sir; I could not say that, because we have got some of it housed over. But it would be better docked than it is housed. Take that that is covered over with a temporary shed built over it that was built a few years ago.

Q. Was it not built last summer?—A. No, sir; a year ago last summer.

Q. All this large amount that you received last summer now lies around exposed to the weather—promiscuously about the yard?—A. Yes, sir.

Q. What amount of that 150,000 feet is entirely uncovered and exposed to the weather?—A. Well, over 75,000 feet.

Q. Over half of it, then?—A. Yes, sir; that is an estimate. I could not tell you exactly. All that received this last summer is out of doors. We received a large quantity of it since the naval constructor returned.

Q. That timber that was received from East Boston and lay here after being received here, is that out of doors now?—A. Yes, sir; that is out of doors now. I would say that the cold weather has affected the live-oak so as to crack it.

Q. What was the quality of the timber received during the last year?—A. It was the best timber that I ever saw.

Q. Does it compare favorably with the other timber in the yard?—A. Yes, sir; it was the best of timber, as an average. There was some that I rejected on account of its being of poor quality. But the majority of it was the best I ever saw.

Q. Where did it come from; do you know?—A. It came from Florida. There were some splendid sticks.

BOSTON, *March* 23, 1876.

DONALD MCKAY sworn and examined.

By Mr. MILLS:

Question. You made a contract to build a portion of a vessel for the Government of the United States, did you not?—Answer. Yes, sir.

Q. By the terms of that contract I believe the Government was to furnish the live-oak timber?—A. The live-oak frame?

Q. No, sir; "the live-oak timber" is the way it reads. Did you get the timber from the Government to put in your vessel?—A. I got all the live-oak.

Q. Did the Government supply you with any other timber?—A. I got a portion of the timber from them, some pine and oak, and different kinds.

Q. Did you work into the vessel the timber you got from the Government?—A. I worked part of it in.

Q. Did you work in all the timber you got from the Government?—A. I returned some to them.

Q. All you did not return you worked into the vessel?—A. Yes, sir; I returned some white-pine plank and other kinds of timber. I think I have got 12,000 or 13,000 left of sizes that would not answer for my ship. I have not returned all of it yet. They have got it charged against me on their books.

Q. What plank was it you returned to the Government?—A. I really forget now what it was; it is over a year ago. I returned some pine, some walnut, and some stuff that the sizes did not suit.

Q. How many have you got that you did not return?—A. I think I have got a few thousand.

Q. Two or three thousand?—A. More than that; may be betwixt five and ten thousand that I got from them.

Q. Where is that?—A. That is in East Boston.

Q. In your yard?—It is in my shed over there. It is a shed I hire for that purpose.

Q. From whom did you hire it?—A. I hired it from Henry Jones.

Q. Did you get any live-oak that you did not return?—A. No, sir.

Q. You returned all the live-oak you did not use?—A. Yes, sir; the live-oak was given to me by the molds, you know. They molded it out in their own shed, and gave it to me by the molds.

Q. Did they deliver you any in the sticks?—A. Some breast-hooks to go in the hold and in the sharp part of the ship and deck-frame.

Q. How much has the Government paid you on the Adams?—A. I can't tell you precisely what they paid me. I am not prepared to say. I could give it to you by looking at the book.

Q. How much do they owe you yet on the Adams?—A. I can't tell until I get the bill of Mr. Easby. He has got a bill charged against me. I think there may be $15,000 or $16,000 they owe me yet. But I have not done the ship yet.

Q. Have you any extra account against the Government?—A. I have some small matters against them.

Q. How much is it?—A. It is not a large amount, I think.

Q. Has the Government paid you any extra account?—A. Not a dollar.

Q. How much is the amount of your extra bill that you have to render against the Government?—A. I have never made it up. It is not large.

Q. About how much?—A. It may be three or four thousand dollars, perhaps; something of that kind.

Q. What is it for?—A. I claim for a good many things that were done that did not belong to me in the ship.

Q. Have you ever rendered that claim to the Government?—A. No, sir.

Q. Have you ever had any assurance from any one that it would be received and paid?—A. No, sir.

Q. Has the Government ever paid you any other sum of money except that which it contracted to pay you for building the vessel?—A. No, sir.

Q. Have you been paid anything for launching the vessel?—A. No, sir.

Q. Has the Government agreed to pay you anything for it?—A. No, sir.

Q. Have you any charge for launching it?—A. No, sir. I had some considerable difficulty when I took the ship, Robeson and me. I have not seen him since a year last April. I saw him when I first took the ship. I had some difficulty about the ship.

Q. How did you get the contract for that ship? Was it by being the lowest bidder?—A. I ought to have got it that way, but I didn't.

Q. How did you get it?—A. They advertised, according to the act of Congress, which compelled them to advertise, and the lowest responsible bidder was to have the job, leaving it discretionary with the Secretary of the Navy whether he could give it or not give it. There were five bids, and mine was the lowest except one, a New York man.

Q. What was his bid?—A. His bid was $148,500.

Q. What was your bid?—A. Mine was $168,000. I was next to him. Bob Jackson, of East Boston, was $500 or $800 over me. I was the lowest bidder when they ruled Thomas Stack out, as not being competent.

Q. Why?—A. On some ground of his not having facilities, or something of that kind. For some reason they ruled him out, and then I demanded the ship, being the lowest bidder. Robeson took the ground that I should have to build her at Stack's price, or not take her at all. I claimed that it was against the rules of the Government for the last fifty or sixty years; they never had done the thing before; they would either give it to the lowest responsible bidder who could give bonds, or not give it at all. That was the ground I took, and that the ship belonged to me. The ground he took was, that he had letters from other parties that they would build the ship for that price, $20,000 less than my bid; and I took the ground that he had no right to build her by letters; that the law of Congress said he should receive bids; he could advertise over again, but he could not get letters out of people, and build her by letters.

Q. Was anybody interested in the bid besides yourself?—A. No, sir; so I took her for $148,500.

Q. Did you make any arrangement with Mr. Hanscom, or Secretary Robeson, different from your written contract?—A. No, sir.

Q. Or anybody else?—A. No, sir.

Q. Did they give you any understanding, or any interpretation of that contract, but the contract itself?—A. No, sir.

Q. Did you engage the services of any one to assist you in getting that contract?—A. No, sir.

Q. Did you agree to give anybody any amount of money to assist you in getting the contract?—A. No, sir.

Q. Did you ever pay anybody anything in consideration of that?—A. No, sir; not a dollar, directly or indirectly; not a dollar; not a cent.

Q. Did you promise to pay anybody?—A. No, sir.

Q. How long have you known Mr. Hanscom, the chief of the bureau?—A. I have known him for thirty or forty years.

Q. Do you know Mr. Griffiths?—A. Yes, sir.

Q. What are the relations existing between those two men?—A. I never knew anything in my life, except at one time they were very much opposed to each other, at the time Mr. Griffiths used to write so much against the Navy.

Q. They are no way related by consanguinity or affinity?—A. I don't know that they are.

Q. You are not related to them in any way?—A. No, sir; I know Griffiths well; I know Hanscom well.

Q. Did you make a second contract with the Department before you finished your first for finishing that vessel?—A. Yes, sir; I made them a proposition to take the labor and complete her for sea, under the naval constructor who had charge of the yard, as I went along. But I have learned since that I got a great deal less for it—some $20,000 less—than they estimated themselves for doing it. I got $71,000, and they estimated about $90,000 to finish the two. I got $46,000 for the Essex, and $25,000 for the Adams. I perform everything under the name of labor; they furnish the material.

Q. Please state if you did not make a contract with Mr. McMichael to give him $2,500 to assist you in getting that contract?—A. No, sir.

Q. Did you agree to pay him $3,000?—A. No, sir.

Q. Did you not pay Mr. McMichael $600?—A. I did, for services.

Q. What kind of services?—A. Well, he worked for me. He worked in the yard, in my yard, &c.

Q. Didn't you pay him $500 for services while he was working there, besides the $600?—A. No, sir; I paid him $600, for what time he worked. He wanted a job with me to mold my frame, superintend, &c., and I made a verbal agreement with him that I would keep him at work on the ship, and, after a few months, he said he had an offer to go to Delaware. I had some difficulty with him. I told him to stay at his work, I wasn't going to do anything with him. I told him I would give him $2,500 to stay on the ship until it was done, and be my foreman. After he had worked for a month or two, he came to me and wanted a settlement. I refused to settle, and told him to stay. He said it was injuring him, because he had an offer from the Department to go and superintend some iron-clads down the coast somewhere. I considered the thing over, and we settled the matter up pleasantly: I gave him $600, and he left me, and gave me a receipt. But he was to stay with me until the ship was built, for so much money, and be my regular foreman.

Q. Who delivered the timber from the yard that you received?—A. It was delivered by the inspector of the yard.

Q. What is his name?—A. His name is Sprague.

Q. Who delivered the iron-work you got from there?—A. The store-keeper, I think, and Mr. Sampson, by Mr. Easby's orders.

Q. Have you any relations in the navy-yard, at work?—A. I have a brother, who has been there acting as quarterman.

Q. How long has he been there?—A. I think he has been there, off and on, for two years.

Q. Through whose influence was he put in the yard?—A. I don't know, I am sure, who got him in the yard.

Q. Didn't you have something to do with putting him there?—A. No, sir.

Q. Did you recommend him?—A. No, sir.

Q. Did you ask for his appointment?—A. No, sir.

Q. Did he deliver to you any of the iron that came from the yard to use on your vessel?—A. I think he did. I think that was in the store-house that he had charge of last fall and summer, and the teams went there for the iron, and he delivered it.

Q. Did you get any tools from the Government?—A. Yes, sir; I had a portion—different kinds.

Q. Have you returned them?—A. I have returned part, and part I have not returned yet. These are, under a special contract, to be charged to me until I deliver them. That is on file at the commodore's office.

Q. Did Mr. Hanscom agree to release you from the performance of any portion of your contract on that vessel?—A. Not the value of a cent. They have not treated me well, because I should have had my work done months ago, if they had not stopped the rigging. But I have got no redress without going to Congress, and I have been there eight years with bills. They stopped the rigging of the vessels last winter, which compels me to stop, in a manner. I should have had the vessels done some months ago but for that.

Q. When did you get your last payment?—A. I think Mr. Easby accepted a bill last week, or it might have been the first of this week, for $6,000. I had the bill made out when he was in Washington a week, and I kept it back until he returned home. The bills are made subject to his approval. That is a condition of the contract.

Q. Have all your payments been made in that way?—A. Yes, sir; through the naval constructor.

Q. Have you not had any payments through the paymaster? Has not Mr. Abbott, the paymaster, paid you any money?—A. He has paid me money, but it always goes through the regular channel to Washington, and then Mr. Abbott is notified by the Department. Every dollar I have got has been accepted by the naval constructor. That is the condition of my contract—that the bills shall be accepted by him; and when he considers that I am entitled to so much money, he accepts them, and I think the commodore signs them with the constructor. The commodore has been pretty severe on me. I have had some little difficulty with him. Mr. Easby seems to be a very fair man.

By Mr. BURLEIGH:

Q. Have you had all the bills approved to which you are entitled under the first contract on the Adams?—A. No; there is a portion yet of what they call the last settlement on the Adams, that has not been settled.

Q. How large a portion?—A. They have a bill against me which they have not rendered to me. I think it is over $30,000. There may be a balance of $12,000 or $15,000 due me on that ship.

Q. Is that any more than can properly be reserved under that contract?—A. No, sir.

Q. Then they have not reserved any more than they agreed to?—A. No, sir; not on the first contract on the Adams.

Q. So that you cannot get it very well until the ship is done?—A. No, sir; and if they never rig her, I don't know what to do with her. They will injure me, and I have no redress. They write a very arbitrary agreement, which is not lawful or just.

Q. You know about the amount of the charges against you?—A. They tell me somewhere between $30,000 and $33,000.

Q. Are you sure it is not over $33,000?—A. No; I am not sure. It is over $30,000, because some of them told me so a month ago—that they had over $30,000 charged against me.

Q. In regard to the copper for the bottom of that ship. Did you buy that copper?—A. I bought it of the Government.

Q. You bought it of the Government at Government prices?—A. Yes, sir.

Q. Why did you do that?—A. Because the sizes they had were what I wanted, and their weights are so much heavier. It is hard to get copper in the market at their prices.

Q. You could get it made?—A. I could have got it made; give me time. They drove me up last fall when that little flurry came, to drive the ships off in a few days, and I put on double the number of men.

Q. Could you not have provided it beforehand?—A. I didn't provide it beforehand. I wasn't going to buy a lot of copper beforehand.

Q. You say there is a charge of over $30,000 against you—that is for materials?—A. Yes, sir; that is for materials.

Q. You were allowed to pay Government prices for those things?—A. Yes, sir.

Q. Do you believe the Government buys its material at the lowest market-price—as low as an individual could purchase for cash?—A. You can get them a little cheaper outside if you go and buy such things.

Q. Did they allow you to pick out just what you wanted?—A. Yes, sir; I picked out No. 1 stuff, and dimensions to suit.

Q. And they charged you cost price?—A. Yes, sir; it was the same way with copper and other stuff.

Q. Didn't you consider that you had quite an advantage in having the chance to go to that pile and get what you wanted?—A. I paid fully as high as I should outside. The only advantages I got were these: they specified the lengths of the wales, and I got timber of the proper dimensions, and it was well seasoned.

Q. Did they have this nice pine lumber for finished work, and sell it to you for six cents a foot?—A. Yes, sir.

Q. Do you know of whom they bought it at that rate?—A. I don't know. The Government prices are on the books.

Q. What did you give them for your oak stuff?—A. I think it was 7 or 8 cents a foot.

Q. How much is the white-oak plank worth on the outside of the Adams?—A. I suppose it would fetch 7 cents a foot.

Q. Seventy dollars a thousand?—A. Yes, sir; before it is worked.

Q. After it is worked?—A. Seven to eight cents a foot, the quality they require.

Q. Did you allow the Government anything for docking that ship for you to copper?—A. No, sir.

Q. They gave you that as a gratuity, did they?—A. Yes, sir.

Q. Your relations with the foremen and men in the yard were very pleasant, so that they would give you the facilities of the yard most any time?—A. In some cases they would, and some cases they would not. They were not very kind, any how.

Q. You seem to have borrowed all the tools you wanted?—A. Yes, sir; I borrowed those by special agreement with the Department.

Q. You had a chance to get all the lumber you wanted from their pile?—A. Yes, sir; at any time.

Q. I should think that was quite an advantage for a ship-builder to have in building a vessel like that, is it not?—A. Yes, sir.

Q. It was a great favor to you?—A. Yes, sir; it was a favor. But then, it was no favor, in one sense. They have charged me for it fully as high as I could get it for outside.

Q. Still, you always went there?—A. Yes, sir; when I wanted it, I went there and got it.

Q. In the hull of the Essex, when she came from Portsmouth, there was a considerable quantity of work partly wrought?—A. Yes, sir; in a rough state.

Q. Iron-work?—A. Iron-work, and different kinds of work. Lots of stuff came up in her.

Q. You took, at about the same time, a contract to complete both ships?—A. Yes, sir; I made a contract the same day for both.

Q. Did you use that material all on one vessel, or did you put it on one or the other, as it was thought best?—A. My ship was then done. It was just about ready for painting. I had all my work made and mostly in place. My ship was pretty well along before I took the last contract on the Essex.

Q. Are you sure you did not use some of that iron-work that came by the Essex on the Adams?—A. Yes, sir; I am sure.

Q. Nor any of the wood-work?—A. No, sir; not a foot, to my knowledge I had to make a requisition for every little thing that we required, and say in what part of the ship it was going.

Q. I understood you to say to the chairman that all the money you had received on account of building the Adams, you had received from the paymaster here?—A. Yes, sir.

Q. Mr. Abbott paid you all as paymaster?—A. Yes, sir.
Q. Is he the man who has paid you?—A. Yes, sir; I believe I got it through his office.
Q. How much in all has been paid you on the Adams?—A. I can't tell you.
Q. Something over a hundred thousand dollars?—A. Yes, sir; I think it is.

By Mr. HARRIS:

Q. How many contracts have you made with the Government within three years?—A. I have made only three.
Q. One to build the Adams, one to finish her, and one to finish the Essex?—A. Yes, sir.
Q. Are those the only three?—A. That is all.
Q. Have you ever had other contracts with the Government?—A. Yes, sir; during the war I had a great many.
Q. You have not had any others since the war?—A. No, sir. During the war I had a great many.
Q. And for the Adams you were to have $148,500?—A. Yes, sir; to complete the hull, what they call to finish her to a certain state.
Q. And for that you entered into a written contract?—A. Yes, sir.
Q. To which were annexed "building directions"?—A. Yes, sir.
Q. The two papers made one contract, according to your understanding?—A. Yes, sir.
Q. And you made a single written agreement to finish the Essex and the Adams?—A. Yes, sir; separate, naming a price for each, and that price was low.
Q. Do you know the value of the live-oak timber that went into the Adams?—A. No, sir; I do not.
Q. Do you know the value of the labor performed on it by the Government?—A. No, I don't.
Q. Do you know whether that labor is charged to you or not?—A. No, sir; I think not.
Q. Have there been any omissions made from the first contract to build the Adams, by direction of the Department?—A. No, sir.
Q. Have there been any concessions in any way agreed to by the Government?—A. No, sir.
Q. You have fulfilled that contract according to the letter of the agreement, so far as you have gone?—A. Yes, sir; as far as I have gone, to the letter.
Q. You did not build the boats for the Adams?—A. I did.
Q. Under the first or second contract?—A. Under the second.
Q. Did you build the spars and masts?—A. I did.
Q. Under the first or second contract?—A. Under the second contract, and the iron-work attached to them.
Q. You do not understand that the labor of getting out the frame is to be charged to you?—A. No, sir.
Q. Have you any lumber now on hand at the yard of Henry Jones?—A. A little in a shed of his.
Q. How much of the lumber which you received from the Government have you there stowed?—A. I think very little that we received from the Government. There may be eight or ten thousand feet that actually came from the Government.
Q. That is not white pine?—A. That is white pine. I had over 60,000 feet.
Q. Any black walnut?—A. There may be a few boards of black walnut left.
Q. Have you other lumber there mixed with that?—A. Yes, sir; I have some of my own lumber, which I had there some years ago. Jones and me estimated it, when I was paying him, (I pay him eight dollars a month,) and we estimated about 18,000 in all I had in his shed.
Q. Is that all the lumber you have on Jones's yard?—A. Yes, sir.

By Mr. BURLEIGH:

Q. Have you ever sold any lumber that you have bought of the Government?—A. No, sir

By Mr. HARRIS:

Q. And you think, of that 18,000 as much as 7,000 or 8,000 is old lumber, that you did not have of the Government?—A. Yes, sir. I think I got of them about sixty-odd thousand feet of white pine.
Q. That lumber was purchased for the completion of your first contract?—A. Yes, sir.
Q. And not for the second?—A. No, sir. Let me put you right. There may be some little misunderstanding about that. I have never backed a wagon up there. There has never been anything added to that since I took that contract. I have never put a board in there.
Q. You purchased all that lumber and carried it to that wharf or yard while you were executing the first contract on the Adams?—A. Yes, sir.
Q. Have you taken any lumber from the yard since you made your second contract?—A. I have taken some to finish the Essex.

Q. Have you purchased any lumber of the Government since you took your second contract?—A. Not to my knowledge.

By Mr. MILLS:

Q. Have you in East Boston, anywhere, other timber, of different qualities, which you purchased or received from the Government?—A. No, sir.

Q. Haven't you used a yard owned by Smith & Tilden?—A. Yes, sir; I have hired a portion of their yard there.

Q. Have you any lumber there?—A. I have nothing but what they call loose stuff and yard stuff; stuff I picked up when I cleaned up my yard.

Q. Have you any live-oak timber there?—A. No, sir.

Q. Any white oak?—A. I think not. There may be some pieces, junks, but no white-oak timber.

Q. Is there any timber there which came from the Government yard?—A. No, sir. There may be pieces, junks and useless stuff, that I bought of the Government. There may be what they call refuse stuff, but nothing you would call white-oak timber.

Q. If any one should say you had several tons of live-oak timber on that yard which came from the Government, would you say that was correct or erroneous?—A. I should say it was not correct.

Q. Is that lumber where you can show it to the committee?—A. Yes, sir; it is piled right there beyond the bridge. I should be happy to show it to you.

Q. Have you any agent employed in your absence?—A. No, sir: only a foreman—two or three foremen.

Q. Who has been your foreman?—A. I have had several foremen that attend to my work, you know.

Q. Are you a partner with your brother, Nat. McKay?—A. No, sir.

Q. Has he ever been your agent in connection with these vessels, in any way?—A. No, sir.

Q. Has he not dealt with the Department for you?—A. No, sir; never, in any way whatsoever.

Q. Has he had any authority to make any representations, promises, contracts, or agreements in your behalf?—A. No, sir.

Q. Have you ever paid to him, to be disbursed at his pleasure, any sums of money in connection with these ships?—A. No, sir; not a dollar.

Q. Have you any understanding with him, express or implied, that at any time in the future you will pay any money to carry out any agreement which he made for you, express or implied?—A. No, sir; not a dollar—not a cent.

Q. Can you inform the committee how much money you have expended in your first contract upon the Adams, and in your second contract upon the Adams and the Essex?—A. I don't know that I could, without making it up from my pay-rolls, &c.

Q. I should not claim that it was proper for me to ask about your private business, if you objected, but, if you have no objection, I should be glad to have you inform the committee how much money you have expended, outside of the lumber which has been furnished by the Government?—A. I think I could make it up by looking over my memoranda, &c.

Q. Your contracts were $148,500 for one, $25,000 for another, and $46,000 for another; making in all $219,500. Were there any advertised proposals for the finishing of the two vessels, the Essex and the Adams?—A. Not that I know of. I made them a written offer to do that.

Q. You made a written offer, which was accepted?—A. Yes, sir.

Q. Was there any competing offer?—A. Not that I know of.

Q. Was any asked for by the Department?—A. I can't tell. I made an offer to finish them for so much money, and they accepted it.

Q. You have received all your pay, probably, on the Adams, within $13,000 or $14,000?—A. Yes, sir.

Q. And you have received all your pay on the Essex, within $5,000?—A. Yes, sir.

Q. So that, if I give the right figures, there will be due you, when those two vessels are completed, about $20,000?—A. Something along there, I think.

Q. Now, can you give an approximate estimate of how much cash you have paid on account of those vessels, or obligations which you are bound to pay?—A. I think I can make it up for you by looking over my memoranda and pay-rolls. It is all in the pay-rolls, because the Government furnished the material. I know they were close contracts. There was a board of three constructors, Easby, Fernald, and Hartt, estimated those ships, and I think they estimated the labor at $90,000 or $91,000. I have learned that since the committee came here.

Q. If you have no objection to telling the committee, we would like to know what you have actually spent and are under obligations to spend?—A. Yes, sir; I can give you what I owe and what I have spent.

Q. Exclusively upon that work, so that you would be willing to inscribe your name to it?—A. Yes, sir.

Q. Are you an American by birth?—A. No, sir; I am a Scotch-American.

Q. Have you received from the Government, or any or its officers, or from the Navy, any material of any kind, which has not been charged to you?—A. Not to the value of a dollar to my knowledge; not to the value of a cent.

Q. In your second contract, have you or not included or agreed to do things which were properly in your first contract to perform?—A. No, sir; not the value of a cent. Mr. Easby is the arbitrator on that, you know.

Q. Has there been no question during the progress of that work as to what was the true legal construction of that contract?—A. Yes, sir; Mr. Easby and me have talked it over several times.

Q. To whom have been referred any differences of opinion on that subject?—A. Nobody; but the constructor and myself have talked it over.

Q. Have you had any communication or correspondence with the chief naval constructor or the Secretary of the Navy upon that subject?—A. I think there is one letter on file in Washington on that subject.

Q. From whom?—A. From me.

Q. Have you a copy of it?—A. Yes, sir.

Q. Have you that letter with you?—A. No, sir.

Q. Can you now give the committee the substance of it?—A. I asked for a certain quantity of dimensioned iron to make my trusses of, which work in my masts, and Mr. Easby delivered me bloom-iron. I protested against taking it. I wanted my iron of dimensions suitable to do my work. I was not a manufacturer of iron, to take bloom-iron and forge it, but I wanted my iron the same as I could go and buy it in the market. The commodore ruled that I should take it in that way, and Mr. Easby also. I appealed to the Department what was the proper thing to do, and I think instructions came back to give me iron to dimensions and in a fit state so that I could do my work.

Q. Is that what that letter contained?—A. Yes, sir; I forged out four or five hundred dollars' worth of the iron, and then I said I would not do any more.

Q. You say that is all that letter referred to?—A. Yes, sir.

Q. Have you had any other difficulty with the commodore?—A. Yes, sir; I had a little controversy with the commodore.

Q. About what?—A. About what I call the mud-dock and timber-shed.

Q. Just tell us how the difficulty occurred and what it was.—A. Well, he addressed me this last fall, in the flurry, to know what time the Essex and Adams would be ready for their crews, through Mr. Sampson. Mr. Easby was away on duty, remember, and Mr. Sampson was filling his place. I told Mr. Sampson if he would write to me I would answer him in writing, but I could not talk to him verbally. Finally he wrote this question, by order of the commodore: when would those ships be ready for their crews? I replied back to him, telling him I had received his letter, &c., and it was impossible for me to say when I could finish those ships, not knowing when the Government would finish their part of the work, &c. The commodore felt somewhat offended about it and wrote back to me again, and somewhere about a dozen letters passed between us on that subject.

Q. Have you all the correspondence?—A. Yes, sir; I think I have. He sent his letters to Washington; I did not send mine.

Q. You told him you could not tell when the ships would be finished, because you did not know when the Government would finish their part?—A. Yes, sir.

Q. What was their part?—A. They rig the ships.

Q. Do you mean to say that you cannot finish your part until they get through with theirs?—A. No, sir; never. They would lay there ten years, because I finish the ship for sea the last thing, until the naval constructor says there is nothing more to do.

Q. So, if the Government should see fit to abandon the ships, and not finish them, as they have before, you think you would have no relief?—A. No, sir; not unless I go to Congress, and I have been there eight years.

Q. Are you aware whether your foremen, or any of your agents, or persons in your employ, have sold any of the material that you have received from the Government?—A. Not to my knowledge; not the value of a cent.

Q. Would you have known it if they had?—A. I would. I was very cautious not to sell anything. I gave away some mallets. They came to me about buying mallets, or blocks for calkers, but I never sold a cent's worth, nor anybody connected with me. I just told them to take them home, or take them off.

By Mr. BURLEIGH:

Q. You are an old ship-builder, I believe?—A. Yes, sir.

Q. You have built a good many ships on the river?—A. Yes, sir. I have built 160, I think.

Q. You sometimes build ships under contract, fitted for sea?—A. Yes, sir; a great many.

Q. You sometimes build hull and spars under contract?—A. Yes, sir. I have built them mostly every way.

Q. What is the usual way?—A. For the last ten or fifteen years I have built them out and out, and sold them after I had built them.

Q. You have built for hull and spars?—A. Yes, sir.

Q. When you build for hull and spars, don't you build the hull complete?—A. Yes, sir; when I build the hull and spars I build the hull complete.

Q. And you build all the spars complete?—A. Yes, sir; when I agree to build hull and spars.

Q. You build the hull complete and you build the spars complete?—A. Yes, sir.

Q. Do you put the bowsprit in and the bowsprit-cap on?—A. Sometimes we contract to build the hull alone; the bare hull.

Q. I am talking about hull and spars.—A. Hull and spars; we put the bowsprit in and cap on. We don't put the spars in; we build them and deliver them to the owner of the ship.

Q. Do you do the block-maker's work to the spars?—A. No, sir; not unless it is specified.

Q. You do not do the block-maker's work with hull and spars, you merely furnish the spars worked out?—A. Ready for the block-maker; yes, sir.

Q. As far as the hull is concerned, is that ready to receive the rigging, ready to take the masts in?—A. Yes, sir; ready to take the masts in.

Q. Dead-eyes and eye-bolts?—A. Yes, sir; I put the dead-eyes on; that belongs to the hull.

Q. And finish the cabin and state-rooms?—A. If you say "all joiner-work." Sometimes you do and sometimes you don't. If the contract does not say "joiner-work," you don't do the joiner-work inside.

Q. Take a ship of a thousand tons capacity, the frame to be of white oak, two decks, good large cabins on deck, houses on deck for the crew, boats would come in of course, and the ventilators would belong to it; for how much would you build such a ship per ton, any time the last three years, that would class A 1 at Lloyd's for eleven years?—A. I would build her for $80 a ton.

Q. I have built three or four ships of that kind, and know what I am talking about. You would not want to build the ship very much if you asked that price?—A. It depends upon who I built her for. I could build her for $70 for some men. Some men you can build cheaper for than you can for others.

Q. I specify that she is to class A 1 for eleven years, at Lloyd's.—A. If you will give me an order to build her without interfering, I could build her for $70 a ton, with one sailing suit—just the hull and spars.

Q. You do not mean the rigging and sails?—A. No; I mean just what you inquire about, hull and spars, iron-work, &c.

Q. Iron-work on what?—A. The spars complete, and joiner-work.

Q. I did not say that. I want to confine you to the hull and spars, as the term is ordinarily used. I say the hull complete and the spars complete, and such joiner-work and carpenter-work as ships have that are built in Boston to-day. What would such a ship cost?—A. I should think it was worth about $70 a ton.

Q. Would not that cover the vessel ready for sea?—A. No, sir.

Q. Does not any rigging or sails enter into that estimate of $70 a ton?—A. No; you couldn't get it done here.

Q. Are you sure?—A. I know you couldn't. I would not build a thousand-ton ship to-day for less than $70 a ton, fitted as you say, with the joiner-work and spars ready for the block-maker.

Q. Such a ship as you would build for $70 a ton, when the masts were put in and she was rigged, would be all ready for the stores to go on board, and ready for sea?—A. Yes, sir.

Q. The cabin and state-rooms painted and varnished?—A. Yes, sir; three coats of paint all through.

Q. The boats on board?—A. Yes, sir; all painted.

Q. The bowsprit and bowsprit-cap in?—A. Yes, sir.

Q. A house for the crew on deck?—A. Yes, sir. The bowsprit would be put in its place.

Q. All dead-eyes, eye-bolts, ring-bolts, and all chocks, and sheaves in the chocks?—A. Yes, sir.

Q. Hawse-pipes and ventilators, and everything about the ship?—A. Yes, sir.

Q. So that there would be nothing to do but just to put the spars in and put on the rigging and sails?—A. No, sir.

Q. Then everything is there to receive the masts, and when the masts are put in, everything is there to receive the rigging?—A. Yes, sir.

Q. Now tell me, what is the reason it cannot be done to a man-of-war in the same way?—A. Well, I don't think there is any comparison.

Q. Tell me one particular in which the same thing could not be done with a man-of-war?—A. Well, you take the specifications of a man-of-war——

Q. Tell me one particular thing—I don't want to go into generalities—that you could not do on a man-of-war to complete the hull and leave it ready for the riggers to go on board and do their work.—A. Why you could not put in your eye-bolts, for one thing, until your rigger marks for them. A navy-ship is not like an outside ship. Mr. Easby won't mark for the eye-bolts on board of this ship nor for the gun-tackle.

Q. Are not all the eye-bolts in each of those ships?—A. Not all yet.

Q. What particular eye-bolt is it?—A. I can't tell you. A good many eye bolts.

Q. Tell me one.—A. I can't tell you now; but I know there are a good many.

Q. Tell me one particular bolt that is not there, which would prevent the riggers from going to work?—A. The riggers can go to work to-day.

Q. The riggers can get the rigging up, because the bolts are there?—A. Yes, sir.

Q. You cannot say, then, that you cannot go to work and finish the hull of that ship because the riggers do not do their work?—A. There are so many things that come in their line that come in with ours.

Q. You have done your work when you complete the hull? The riggers cannot go to work until you complete the hull?—A. I finish that ship for sea, you know.

Q. You finish the hull of that ship. You have said, heretofore, that when you got the eye-bolts all in, and all this work done, the hull was ready to receive the stores and go to sea, so far as the hull is concerned. I want you to remember that you have said that.—A. I am talking about an outside ship. You are talking now about a man-of-war. You go up aloft on the tops, if you please. There is an iron railing to be put around there; that is by direction of the boatswain or second boatswain, or the sailing-master. He says, "I will have the iron railing put here." Then the iron stanchions have got to be galvanized. We can't tell where to put these things, and other things.

Q. Were not those tops fitted out before they were left?—A. No, sir; those things are not in.

Q. The holes are bored, are they not?—A. Some are and some are not. The Adams is pretty much bored; the Essex is not. They are different ships, and the tops are different.

Q. You had plans made before the men were sent aloft?—A. Yes, sir.

By Mr. HARRIS:

Q. Mr. Burleigh asked you the difference between a merchant-ship and a ship of war, but did not allow you to tell the difference. What is it?—A. There are so many differences that I can't tell you. It would take until morning. My furniture is completed for those ships. I offered to put it in its place on board the ships, but Mr. Easby says, "If you do you have got to take the responsibility. This ship may not be finished for six months, and if you put it in I will not receive it."

Q. Mr. Burleigh asked you something about a merchant-ship, and you said you would build the hull and spars and do everything belonging to them for $70 a ton, and you say there is a difference between that and a ship of war in that particular?—A. Yes, sir.

Q. If you build a merchant-ship you have your plans for the rigging, haven't you?—A. Yes, sir.

Q. And it is part of your job to furnish all your material, and you know exactly what your job is to be?—A. Yes, sir.

Q. Do you know what your job is to be on these ships in connection with the rigging?—A. No, sir; I don't know anything about it.

Q. Now, I want to know if you say you cannot put into that hull the necessary iron-work to receive that rigging until you know what it is?—A. Yes, sir; you cannot put it in by the plans. You cannot put in the dead-eyes.

Q. Have you plans for everything you are to do to those ships?—A. I think, as far as I have gone, I have had plans.

Q. As far as you are under contract to do, have you got plans?—A. Yes, sir; I got them from the naval constructor.

Q. Have you got them independently of him?—A. No, sir; not independently of him.

Q. Can you go on without him and finish your work?—A. No, sir.

Q. Then the only reason why you cannot finish those ships is because you have not received definite plans which he has adopted? Is that it?—A. That is it. He is not prepared to let me finish the ship.

Q. Why not finish it for yourself under the contract?—A. I will tell you one instance: The gearing for the steering-wheel and the iron blocks that go under the deck. It is a very complicated arrangement. The Government furnishes them, and they have got none made.

Q. Do you know where they are to go?—A. Yes, sir; but I do not furnish the blocks. They furnish material.

Q. So that there are things which the Government is bound to furnish you which you have not got?—A. Yes, sir; they furnish their own blocks.

Q. Have you a contract to make the boats?—A. Yes, sir; and I have made them.

Q. What are they?—A. There are seven boats; a steam-launch, working-launch, two quarter-boats, whale-boat, gig, and dingy.

Q. Have you made them all?—A. Yes, sir.

Q. Have you made the steam-launch?—A. Yes, sir; for the Adams, not for the Essex.

Q. In making a contract for building the hull of a merchant-ship, what do you say is reckoned in the hull?—A. If I build the hull, I build her with a set of dead-eyes, put the bowsprit in, and paint her.

Q. What else?—A. Finish her inside and out, ready for her spars and rigging.

Q. How is it as to boats?—A. I do not build any boats, except when I make an agreement to do it.

Q. If you were building the hull and spars of a merchant-ship, would you not furnish boats?—A. No, sir; unless they named boats.

Q. I want to know what you can build a thousand-ton merchant-ship for, to be classed eleven years A 1 at Lloyds', and have her all ready to go to sea?—A. I will build you a thousand-ton ship to-day, to class A 1 at Lloyds', and give you one sailing suit, (I will give you nothing extra,) give you her boats and caboose, for eighty dollars a ton.

By Mr. BURLEIGH:

Q. The ship to carry heavy cargoes, at the lowest rates of insurance, to any port of the world?—A. Yes, sir.

Q. Wouldn't you do it for sixty dollars a ton?—A. No, sir.

Q. Is it not done by other ship-builders as low as that?—A. I think it is done at Bath, where they get rents cheaper, labor cheaper, and everything else; very good ships, too.

By Mr. HARRIS:

Q. How much more do you think the hull of a frigate of the same size, built after the manner of Government vessels of the present day, with a live-oak frame, &c., would cost than the hull of a merchant-ship?—A. Over double.

Q. Provided you had both of them in your own hands to build, without interference on the part of the Government, you say one would cost double what the other would?—A. Yes, sir; when you take the Government specifications to build them by, the manner of coppering them, and all that.

Q. Can you explain why?—A. For instance, we locust-treenail our ships, and the Government drive in copper bolts and drive them in thicker than we do the locust treenails. I would as soon have a locust treenail as copper-bolt.

By Mr. BURLEIGH:

Q. Would not a merchant-ship have more carrying-capacity than a Government vessel?—A. Yes, sir: but there are very full ships.

Q. She would have more inside and outside surface?—A. Yes, sir.

Q. Consequently, would take a greater surface of timber?—A. Yes, sir.

Q. How much difference is there in the weight of the timber in a man-of-war and in a merchant-ship?—A. I don't think there is much difference in the scantlings, as we put them into our best ships. The walls of a man-of-war are thicker, and the garboards.

Q. Would not about the same amount of copper sheathing have to be used for coppering one vessel as the other?—A. Yes, sir; about the same quantity.

Q. Don't you use a great deal of hard pine in a man-of-war?—A. We do the ceiling of a man-of-war with hard pine; outside, we use oak.

Q. Is not the ceiling nearly as much as the outside planking?—A. I should think it was about the same.

Q. Then one-half of the planking of a merchant-ship costs as much as the planking of a man-of-war?—A. I should think it did, about as much.

Q. Is the end-beam of a man-of-war white-oak?—A. Yes, sir.

Q. Are the beams of a merchant-ship of different timber, or are they the same?—A. They are molded larger in a man-of-war, but they are the same kind of material.

Q. Low down?—A. Yes, sir.

Q. Are the decks the same kind of material in a man-of-war as in a merchant-ship?—A. Yes, sir; much thicker, that is all; an inch or an inch and a half thicker.

Q. Is the cabin of a man-of-war furnished any better than merchant-ships?—A. No better than some of our merchant-ships.

Q. Would you not build a more elaborate cabin for the ship you had in your eye when you said you would build it for $80 a ton than you would for a man-of-war?—A. The style would be about the same. There would be more gilding, and more hard wood.

Q. Have you not finished some of the ships you have built as smoothly and nicely as you have finished these Government vessels?—A. Yes, sir; I have.

BOSTON, *March* 23, 1876.

B. H. SAMPSON sworn and examined.

By Mr. MILLS:

Question. What position do you hold in the navy-yard?—Answer. Foreman of shipwrights.

Q. How long have you been here in that capacity?—A. I came here in July, 1869.

Q. Do you know of any timber being received in this yard and measured and pronounced to be greater in quantity than the real quantity that was bought?—A. No, sir.

Q. Do you know anything of Simon McKay's employment in this yard?—A. Yes, sir.

Q. Who employed him?—A. He was put on, I think, by order of the Department at Washington.

Q. What is his pay now?—A. Two dollars and seventy-six cents a day.

Q. What was his pay when he was first put here?—A. He served as first-class shipwright at $3.26 a day.

Q. What was his pay when he was molding the frame of the Adams?—A. I am unable to say whether he was quarterman then or not. It was $3.76 if he was quarterman. I can tell whether he was or not by referring to the books kept at that time. I am not certain.

O. What relationship exists between him and Donald McKay?—A. They are brothers, I understand.

Q. Did you sign the bills for the live-oak that went into that ship?—A. No, sir.

Q. Who did?—A. I could not tell you.

Q. How many feet of live-oak would be required to put into that ship to make the frame of it (the Adams) and do what was necessary?—A. Judging from the amount that it took for the Vandalia, I should say that it would take somewhere in the vicinity of twenty-one or twenty-two thousand feet.

Q. How many feet of pine to do the work that was to be done on the Adams? How much pine lumber would it take to be put in that vessel where the pine is to be used?—A. I am sure I am not prepared to answer that question, because it has not been a part of my business to keep an account of the lumber used on that vessel.

By Mr. BURLEIGH:

Q. Will you state, in your opinion, how much white-pine lumber was required to do the finishing of the Adams, the cabin-work, bulk-heads, hammock-lining, and all that kind of work, if you can tell, within two or three thousand feet?—A. I should say between 38,000 and 40,000 feet of white pine. I tell you in the first place that I am not posted, because it has not been part of my business.

Q. Why don't you say that you don't know, if you don't know?—A. I say I don't know, positively. It is merely my opinion.

Q. Do you mean that, besides mahogany and black walnut?—A. Well, there is very little of those in the ship, except for the furniture.

Q. What is the workmanship of the outside on the Adams?—A. It is good.

Q. You cannot tell how much pine it would take to do the pine-work on the Adams?—A. No, sir; that has not been part of my business; but, as I have stated, in my opinion, it would require from 38,000 to 40,000 superficial feet.

By Mr. MILLS:

Q. Did you deliver any tools to Mr. McKay?—A. Yes, sir.

Q. By whose order?—A. By order of the constructor.

Q. What was done with them?—A. They were taken to East Boston.

Q. How many tools did you deliver?—A. I cannot tell you. His receipt will show, the receipt-book in the constructor's office, and they were all put upon that book.

Q. Have they been returned?—A. I think not, all of them.

Q. What is the value of those that have not been returned; can you state?—A. No, sir; because I don't know what portion of them now remain at East Boston.

Q. Can you tell by your books?—A. No, sir.

Q. Whose books would show?—A. Those of the construction-store clerk.

Q. Do you know whether or not there was more timber furnished Mr. McKay than was in your judgment necessary to do the work on the Adams?—A. I don't know that there was.

Q. Did Mr. McKay furnish a good deal of timber that went into the Adams himself, outside of the yard?—A. Yes, sir; he furnished most of the planking.

Q. You did not furnish him any planking in the yard?—A. I don't know but there might have been some.

Q. You did not furnish him a great deal of plank, then?—A. No, sir.

Q. Did you furnish him much pine?—A. I don't think we furnished him any yellow-pine. We furnished white-pine for the joiner-work.

Q. How much do you suppose?—A. I say I don't know, positively, how much.

Q. It is not your part of the business to keep the record of that?—A. No, sir; that is the joiner-work. That has been delivered by the inspector of timber.

Q. Let me ask you right here if you have any information that any more was furnished him than he was charged with; any more lumber of any kind—white-pine or any other?—A. I have no knowledge of anything of the kind.

Q. Have you any belief about it from any information that you have?—A. No, sir; I don't know of anything.

Q. Who furnished the timber; who actually measured and delivered to Mr. McKay the timber that went into that vessel?—A. Well, the timber when it comes into the yard is inspected and surveyed by the inspector of timber, and a register-mark is put upon the end of every stick, and that corresponding register-mark is on his book, showing the number of feet there are in that piece of timber, and when we want a stick of timber to use, we get this register-mark, and the inspector of timber will take that and charge it to whatever object it is used for, and return it to the constructor.

Q. Well, now, after that explanation, do you know who furnished that timber; who went and got it and delivered it, any of it, or all of it?—A. Mr. McKay's brother and William

B. Sprague were the two men who selected the timber and molded the frame for Mr. McKay. It was got out in the saw-mill, and the inspector of timber had a man there to take every stick on his book as fast as they selected a stick.

Q. Who was he?—A. Charles H. Sprague.

Q. Is he here now?—A. Yes, sir.

Q. Was it Mr. Sprague who took the timber and delivered it to the mill?—A. No, sir; it was done through him. He had an assistant, a man by the name of John B. Simonds.

Q. Where is he?—A. I don't know where he is.

Q. He delivered it on the wharf, where it was put on a vessel and floated over to Mr. McKay's yard, while he was building the vessel?—A. Yes, sir; while the live-oak timber was got out. Mr. McKay's brother and William B. Sprague were the two men who selected the timber for the frame, and the inspector of timber would take the registry-mark and charge it to the ship. All I had to do was to see that the timber was got out and delivered outside of the mill.

Q. How about the white-oak plank and pine plank; that didn't have to go to the mill, did it?—A. I think it was only white-pine plank. There was no yellow-pine plank delivered him, I think. Mr. Sprague, the inspector of timber, measured that when it came in the yard. He delivered it to Mr. McKay, and on every board and plank is marked the contents. The white-pine is marked with the actual number of feet in each board or plank.

Q. Now, who measured the white-pine plank?—A. Mr. Sprague.

Q. He reported it to the constructor to put on his books?—A. Yes, sir.

Q. The amount of pine lumber they furnished to Mr. McKay was measured by Mr. Sprague; that measure was reported to the constructor, Mr. Easby, and put on his books?—A. Yes, sir.

Q. Do you know of any instance where timber has been received in the yard and measured at a greater amount than was actually received, and pronounced to be a greater amount?—A. I don't know of any such case.

By Mr. JONES:

Q. By whom and what influence were you appointed here?—A. I was appointed through the influence of General Banks, I suppose. He was the member of Congress from this district at that time.

Q. What constructors have you served under?—A. I have served under Mr. S. M. Pook, who was here when I reported for duty, Mr. Isaiah Hanscom, Mr. Davidson, Mr. Simmons, William L. Hahscom, Mr. Samuel H. Pook, and the present constructor, Mr. Easby; also Mr. Fernald.

Q. Are you acquainted with the contract-ship Adams, built by Donald McKay?—A. Yes, sir.

Q. What part of the work did the Government perform for Donald McKay?—A. They got out the frame.

Q. Did you understand it to be the duty of the Government to do such work on the contract?—A. I did not at the time; not until I had orders to do it.

By Mr. HARRIS:

Q. Did you know anything about the nature of the contract between the Government and Mr. McKay?—A. No, sir; I never saw it. It was only from what I have heard.

Q. You say you did not think at the time that it was the Government's duty?—A. No, sir; not at the time. I supposed they would furnish him with the timber; *i. e.*, judging from the estimates made for building the ships at that time. I supposed the Government would furnish him the live-oak.

Q. Therefore it was a surprise to you, was it, that you had to get it out?—A. Yes, sir,

By Mr. JONES:

Q. What was the condition of the tools returned?—A. Well, they were in as good condition as could be expected after having been through that service.

Q. Was the Adams in the dry-dock?—A. Yes, sir.

By Mr. BURLEIGH:

Q. What damage would building a ship do to the tools, ordinarily?—A. Not a great deal, except to the falls and blocks. These would deteriorate materally by being used six months or a year in a ship-yard.

By Mr. JONES:

Q. At whose expense was the Adams put in the dry-dock?—A. At the Government's expense.

Q. At how much expense should you judge, as an estimate?—A. I have it, and can tell you within a dollar or two.

Q. Have you the time charged of all the men?—A. Yes, sir.

Q. Please give that to the committee. Was the contractor furnished with more material than was required to build the ship, according to the best of your knowledge?—A. No, sir, not that I know of.

Q. Not the whole, but any particular class of lumber?—A. I have no means of knowing that he was.

Q. Have you heard such reports?—A. Yes, sir; I have heard all kinds of reports.

Q. Have you any knowledge of any one that has said that to you? If so, state his name. A. I don't recollect now any one that would be more liable to know anything about it than I would myself. I have heard such flying reports.

By Mr. MILLS:

Q. Do you know of any labor or materials that were charged to the ship Vandalia that were used for other purposes—not used on that vessel?—A. I can't call any to mind now, but I think very likely there has been.

Q. Why should any be charged to her at all that was not used on her?—A. Well, sometimes, when we are in a hurry, if we find a piece of work made for one ship that is not wanted immediately for that vessel, which can be used on the vessel which is in a hurry, we use it on that; but we intend to give the credit to the ship for which it was prepared when such transfer is made.

Q. Do you know of any large amount of timber bent by the bending-machine for the vessels, that was not fit for use?—A. There has been a good deal of timber broken up there by that machine and destroyed.

Q. More destroyed than was used?—A. Well, I should no twant to say that. In one department, in the knee department, I think that would be true, as far as the knees are concerned. But in the timbers I don't think that holds good.

Q. Have you ever used any of the timbers bent by that machine in constructing a ship built in this yard?—A. Yes, sir; the torpedo-boat. All her backing under the armor-plating was bent by that machine.

Q. How much work was saved by using such kind of timber other than would have been saved if you had used naturally-bent timber, taking into consideration the amount damaged?—A. The torpedo-boat had yellow pine backing, and it is very seldom that you find a sweeping stick of yellow pine. It is almost always straight timber, and in order to get it out there would necessarily be great waste, and it would necessarily be shorter pieces.

Q. How much was saved by using the bending-machine; how much labor was saved, and how much benefit on that vessel was it, in your estimation?—A. That would be a difficult matter for me to tell.

Q. You did not keep any account?—A. No, sir.

Q. Can't you, by a full description of the amount of work which you did, give us the means of judging?—A. The backing is about 5 feet in depth, I think, and it went the entire length of the ship, and was about 9 or 10 inches in thickness, and it was bent to conform to the shape of the ship's sides.

Q. Well, in bending that for that purpose, was the grain of the wood on the inside of the bend compressed and the outside strained?—A. No, sir; because the bend was so slight that it would not require that. The ship was very sharp.

Q. Could you not have bent that timber by heating it, with the methods that you had previously used on the yard, before you had the machine?—A. I don't think we could have kept it in shape.

Q. What is there about this machine that keeps the wood in shape after it is bent?—A. It is held in form by portable holders, secured to the floor of the mill, until it gets thoroughly set, so that it will retain its form.

Q. Have you not been in the habit of taking the plank and steaming it and making the same bends, fully as abrupt, without any of these machines?—A. Yes, sir.

Q. And of the same thickness as the timber you bent for that purpose?—A. No, sir.

Q. Do you bend any planking by this machine?—A. No, sir.

Q. Do you use it now for bending timber?—A. Only for bending the frame of the Miantonomoh, now building at Chester, Pa. In building the Vandalia, the rails, waterways, and chocks, and a good many other pieces were bent by that machine.

By Mr. HARRIS:

Q. What proportion of the Vandalia was bent by this machine?—A. I cannot say what proportion.

Q. You never bent the frame of any ship?—A. The live-oak frame is hewn or sawed out by the molds and bevelings.

Q. Did you bend the knees of the Vandalia in this machine?—A. Yes, sir; some of them.

Q. Was the work done by that machine for the Vandalia satisfactory and good work?—A. Yes, sir.

Q. Did you waste timber by breaking and otherwise?—A. Not on that ship.

Q. Do you estimate this machine of any practical value in a navy-yard, considering the expense of it? Do you consider the machine of practical value to the Government in case the yard was being used fully for building ships?—A. I think if we were carrying on work at the rate we were during the rebellion, that that machine could be worked in to very good advantage, when we had half a dozen ships going on at the same time.

Q. Would you consider it of much value at a time of peace like this?—A. No, sir; not at the present time.

Q. Would you use it at the present time if you had a single ship to construct in the yard, and were building her of a frame of live-oak?—A. Well, it might be used; but I don't know that there would be any great advantage to be derived from it. If we had to go to work and get engineers and men to run the machine, just to bend a few pieces, it would not pay.

Q. So that unless you have full work, you would not think it so profitable to use it?—A. No, sir; that is my opinion.

Q. Can you bend seasoned timber with it as well as you can green?—A. Yes, sir; better.

Q. Has not the timber got to be cleaned before you put it into the machine?—A. Yes, sir; green timber would burst all to pieces. The water must be all vaporized and got out of it. If it is not, it acts as a hydraulic pressure and will burst the timber.

Q. Then, if you were in a hurry and a dry timber was not to be had, this would not answer the purpose?—A. Well, you would have to steam the timber a good while in order to get the water out of it.

Q. Do you consider it proper to use green timber at any time in ship-building?—A. No, sir. Outside, when we build merchant-ships, we don't stand about seasoned timber for the white-oak frame, because generally the time between the commencement of the ship and the finishing of her would be enough to season it.

Q. Would you recommend the Government to buy a bending-machine, provided they had none, to do its work in this yard?—A. Not at the present time; I would not.

Q. Would you at any time, knowing what it will break, and the cost of establishing it?—A. No, sir; I don't think I would recommend it.

Q. Did you ever hear any one say that it was a failure, before it was bought by the Government, or was it considered so?—A. Well, I cannot tell directly. I may have heard reports to that effect.

Q. Was that a common report?—A. Well, so far as I am able to answer that question; I would say that I have heard that statement made.

Q. What was your individual opinion at that time?—A. I had no opinion, because I had not seen the machine or any of its work.

Q. When it was first introduced here and when you did know what it was, were you favorably or unfavorably impressed with it?—A. Well, not very favorably impressed with it.

Q. You never would have bought it of your own motion?—A. No, sir.

Q. Did the Government deliver to Mr. McKay any of the material for building this ship—I mean move any of it?—A. If you mean deliver it outside of the yard by Government conveyances to Mr. McKay's yard, I answer not that I know of. The Government teams, I think, hauled the material down to the wharf where he had a vessel, and loaded it at his expense.

Q. How does the work on the Adams compare with the Government work?—A. Favorably.

Q. Do you consider it as good as Government work?—A. Yes, sir.

Q. Have you seen the timber, knees and lumber delivered at this yard since you have been on duty here?—A. I have seen some of it; it is not my business to inspect it.

Q. You being here as foreman, you must see the most of it.—A. I have seen considerable of it.

Q. Are the knees received here of good quality and in accordance with the Government regulations?—A. Not having seen the requisitions and contracts, I don't know what the Government have required them to put in.

Q. They generally require first quality of everything, don't they?—A. Yes, sir.

Q. Are the knees received here of good quality, and in accordance with the Government regulations? You know what those are.—A. There have been a great many knees put in here that I have not examined in any way, and did not consider it part of my business at all until I came to use them; therefore I don't think I am qualified to tell.

Q. That is not the question I asked; are the knees received here of good quality and in accordance with the Government regulations?—A. If I didn't inspect them I couldn't say. There are hundreds of knees in the yard which I have never been called upon to examine in any way, that remain here in the yard.

Q. Do you know of what quality they are?—A. Some of them are first qual i and thea are some that are not; whether they have been accepted or not, I don't know.

Q. How many should you think there were of first-class quality, such as the Government would require, to the best of your knowledge?—A. Well, I cannot say; I should not want to fix the number.

Q. How many should you think?—A. I don't know that there are any, that have been received by the inspector.

Q. What is the quality of the live-oak received at this yard?—A. It is of good quality.

Q. Is it suitable for ship purposes?—A. Yes, sir.

Q. How many ships of a thousand tons each could be built from the amount of live-oak now on hand in this yard?—A. To get the entire frames, it would be perhaps three ships of a thousand tons each.

Q. Could you get all the difficult pieces for three ships out of the live-oak now in this yard?—A. I think we could. I wish to state here why I say so; that which is piled up in the buildings has been culled over and over again and the select pieces have been used;

some went to Portsmouth, and Mr. McKay's ships were got out of it, and some portions of the frames of the Enterprise and the Essex were taken from this timber. Therefore it has been pretty well culled over.

Q. Do I understand that you made that selection for these ships before this live-oak was received?—A. Yes, sir; I am referring now to the live-oak piled up in the shed.

Q. Is there any of this live-oak piled up in the shed; has there been anything taken from it?—A. No, sir; of that delivered last summer there has not been any taken out, not to any amount that I know of.

Q. Is tnere a fair proportion of difficult pieces, such as would be required to build a ship of a thousand tons, among that timber, enough and suitable to build three ships of a thousand tons?—A. When I speak of that, I include all the live-oak timber in the yard.

Q. Is there among the timber delivered by Mr. Swift, outside of the lot on hand when you culled the timber for the Enterprise and other vessels, enough of difficult pieces to make three ships?—A. I should say not, although I have not made special examination of the timber.

Q. Then you would not consider it timber of the first quality, would you?—A. It might be timber of the first quality, but it would not be suitable for this work.

Q. How many ships do you estimate that the timber furnished by Mr. Swift would build, provided it was suitable and well selected?—A. I cannot give you the cubic feet of timber. It would build six or eight ships, according to the size.

Q. How many ships can you get out of that lot and find all the difficult pieces?—A. I tell you that to get *all* the pieces we could not get more than three ships of a thousand tons each.

Q. State whether or not the last lot of live-oak timber delivered by Mr. Swift, independent of all the timber on the yard, contained a fair proportion of difficult or special pieces of timber?—A Well, I think that the straight timber predominated; that there is more of that in proportion, in my opinion, than what you can use up in building a ship.

Q. You think there is not enough of special pieces to use up the balance of the timber?—Yes, sir.

Q. Is it your design and desire in purchasing a lot of ship-timber to get difficult and special pieces enough to use up the rest?—A. Well, you will have to go over a great deal of timber to get that. There always will be, in all cases, a quantity of timber that you have to purchase that you are unable to use in building a ship. You will have to purchase a great deal more than would otherwise be needed in order to get a sufficient quantity of these special pieces.

Q. Do you have, ordinarily, to make special or difficult pieces in order to use up your other parts on hand?—A. Yes, sir; very often.

Q. Is there any rule by which you determine, in the purchase of timber, what proportion shall be straight and what shall be crooked or extra—speaking now of Government purchases of live-oak?—A. Well, generally a contract is made for the principal pieces, so many feet, so much curved timber and so much of promiscuous timber, and divide it off.

Q. The principal portion of the timber would make the difficult pieces?—A. Yes, sir; the special pieces.

Q. Was Mr. Swift required to furnish the timber in that way, or did you simply take it by measure, or anything that was brought?—A. It was taken as it was delivered, the timber-inspector classifying the same.

Q. What classifications have you for live-oak timber; is it straight, curved, and special pieces?—A. Yes, sir.

Q. What do you call the principal pieces?—A. The large pieces to make stems and sterns, posts, &c.

Q. What is the price paid for staight live-oak?—A. About a dollar and forty cents a foot, I think.

Q. What for curved?—A. $1.50 and $1.75.

Q. What for special pieces?—A. Well, sir, I think $2 and upwards. I don't know.

Q. Is it required that those curved pieces shall be from twelve to thirteen inches?—A. I believe that is so specified.

Q. Do you know that any of the lower grade of timber has been received at a higher price—at the price of the higher grade of timber?—A. No, sir.

By Mr. HARRIS:

Q. I want to find out whether, in the delivery of live-oak, the party delivering it is bound to furnish the different grades, or whether the Government will take either grade without reference to the other?—A. So far as my observation goes, all timber has been received by the Government that has been delivered here.

Q. And then divided into the proper grades by the Government surveyors and inspectors?—A. Yes, sir; that is their business.

Q. Therefore you give them "straight timber," according to the inspector's survey, so much?—A. Yes, sir.

Q. Of "curved timber" and "special pieces," so much?—A. Yes. sir.

Q. So that, if a man should deliver upon your yard 10,000 cubic feet of timber, you would take it if it was all straight, giving the "all straight" price?—A. Not if the schedule called for so many pieces of straight, such a portion of curved, and such a proportion of special.

Q. Supposing you had not a contract specifying, and the party was allowed to land 50,000 cubic feet of live-oak timber, and then the Government saw fit to purchase it, state whether or not it might be taken for "all straight," at the "all straight" price?—A. I should say so.

Q. So that, unless the party had a contract to deliver such a proportion of straight, and such a proportion of curved, and such a proportion of special pieces, the whole would be taken at its proper grade, and at that price?—A. Yes, sir.

Q. Do you know anything about what arrangement they had with Mr. Swift for the delivery of this last lot of timber?—A. No, sir.

By Mr. JONES:

Q. Did you know that this large amount of timber that was delivered on the yard here was Mr. Swift's timber and not the Government's, when he had permission to deliver it?—A. Yes, sir; I so understood it.

Q. In your opinion, as foreman shipwright, did you consider that a fair lot of straight timber, of curved timber, of principal pieces, or were there more in proportion of either kind than there usually is delivered here by contract?—A. I believe I have answered that question already.

Q. I don't think you have on this last lot of timber?—A. I said I thought the straight predominated. In going into the building of a ship and using up timber in that way, the special pieces and the curved timber will be used up, and there will be a quantity of straight timber left. The straight timber will not be all used.

Q. Then I understand you to say that of the timber that Mr. Swift had permission to land on this yard, there was more straight timber in proportion than there should have been if there had been a contract by the Government?—A. That is my opinion, sir.

Q. Was there considerably more?—A. Well, sir, I don't know; I have not paid particular attention to it.

Q. How was that timber in regard to its size, in comparison with other timber that had been contracted for by the Government, and delivered under contract? I mean this last lot that Mr. Swift had an order to land on the yard here, that was brought from East Boston and other places, and afterwards received by the Government; how was that in regard to its sizes?—A. I don't think it would vary much, from what I have seen since I have been here.

Q. Is the live-oak on this yard now properly stored?—A. No, sir.

Q. Why not?—A. They have not had the help to do it.

Q. Is the oak timber properly stored?—A. No, sir.

Q. Would it not have been better in the water, than it is piled up in the yard and under those temporary buildings?—A. That piled up under the temporary buildings is live-oak.

Q. There is some on this yard that lies exposed to the weather, of this last lot that was received?—A. Yes, sir.

Q. A large amount?—A. Yes, sir.

Q. How much should you think of this last lot now lies upon the yard exposed to the weather?—A. Well, I think that all that has been delivered by Mr. Swift since last summer, whatever it is, is now out of doors.

Q. Is it exposed to the weather?—A. No, sir; some of it is in the dock, but a large proportion of it lies on the ground exposed to the weather.

Q. Is there not a very large lot of white oak, yellow pine, and live-oak timber, now lying out of doors on the ground, exposed to the weather on this yard?—A. Yes, sir.

Q. Do you know how long live-oak timber will last under water?—A. It will last until the next centennial, I guess, if not used before that time.

Q. Do you know who ordered it piled up in the manner that it is now, in a large pile?—A. Mr. Pook.

Q. Do you know the reason why it was piled up there instead of putting it in the wet basin?—A. There were no facilities for getting it into the dock. Mr. Pook proposed the extension of the present railway in the yard, down to the extreme lower end of the yard, so that the timber could be transported on the cars and thrown off.

Q. Do you consider it economy in the Government to buy and keep on hand large quantities of timber that they have not facilities for taking care of?—A. I should say not.

Q. Is that the case to-day?—A. Yes, sir; there is a large quantity of timber about the yard that is not properly taken care of.

Q. Have the Government facilities to take care of this immense quantity?—A. Certainly they have. I don't understand what you mean by "facilities."

Q. Have you the buildings and docks to put this timber in, so that it can be preserved?—A. Yes, sir; but not the force to handle it. There is quite a large basin which you didn't see, called the "lower basin," which is partially filled with old spars, that have been there for years. The basin is nearly filled with that kind of stuff.

Q. How long has this state of things existed, that the timber has lain outside on the ground and in the yard, exposed to the weather—timber that should have been put in the docks—and thus been deteriorating all the time? How long has that state of things existed, to your knowledge?—A. Well, it has always been so, to a greater or less extent.

Q. For how long?—A. For ten years.

Q. Who has delivered this live-oak?—A. Mr. Swift.

Q. Who delivered the knees?—A. That I couldn't tell you.

Q. Who delivers the white-pine material, do you know?—A. I think that has been delivered by different parties. I think Mr. Trickey put in the larger part of it, and the oak timber different parties. Mr. Trickey put in some, Mr. McCullough some, and a man by the name of Duryee.

Q. Who for the last five years has delivered the most of the timber to this yard, outside of the live-oak?—A. I should say Mr. Trickey.

Q. Do you know of any articles received after being once rejected on this yard?—A. I don't recollect of any articles that have been received after being rejected.

Q. Are you acquainted with the work on the Essex?—A. Yes, sir.

Q. Where did she come from?—A. From Portsmouth navy-yard.

Q. Who is doing the work on that ship now?—A. Donald McKay.

Q. Did much material come up in that ship when she came from Portsmouth?—A. Her cabin-work, the bulk-head, and quite a lot of iron-work, the castings and materials—a schedule of which was taken—and some furniture.

Q. What was done with that material that came up in her?—A. It has been used on the ship.

Q. Has the Government done any work on her since she arrived here?—A. Yes, sir.

Q. What is it?—A. She was docked, and her stern-bearing was put on, and her engine-beds were changed and refitted, poles cut for valves, &c., holding-down bolts put in, &c., and the location of the coal-scuttles in the deck changed.

Q. Do you know how much it cost the Government for labor and for what they did on the Essex after she got here, or about how much?—A. Well, I cannot tell you now. It was several thousand dollars.

Q. How many thousand dollars should you think?—A. Well, I can tell you if I can have time to think the matter over. This was before the work that I just spoke of, in changing the engine-beds, &c., was done, before the ship was let out at contract.

Q. Do you say that cost several thousand dollars?—A. Yes, sir.

Q. How many should you think? What is your estimate?—A. When I said "several thousand dollars," I meant what work we had done on her since the contract and before, because we have done quite a number of jobs on the ship since the contract, on account of alteration.

Q. How much did these alterations amount to on the Essex that were done by the Government?—A. A thousand or fifteen hundred dollars.

Q. Were they done by the Government?—A. Yes, sir.

Q. Was there a board called to estimate how much those alterations would cost?—A. Not that I know of.

Q. Do you select your employés?—A. Yes, sir.

Q. The whole of them?—A. Yes, sir; as I require them.

Q. Are the names given to you, and then are you required to employ them?—A. In some cases, and in some cases they are not.

Q. Are they not given to you in a majority of cases?—A. No, sir.

Q. Have you, or any one under you in your department, collected any money for presents since you have been in this yard?—A. At the time Mr. Hanscom was detached from this yard and ordered to the Brooklyn yard, a movement was made on the part of the employés to raise money for the purpose of hiring a band to give him a serenade, with the understanding that if anything was left after paying for the band it should be devoted to the purchase of a present for Mrs. Hanscom.

Q. Did you collect it, or did any one under you collect it, or did you order it done?—A. It was collected all through the yard, in different departments.

Q. Have you, or any one under you, collected any money for presents since you have been at this yard?—A. I say money has been collected. I don't know as I have collected any.

Q. You have ordered it to be done, have you not?—A. No, sir.

Q. Do you know of any one collecting any?—A. Yes, sir.

Q. To whom were the presents given?—A. To Mr. Hanscom's wife.

Q. How much money did they collect?—A. About $600, I think.

Q. Which Hanscom was it?—A. William L. Hanscom. It was a public thing. I suppose everybody knew it. They had a reception at the house that evening.

Q. What was the present?—A. It was a shawl.

Q. Do you know who gave the order to collect?—A. No, sir; there was no order given.

Q. You don't know who started the thing, or put it up?—A. No, sir; I do not; but it was a general movement throughout the yard. Every department in the yard subscribed more or less toward it.

Q. Was there ever any other money collected for presents?—A. Not that I know of.

Q. You have been chief of the shipwrights for some years?—A. Yes, sir; foreman.

Q. In your experience, who determines the question who is a shipwright competent to be employed in the yard?—A. I have considered that my duty, subject to the approval of the constructor. I recommend certain men when I employ them as shipwrights.

Q. Have you selected men, as far as you were able, who were competent as shipwrights, without the interference of other people?—A. Not in all cases.

Q. Won't you give now, in your own way, your experience upon that subject of employing shipwrights. I want to ascertain whether or not you have had the free and independent exercise of your own judgment in this matter of employing competent men as shipwrights, or whether you have been interfered with by politicians, members of Congress, or ward politicians of this city, or heads of Departments. I prefer that you should state it in your own way, for I have no doubt that you have had experience that we would consider valuable.—A. I would say that I have not felt at liberty in all cases to select such men as I could wish to. I don't know that I have had positive orders in some cases to hire certain men. They have been ordered on by the Department at Washington, and by the constructor, so that I felt it my duty to employ the men, although in a great many cases I did not consider that they were really the best workmen.

Q. Or competent workmen?—A. In some cases.

Q. Have you been ordered to receive men classed at a certain rate?—A. Yes, sir.

Q. From whom have you received those orders?—A. From the constructor.

Q. Do you mean at Washington?—A. I received them through the constructor here. The orders came from Washington to the constructor here to employ such and such men, at such and such rates.

Q. When you have got in that way incompetent workmen, what have you been in the habit of doing about it?—A. I have done the best I could with the men, kept them at work.

Q. Have you been in the habit of reporting them for discharge?—A. Do you mean on that account?

Q. Yes, sir.—A. No, sir; I have not.

Q. So that, in point of fact, although the chief ship-carpenter in this yard, you have not had entire control of the employment of your men under you?—A. Not the entire control; no, sir.

Q. How you ever felt yourself so far independent in your place that you could discharge whom you pleased?—A. No, sir; not in certain cases.

Q. Have you been applied to to take on particular men by persons not connected with the yard?—A. Yes, sir.

Q. Well, who, and in what instances?—A. Now you refer to whether I have been requested to hire certain persons by parties not officially connected with the yard. Well, sir, you might say that almost every prominent man, including Mr. Harris himself, has made such requests of me; and Mr. Simmons, the collector, Mr. Rice, the present governor, Mr. Frost, Mr. John M. S. Williams, General Banks, and Mr. Gooch; not recently, though, General Banks.

Q. How long ago?—A That was in his old time.

Q. Formerly, before 1874, state whether or not he exercised large influence here on you in the employment of men?—A. Not personally; he never has made many requests of me.

Q. Were his wishes regarded, so far as you could ascertain what they were?—A. Yes, sir.

By Mr. HARRIS:

Q. I believe, in my case, there has been only one man whom I have asked you to employ; I could not keep him here very well, could I?—A. No, sir.

Q. Was he a good workman?—A. Yes, sir.

By Mr. BURLEIGH:

Q. Among your own personal friends, outside of politicians, have not such requests been frequently made of you for some of their friends?—A. O, yes, sir.

Q. You did not come in direct communication with the Department, but got your orders through the constructor here?—A. Yes, sir; the orders are given to the commandant to employ a certain person at a certain rate.

Q. Now, what was the condition of things in 1874, during the Banks and Gooch campaign; were men put upon you whom you could not properly use?—A. Well, I was continually importuned to put on men, and I put on all that I could consistently with my duty to the Government. It was a mere matter of accommodation to a friend that would like to have a person employed. I did it if I could, but could not always do it.

Q. Did you sometimes put the names upon your requisitions yourself, and recommend them to your superior?—A. Yes, sir; in the majority of cases that is the way it has been conducted.

Q. It is your right, then, as foreman of shipwrights, to recommend to your superior officer the employment of certain men, giving them your recommendation?—A. Yes, sir.

Q. That is part of your rightful duty?—A. Yes, sir.

Q. And whenever those names are approved, you take them on?—A. Yes, sir.

Q. If they are rejected, do you exercise the power?—A. No, sir; I merely suggest that those persons be employed.

Q. Well, have you sought to recommend only such men as you believed to be competent

Q. Who has delivered this live-oak?—A. Mr. Swift.

Q. Who delivered the knees?—A. That I couldn't tell you.

Q. Who delivers the white-pine material, do you know?—A. I think that has been delivered by different parties. I think Mr. Trickey put in the larger part of it, and the oak timber different parties. Mr. Trickey put in some, Mr. McCullough some, and a man by the name of Duryee.

Q. Who for the last five years has delivered the most of the timber to this yard, outside of the live-oak?—A. I should say Mr. Trickey.

Q. Do you know of any articles received after being once rejected on this yard?—A. I don't recollect of any articles that have been received after being rejected.

Q. Are you acquainted with the work on the Essex?—A. Yes, sir.

Q. Where did she come from?—A. From Portsmouth navy-yard.

Q. Who is doing the work on that ship now?—A. Donald McKay.

Q. Did much material come up in that ship when she came from Portsmouth?—A. Her cabin-work, the bulk-head, and quite a lot of iron-work, the castings and materials—a schedule of which was taken—and some furniture.

Q. What was done with that material that came up in her?—A. It has been used on the ship.

Q. Has the Government done any work on her since she arrived here?—A. Yes, sir.

Q. What is it?—A. She was docked, and her stern-bearing was put on, and her engine-beds were changed and refitted, poles cut for valves, &c., holding-down bolts put in, &c., and the location of the coal-scuttles in the deck changed.

Q. Do you know how much it cost the Government for labor and for what they did on the Essex after she got here, or about how much?—A. Well, I cannot tell you now. It was several thousand dollars.

Q. How many thousand dollars should you think?—A. Well, I can tell you if I can have time to think the matter over. This was before the work that I just spoke of, in changing the engine-beds, &c., was done, before the ship was let out at contract.

Q. Do you say that cost several thousand dollars?—A. Yes, sir.

Q. How many should you think? What is your estimate?—A. When I said "several thousand dollars," I meant what work we had done on her since the contract and before, because we have done quite a number of jobs on the ship since the contract, on account of alteration.

Q. How much did these alterations amount to on the Essex that were done by the Government?—A. A thousand or fifteen hundred dollars.

Q. Were they done by the Government?—A. Yes, sir.

Q. Was there a board called to estimate how much those alterations would cost?—A. Not that I know of.

Q. Do you select your employés?—A. Yes, sir.

Q. The whole of them?—A. Yes, sir; as I require them.

Q. Are the names given to you, and then are you required to employ them?—A. In some cases, and in some cases they are not.

Q. Are they not given to you in a majority of cases?—A. No, sir.

Q. Have you, or any one under you in your department, collected any money for presents since you have been in this yard?—A. At the time Mr. Hanscom was detached from this yard and ordered to the Brooklyn yard, a movement was made on the part of the employés to raise money for the purpose of hiring a band to give him a serenade, with the understanding that if anything was left after paying for the band it should be devoted to the purchase of a present for Mrs. Hanscom.

Q. Did you collect it, or did any one under you collect it, or did you order it done?—A. It was collected all through the yard, in different departments.

Q. Have you, or any one under you, collected any money for presents since you have been at this yard?—A. I say money has been collected. I don't know as I have collected any.

Q. You have ordered it to be done, have you not?—A. No, sir.

Q. Do you know of any one collecting any?—A. Yes, sir.

Q. To whom were the presents given?—A. To Mr. Hanscom's wife.

Q. How much money did they collect?—A. About $600, I think.

Q. Which Hanscom was it?—A. William L. Hanscom. It was a public thing. I suppose everybody knew it. They had a reception at the house that evening.

Q. What was the present?—A. It was a shawl.

Q. Do you know who gave the order to collect?—A. No, sir; there was no order given.

Q. You don't know who started the thing, or put it up?—A. No, sir; I do not; but it was a general movement throughout the yard. Every department in the yard subscribed more or less toward it.

Q. Was there ever any other money collected for presents?—A. Not that I know of.

Q. You have been chief of the shipwrights for some years?—A. Yes, sir; foreman.

Q. In your experience, who determines the question who is a shipwright competent to be employed in the yard?—A. I have considered that my duty, subject to the approval of the constructor. I recommend certain men when I employ them as shipwrights.

Q. Have you selected men, as far as you were able, who were competent as shipwrights, without the interference of other people?—A. Not in all cases.

Q. Won't you give now, in your own way, your experience upon that subject of employing shipwrights. I want to ascertain whether or not you have had the free and independent exercise of your own judgment in this matter of employing competent men as shipwrights, or whether you have been interfered with by politicians, members of Congress, or ward politicians of this city, or heads of Departments. I prefer that you should state it in your own way, for I have no doubt that you have had experience that we would consider valuable.—A. I would say that I have not felt at liberty in all cases to select such men as I could wish to. I don't know that I have had positive orders in some cases to hire certain men. They have been ordered on by the Department at Washington, and by the constructor, so that I felt it my duty to employ the men, although in a great many cases I did not consider that they were really the best workmen.

Q. Or competent workmen?—A. In some cases.

Q. Have you been ordered to receive men classed at a certain rate?—A. Yes, sir.

Q. From whom have you received those orders?—A. From the constructor.

Q. Do you mean at Washington?—A. I received them through the constructor here. The orders came from Washington to the constructor here to employ such and such men, at such and such rates.

Q. When you have got in that way incompetent workmen, what have you been in the habit of doing about it?—A. I have done the best I could with the men, kept them at work.

Q. Have you been in the habit of reporting them for discharge?—A. Do you mean on that account?

Q. Yes, sir.—A. No, sir; I have not.

Q. So that, in point of fact, although the chief ship-carpenter in this yard, you have not had entire control of the employment of your men under you?—A. Not the entire control; no, sir.

Q. How you ever felt yourself so far independent in your place that you could discharge whom you pleased?—A. No, sir; not in certain cases.

Q. Have you been applied to to take on particular men by persons not connected with the yard?—A. Yes, sir.

Q. Well, who, and in what instances?—A. Now you refer to whether I have been requested to hire certain persons by parties not officially connected with the yard. Well, sir, you might say that almost every prominent man, including Mr. Harris himself, has made such requests of me; and Mr. Simmons, the collector, Mr. Rice, the present governor, Mr. Frost, Mr. John M. S. Williams, General Banks, and Mr. Gooch; not recently, though, General Banks.

Q. How long ago?—A That was in his old time.

Q. Formerly, before 1874, state whether or not he exercised large influence here on you in the employment of men?—A. Not personally; he never has made many requests of me.

Q. Were his wishes regarded, so far as you could ascertain what they were?—A. Yes, sir.

By Mr. HARRIS:

Q. I believe, in my case, there has been only one man whom I have asked you to employ; I could not keep him here very well, could I?—A. No, sir.

Q. Was he a good workman?—A. Yes, sir.

By Mr. BURLEIGH:

Q. Among your own personal friends, outside of politicians, have not such requests been frequently made of you for some of their friends?—A. O, yes, sir.

Q. You did not come in direct communication with the Department, but got your orders through the constructor here?—A. Yes, sir; the orders are given to the commandant to employ a certain person at a certain rate.

Q. Now, what was the condition of things in 1874, during the Banks and Gooch campaign; were men put upon you whom you could not properly use?—A. Well, I was continually importuned to put on men, and I put on all that I could consistently with my duty to the Government. It was a mere matter of accommodation to a friend that would like to have a person employed. I did it if I could, but could not always do it.

Q. Did you sometimes put the names upon your requisitions yourself, and recommend them to your superior?—A. Yes, sir; in the majority of cases that is the way it has been conducted.

Q. It is your right, then, as foreman of shipwrights, to recommend to your superior officer the employment of certain men, giving them your recommendation?—A. Yes, sir.

Q. That is part of your rightful duty?—A. Yes, sir.

Q. And whenever those names are approved, you take them on?—A. Yes, sir.

Q. If they are rejected, do you exercise the power?—A. No, sir; I merely suggest that those persons be employed.

Q. Well, have you sought to recommend only such men as you believed to be competent

shipwrights in those requisitions?—A. There is a very great difference in the ability of workmen.

Q. I mean men whom you could profitably use?—A. There are some men that I would rather have at $5 a day than others at $1; men that are good mechanics, too. But there is a great difference in their ability to turn off work.

By Mr. JONES:

Q. As I understand, when an order comes from the Department here to take on a man, you are the man who sends the name to the constructor and he to the commandant to sign the order?—A. No, sir, I don't have anything to do with it, only to set the man at work when he is ordered on by the Department.

Q. No lists are handed to you to hand to the commandant?—A. No, sir; the order comes down to me that such a man has been put on by order of the Department, and that he will be set to work. In some cases I have made out a requisition. The order will sometimes come that I will make out the necessary papers for the employment of so and so. Then I would make a requisition in accordance with that. But when the order comes peremptorily by order of the Department that those men will be entered on my roll, that is different.

Q. When you are ordered to make a requisition for a certain amount of labor, does any one furnish you the names of those you are to employ?—A. No, sir.

Q. That is, no one suggests the names to you of the men whom you are to employ?—A. As I stated before, I have been continually importuned to give certain men work.

Q. For instance, you are ordered to make a requisition for forty men in your department; then, after the requisition is approved, is any one permitted to furnish you a list of names of the men you are to employ?—A. No, sir.

Q. And you do not consult any one?—A. No, sir. Sometimes the constructor who gives the order would say to me that he would like to have a certain man put on to that requisition, and of course I would put him on.

Q. You keep your pay-roll, don't you, and know who is on it?—A. I keep my muster-roll.

Q. Is there any one here on the yard to-day who draws pay from the Government without performing any duty, that you know of?—A. No, sir.

Q. Any one employed in two places who draws double pay?—A. I know of none.

Q. Was the ship Adams recalked all over when she was in the dock?—A. Yes, sir; as far as could be.

Q. I mean her bottom, under her copper?—A. There were some places where the oakum was so hard that it could not be started. I had the master calker examine it with me when she was docked, and we found that it would be impossible to start the oakum in to recalk her without serious injury to the edges of the plank.

Q. What section of the ship was that?—A. That was on her bilge.

Q. Was her bottom calked all over?—A. Yes, sir.

Q. Was she well calked?—A. Yes, sir; very well.

Q. Do you know whether Simon McKay, the man who molded the frame for the Adams and fitted it for the ship, was paid by the Government or by Mr. McKay?—A. He was paid by the Government.

Q. Do you know how much he received per day during that time?—A. He was a quarterman, and received $3.76 a day.

Q. How many men did he have under him?—A. Part of the time there was not any one, only he and Mr. Sprague; and part of the time he had four or five others, patching and trimming.

Q. How long did it take?—A. It was probably six or eight weeks, more or less.

By Mr. MILLS:

Q. By whose order or authority were your men employed on the frame of Mr. McKay's ship, the Adams?—A. By Mr. Pook, the constructor.

Q. Were others employed beside those on the saw-mill?—A. Yes, sir; there were a few.

Q. Did you have any men at work preparing the frame, the stern, the stern-posts, the head, and dead-woods?—A. I had men employed on the frame, stern, and stern-post, but not on the head.

Q. Was the shaft-hole cut by your men?—A. I cannot say, sir.

By Mr. BURLEIGH:

Q. You testified that Simon McKay was employed by the Government?—A. Yes, sir.

BOSTON, *March* 23, 1876.

J. A. C. GADDIS sworn and examined.

By Mr. MILLS:

Question. Where do you reside?—Answer. In East Boston.

Q. Do you know anything about any timber belonging to the Government of the United States that is outside of this navy-yard, in Boston, anywhere?—A. Yes, sir.

Q. Where is it?—A. It is in East Boston, up to what is now called Curtis and Tilden's old yard, between East Boston and Chelsea; it is piled up there. There are long pieces of white-pine timber, such as we call "Susquehanna timber," shipped from Susquehanna, part of it; and then there is some live-oak. That is about what is there.

Q. How much of it is there?—A. Well, I could not exactly say. There are several thousand feet.

Q. How many thousand feet?—A. Well, perhaps to measure it, you might find from ten to twenty thousand, sir. That is all the white pine and the oak.

Q. Do you know how it came there?—A. Part of it was hauled over from the navy-yard and part of it was floated over. The long, heavier pieces were floated from the yard and hauled out at the Atlantic Works, and part was floated up to the yard, and part floated where it now is.

Q. Who had it carried there?—A. It was carried there for Mr. McKay's frigate, the sloop he built.

Q. Do you know who took it there?—A. I could not tell who floated it there; but the teamsters who took it there are Purcell and Foull.

Q. What are their given names?—A. I don't know. I don't know that I ever saw their given names.

Q. How far is that timber from here?—A. On a straight line, a little over half a mile.

Q. How far is that from where Mr. McKay built the sloop-of-war?—A. It would be about as far from the Atlantic Works to where the timber now lies as it would be from the lower ship-house. The lower ship-house stands right straight across. All the difference would be from this spot to the ship-house—perhaps a thousand or fifteen hundred feet, or more.

Q. Do you know of any other that has been carried away from the yard besides that?—A. There was more lumber carried there.

Q. What has become of that?—A. That has been stored in Henry Jones's lumber-yard, and, unless it has been taken away very recently, it is there still. By the way, I would suggest to the committee to call Henry Jones, of East Boston, as a witness.

Q. Do you know when that timber was carried there from the navy-yard?—A. That timber was carried there, sir, at the time of the commencement of the Adams, the sloop that Mr. McKay built. That lumber was hauled. There is white pine and different descriptions, and different conveyances were used.

Q. How much of that timber is in the possession of Henry Jones now?—A. I could not tell exactly, sir; but I should think there is somewhere in the neighborhood of 50,000 feet.

Q. Do you know who delivered that lumber to Mr. McKay?—A. No, sir; I do not. It was all taken from the yard.

Q. Do you know what the parties said who delivered it to you? Have you heard anything on the subject of how they got it from them?—A. The parties who were interested about getting it out of the yard had an order to get it out of the yard, what was required for the vessel. That was the order. They could come into the yard and select just what they pleased, and what was suitable for it. Right here I would give you the name of Simon McKay. He is the man who selected the timber here for his brother. He was employed part of the time in molding the timber out. When that was going through the process of siding it in the mill down here, he had charge of molding the frame; and then, after that, I don't know whether he was hired by his brother out of the yard or whether he took his discharge and went with his brother. At any rate he selected the timber, and made choice of such as was suitable for the construction of the hull.

Q. That is not being used for work on the Adams now?—A. No, sir.

Q. Has any timber been taken from the yard and used on that vessel from that lot?—A. I cannot tell you that; but it would not require the amount of timber taken out of the yard to put her cabin into her.

Q. How much more was taken out of the yard than was necessary to put her cabin into her?—A. I mean the pine-work about the cabin such as we use here right in the yard when the Government is finishing their vessels, such material as joiner-work consists of, sufficient to finish what we call the inboard work.

Q. How much more was taken out than would do that work?—A. Well, it would take about 20,000 feet, we will say, (she is but a small thing,) her wardrooms and so on. Twenty thousand feet would cover her inboards. And from the pile of lumber that is there there is enough to do three such crafts as she is. What I mean to say is, that recently there was enough taken out to do three such crafts. There is not enough left now.

Q. Was not considerable of it used about the head of the vessel?—A. There was some used about the head, but that was not a very large amount.

Q. What did the hammock-rails, and sheathing of the hammock-rails consist of?—A. That was the same with the lumber that went into the cabin and other parts. The rails are not constructed of this wood, but of hard pine—the hammock-rails. But the sheathing of the hammock-rails is white pine, narrow, four inch, beaded.

Q. Do you know how much lumber was remaining there after they used all they wanted on the vessel?—A. Well, I should think that there would be 25,000 feet.

Q. Do you know how much there is there?—A. No, sir; I never measured it but from judgment. From judgment I should say that it was 25,000 feet. It is fully that.

Q. That is all white pine?—A. There is ash there and mahogany there.

Q. Is there any black walnut?—A. Yes, sir; some.

Q. Any live-oak?—A. No, sir; there is some locust. There is no live-oak there at all.

Q. Do you know whether Mr. McKay has had any live-oak there in that place, or anywhere outside of the yard?—A. Yes, sir; that Government live-oak. I spoke about that—that which was hauled up to the upper yard. That was for the frame of the ship.

Q. Is it there now?—A. Yes, sir.

Q. After the ship is framed and afloat?—A. Yes, sir; it was there all last summer.

Q. How much is there of that there?—A. Well, there is quite a pile. There are several tons.

Q. Do you mean to say that after they used all they wanted in the vessel there is a pile of live-oak left there now?—A. Yes, sir.

Q. How much?—A. There are several tons there hauled up. I would like for the committee to visit East Boston.

Q. Do you know of Mr. McKay offering to sell any of that live-oak?—A. No, sir.

Q. Do you know of Simon McKay in this yard offering to sell live-oak to anybody?—A. No, sir.

Q. Do you know anything about any of the tools of the Government being outside of this yard anywhere?—A. Yes, sir; there were several tools, a considerable amount, hauled up from the Atlantic Works at the time, and stored in the lobby there. The Atlantic Works is where the Adams was built. They were Government tools. They were hauled from the Atlantic Works to the lobby of the yard. These tools are up there now, belonging to the Government, unless they have been taken away very recently. I could not tell you how many there are, but there are a good many.

Q. Have you any idea what their value is?—A. No, sir; but I could tell you what they are. There are clamp-screws, jack-screws, corner-screws, ring-bolts, blocks, and falls. They were taken out of here. I understood that they were borrowed at the time when they went out of the yard, and that they were to be returned.

Q. How long is it since Mr. McKay has had any necessity for those tools?—A. He has had no necessity for them since the Adams was launched.

Q. Do you remember when that was?—A. That was a year ago last September.

By Mr. HARRIS:

Q. Do you know of the foreman of Mr. McKay offering to sell any of the timber or lumber?—A. I don't know of my own personal knowledge, but have heard of it.

Q. What person knows it, in your judgment?—A. Mr. Simon McKay knows it; he is here in the yard.

Q. Anybody else?—A. No person that I could place.

Q. Do you know of the Government having to make tools when they needed them in consequence of these tools having been taken away?—A. I know what the blacksmith says he had to do. He says that there were so many tools taken out of the yard—such as double-headers and fire-tools—that when they called men in to work on the Vandalia he had to make tools before he could set his men to work. I think his name is Samuel Dwight.

Q. Is he the head blacksmith?—A. Yes, sir; he is the head man—the foreman.

Q. Do you know of any other property of the Government that is outside of this yard that belongs in here?—A. No, sir; I don't know of any other property. By the way, you might just as well call your boss-painter here.

Q. Do you know how much lumber was taken from the yard by Mr. McKay to finish the Adams?—A. No, sir; I could not give you the number, neither by tons nor by feet; but, in my judgment, I should think there would be 50,000 feet of different kinds of white-pine lumber.

Q. Do you know whether or not that lumber was charged to Mr. McKay here in the yard?—A. Not of my personal knowledge.

Q. What is your relation to this yard?—A. My relation to this yard is nothing, only that I, as mechanic, have worked in this yard once about eleven months, and once about two.

Q. Do you know of any other abuse in the Navy?—A. No; not of my own personal knowledge.

Q. Do you know of anybody giving or receiving anything for the obtaining of office in the Navy—any position here as clerk, laborer, or writer?—A. No, sir; I do not.

Q. Do you know of any assessments put on men for political purposes—requiring men to pay certain amounts of money to carry on political campaigns in the interest of particular persons?—A. No, sir; I do not.

Q. Were you employed here during the Gooch-Banks campaign?—A. No, sir. I was not one of those fortunate ones. I could not get in. They would not give me a sight.

Q. Did you make any efforts to get in?—A. Yes, sir.

Q. To whom did you apply?—A. I applied to Mr. Hichborn twice. He promised to give me a job, but failed to do so the first time. The second time I came to him and asked him if I could get into the yard. He told me that he had looked at my name several times and passed it by, not knowing whether I was at home or at work; consequently, I could not get on.

Q. Did you make any application to Mr. Gooch or Mr. Banks to get on?—A. No, sir. I am not in their district; but if I had been I should not go there. If I cannot get in on my own merit I will not get in in any other way.

Q. Do you know of anybody who did?—A. No, sir. I could not put my hands on the name of anybody; but there is a good deal of talk about it.

Q. You don't know of any person that has bought any of this live-oak timber that you are speaking of?—A. No, sir.

Q. You don't know of any of that timber that has been sold by anybody?—A. I do not.

Q. Have you any knowledge that any labor was done at the Government expense on the Butler yacht?—A. It has been talked so; but I have no knowledge about it.

Q. From whom have you received the information?—A. That is the information of the mechanics generally, as we would talk among ourselves, as a matter of conjecture.

Q. Is it not a mere matter of conjecture?—A. I would say that it is so far as I am concerned.

Q. You don't know of anybody whom we can call to prove it?—A. I do not.

Q. Do you know of any mechanics who worked upon that yacht who got their pay from the yard?—A. No, sir; but I know of mechanics who worked on the sloop who got their pay from the yard while Mr. McKay was molding out the frame.

Q. The matter I wanted to confine your attention to was the Butler yacht; whether you know of any person who received any pay for services on that yacht from officers of the Government?—A. No, sir; I do not.

Q. Have you any information on that subject?—A. Nothing reliable.

Q. You know of nobody who has that information?—A. No, sir; I do not.

Q. I suppose a great many rumors arise in the yard which are mere matters of conjecture: rumors among the workmen?—A. Yes, sir. But if a man follows up suggestions, and makes inquiries, and ferrets out, he is apt to get hold of something.

Q. You have not done that thing?—A. No, sir; I have not done that thing.

WASHINGTON, D. C., *February* 23, 1876.

JOSEPH MCFARLAND sworn and examined.

By the CHAIRMAN:

Q. You were clerk of the Naval Committee of the House of Representatives during the Forty-third Congress, were you not?—A. For the first session; not for the second.

Q. Did you not act as clerk for a part of the second session?—A. No, sir; Mr. Alden was the clerk then, I believe.

By Mr. BURLEIGH:

Q. Were you not changed some time during the session?—A. No, sir; I was clerk of the District of Columbia Committee the last session. Mr. Alden was here at the beginning of the session. He was brought here by Judge Scofield, I believe. In fact Judge Scofield notified me at the close of the first session that he would have Mr. Alden here.

By the CHAIRMAN:

Q. Do you remember at any time there being in your custody, as clerk of the Naval Committee, some etters or lcommunications from a gentleman by the name of Griffiths?—A. Yes; there were such letters.

Q. Do you know what became of such letters?—A. Yes; they were returned to Mr. Griffiths, in Brooklyn. I think he resides in Brooklyn, or somewhere in New York State.

Q. By whose order were they returned to Mr. Griffiths?—A. Judge Scofield's. I will state here that Judge Scofield told me that he had received a letter from Mr. Griffiths, withdrawing all the charges he had made in those letters. I think there were two communications, and in one of them he asked that the letters be returned to him. Judge Scofield directed me to get the letters and return them, which I did. He gave me Mr. Griffiths' address, but I forget it now.

Q. Did you make any record of the action of the committee in regard to those letters?—A. No, sir. Do you mean about returning them?

The CHAIRMAN. Yes.

The WITNESS. No, sir; because I did not act after that time. There was a record of the committee, I think. You remember those letters were submitted to the committee one session. I think that was the only record I made of them.

Mr. BURLEIGH. I think there was but one letter submitted to the committee; a long letter.

The WITNESS. I think there were two letters, but I will not be certain.

By the CHAIRMAN:

Q. You do not know what became of the record of the committee during the period for which you were clerk?—A. No, sir; I presume it was turned in to the clerk's office at the

close of the session, with all the papers of the committee. That is the general rule. I believe, to turn everything from the committee-room to the files-office. I think everything went in there, including the minute-book; but I am not certain.

By Mr. BURLEIGH:

Q. Did you not hear that that record was missing at the commencement of the second session?—A. No, sir; I knew those papers were not here because I had returned them.

Q. Did you not know that the record relating to that matter was not to be found?

The WITNESS. You mean in relation to the returning of the papers?

Mr. BURLEIGH. In relation to the action of the committee when the letter was submitted to it.

A. No; I did not know that.

By the CHAIRMAN:

Q. Have you any knowledge in reference to the disappearance of the record of the committee?—A. I have not.

Q. Did you take any copies of these letters?—A. No, sir.

Q. Are you able now, from your recollection, to state the contents or the substance of them?—A. I can, generally. I can tell you to what they related. They related to charges against Mr. Hanscom, chief of the Bureau of Construction and Repair in the Navy Department, and his brother, William Hanscom, I think. The details I have forgotten. I did not charge myself with the matter.

Q. Don't you recollect that there was a charge made of $5,000 being paid to them for their influence in purchasing a bending-machine?—A. I recollect about that bending-machine; but as to the amount of money I do not recollect.

Mr. BURLEIGH. I do not believe that he said that he had himself paid this money; I think he said he knew of it. I think it was his father that he said had paid that money.

By the CHAIRMAN:

Q. That is your only recollection as to the general purport of the letter?—A. Yes; I did not charge myself with it at the time, but I remember that it related to the Hanscoms.

By Mr. BURLEIGH:

Q. Do you remember a charge of the acceptance of wines and cigars, &c.?—A. I cannot say, now; I recollect that there was a general charge of bribery and corruption on the part of the Hanscoms. As to the details, I do not remember, except the bending-machine.

Q. You recollect that that letter was submitted to the committee?—A. Yes, sir.

Q. Do you recollect that instructions were given by the committee to the chairman or the clerk, to write to the man and get a statement from him under oath, or to appear in person?—A. Yes, sir.

Q. That was the action of the committee, was it not?—A. Yes, it was; I recollect that, distinctly. I wrote the letter and Judge Scofield signed it as chairman of the committee.

By the CHAIRMAN:

Q. Do you know, or have you information reliable enough in its character to furnish the committee showing any fraud or abuse connected with the naval service?—A. No, sir; I know nothing of my own personal knowledge; nothing except what I see in the newspapers.

Q. You know of no party who has, or pretends to have, information or knowledge of any fraud or abuse?—A. No, sir: I know of no one.

Q. Do you know of any agents or attorneys, or go-betweens, between contractors and the Navy Department or any of its bureaus?—A. I do not.

Q. While you were clerk of the committee you gave no party access to your books or papers?—A. No, sir; not while I kept them, except to such gentlemen as might be authorized by the committee.

Mr. BURLEIGH. If you refresh your memory you will remember that I asked you about that record when I came back.

The WITNESS. You did; I remember that.

Mr. BURLEIGH. You said you left it in the committee-room.

The WITNESS. I did.

Mr. BURLEIGH. You knew that the record was missing?

The WITNESS. Yes; I understood it was missing. I think you were the first person I spoke to about it.

Mr. BURLEIGH. I went to look it up, and I never found where it was; and it is not to be found now.

The WITNESS. I think the first I knew about the record being missing was when you spoke to me.

By the CHAIRMAN:

Q. Do you know, in the management of the Navy Department, whether any favoritism as been exhibited to any class of persons? If so, to whom?—A. I do not.

By Mr. BURLEIGH:

Q. Do you remember what Judge Scofield said to you when he asked you to return the papers to Mr. Griffiths?—A. He had a letter from this man Griffiths, which he showed me, the substance of which I have already stated, that he had taken back all he said in those communications, and that now he would like to have his letters returned. Judge Scofield remarked that he supposed, from what he had heard about him, that this man was a crazy sort of man and that not much reliance was to be placed upon his statement, and that he thought it would be well to return the letters, and he asked me to do so.

Q. Did not you suppose at that time that the letters belonged to the committee?—A. Well, yes; as a matter of course they were among the records of the committee; but I acted by command of the chairman, and I supposed that fact covered me, so far as I was concerned.

Q. You say Judge Scofield wrote the letter asking for the charges under oath, or that he should appear in person. Did this man answer that letter, that you know of?—A. Yes; he did answer that letter.

Q. Did he make the charges and swear to them?—A. No, sir; he did not. The second letter was very short and to the effect that he did not think he could get justice if he came here. That was the gist of his letter. That letter constituted the second communication I spoke of. The third communication that Judge Scofield received was a taking back of everything he had said, and asking to have his letters returned to him.

BOSTON, *March* 24, 1876.

JAMES L. TOWNSEND sworn and examined.

By Mr. BURLEIGH:

Question. You are a ship-builder, I believe?—Answer. Yes, sir.

Q. Have you built many ships in the vicinity of Boston?—A. Yes, sir; some seventy-six, I think.

Q. Three masted-vessels?—A. Yes, sir; ships and schooners; mostly ships.

Q. Did you bid on these sloops of war?—A. No, sir.

Q. Did you ever do any Government work?—A. I built a cutter for the Government.

Q. Did you get a fair price for building her?—A. Yes, sir.

Q. Was there any trouble between you and the Government in regard to building her? A. Not any.

Q. Why did you not bid on these sloops of war?—A. I had business enough at the time, and had not the time to do it, I thought, within the time required.

Q. Is it usual in Boston to contract for building the hull and spars of a ship?—A. Yes, sir.

Q. What does building the hull and spars of a ship include in the absence of any specifications? Does it include the cabin and the house on deck?—A. The "hull and spars" in Boston includes cabin and houses on deck; everything appertaining to the hull and spars, complete, ready for the crew to go on board.

Q. Sheaved?—A. Yes, sir.

Q. How many coats of paint on the spars and on the hull?—A. Two, commonly; but sometimes three.

Q. Would you build any boats under that contract?—A. No, sir; not unless they were specified.

Q. Would you put any furniture in the cabin?—A. No, sir.

Q. If you built the hull and spars complete would you build the bowsprit, and put the bowsprit cap on the bowsprit and put the bowsprit in its proper place?—A. Yes, sir. There is an exception to that rule; but the rule that I have always followed was to finish the spars complete, bowsprit and all.

Q. Under that rule, furnishing the spars complete and the material complete, would there be anything to do to the hull to finish it for sea?—A. Not anything.

Q. Would all the eye-bolts, chain-bolts, chain-channels, and all of those things—everything that was fastened to the hull—be all in, ready to receive the rigging?—A. I understand it so.

Q. When the masts were in, her rigging on and set up, sails bent, stores and provisions on board, the crew there, the charts, &c., she would be all ready to go to sea, would she not?—A. Yes, sir.

Q. Would there be anything to be done to the hull that you would not be obliged to do? —A. Nothing to the hull, under a contract to build the hull and spars.

Q. You would finish the cabin ready to receive the furniture?—A. Yes, sir.

Q. And the crew's quarters?—A. Yes, sir.

Q. How much could a ship of that kind be built for to-day, or any time during the last three years, of white-oak frame and knees, perhaps some hackmatack, yellow-pine beams, yellow-pine ceiling throughout, yellow-pine planking, all good material, well fastened in every way, such a ship as would class A No. 1 at Lloyd's for eleven years? What could such a ship be built for per ton?—A. From $60 to $63 per ton.

Q. How much could she be built for and fitted ready for sea, rigging, sails, and all?—A. $85 to $90.

Q. If you were going to build such a ship any time during the last three or four, five or six years, which would you prefer for the frame, naturally-bent timber or timber bent by a machine?—A. The natural timber.

Q. What objection have you to machine-bent timber?—A. So far as my knowledge extends, I have never seen any that was perfect.

Q. Have you seen any of this bent timber after it has been bent in the machine?—A. Yes, sir.

Q. What do you mean when you say that it is not perfect after it is bent in the machine?—A. There is too much strain upon the fiber of the wood. It shows a deficiency; the fibers are drawn or compressed.

Q. You think that weakens the timber?—A. I should think if it destroyed any part of the timber it would have a tendency to weaken it.

Q. Does it destroy any part of the timber?—A. That which I have seen has been.

Q. Have you been over to see the mill at the yard and seen any timber bent by that machine?—A. I never saw it in process of bending, but I have seen the timber after it has been bent.

Q. Have you ever seen any of those knees that have been bent by that process?—A. Yes, sir.

Q. Do you consider them as good as a natural knee?—A. I do not.

Q. I suppose you know that there was one ship built here of timber bent in that way?—A. Yes, sir.

Q. Do you know how that ship wore?—A. I have no knowledge, only by hearsay.

Q. Was your hearsay from what you considered good authority?—A. Practical men; remarks made by practical men.

Q. What have you heard?—A. That she required calking often; the calking did not hold.

Q. To what do you attribute that?—A. Well, a general weakness.

Q. The rigidity of the timber not there, is that what you mean?—A. The rigidity of the timber not there—not keeping in place—that would be one cause. Of course there are various causes why oakum don't hold. It may be in the shrinkage of it, but, as a rule, I should think in this case it was want of rigidity.

Q. Would the ship work more?—A. I should think so.

Q. And in working it would loosen the calking?—A. Yes, sir.

By Mr. HARRIS:

Q. Is she afloat now?—A. I think she is.

Q. Do you know anything about how she was classed for ten or eleven years?—A. I think she was not classed at the French Lloyds.

Q. Do you mean to say they would not class her?—A. They would not class her. The objection was that it was an experiment, and consequently they did not wish to take any risk. It was something new, and did not come within their rule. They had no rule by which to govern themselves.

Q. Not having seen that timber-machine work, you do not know the process through which they put the timber before it is bent?—A. Generally I do. I have seen the preparations for that purpose—steaming to a very high degree.

Q. Do you think that steaming to a very high degree has any injurious effect on the wood?—A. No, sir; I would not say that it would destroy the wood. I have no practical knowledge as to its durability after going through that process.

Q. Do you think the knees as well as the frame would be less rigid made under that process than a natural knee would be?—A I think that they would be.

Q. Do you know of any of the knees or timber bent in this machine being put in any other ship except the New Era?—A. No, sir; not recently. I understand that there was a ship built here in East Boston that had them in, but she did not prove a success. I think she was built by Boole.

Q. How many years ago was that?—A. The knees were bent by a machine in the Brooklyn navy-yard before I heard of this machine. I don't know of any other.

Q. Did they have to take them out, or what do you mean?—A. I understood that they decayed.

Q. From what cause?—A. That I cannot say. According to my experience in timber, we have to steam a part of the planks that go on our merchant-ships. It makes them more brittle. There is not that elasticity when they become cold that there is in wood in its natural state.

By Mr. HARRIS:

Q. Supposing you had to build the hull and spars of two ships in your own yard, having entire control of both, one to be built to comply with the specifications usually required in war-ships and the other to be built as a merchant-ship, can you inform the committee what would be the probable difference in the cost of the two?—A. Live-oak is a material that is

used but very little for ships in the merchant-service. The difference on the hull and spars might be twenty-five per cent. The difference comes in with the variety and quantity that is put on board a man-of-war rather than in the merchant-service. Of course the style of constructing a war-ship is very different from what it is with merchant-vessels. The outside planking must be fastened with copper rather than tree-nails, which enhances the cost very much. It would hardly be practicable to compare the construction of a merchant-ship with the construction of a war-vessel.

Q. In the hands of the same man, would not a war-vessel cost twice as much as a merchant-ship?—A. No, sir; I think not.

Q. Well, what do you think would be the probable difference?—A. Probably 50 per cent. more; one-half more.

By Mr. MILLS:

Q. What would it be worth to build a man-of-war of 615 tons, 185 feet long, 35 feet wide, and 16½ inches deep, the frame to be of live-oak, the timber white oak and pine, and coppered?—A. That is a pretty difficult problem to answer without having the specifications to work from.

Q. Built just as you, as a ship-builder, know men-of-war are built, with all their finish and everything complete. What could such a vessel be built for complete, ready to receive her crew and go to sea, leaving out her engines?—A. That is almost too wide a range.

Q. I take it for granted that a man who has built 70 or 80 vessels can form a judgment upon that —A. That is too wide. It is too much range.

By Mr. BURLEIGH:

Q. Provided the Government would get out the frame of live-oak to the molds and plane it, what would you furnish all the material to build the hull and spars of a ship of war of these dimensions, 185 feet long, 35 feet wide, and 16½ feet deep, about 1,000 tons, new measurement, plank her inside with yellow pine and outside with white oak, fasten her in the usual way for a merchant-ship, put in the cabin, bulk-heads, wheel, capstan, and all those things that belong to the hull; what would you build such a vessel for?—A. That would fall under the same general answer. I believe I once stated 50 per cent. more.

Q. Do you take into consideration that you do not furnish the frame at all?—A. No; the labor is very much greater in the construction of war-vessels with iron straps, which are not common in merchant-vessels, and the cutting of the planking over the straps. The process of working the material is quite different, as you can readily see, and the stuff has to be handled over two or three times. I think the statement I made, 50 per cent. more, would be under rather than over.

By Mr. HARRIS:

Q. What do you say about the bending-machine, as far as you have observed it?—A. I should not want to take any stock in it myself.

Q. All you can say about it is, after it has bent the timber, the timber is very much the worse for it?—A. All that I have seen.

By Mr. BURLEIGH:

Q. Did you know of any other bending-machine than this one?—A. I know of one that was used in the city of Brooklyn or Williamsburgh.

Q. How many years ago?—A. I think it must be twenty years ago.

Q. Do you know of any work that that bending-machine did?—A. I have seen knees bent by it as a sample of what the machine would do.

Q. Were the knees in the ship you spoke of bent by that machine?—A. I understood so.

Q. Did they decay more than ten years ago, or how long ago?—A. I should think it was ten years ago.

Q. That the knees were decayed?—A. Yes, sir; I so understood.

Q. Was that the general opinion among ship-builders here?—A. How far others had knowledge of it I can't say; but the general opinion of it was that it did not work well.

Q. Was that the general opinion among ship-builders, that it did not work well?—A. Yes, sir.

By Mr. JONES:

Q. Provided there were certain parties who owned a bending-machine, such as the Government now own in that yard, and they were anxious to sell that machine to the Government for ship-building purposes, and the Government should select you, with others, as a board to decide upon its merits, I will ask you if you would recommend the Government to buy that machine with the purpose of making it useful in ship-building?—A. With what knowledge I have of the machine, I should not.

By Mr. HARRIS:

Q. State whether or not, from what knowledge you have of the machine, you think it a very successful piece of mechanism for destroying good timber?—A. You are pressing this thing pretty hard, gentlemen.

Q. Well, injuring good timber.—A. There is a limit to the machine, up to which point it might be made useful; but for general, practical work that limit of usefulness is easily obtained in the natural timber. It could be used for making slight curves from straight timber; but there is not enough of that kind of timber required to incur the cost of getting up a machine.

Q. Then, if you had ship-building enough to do which required a great deal of bending for the light curves, this machine would have usefulness?—A. I don't think it would pay for one yard, for the purposes of the most extensive ship-building establishment that we have in the United States. I don't think it would be useful, and I don't think it would pay.

Q. But where you can use it to convert straight timber into curved, you save money in the timber?—A. I think it is practicable, to a slight extent.

Q. You say it would save timber in such cases?—A. It would save a small amount.

Q. It would save labor also, would it not?—A. Not much.

Q. It would cost as much to prepare it in the bending-machine as it would to work it to shape in the usual way?—A. I think it would.

By Mr. JONES:

Q. You would not think it prudent for the Government to pay $160,000 for such a machine, would you?—A. I shall answer that as I did before. I did not take any stock in it, nor advise my friends to do so.

By Mr. MILLS:

Q. And you regard the Government as a friend?—A. Certainly I do. I was consulted by some friends with regard to going in to help carry the thing on, and I could not advise them to do it. I have not seen anything to alter my opinion since.

BOSTON, *March* 24, 1876.

WILLIAM F. LEIGHTON sworn and examined.

By Mr. JONES:

Question. You are a carpenter in the United States Navy?—Answer. Yes, sir.

Q. How long have you been?—A. Twenty-seven years.

Q. How long have you been stationed at this yard?—A. I was stationed at this yard in 1870-'71.

Q. Where are you now?—A. On board the Wabash.

Q. Were you ordered on a board of survey in 1871-'72?—A. I was ordered on a board of survey in 1871-'72 by Admiral Steedman, of this yard.

Q. Of whom did that board consist?—A. Lieutenant Walker, Ensign Gove, and myself.

Q. That survey was ordered by the equipment department, was it not?—A. Yes, sir.

Q. Did you perform that duty?—A. I did, sir.

Q. Do the different departments keep books, so that they can tell at any time what they have on hand?—A. Yes, sir; it is supposed that they do.

Q. Did the investigation agree with the books?—A. No, sir.

Q. Please name in what particulars they did not agree.—A. We had nothing to do with the books. I went through the whole equipment department with Mr. Walker; in fact, the heft of it rested on me. I weighed all the hemp there was in the department. I had fourteen men with me, and I weighed all the hemp myself. I took the account and made my returns to the chairman of the committee every night. After I got through weighing the hemp, Lieutenant-Commander Walker came to me and wanted to know if I was sure I weighed correctly. I told him I was sure. "Well," says he, "your figures don't agree with the books by 20 tons. There are 20 tons more on the books than you have account for." I told him that I was satisfied that I had weighed the hemp correctly. I did not think it would vary half a ton. There will be a little waste in taking hemp down and putting it on the scales.

Q. You weighed and took account of everything?—A. I weighed and took the figures myself. We weighed everything in the equipment department, where it was necessary.

Q. Was there anything else found deficient?—A. There was a deficiency found in the canvas. We took the figures from the bolts of canvas, and all the canvas that had been cut, we measured with a yard-stick. Mr. Walker said, "There is something wrong, Mr. Leighton; there are 15,000 yards of canvas missing" I told him I didn't think I had made any mistake. He said, "You are satisfied you have made no mistake?" I said, "I am satisfied." I told him then if I was to be put on oath I could swear that I had taken the amount of hemp and canvas correctly. The manila held out according to their books.

Q. Did all the other material agree with their books?—A. No, sir; a great many things fell short.

Q. Do you know any of the other things?—A. No; I cannot remember. I kept no minutes of anything. I passed them over to the chairman every night.

Q. You have no minutes of that survey?—A. None at all.

Q. Were you sent for last fall to go to the commandant's office?—A. Yes, sir; they sent down for me to come up to the commandant's office, and I went up.

Q. What for?—A. They wanted to know if I could give them any information in regard to the survey in the equipment department. I told them I had no minutes. They found the order where I was ordered on the survey, and Mr. Hudson, the commandant's secretary, informed me that Captain Luce would like to see me.

Q. What conversation did you have with Captain Luce in regard to it?—A. He wanted to know when I was on the survey, and I gave him the date and a history of our proceedings. I gave him a history of the hemp that was supposed to be missing, and the canvas. He says, "Mr. Leighton, we are holding a survey, and I am very much worried; I feel alarmed; there are a great many things missing, and I do not want to be held responsible for other people's thefts." I told him there was probably a copy of our report here, but they could not find any report, and I think Mr. Hudson told me that they had sent on to Washington, and their copy of the original report was sent on to the yard.

Q. Did you ever understand in any way that they wanted them to balance their books so that they would agree with the report of the survey?—A. I did. I understood that according to the last report that was made there was about the same amount missing, and the order was given to make the books correspond with that report.

Q. Who told you that?—A. I cannot tell you who it was.

Q. Did any one propose to you to make the report conform to the books?—A. Not that I know of. I don't know what orders the commodore received.

Q. Can't you tell the committee who it was that gave you the information that such was the desire?—A. I think, (I don't like to say certain,) that John Griffin told me. I think he told me that the order from the Department was to make the report agree with the books in the yard—the order from the department—he did not say what department.

Q. The department in the navy-yard or at Washington?—A. At Washington.

By Mr. HARRIS:

Q. Would not that be right?—A. I should not suppose it would.

Q. Suppose you were appointed at the head of the equipment department, and you knew or felt that you did not have in your hands all that apparently belonged to the department, and you called a board of survey, and that board of survey made a careful estimate of all the property in that department, would you not insist, if you were that officer, that you should be charged with no more than was found on hand?—A. I should, because I should not want to pay for it.

Q. So far as Captain Luce was concerned, if the loss did not occur during his administration, it would be right to charge him only with what the survey reported, would it not?—A. It would be hardly right to make Captain Luce pay for it.

Q. Would it not be right to charge him with the amount on hand, and then seek the parties who had made default before?—A. Yes, sir; but I believe most of the parties are dead.

Q. Were you ever asked by anybody in authority to make a report contrary to the facts you found?—A. O, no, sir; we made our report conform to the stock we found.

Q. Were you ever asked to make the report conform to the books?—A. No, sir.

By Mr. MILLS:

Q. You did not understand, then, from Mr. Griffin, that orders came from the Department to make the report conform to the entries on the books?—A. O, no, sir; to make the books correspond with the report. That is as much as to say, "Make a new set of books."

By Mr. HARRIS:

Q. Then you were not asked, nor was the suggestion made to you, to make any report of facts which was not absolutely correct?—A. O, no, sir.

Q. And you did make your report just according to the truth?—A. Yes, sir.

By Mr. MILLS:

Q. Who was the officer in charge of the equipment department at that time?—A. Captain Spicer.

Q. Who was the officer who would receive these articles and put them on the books?—A. I don't know that I can tell who the receiving-officer was.

Q. Didn't you report on that matter? When you found a deficiency didn't you report by whom the articles that were deficient should have been received?—A. I don't know; I guess not.

Q. You reported the deficiency?—A. O, yes, sir.

Q. Do you know whether the officer was still retained here, after that report was made, who had charge of entering those articles and charging them on the books?—A. I cannot tell that. I recollect I said to Captain Luce that there was a young man who was employed in the equipment department, when he took account of stock, who could give him more

information about the books than I could. That young man was sent for. I don't know whether he is employed there now or not. I don't know his name.

Q. What was the value of those articles that fell short?—A. I can't tell; probably the hemp was purchased in war-time, when it was very high.

By Mr. HARRIS:

Q. As I understand, there were twenty tons of hemp missing?—A. Somewhere about twenty tons of hemp, and about 15,000 yards of canvas.

Q. What was that canvas worth?—A. It was pretty high during our trouble. It was all bought, probably, at a very high price.

Q. I want to know whether you can give any information as to how long this deficiency had probably existed.—A. No, sir.

Q. Did you learn how long it had been since the last survey was made?—A. No, sir.

Q. You don't know whether this deficiency was the result of twenty years or not?—A. I can't tell.

Q. Did you get any information upon which you could rely, from which you concluded that the incumbent before Captain Luce was responsible?—A. No, sir.

By Mr. JONES:

Q. You know that this deficiency was before Captain Luce?—A. O, yes, sir.

Q. Then the subsequent conversation you had with Captain Luce was long since?—A. It was last fall. They took account of stock last fall.

Q. Do you know how that corresponded with your former report?—A. I can't say. I know Captain Luce told me there was trouble—there was a deficiency there, and he wanted the thing made right.

By Mr. HARRIS:

Q. So far as you know, the result of your report was not carried on to the books at the time you made it?—A. I know nothing about that. I know the report was sent to Washington.

BOSTON, *March* 24, 1876.

EDWARD T. LORING sworn and examined.

By Mr. MILLS:

Question. Do you know anything about any Government lumber being in the hands of Mr. Donald McKay for the purpose of building vessels?—Answer. Yes, sir; I know there was some they said was in his hands.

Q. Did anybody ever offer to sell you any of that lumber?—A. Yes, sir.

Q. Who?—A. Mr. McKay's son offered to sell me some live-oak timber.

Q. At how much?—A. Four cents a foot.

Q. What was his son's name?—A. I think it was Cornelius.

Q. Do you know what the price of live-oak is?—A. I don't.

Q. Don't you consider four cents a foot very cheap?—A. I don't know. I have never bought any by the foot.

Q. Did he offer to sell it to you?—A. Yes, sir.

Q. What measure do you mean?—A. I suppose board-measure.

Q. Live-oak, was it?—A. Yes, sir.

Q. Do you understand that it was four cents a foot, like any other plank, board-measure?—A. Yes, sir; that is what I understood.

Q. Did you ever see any live-oak offered for sale in that way?—A. No, sir; I don't know that I ever did; but they sell plank in that way.

Q. Live-oak is never made into plank, is it?—A. No, sir; I asked him if he would sell me some and he said he would, and I went around and selected it, and he marked it for me, and then he called Mr. Hersey to set the price on it, and he set four cents a foot. I told him I could not afford to give it, and I didn't take it.

Q. What did you want of the live-oak?—A. I wanted to make calking-beetles.

Q. Could you get it any cheaper than that anywhere else?—A. Yes, sir; I think I could. I never bought it by the foot; I always bought it by the lump.

Q. How much could you get it for when you bought it by the lump?—A. I don't think I ever gave half of that.

Q. Where was this live-oak that they offered to sell you?—A. It was down at the Atlantic Works, where he built the sloop-of-war.

Q. When was that?—A. It was soon after the launch, when he was clearing up the yard.

Q. How much live-oak did he have there?—A. Well, he had a good deal.

Q. How much is "a good deal?"—A. I didn't take particular notice, because I had no reason to.

Q. By such notice as you did take, what did you estimate the amount to be in the yard

—A. I ain't much booked up in telling the number of feet. There might be a dozen horse-loads.

Q. How much is a horse-load?—A. I cannot tell how many feet. I can tell you where there is a lot of it now, and a lot of other stuff belonging to the navy-yard; I should think enough to load a schooner of a hundred tons, certain.

Q. Where is that?—A. That is in East Boston, down near Chelsea Bridge.

Q. Whose house is it in?—A. It is in an open lot; in a yard.

Q. Whose yard is it?—A. I don't hardly know whose it is. Taylor, I believe, has it now.

Q. It is not Henry Jones's yard?—A. No, sir. John Taylor has built there, and there is a stone-cutter there now. I don't know hardly who does own the yard. I should think there is enough there to load a schooner of 100 or 150 tons.

By Mr. HARRIS:

Q. Do you know whose lumber it is?—A. I know it was timber that was taken from the yard where he built this sloop of war. There is live-oak and all kinds of stuff there, all kinds of timber and plank.

Q. It is uncut timber?—A. No, some of it has been cut.

Q. Well, it is blocks or pieces?—A. Some in blocks, and some pieces, and some stage-plank, and what there was left.

Q. Why do you say that it belongs to the Government?—A. I have always understood that the Government furnished it.

Q. Didn't you understand that Mr. McKay bought it of the Government?—A. No, sir.

Q. You don't know whether he did or not, do you?—A. No, sir; I don't know the fact.

Q. How much live-oak did you want to buy?—A. I didn't want to buy but a very little, perhaps $10 worth.

Q. Did you want to buy it in whole timber or blocks?—A. Blocks, some of them 4 feet long, some of them 15 feet. I wasn't particular, because I wanted to saw it into pieces about 18 inches.

Q. Then you were seeking to buy some of the remnants there were there?—A. Yes, sir.

Q. And you didn't want over $10 worth?—A. No, sir.

Q. You wouldn't have thought of taking a whole stick of live-oak of the ordinary size?—A. No, sir.

Q. Don't you know that 4 cents a foot would be a fair price for blocks?—A. No, sir. went there when the sloop-of-war was building, and asked his foreman if he would sell me some then, and he said he could not; it had all got to go back to the yard again.

Q. How much did you ever pay for live-oak per foot before?—A. I never bought it by the foot.

Q. Where did you usually get live-oak to make mallets of?—A. I bought it over here in Charlestown of people who bought the wood in the yard. You know they always save such things as those.

Q. That is, you bought the blocks that came out of the navy-yard and were sold to people for fire-wood?—A. Yes, sir.

Q. Was this which you wanted to buy the same kind of stuff?—A. It was larger stuff.

Q. Did you select any stock that was not cut?—A. No, sir.

Q. You selected only pieces of timber?—A. Yes, sir.

Q. They were pieces that would not answer to work into a ship, I suppose, weren't they?—A. They would work up to some use.

Q. Did you select a piece that would answer to go into a ship?—A. Yes, sir; to particular uses; they would not have done to make a ship's frame of.

Q. Do they want live-oak for any other use than for a ship's frame?—A. O, yes; they use a good deal.

Q. Are you a ship-carpenter?—A. No, sir; a calker.

Q. Where are you from?—A. East Boston.

Q. Is that your native place?—A. No, sir; my native place was Duxbury.

By Mr. BURLEIGH:

Q. You say there was some timber, plank, and stuff removed from where this ship was built, to another yard?—A. Yes, sir.

Q. Among the timber that was removed from where the ship was built to this place, where it is now, was there any live-oak?—A. Yes, sir.

Q. Are you sure that that was moved from the yard where the ship was built?—A. Yes, sir; it was moved at the same time I wanted to buy this wood; they had teams moving it.

Q How much live-oak is there there?—A. I never took particular notice; there is quite a lot.

Q. How many horse-loads should you say?—A. I cannot say. There might be half a dozen horse-loads—perhaps more.

Q. I thought you said there were twelve horse-loads lying around of all that was moved?—A. Yes sir.

By Mr. HARRIS:

Q. He was cleaning up all the refuse in the yard?—A. Yes, sir.

By Mr. BURLEIGH:

Q. That was generally short, refuse stuff?—A. I guess the live-oak was, most of it.

By Mr. JONES:

Q. You don't know of any lumber anywhere else except up in this yard?—A. No, sir.

BOSTON, *Friday, March* 24, 1876.

JOSEPH F. PAUL sworn and examined.

By Mr. HARRIS:

Question. You are now a large dealer in lumber here, or have charge of a large business?—Answer. I am the largest retail dealer there is in the State, I guess.

Q. What is the firm?—A. It is J. F. Paul & Sons now.

Q. What has been the price of spruce lumber—we will say spruce boards—irregular in length—eastern spruce—good, sound spruce boards?—A. Well, they have ranged this last season from 13 to 15 for 1's and 2's, and two-third price for what we call "outs." I am speaking now of 1875. In 1874 they ranged from 15 to 17. I am speaking of the cargo, not retail prices. They retailed last year from 16 to 17, for what we call the best boards; but what we call "outs" goes in with the coarse boards. Our "clears" are selected out to sell for "clears." We find the "clears" among the ones and twos; that makes the extra price. We sell what we call the "outs" at the same rates; they mix them in with the others.

Q. You are speaking now of as good boards as come into the market?—A. Yes, sir; just the regular boards sold here in the market.

Q. Do you know anything about one John Trickey?—A. Yes, sir.

Q. Do you sell him boards?—A. We have never sold him any, of any consequence.

Q. You don't know of furnishing him any which he supplies to the navy-yard?—A. No, sir.

Q. Now, what would be the price of white-oak boards, inch thick?—A. The prices are various on those now; I have paid about $45 to $50, and I have paid $60; all I buy is finishing lumber. I think what they use in the yard, of oak, is of the coarse quality; I think that what they call pasture-oak, used for cart-bodies, is $45 a thousand—what we call round A's.

Q. Would you furnish 5,000 feet at $45?—A. No, sir; I think I should want $5 to $7 more than that; there is a good deal of waste. I should want about $50 a thousand, if the order was for 5,000 feet.

Q. And that would be a fair price?—A. Yes, sir.

Q. Now, suppose you were called upon to furnish 25,000 feet of pine lumber, pine timber, that would square 14 inches, good nice handsome square timber, fit for the capping of wharves, sixteen feet in length?—A. Well, I should say that that sized lumber would cost about $28.

Q. Would you say $40 was an extravagant price?—A. Well, I should say that it was. I have bought the finest of timber for the South Boston bridge, and the length is what makes it cost. I had some of that 60 feet long; that I paid $38 for, and the shorter I paid about $28 for; that was as nice pine timber as ever came into this market; it grew in New Hampshire; it is better timber than you get from the East; there is no shake about it.

Q. Now, suppose we increase the dimensions to 16 inches square?—A. I think we had some 14 and 16; we paid $38. When you get up to 25 feet on that timber they increase the price; it takes a big tree to make it.

Q. So that you say what you would call long timber, 14 by 16, would cost $38?—A. More than that; you are getting up to a long size, a solid stick of timber 14 by 16; not so long timber would cost that.

Q. Now, do you know anything about oak plank?—A. I don't deal in that kind of oak plank that you have over there to the navy-yard.

Q. White-oak plank 3 or 4 inches thick?—A. That ranges about the same as 2-inch plank, worth about $40 per thousand. If you get ship-plank you get longer plank; our plank that we used to deal in during the war was different. I deal now in square oak 16 feet long, what would cost $40 a thousand.

Q. What would good, nice pine boards cost 16 feet long?—A. We paid $60 a thousand for them during 1874; they got down to $52 a thousand last fall; to-day we can buy them for $50; I am speaking now of No. 1's and 2's; 3's is $10 a thousand less.

Q. I suppose you are giving us, generally wholesale prices?—A. Yes, sir; that we should sell them for.

Q. What would you sell them for in quantities of 20,000 at a time?—A. Good Michigan pine, I should say to you $58 a thousand, now.

Q. Is the price lower now than for the past year?—A. Yes, sir; six to eight dollars lower than one year ago last spring. The same lumber that I paid $60 for, all through 1874, I have had for $50, and we have bought some at $48, but that is only when you catch it out of market. We don't get more than one "1" to three or four "2's."

Q. Do you know what class of lumber is furnished at the navy-yard for ordinary purposes?—A. Their best lumber there is about the same as I speak of; then they may come down for other purposes as low as $35 or $40.

Q. Why don't you furnish lumber for the Navy?—A. I never was fortunate enough to get in a bid but what somebody beat me. I used to try before the war, but it was my luck in Boston that there was somebody who would bid under me. I found that my time was worth more than all I could get out of it.

By Mr. JONES:

Q. What should you say that eastern pine plank were worth—eastern wharf-plank, 4-inch plank?—A. Well, good nice eastern plank (you mean knotty plank with a little sap on the edge,) I should say about $35 a thousand.

Q. What is black walnut worth, 10,000 feet, 1-inch, 2-inch and 4-inch, of good qualities?—A. Well, perhaps it depends upon who supplies it. I am paying for walnut by the carload $72, but I call it $75. I should charge the Government $85, if they wanted the best. That would be all "1's" and "2's." I am furnishing it for vessels in Halifax and Bath for $85. All the live-oak we ever buy we call sometimes smart-oak, because it is good for particular porposes.

Y. What do you consider inch ash worth?—A. I should consider it to sell worth $50 per thousand, good "1's" and "2's." About white oak, this pasture-oak; we used to buy that because during the war we used to furnish it for everything. I don't know anything about the prices of live-oak. I never dealt in it in my life.

Q. Do you think the city of Boston gets lumber as cheap as you sell to private individuals?—A. I never was able to sell any to the city. It is a wonder to me how a man can sell for less than it costs and make money.

BOSTON, *March* 24, 1876.

WILLIAM H. RIGBY sworn and examined.

By Mr. MILLS:

Question. You are foreman boat-builder in the yard, are you not?—Answer. Suspended foreman, at present.

Q. What do you know about the building of a boat here some time ago for a private individual?—A. I built such a boat.

Q. For whom did you build it?—A. Well, the suspicion was it was for the yacht America.

Q. Who was the owner of that yacht?—A. General Butler.

Q. Who ordered you to build the boat?—A. Mr. Pook, the naval constructor.

Q. Was it built by Government labor?—A. Well, in June, 1874, what they call the second-class foremen in the navy-yard were suspended, and Mr. Pook told me that I might go to work and build this boat. He had spoken to me frequently about it. I told Mr. Pook that as I was suspended, I had no objection to building the boat, but I wouldn't hire any men on my responsibility to build her; if he would guarantee the men's pay, I would hire them in. He told me to hire the men in, although their names were not borne on the rolls for the month. Some few days afterward, there was some work to be performed on a boat belonging to the yard, and he told me to hire some men in the same way, as there wasn't anything to pay them in June and they should get paid in July; so I did so.

Q. Then you hired men?—A. Yes, sir.

Q. And they were paid by the Government?—A. I suppose they were.

Q. Was that boat built out of material belonging to the Government?—A. Material in the yard.

Q. What sort of material?—A. Pine, oak, and cedar.

Q. Any mahogany?—A. Yes, sir; some few pieces.

Q. Very hansomely built, was it?—A. Very handsomely built.

Q. What was about the cost of that boat, material and everything?—A. Probably about $275.

Q. What became of that boat after you got it built?—A. The yacht America came up here to the navy-yard and she was delivered by Mr. Pook to the vessel.

Q. Delivered to the America?—A. Yes, sir.

Q. Who was then the commander of the America?—A. I can't tell you who the captain was. I don't know.

Q. How long had the America been here?—A. She came up here.

Q. The boat was built, and the yacht came here and took it?—A. Yes, sir. I understood that General Butler bought the yacht from the Government—I think she was at West Point at the time, or at the Naval Academy—I am not sure of it, with two boats attached to her, and when he received the yacht there was only one boat, and he applied to the Department for the other boat, and they told him to get one in Boston.

Q. What do you call those little boats?—A. Tenders.

Q. You understood that the yacht was to be delivered to him with two tenders, and he only got one?—A. Yes, sir; he got one with the boat, and then he applied for the other one, and they told him to get it here.

Q. And he did so?—A. Yes, sir.

Q. Who told you that?—A. I won't be certain whether it was Mr. Pook told me, or General Butler himself; but I rather think it was General Butler.

Q. Do you know whether, as a fact, he bought the yacht America from the Government?—A. That was the common report.

Q. What was that yacht worth?—A. I can't tell you; I did not go on board of her but once in my life: I never examined her; I suppose that boat, when she was first built, probably cost $25,000; then, after she was built, she went over to England and was sold in England, and from England she came back into the Confederate States, and was taken there as a prize. The Government recaptured and held her. She wasn't worth more than $5,000 or $6,000 at that time, because she was old and rotten.

Q. Do you know of any other property or material of the Government that has been used for building boats for other persons?—A. No, sir; not for anybody outside of the yard.

Q. Do you know of any boat built for anybody inside the yard?—A. I built a little boat 12 or 13 feet long, by the orders of William L. Hanscom, for general purposes, which is in the yard to day.

Q. Do you know of any material that has gone out of this yard to any person other than persons representing the Government?—A. No, sir.

Q. Do you know of any foreman or officer or employée in this yard, who has made any assessment on the men under him for any purpose?—A. No, sir.

Q. Do you know of any person who has charged the men under him anything for giving them employment?—A. No, sir.

Q. Do you know of any false measurement of lumber?—A. No, sir; that does not come into my line of business at all.

By Mr. JONES:

Q. Are you building the boats for Mr. McKay, for the Adams?—A. No, sir; he built hem by contract. He had them built by contract.

Q. Do you know who is building them?—A. Some parties that I recommended to him; that is, some parties who worked for me in the shop. He wanted me to recommend some men who would do the work in good shape, and that understood Government work, and I recommended the men, and he had the privilege of building them in the yard, in the shop where I store boats. I superintended them for the Government while they were building.

Q. How many were there to be?—A. I believe seven. There was a working-launch, steam-cutter, first and second cutter, whale-boat, gig, and dingy. The steam-cutter is built, as far as it can go at present, without the machinery. The others they call completed. I have not examined them, because I was suspended before they finished the boats, and I took no further interest in them.

Q. How far along is the steam-cutter?—A. She is all planked up, sealed up, and there is nothing to do to her with the exception of putting on the stern-bearing and making the rudder, and, of course, there is always some work when the engineers put in the machinery, but whether that comes under Mr. Kay's contract or not I don't know.

Q. Have you understood she was not to be completed by Mr. McKay?—A. My understanding was that he had nothing to do with the machinery.

Q. How could he build the boats without the machinery for the steam-cutter?—A. He could build the steam-cutter ready for the machinery.

Q. Would it be a steam-cutter without any machinery?—A. She would be a steam-cutter with the exception of the machinery. That is all fitted for the purpose, built for the purpose.

Q. What sort of machinery do they have in a boat of that kind?—A. They put in small machinery. The Government generally furnishes an upright boiler for a boat like that.

Q. Do you know where the yacht America is?—A. She is right down alongside of the wharf in the navy-yard.

Q. Do you know whether she is covered up with Government canvass or not?—A. No, sir, I don't know. She is covered, but I don't know whether she is covered with Government canvass or not. I should think she is covered up by her own covering.

By Mr. MILLS:

Q. Did Donald McKay, at any time, offer you any money, provided you would favor him on his job?—A. Donald McKay did make some little advances to me that way.

Q. State exactly what occurred.—A. Donald McKay had been round Boston and vicinity

to get somebody to build those boats, and couldn't find anybody who could build those boats according to contract that he could trust. He then came to me. I wanted him to deliver the boats up to the Government and let me build them in the shop. I told him I thought it would be cheaper for him to do so, as I had every facility to do it, but he made some objection to that; but he told me that if I would superintend the boats he would make it all right with me. Says I, "Mr. McKay, I am employed by the Government, and I cannot entertain any such idea as that. Anything I can do to advance your interest, without interfering with the Government, I am ready to do it." That is about all that was said either one way or the other.

Q. Did he state what he would give you to "make it all right?"—A. No, sir.

Q. It was your duty to superintend the building of the boats, anyhow, was it not?—A. No, sir; it was not properly my duty. I suppose probably it would be my duty, providing I was authorized to do by the Government. Mr. Easby authorized me to do it afterward.

Q. But at the time Mr. McKay spoke to you, nobody had authorized you to do it?—A. No, sir; I simply superintended in this way, not that I done anything for him, but to see that the work was done properly, just as we would do it.

Q. He came to you and wanted you to build them out of the Government material and with the Government labor, and said that he would make it all right with you?—A. No, sir; he did not make any such proposition to me; he simply, as I understood it, wanted me to take those men and superintend the work for him.

Q. That is, he wanted you to take the Government laborers?—A. No; he hired the Government men I discharged the men from my shop, because my work was drawing to a close, and he hired them. There was no man in the Government employ that done the work. I simply superintended, to see that he did the work right and proper.

By Mr. BURLEIGH:

Q. For him?—A. No, sir; for the Government. Mr. Easby, previous to this, told me he wanted me in the first place to make out a schedule of the work to be done, and how it was to be done, and the size of the material, for Mr. McKay, and then he wanted me to superintend the work and see that it was done according to contract.

By Mr. MILLS:

Q. Why did Donald McKay come to you and ask you to do anything, if it was your duty, by Mr. Easby's orders, to do the same thing, and say he would "make it all right" with you?—A. Mr. McKay didn't ask me, as I know of.

Q. Then why did you think there was anything wrong about it?—A. Well, I think if the Government employs me to do a certain work for them, in the absence of any orders from the Government I have no right to hire my time to anybody else, or do anything that would make it appear that I was receiving anything from Mr. McKay. If I worked or done anything for him, I considered it wrong, when I was at work for the Government.

Q. Donald McKay, after you had received the orders from Mr. Easby to do this work, told you if you would do what the Government had ordered you to do, he would "make it all right" with you?—A. He did not know Mr. Easby had given those orders.

By Mr. BURLEIGH:

Q. Did you, or did you not, take the same supervision of those boats as if you had built them for the Government?—A. Yes, sir; because in the contract he was to be allowed the facilities of the yard.

Y. Did you make any charge to Donald McKay for your time?—A. No, sir.

Q. How much do you get a day?—A. Four dollars and sixty cents.

Q. You did the same by him in building those boats as you would have done ordinarily, if the Government had built the whole of them?—A. Yes, sir.

Q. And made no charge?—A. Made no charge.

Q. Your understanding was that the America was short of one boat?—A. Yes, sir.

Q. Then why did you say you couldn't take the men employed by the Government and build the boat, if a boat was due her?—A. I didn't know the fact at that time. I was not going to hire men, when I was suspended myself, into the shop there on my own responsibility, to simply carry out the request of the constructor.

Q. Who did hire the men?—A. I hired them; but after he gave me assurance that the men should be paid in July.

Q. Paid in July by the Government?—A. Yes, sir; I suppose by the Government.

By Mr. MILLS:

Q, And then you built the boat?—A. Yes, sir.

By Mr. HARRIS:

Q. Who paid for your labor on the Butler boat?—A. Well, as I said in the commencement, in a day or two after I commenced on her, I had to hire men to work on the wharfinger's boat, but as Mr. Pook said they could not be on the rolls, because they wouldn't have any money to pay them until July, I considered myself, as I had four men working on the Government boats, entitled to my pay.

Q. And you got your pay from the Government?—A. Yes, sir.

By Mr. MILLS:

Q. As did all your men, didn't they?—A. I presume they did.

By Mr. HARRIS:

Q. Were you paid by the Government paymaster?—A. Yes, sir.

Q. And all the men were paid by the Government paymaster?—A. That I don't know; I suppose they were.

Q. You had hired the men from the Government under instructions from Mr. Pook?—A. Yes, sir; I had hired the men under Mr. Pook's instructions.

Q. And gave them their certificates showing how much they had worked, and what pay they were entitled to receive?—A. I gave their time to the constructor.

Q. Was the boat that you built here a companion for the one that was on the America?—A. No, sir.

Q. Was it like it?—A. No, sir; I should be very sorry to build a boat like it.

Q. Was it larger or smaller?—A. It was a larger boat. That is, she was probably two feet longer and probably smaller otherwise. It was a different model. There was nothing extraordinary about the boat. The stock she was built out of was stock that would certainly have gone to waste, because she was a very small, light boat, and was built out of odds and ends about the shop.

By Mr. BURLEIGH:

Q. What vessel did those boats belong to which you say you built?—A. To the Adams.

Q. What work did you do on those boats?—A. I did nothing more than to superintend them. I supplied them with molds I had in the shop. They were right alongside my own shop. Of course, I superintended my own work and them at the same time, the same as I have done when I have had both shops running.

Q. Did you understand that you were doing work that Donald McKay ought to have done?—A. No, sir; I did not.

Q. Were you inspecting the work and accepting it as it went on?—A. Yes, sir; that was my business, for the Government.

By Mr. BURLEIGH:

Q. Didn't you plan the work?—A. As I said before, I let them have the molds and draughts. Of course, I planned them, but not for Donald McKay. Those were molds which I had of boats which I had built previously for the Government, and I simply transferred the molds over to them.

Q. I asked you if you did not take the same superintendence of those boats as if they belonged to the Government, and you said yes.—A. Yes, sir.

By Mr. HARRIS:

Q. I want to know whether your instructions were to act as inspector of those boats or as Donald McKay's foreman?—A. No, sir; I was to act as inspector for the Government; I had nothing to do with Donald McKay.

Q. Didn't you understand that the services you rendered, Donald McKay ought to pay for?—A. No, sir; I acted simply as superintendent for the Government, to see that the Government got what they paid for.

Q. Those were the instructions you received from Mr. Easby?—A. Yes, sir.

Q. Had Donald McKay any master boat-builder?—A. He had a man who acted as quarterman in charge of them.

Q. Was he a competent boat-builder?—A. Yes, sir.

Q. Did he work upon the boats himself?—A. Yes, sir.

Q. What did you understand your relation to those boats to be?—A. Well, I understood Mr. Easby that he wanted me to take the general supervision of those boats, and see that the work was done according to Government contract; that they did not slight the boats or put anything into the boats that was not suitable.

Q. Then you understand that you were acting in the interests of the Government?—A. In the interests of the Government.

Q. Did you make Donald McKay build those boats as well as you would have built them yourself for the Government?—A. Up to the time when I was suspended.

Q. Were you suspended before the boats were finished?—A. I was suspended before the boats were finished.

Q. Were you suspended under the general suspension or by special order?—A. Under the general suspension of all the foremen in the yard at the time.

Q. You were not singled out for suspension?—A. No, sir.

By Mr. BURLEIGH:

Q. If the foreman that Donald McKay had there was competent to build the boats, why were you employed?—A. I was employed by the Government at the time.

Q. Donald McKay agreed, as you understood, by his contract to build those boats himself; you understood that?—A. Yes, sir; well, I didn't understand that Donald McKay was to do the work himself. He was to build the boats the same as he built the ship.

Q. For the Government?—A. For the Government.

Q. Now, why were you employed, if he had a competent man to take charge of the building of those boats?—A. Simply because contract-work never comes up to Government work, and it is very necessary, if you are going to have anything done for the Government, to have somebody to see that it is done properly. My idea is, that it is just simply impossible to get a job done by contract for the Government, or for anybody else, that will come up to the Government work.

Q. Do you understand that Mr. McKay had a Government officer over at East Boston to lay out and plan the sloop of war he built there for the Government, and superintend it, and give him the molds, and show him how he should do the work on that ship?—A. I understand that they furnished him the molds.

Q. Do you understand that they were over there, and superintended the work, and told them how they should put it together, and all that?—A. I do, sir; that is, I understand that the constructor had the supervision of that ship.

Q. The constructor that was on the yard?—A. Yes, sir.

Q. The ship was over at East Boston, wasn't it?—A. Yes, sir; the constructor went over to East Boston.

Q. These boats were built right in your shop?—A. Yes, sir; right in my shop or alongside of my shop.

Q. Donald McKay said if you would superintend the building of those boats he would "make it all right" with you, and Mr. Easby told you to take the supervision of those boats, and you did so?—A. Yes, sir.

Q. Because Mr. Easby told you to?—A. Yes, sir.

Q. Not because Mr. Donald McKay asked you to?—A. No, sir; not because he asked me to.

Q. You furnished that foreman and the men Mr. McKay had there all the facilities of your shop to do the work?—A. I had nothing to do with that; it was the constructor who furnished the facilities.

Q. Didn't you have charge of your own shop?—A. Yes, sir, I had charge of my own shop, as far as the shop was concerned, but when Mr. McKay contracted with the Government he was to have the facilities of the yard, and of course Mr. Easby gave Mr. McKay the facilities of the yard. They could come down into my shop and get any tool they wanted and I couldn't say anything.

Q. They came to your benches, came to your lathes, or any part of your shop, to saw or plane anything?—A. Yes, sir.

Q. And you give them the preference, did you?—A. I didn't have anything to do with it; when they wanted any work done, that had to be done.

Q. That had to be done according to order in preference to your own work?—A. No, sir.

Q. Didn't you turn any work aside for them?—A. No, sir; if they wanted the use of the grindstone, and my men were using it, they had to wait until my men got through with it. If they wanted to use any tool that I was using, they had to wait until I got through.

Q. You were inclined to treat them civilly and courteously all the time?—A. I couldn't help myself. No, sir; I probably haven't been so antagonistic to anybody for twenty years as I was to that crowd that built those boats.

Q. Was it any advantage to the Government to have those boats built in your shop?—A. No, sir.

Q. Was it not a detriment, and could you not have inspected the work just as well afterward as while they were building the boats?—A. No, sir; there are a good many things that can be covered up when you put paint and putty on them, and it is very necessary to have somebody as the work progresses to see how it does progress. I would step over there probably half an hour and examine the work and see how it was done, and if it did not suit me, I objected to it.

Q. You said there was never so much contention about anything as there was about building those boats; why was that contention?—A. Because I wanted it done according to the Government contract; done the same as I would do it.

Q. You had no objection to their building the boats in your shop or to taking the supervison of them?—A. I had nothing to do in the matter.

Q. Didn't you have any objection to it?—A. I did strongly object to it.

Q. You thought they might as well build them somewhere else as build them under your supervision?—A. I thought as he was going to take the contract, he might build the boats over in East Boston.

By Mr. MILLS:

Q. Do you know of Donald McKay making the same offer to anybody else that he made to you?—A. No, sir.

Q. Ever hear anybody say so?—A. I never did.

Q. Do you know whether Simon McKay, who was here in the employment of the Government, delivered to him any material for the building of his ship?—A. I know Simon McKay was in the iron-store.

Q. Do you know who appointed him? Through whose influence did he say he got here? —A. I don't know.

Q. Was he on the yard before Mr. McKay got this contract with the Government for building the ship?—A. Yes, sir; he worked on the yard two or three years, I think.

BOSTON, *March* 27, 1876.

WILLIAM H. RIGBY recalled.

By Mr. MILLS:

Question. I want to ask you whether Mr. McKay did not offer you money if you would allow him to use such material as you had prepared?—Answer. No, sir, he did not.

Q. Any material that was bent and sawed ready for work somewhere else?—A. No, sir.

Q. Do you know whether any of the work that was done on the boat for General Butler was charged to the Vandalia or any of the material used on the boat?—A. Nothing was charged to the Vandalia.

Q. Nothing of the work there?—A. No, sir; they were not doing any work on the Vandalia. My gang was all suspended, and I was suspended, among the rest. When those three men were taken in, there was no work doing during that month on the Vandalia when they were at work on General Butler's boat. They were not reported every day, because they were not on the rolls that month. About Mr. McKay's work, I should like to make an explanation. I got the order from the constructor to give Mr. McKay all the molds and specifications, and to show him where to get his stock. Mr. McKay wanted me to facilitate him by giving him those molds, and showing him. I made the molds, and, also, the patterns, for his castings. I picked those out and gave them to him. That is the extent, I understood Mr. McKay wanted me to assist him, which I had got my orders previous from Mr. Easby so to do. Then, again, I would like to state here that about a year ago there was a man came to me, stating that he had taken the job from Mr. McKay to build those boats, a man who knew nothing about boat-building, and I was somewhat surprised. Mr. McKay also accused me of recommending some men to him that were not boat-builders, which I did not do, which caused ill-feeling between Mr. McKay and me. After this man took charge of the boats, the boat-builders he had to work for him found out he did not know anything about the business, and he told them they might take the boats, and he would step out. Then Mr. McKay made a contract with those men to build the boats for so much money.

By Mr. HARRIS:

Q. What money did Mr. McKay offer you?—A. He never offered me any money at all. He said if I would assist him (he was not a boat-builder) he would be willing to do what was right.

Q. But you had your orders before?—A. I had my orders previous to this to deliver to Mr. McKay all molds and patterns connected with the boats, that is, castings, &c.

Q. You never did receive any money from Mr. McKay?—A. Not a cent, either one way or the other, neither directly nor indirectly; and if it was necessary I could furnish proof from all the men that was there that Mr. McKay and me and those who built the boats were antagonistic all the time those boats were building, simply because I wanted him to build the boats according to contract.

Q. Were the boats well built?—A. The boats were very well built; not so well as we should build in the yard, but the boats are well built, probably better built than a good many boats I have seen built in Government yards, for we have the name of building the best boats in this yard of any yard in the country.

By Mr. JONES:

Q. Did Mr. McKay use any material in building the boats for the Adams that had previously been partly gotten out by the Government?—A. Yes, sir; he did.

Q. What expense should you suppose had been put on that material before it was used on the boats?—A. Here I should like to explain. In getting out material for boats, I go round the yard and pick up condemned ship-timber for certain parts of my work, because it don't do to take new; that is, knees and the like of that that have been condemned. I take them and get them sawed up, and use the timber in building the boats. I had got a lot of that kind of stuff sawed up in the cellar, and Mr. McKay wanted me to deliver it to him. I would not do it, because I had no orders. Mr. Easby said that Mr. McKay was to take the rough material, the same as I did; but when Mr. Easby was off, I received an order from Mr J. F. Hanscom, then acting as constructor, to deliver to Mr. McKay all the material that could be used economically that was in the cellar. Of course I had nothing more to say, and I let him take it.

Q. Then you delivered to Mr. McKay material that had been previously prepared for boat-building by the Government?—A. Prepared to a certain extent, but not prepared ready for use; merely sawed out. I supposed that, according to his contract, the Govern

ment was obliged to find him stuff to build the boats, not stuff to build ships of. The Government did not have any stuff in the yard suitable for boat-building, that is, for the flotillas and such work, and, as I said previously, I took the condemned ship-timber and expended ship-timber, in order to get this stuff out of it.

Q. Was not that order a great saving to Mr. McKay?—A. It might have saved him $40. I do not think it would exceed that.

Q. That is, the work on it was not worth more than that?—A. No, sir.

Q. Was that charged to him?—A. No, sir.

Q. That stock had been gotten out for those same boats?—A. It had been accumulating. This stock had been accumulating in the store probably for two years. If I build a set of boats, I get out a lot of flotillas, and there will be three or four or half a dozen too many, and they are put into the cellar.

Q. Have you not got a lot of material there now that is fit to be worked into boats?—A. Yes, sir; I have got a lot of flotillas, stems, and such as that, because it is necessary to have them seasoned.

Q. You furnished him with stems, did you not?—A. No, sir; I don't think he got more than one stem out of the lot.

Q. Was there anything else that you furnished in building those boats for Mr. McKay except this material in the cellar which you speak of, which had been gotten out previously by the Government?—A. No, sir.

By Mr. MILLS:

Q. Do you know of any work that was charged to the Vandalia that ought to have been charged to some other account?—A. I cannot call to remembrance now, to state positively, because it is sometimes the case that a man is called away for to do a job for an hour and a half or two hours at the same time he has been at work on the Vandalia and no note made of it.

BOSTON, *Friday, March* 24, 1876.

Paymaster CHARLES W. ABBOTT recalled.

By the CHAIRMAN:

Question. What is this paper which you now hand me?—Answer. It is an abstract of vouchers. That is a sample of all the others. I selected that because there is more business in that last quarter of 1875 than in all the others put together.

Q. Are your purchases, open contracts and all, about $800,000 a year?—A. I sum up for this quarter $222,000; but for 1875 I think it would not amount to as much as that—say $600,000 to $800,000, perhaps.

Q. Are you paying out prize-money here?—A. Yes, sir.

Q. On what account?—A. That is the Farragut fleet, the last distribution.

Q. Have you paid it?—A. Yes, sir; that is, I have paid portions of it.

Q. This is what you have paid?—A. Yes, sir; the prize-certificates are sent here, some of them.

Q. You don't buy any clothing in open market?—A. No, sir.

Q. Do you know Charles Allen Brown, of this city?—A. No, sir.

Q. Whom did you succeed as paymaster?—A. Mr. George Plunkett. He died in October, 1874.

Q. Who was Mr. Plunkett's clerk?—A. His brother when I came here.

Q. Did you retain the same clerk or did you take another?—A. I took another, or wanted to, but I was forced to abandon him and take the same one.

Q. Who forced you to do that?—A. Well, General Butler.

Q. What did he have to say about it?—A. I appeared at the office after being ordered to, with a clerk of my own selection, and I met the clerk, who was the brother of Mr. George Plunkett, and he asked me if I was not going to retain him, and if I had selected another clerk. I told him that I had selected another clerk, and he went away. The next morning when I was in the office one of my clerks said to me, "Mr. Plunkett says that General Butler is going to have you out of here in less than three days, and that he (Mr. Plunkett) will be back here again in the office by Saturday." Well, then, during that day I learned further about it—so much so that I thought it was very strange, and I determined to go and see General Butler and ask him about it.

Q. Didn't he send for you?—A. No, sir; I went voluntarily to see him, and I asked him if it was true. I told him that I had understood that he had interfered in regard to my selection of a clerk and my position there. He said that he had, that he had telegraphed and written to the Department; and we had some conversation there of perhaps half an hour, in which, among other things, he told me that I had my day, and that now he was going to have his.

Q. What did he tell you he was going to do?—A. Well, that he was going to have me out of the office.

Q. Was it to remove you or to place you somewhere else?—A. It was that I should not remain in that office, because I would not retain Mr. Plunkett.

Q. He could remove you to some other station?—A. He could only prevent my remaining here at Boston as purchasing-paymaster.

Q. Did he tell you that he would have you removed if you did not retain Mr. Plunkett?—A. Yes, sir; that was the understanding.

Q. Then you were forced to retain Mr. Plunkett in order to keep you from going away?—A. Yes, sir. I had some letters from Washington advising me to abandon my position and retain him.

Q. Who advised you?—A. Mr. Watmouth, the Paymaster-General.

Q. Did you make known your difficulties to the Paymaster-General? Did you communicate to him the fact that General Butler had threatened your removal?—A. No, sir; but he was aware of it from this letter received. I telegraphed to him to ask what the trouble was. He replied, "You must see General Butler." Then I received a letter from him in which he said that he had made a hard fight to retain me in that office, and, said he, "There were several applicants—three or four," and he said, "I think I will be able to retain you there, but you must see General Butler." It was substantially that if I did not conciliate General Butler he could not keep me. He said, "I want you to be at that office, but if you do not conciliate General Butler you will not be able to remain."

Q. Then you went to General Butler and made the offer to accept the clerk?—A. No, sir; I did not go to him. That was before I had received this letter from General Watmouth. I did not go to see him again, but I said to my clerk, the one whom I did select, "Well, I would like to remain here. It is near my home; and you want to come into the office. Now if I stick to you we shall neither of us accomplish anything, because I shall be detached, and that will not do you any good;" and he said, "Well, don't let me embarrass you; I will withdraw." He withdrew, and then I sent word to Mr. Plunkett that I would retain him.

Q. Did he come into the office?—A. Yes, sir; he came into the office after that.

Q. How long did he remain?—A. He remained until he was appointed assistant paymaster, in last September—nearly a year.

Q. Is he assistant paymaster now here?—A. Yes, sir.

Q. Now that is not the only interference with your office here by politicians outside. Are there not others?—A. Well, there have been interferences; for instance, (I cannot call it exactly an interference, except it is that thing which is constantly held over you, that if you do not do such and such things something will happen.) You hear things.

Q. Are there not other gentlemen influential like General Butler who have their favorites here whom you have to respect?—A. Yes, sir; but General Butler was the particular man that I dreaded in this, because he had been what was called "running the office."

Q. I ask, in the discharge of your duties as paymaster, do you or not encounter the same sort of influence from other parties in other matters? You spoke of a gentleman who is a particular friend of Senator Cragin here the other night. I noticed that that gentleman seemed to be doing all of your contracting here in the way of timber?—A. Yes, sir; that is Mr. Trickey.

Q. Do you say that anything was held over you in regard to Mr. Trickey—that if you did not do such and such things something would happen?—A. Well, if I did not give the timber to Mr. Trickey, my idea was and my feeling was that as sure as he did not get all the timber (and I was very glad there was not much of it) that I should not stay in the office probably a month.

Q. He has been getting it for a long time, has he not?—A. Yes, sir.

Q. What do you know of the history of your office? What do you know on your books about who has been furnishing timber here for years to this yard?—A. O, Mr. Trickey has furnished timber for years and years.

Q. What are your personal relations with him?—A. Well, they are pleasant.

Q. Who determines the price at which you shall take lumber from him, where you buy in the market?—A. There is an estimated cost. I don't know what they want. There is a great variety of lumber. There is clear stuff, first quality of lumber, and cheaper kinds. Requisitions are made by different parties under the departments, and they make an estimated cost, which I regard as based on their inquiries as to the market-price of lumber and the kind that they want. They have experts. I am not an expert in regard to lumber and to a great many other kinds of supplies. Each department has its experts. They want a certain kind of lumber and ascertain the market-price. The requisition is made at so many feet of lumber at such an estimated cost. That is sent to the bureau, approved by the bureau, and then sent to me to make the purchase. I regard that estimated cost very much, because I am governed by that as to the quality.

Q. Well, when you come to make that purchase you have that requisition and order to buy that lumber. You go to Mr. Trickey and say you want it at that price?—A. I send to Mr. Trickey a little written form, "What will you deliver so much lumber for at such a price?" Well, in a great many cases I have found that Mr. Trickey hit the exact figures that were the estimated cost, and then I have suspected that there was where they had got their estimated cost, that they sent to him.

Q. Then you have believed that the men who made out the estimate made it out with the knowledge of Mr. Trickey?—A. Yes, sir; that he got his estimated cost of Mr. Trickey.

Q. Now you take the engineer's department over there, which has been under the charge of Mr. Granger for the last 18 months, and it appears that not a dollar's worth of timber or lumber has been received from any other party than Mr. Trickey. During this whole time have you bought the lumber for this department?—A. I have bought it for the last year.

Q. Do you buy for it also?—A. Yes, sir; I buy for all the departments, excepting where it is contracted for. I have made several purchases for the civil engineer's department during the last year.

Q. Have you bought lumber of anybody else except Mr. Trickey?—A. No, sir; only one lot.

Q. What was that?—A. That was a small lot of spare timber. It amounted to about $500.

Q. You have felt, have you not, that those estimates were made after consultation with Mr. Trickey, or with the knowledge that Mr. Trickey would furnish it at those prices?—A. Ordinarily, yes, sir.

Q. Have you given to any other person the opportunity to figure on those requisitions?—A. No, sir. I regarded that as a fair market-price, the estimated cost for what they wanted, and in those cases I have sent the requisition to Mr. Trickey to be filled.

Q. So that if there was collusion between him and the parties who made those estimates, you have simply carried out the scheme, if there was a scheme?—A. Yes, sir; it never occurred to me that there was any collusion between him and any one.

Q. You see how easily it could be done?—A. Yes, sir; but I sent to Mr. Trickey——

Q. [Interrupting.] If I understand you, you dare not buy lumber from anybody else but Mr. Trickey?—A. Yes, sir; that was the feeling that I had. If I had bought lumoer from any one else, I should not have expected to remain in the office but a month. He would be sure to find it out, and I should be expecting my detachment at any moment.

Q. That implies that Mr. Trickey would have the power at headquarters to remove you. Would he appeal to General Butler, in your judgment?—A. No, sir.

Q. Is it your feeling that the contractors have power to send you away?—A. Yes, sir; that is my feeling.

Q. Mr. Trickey is whose friend—what Congressman?—A. Mr. Cragin. General Butler was going to have me out of that office on the clerk question. He told me that Mr. Plunkett was a very dear friend of his, and that his brother desired to remain here, and, said he, "You have turned him out, and I will turn you out." That is the amount of it.

Q. Well, is there any other person of whom you have bought so large quantities of material—so large in value—as you have of Mr. Trickey?—A. No, sir.

Q. I see here on your schedules, "The Atlantic Works, for machinery," four large bills, ranging pretty nearly $14,000; what was that for?—A. Those were payments that were made for machinery. It was for the steam-sloops that they were building.

Q. That was probably under a contract?—A. That was under a contract. The bills would come to me for payment. They would send me the money with the bill. The bill would be marked "Payable by paymaster at Boston," and I would receive draft from the Treasury for the amount, and I would pay it.

Q. So you were a mere conduit through which the money passed from the Department to the contractor?—A. That was all.

Q. Here is an entry that A. D. Wilds was paid for hemp $32,000 and over.—A. That was a bureau purchase.

Q. That was something over which you had no discretion?—A. Yes, sir.

Q. Here is an entry showing that Charles Brewer & Company were paid for coal $6,000.—A. That was a bureau purchase.

Q. Was it one of those sealed bids?—A. I don't know. The contractor might ask to have his bill payable anywhere.

Q. Here are two bills of H. M. McDonald for bunting.—A. That is largely a bureau purchase. They have had a contract for bunting, and then I have made purchases. Their requisitions come to me for bunting, and I should send it over. The United States Bunting Company knows just what the yard wants, and their prices.

Q. Is that General Butler's company?—A. Yes, sir.

Q. Is it the only one in the United States?—A. Yes, sir. General Butler is interested in it. They make very nice flags, and they were tested here at the yard with the English bunting, by letting two flags, one of each manufacture, blow in the wind until they were worn out, and the English one was worn out first. Those are very nice flags. If a requisition came for a few flags I should send it there.

Q. You are satisfied that you would get that bunting as cheap as the foreign bunting?—A. Yes, sir.

Q. Is anybody paid any commissions on that?—A. No, sir.

Q. Does Mr. Trickey have anything to do with that?—A. Not the slightest.

Q. Does Mr. Trickey influence your purchases in any other goods except lumber?—A. No, sir. Mr. Trickey never influenced me in any other respect.

Q. You don't know that he follows after you and gets commissions on what you do purchase?—A. No, sir; because I should know it if he did.

Q. Do you know that anybody receives any commissions on any other purchases you make in open market?—A. No, sir.

Q. Or discounts?—A. No, sir.

Q. You don't get any?—A. No, sir; I never have received a cent on any purchase I have made.

Q. Here is an entry of sale by C. F. Austin of bakers' bread. What is that?—A. He is a very fine dealer here. We can buy cheaper of him. He has better preparations for baking it. He will put the bread in cheaper than anybody else.

Q. Here is an entry of John Miller for provender—open purchase.—A. That is open purchase for stuff that they use at times. It is for feed for teams.

Q. I notice here that there is a large item for water—Mystic water-board.—A. That is a quarterly bill sent to me for payment. I have the water furnished the yard, and they have a regular price.

Q. Here are entries: "Walworth Manufacturing Company, sewer-pipe, $642;" "Gale & Co., cement, $800." Do you buy those in open market?—A. Yes, sir.

Q. Have you regular dealers from whom you purchase those things?—A. In some cases I send to a good first-class dealer, and then, frequently, I send out three or four or four or five bids.

Q. You hire an office of Mr. Trickey?—A. The office is hired. He has leased that building. I don't know how long he has had it.

Q. Did you find the office there when you came to this place?—A. Yes, sir; it has been there a long time.

Q. Did you make the contract for the rent?—A. No, sir. I don't know who made that. It is $2,000 a year.

Q. How much room do you have?—A. Well, I have three rooms.

Q. Where is the office?—A. 21 Kilby street.

Q. Do you know whether that is a fair rent?—A. Well, I should think that was a fair rent. It is close to State street. It is up one flight. That contract, I think, would be approved by the Secretary of the Navy.

Q. Who rents that house—who negotiates for the rent of that? You say you don't do it.—A. I presume it was done originally by the Secretary of the Navy. The office must have been there ten years. I don't know but longer.

Q. Who is it that contracts for the quarters for officers when they have quarters on shore? For instance, if the naval board was ordered to meet in Boston for some purpose, whose duty would it be to contract for quarters?—A. If it is here they would probably do it themselves. They would not come to me.

Q. Is there any other firm or any other person in Boston from whom you feel that you are bound to purchase from as you are from the gentleman whom you have mentioned to us?—A. No, sir.

Q. With all the customers you purchase from you do not feel under the same restraint?—A. No, sir.

Q. The amount of your purchases are comparatively small?—A. Yes, sir; there has not been much business.

Q. Your lumber-purchase is always the largest every year?—A. Well, no, sir. The lumber-purchase might be a great deal larger.

Q. You have not paid for all the lumber purchased in this yard?—A. No, sir.

Q. How do they pay for the balance of it?—A. There are large quantities of oak knees. Those bills that I have brought are all the purchases that I have made, in fact. There are one or two others that you have got in that I did not pay. Bills are sent to me of timber that is delivered at Portsmouth. If Mr. Trickey delivered it he would want it paid here in Boston.

BOSTON, *March* 24, 1876.

WILLIAM J. KEEGAN sworn and examined.

By Mr. BURLEIGH:

Question. You made application to get on this yard at one time?—Answer. Yes, sir.

Q. What are you?—A. I am a willow-worker by trade.

Q. Have you ever been a soldier?—A. I have been a soldier in the service here four years and a day, from 1861 to 1865.

Q. Were you wounded in the war?—A. No, sir; except that I got the trucks of a long 32 over my left foot, and that has incapacitated me for working at my trade. Consequently I had to apply for labor.

Q. To whom did you apply?—A. I applied at the construction office, but did not succeed. Then a party introduced me to the foreman in another department, and I got employment there, in the steam-engineering department.

Q. How long did you work there?—A. I have been working there off and on for the last six years, I should think.

Q. Did you have to pay anything to get into that department?—A. I had to pay $15.

Q. State the circumstances attending your getting on the yard.—A. Well, sir, this party,

Michael H. Quill, introduced me to Mr. William H. Chapman, foreman of the ship's gang in the steam-engineer's department. I was not acquainted with Mr. Chapman; did not know the man when I was introduced to him; but this party, Mr. Quill, was intimately acquainted with him. He came into the yard, thinking that Mr. Chapman might perhaps give me a chance to work. However, we met him here at the dry-dock. This man introduced me to him, made known to me previous to him speaking to him that this was he. This man stated the circumstances to Mr. Chapman, and he said, "You appear to be a man who could do a fair day's work, smart-looking; however, if I can do anything for you, I will notify you whatever time there is a chance." Well, the forenoon, on the following Saturday, this Mr. Quill was notified by Mr. Chapman to tell me to come in here and go to work in the steam-engineer's department at 1 o'clock that Saturday, after muster. Well, then, Mr. Quill gave me to understand that what Mr. Chapman required was $15 from me. This $15 was to be divided among three engineers, five to each, in the department. This is the statement of Mr. Quill. Consequently, I says to Mr. Quill, "Well," says I, "Quill, you know very well that I haven't got a dollar; I am at present in debt." He says, "I am aware of that, and I told Mr. Chapman so; that you had a family; had been out of work and in debt." I says, "Very well; I can't pay him that until after the lapse of some time." Well, at this time they paid in the yard once a month; now, they pay twice a month. The first payment I received, there was ten or twelve days kept back that I didn't receive; consequently I had a very small amount to get, and I couldn't pay this money to Mr. Chapman.

By Mr. JONES:

Q. Why was this ten or twelve days kept back?—A. It is the rule of the yard; it is done with every man. However, Mr. Chapman felt very angry with me, because I did not pay him this $15.

By Mr. BURLEIGH:

Q. Did Mr. Chapman say this to you?—A. Yes, sir; this he told me himself. When he found I could not pay him this $15, he became very angry, and, said he, "I am not going to remain out of this money," said he; "I paid this money out of my own pocket, and you will have to pay me." I says, "I intend to pay you, but my circumstances will not permit me to do it at present." I gave him $5. I owed in the store, and my wife was anxious to pay there whatever she could; so the next time I received my pay, I gave him another $5; but in the mean time he goes to Mr. Quill and demanded of him to pay him the $15, telling him that he was out of pocket by it himself, and required of him to pay it. "Why," says this man, "Mr. Chapman, don't be alarmed; Keegan will pay you; give him a chance; the man is honest." Very well; when there was an opportunity for me to pay him the remaining amount, I paid him. Well, since that time I gave him more money; but what I gave him after that he did not exact or require from me. I gave it to him through advice:

Q. How much did you give him?—A. I gave him about $15 besides, making $30 in all.

Q. By whose advice?—A. Well, my wife's advice, and some other parties. I got into trouble here.

Q. Who were the other parties?—A. Friends of mine, inside and outside of the yard. I got into trouble with a man who was working with me.

Q. Name some of those men.—A. There are none of them here now.

Q. Are any of those men living in Charlestown?—A. Not that I know of.

Q. Where are they living?—A. I can't tell.

By Mr. MILLS:

Q. Why did they want you to pay any more?—A. I am about to state the reason. This party was working with me, and he ran away with the idea, because that he had been in the yard a number of years, he should be my "boss." Well, the man was receiving no more pay than I was receiving at the time, and he got to abusing me, setting me work to do, and insisting that I should do this, that, and the other; so I spoke to him about it, and then he commenced abusing me, and called me a son of a bitch. So I told him, "If you call me that again, I will strike you." He did. I was working in the crank-pit at the time, and I jumped out of the crank-pit—the man was a heavier man than me, and I judged from that it was his intention to brow-beat me, thinking I was afraid of him. I struck him, and then I wanted him to fight. I did not want him to submit to my striking him without getting satisfaction. Then he went and reported me, and I was advised, through that, to give Chapman more money, so that he would work for me. I was not discharged on account of it. I was notified to come down to the office the next day to answer this charge which had been brought against me, and did, and so I was told to go back to my work. Since then I have had every reason to expose Mr. Chapman's doings. There are men who have been working in the department not at all deserving the wages they have been receiving. I have been recommended to him for more pay, but I never could get it.

Q. Is Mr. Chapman here now?—A. Yes, sir; he is the only foreman that is kept in the department now. The rest are all suspended.

Q. He is foreman of what?—A. He is foreman of the ship-gang. There are two ma-

chinists receiving $3.26 a day who are doing what I did myself for $2—two first-class machinists taking away ashes and stuff from those ships that are lying moored here.

Q. Is that all they do?—A. That is all they do. I am not the only one that knows it. That is his doings.

Q. Do you know of any other abuses in the yard?—A. Yes, sir; there is a party by the name of Richard Gayton, whom Mr. Chapman has kept in here. The first part of the war, when the draft came on, he cleared out and went to Chicago. He was written to to come back into the yard when the thing passed over and there was no danger of his being forced into the Army, and he came back, and Mr. Chapman has kept that man here right straight along, when other men have been ordered out. I have accused Mr. Chapman of this and remonstrated with him about it.

Q. What does that man get?—A. Two dollars a day.

Q. What does he do?—A. He works as a laborer in the gangs at times, and other times he takes ashes away from those stoves.

Q. Do you know of any other abuses besides that?—A. I know a great deal, but I don't suppose it would be very necessary for me to state. I have heard of others who have paid Mr. Chapman. The thing is, I have not seen them pay the money. There is a man on board the receiving-ship named John Hollywood. He is boatswain's mate on board the Wabash.

Q. What did he pay?—A. He told a party that he had paid money to Mr. Chapman. I remember the time well when he took him in. I don't know the amount he paid.

By Mr. JONES:

Q. Did he tell you that he had paid Mr. Chapman any money?—A. No, sir.

Q. Whom did he tell?—A. A party now in the seevice.

Q. Who is the party?—A. His name is William Wells.

Q. Is he in the yard?—A. No, sir.

Q. Where is he?—A. He is on this last vessel that went out here, the Vandalia.

Q. Is there anything else?—A. There is another little matter. Here, about four years ago, the time-keeper came round aboard those ships where the gangs were working, to find out, from those men, who were citizens, who were natives, and who had been in the service, and a man by the name of Cornelius Sullivan stated that he had been in the service. When asked what branch, he said in the Army. He was asked what regiment, and he said a Pennsylvania regiment. I was in the gang at the time present. When he was asked the colonel's name, he couldn't tell; he had forgotten. He was asked the name of the captain of the company, and he had forgotten his name; he was asked the letter of the company, and he couldn't answer. Consequently he was notified to come up to the office, and they took a description of him there, and sent this description on to the city of Philadelphia and made inquiry whether such a man had served in this regiment, and they received back answer to the effect that no such man had served in that regiment. Then he was sent for, and discharged, but Mr. Chapman worked that man in again, after he had been out a little time.

BOSTON, *March* 24, 1876.

DANIEL A. STORY sworn and examined.

By Mr. MILLS:

Question. What are you doing?—Answer. I am deputy surveyor of lumber.

Q. Where?—A. Boston district.

Q. Not in the navy-yard?—A. Not in the navy-yard.

Q. Did you ever measure any lumber for Mr. McKay?—A. Yes, sir.

Q. Did you measure any lumber that the Government furnished him for building the Adams?—A. I measured some lumber after she was done, belonging to the Government.

Q. Do you know to whom that lumber belonged?—A. I always keep a record of what I do, and I think it was some that was left after the vessel was done—white oak.

Q. Do you know how much there was?—A. I don't know exactly; I should say in the vicinity of forty tons of white oak.

Q. Did you measure any live-oak that was left?—A. Not a stick.

Q. Did you measure any pine plank, or pine timber?—A. Not a piece.

Q. Nothing but white oak?—A. No, sir; only that, at that time.

Q. That was after the vessel was done?—A. That was after the vessel was done; I think about the time he was moving his lumber.

Q. Was that lumber that the Government furnished him to build the vessel?—A. I don't know about that. I am under the impression that the lumber came from Mr. Trickey.

Q. Which Mr. Trickey?—A. Trickey & Jewett, I believe they called them.

Q. How came you to be called upon to measure it?—A. That is what I don't know. I

went down street one morning and he inquired for me, and I went over to see him; I didn't know what he wanted, and he said he wanted me to survey it.

Q. Did he tell you what lumber it was?—A. Of course I recorded it on my bill. I made a bill and a duplicate for him, and then a duplicate to the surveyor-general, and recorded it myself.

Q. Would your bill show what lumber it was?—A. Exactly; it would show what I was told about it and the record I gave of it—all that I knew about it.

Q. Was that lumber marked in any way, the number of feet "registered," as they call it, with the navy-yard mark?—A. I did not see any; all the marks, as nigh as I can recollect, were the red-chalk marks that are usually on lumber they send on.

Q. Could the marks put on it by the Navy Department be easily destroyed?—A. If they were put on the end of the stick, they could.

Q. How do they put the marks on; are they painted on or punched out?—A. I don't know much about Government lumber; I have surveyed some that was "sealed," cut in, I think, with a gouge, on the end.

Q. That could be cut out again?—A. Of course it could.

Q. Do you know whether Mr. McKay was building any other vessels besides the Government sloops?—A. I don't know.

Q. Didn't you see any other vessel there building?—A. No, sir.

Q. This was ship-timber?—A. Yes, sir.

Q. Do you remember whether Mr. McKay said that that was lumber that was left over from building those vessels?—A. No; I don't. Whatever was told me is on my survey bill, and it is recorded in my own book.

Q. Can you get that and show it to us?—A. Yes, sir.

Q. Do you know of any lumber belonging to this navy-yard outside of this yard?—A. I don't know anything about the navy-yard lumber, except that there is lumber over at East Boston that is always said to have come from the navy-yard; that is all I know about it.

Q. What sort of lumber is it?—A. Pine lumber.

Q. How much is there of it?—A. That I can't tell you; I never took particular notice. Mr. McKay, as I understood, had lumber stored at Jones's wharf, over there in the building.

Q. Has any of that lumber been sold since it has been stowed there?—A. I don't know.

Q. Did you survey that lumber, too?—A. No, sir; not at all.

Q. You say there is as much as 40,000 or 50,000 feet there now?—A. That I can't say. I should think there had been more than that.

Q. What causes you to think so?—A. Because I saw it come, and I saw it as it was piled in the building.

Q. Did you see it come in frequently?—A. I don't know how long it was coming there; probably, if I recollect right—it was a year ago last summer—I should say it came for three or four weeks.

Q. Every day?—A. I don't know about every day; I wasn't there every day; I was at other places.

Q. Was that after the Adams and Essex were built?—A. That was before.

Q. Was any of that lumber, so far as you know, worked into the Adams or the Essex?—A. I suppose it was; it went out, and I suppose it was used for finishing that boat.

Q. How much is your estimate of what has been carried there?—A. What I should say would perhaps be no good for anybody to go by, but from recollection, I should say, if a person asked me to say how much had gone from there, 60,000 feet of pine, at least; perhaps I may be wrong.

Q. Do you know whether there is any live-oak anywhere in the city outside of this yard? Do you know anything about Curtis & Tilden's yard?—A. I know where there is one piece.

Q. Where is it?—At P. S. & J. B. Hucking's yard, in East Boston, there is one piece; I saw it there this morning.

Q. How large a piece is it?—A. It is a small piece, 8 or 10 feet long, with an arm perhaps 4 or 5 feet long, and perhaps that thickness. [Indicating about 18 inches.]

Q. Do they deal in ship-timber?—A. They deal in ship-stock.

Q. Live-oak?—A. Not live-oak; white oak and hard pine.

Q. What is the usual price for live-oak timber here, take the three grades?—A. I don't know about that, for live-oak is not used much.

Q. Well, what is the price of white oak?—A. It is according to what it is; the price is very much depressed now.

Q. What was it six or twelve months ago per thousand feet, for the best quality white-oak timber, long pieces, 12 inches square, say 30 or 40 feet long, such as they use for ship-building?—A. It varies according to what it is. You take a stick for a keel-piece, and probably it was worth, six months ago, I should say, at retail $65 or $70 a thousand.

Q. Well, what would inferior be worth?—A. Inferior, not much more than half-price.

Q. $30 or $35?—A. Yes, sir.

Q. What are hard-pine plank worth?—A. Six or twelve months ago, white pine was worth by the cargo, good stock $30 and some over, board-measure.

Q. What would inferior be worth?—A. I am not a dealer in lumber, but, as far as my impression goes, it is about two-thirds price.

By Mr. JONES:

Q. Have you heard any reports that any of this timber that you saw going out went to any other place except to the ship?—A. I don't know as I recollect of ever hearing that it went to anybody else. I have seen Mr. Peterson, of the firm of Manson & Peterson, come there and get lumber.

Q. What did they do?—A. They did the joiner-work for that vessel. I don't know that I ever heard it went anywhere else.

Q. You never saw any one else go and get any?—A. No, sir.

BOSTON, *March* 24, 1876.

BROWNELL GRANGER sworn and examined.

By Mr. HARRIS:

Question. What office do you hold in this navy-yard?—Answer. Civil engineer.

Q. How long have you held it?—A. I was appointed in July, 1874, and was ordered here September 21, of that year.

Q. As a civil engineer in this yard, what duties do you perform?—A. I have the care of the repairs of buildings in the yard, the erection of all buildings, of whatever kind, charge of the wharves and docks, sewerage, gas, and water—everything appertaning to the office of civil engineer.

Q. Have you special charge of any lumber?—A. Yes, sir.

Q. Does the duty of receiving and inspecting any lumber devolve upon you?—A. Yes, sir.

Q. In what department?—A. In the department of yards and docks.

Q. Have you, since you have been in the office, received any timber for that purpose?—A. Yes, sir.

Q. Who were the contractors who furnished it?—A. I have received nothing by contract.

Q. You have received it by open purchase?—A. Yes, sir.

Q. What kind of lumber?—A. It has been timber, mostly—that is, building-timber, wharf-timber. When I came here, there was a wharf in process of repair, called the "Ohio Landing," for which contracts had been made and given out before I came. A part of the timber that came in was for wharf-timber. Then, I have received a small quantity of boards and planks, suitable for houses and walks.

Q. From whom have you bought that?—A. It has been purchased, I think, from Mr. Trickey.

Q. How much in quantity?—A. I don't think over 60,000 or 70,000 feet in all. Up to October 1, last, it was 57,000 feet only.

Q. Have you received any since?—A. I may have received, perhaps, 15,000 or 20,000 feet.

Q. From whom?—A. From Mr. Trickey.

Q. Where was the purchase of this lumber made, or where was the agreement made?—A. I don't know, sir.

Q. Do you know the price paid for it?—A. It is on my book, which I can show. [Book produced.]

Q. Who surveyed this lumber?—A. The man in charge of the timber-shed.

Q. Who is it?—A. Mr. Averill.

Q. Was this paid for upon your survey?—A. Yes, sir.

Q. Do you remember the price paid for spruce plank, of which it appears you have had 42,000 feet?—A. I paid for spruce plank at that time $22.

By Mr. JONES:

Q. What was it; random stuff of different lengths?—A. No; it was dimension timber.

Q. You mean 12, 14, 16, or 18 feet long?—A. Yes, sir; spruce boards, one inch thick.

By Mr. HARRIS:

Q. Will you give now, as you find it entered upon your book, the different amounts of lumber received by you?—A. As I said before, part of the lumber that was contracted for before I came here came in afterward.

Q. How much came afterward? You surveyed that, didn't you?—A. Yes, sir.

Q. Turn to that and see how much you received after you came here?—A. I find another entry here in December of "Lumber." I cannot tell exactly when that commenced coming in.

Q. Begin where you commenced. What is the first receipt of lumber after you came?—A. The first receipt of lumber after I came was, October 31, 143,000 feet white pine, 10-inch, squared. That must have been some of the wharf-timber. That was from Trickey & Jewett, at $30 for the 10-inch and $40 for the 14-inch. That was good, clear timber; the boards were about 16 feet long, I think. The next item is "Trickey & Jewett," on the 17th of November, "10,000 feet of spruce boards, 1-inch."

By Mr. JONES:

Q. Was that random lengths or all squared, the same as western pine lumber comes?—A. It was all squared lumber.

Q. What I mean by random lengths is one board 14 feet long and another 16, and another 17.—A. It was eastern lumber. I think it was all about 12-feet lumber.

Q. Did you ever see any spruce that came from the East into this market that was cut in this way; do you understand lumber?—A. Yes, sir.

Q. Did you ever see a cargo of spruce lumber come here that was what we call dimension lumber? Wasn't it always random lengths? If you have a cargo come, are there not some 12-feet boards, some 16 and some 17?—A. Yes, sir; unless you call for dimension lumber.

Q. Does that say dimension lumber?—A. No, sir; but in our requisition we always called for dimension lumber.

By Mr HARRIS:

Q. Do you remember receiving lumber at all of random lengths since you have been here?—A. No, sir; I think not.

Q. What was the price paid for it?—A. $22.50.

Q. When was that?—A. The 17th of November, 1874.

Q. What sort of lumber was it?—A. It was 1-inch spruce.

Q. Good quality, or bad?—A. Good quality.

Q. How wide would it average; was it floor-boards or wall-boards?—A. It was used for floor-boards in general repairs.

Q. Who did you get that of?—A. Trickey & Jewett.

Q. What is the next item?—A. At the same time 7,000 feet pine 10-inch. That was $34.50.

Q. Who furnished that?—A. Trickey & Jewett.

Q. Who purchased it?—A. Paymaster Abbott, in Boston.

By Mr. BURLEIGH:

Q. How long was that?—A. That was, I think, 16 feet. We used it for wharf timber.

By Mr. HARRIS:

Q. What is the next item?—A. Forty-seven thousand feet of 14-inch.

Q. For that same work?—A. Yes, sir; that was $40 a thousand.

Q. Of whom did you get that?—A. Trickey & Jewett.

Q. Was this eastern or western lumber?—A. I cannot say as to that. I think it was eastern.

Q. Was it generally about the same lengths?—A. Yes, sir.

Q. Was that the required length?—A. Yes, sir.

Q. What was this for?—A. This was furnished by contract, and was timber that came in for the wharf; estimates were made and dimension timber required.

Q. And they furnished the timber according to the dimensions, you understand?—A. Yes, sir. The next item I find is July 1, 1874, 11,000 feet spruce plank, 2-inch, $23.

Q. What length?—A. There is no length given here. Twenty-three thousand feet of 3-inch, at the same price, $23, and 24,000 feet of white pine, 4-inch, at $40.

By Mr. JONES:

Q. Was that eastern or western?—A. That was eastern.

Q. Didn't you think that was a large price for plank to cover a wharf with; was that what we call dimension stuff, cut to length?—A Yes, sir; I didn't understand the price of that lumber was anything out of the way when it came, though I had nothing to do with the price.

Q. Was that free from sap?—A. Yes, sir; it was good lumber, I call it.

Q. Was there no sap in it, if it was eastern lumber?—A. I don't remember seeing any that should cause me to reject it.

Q. Didn't you see sap in the corners for an inch and a half; wasn't that the way it was?—A. Yes, sir.

Q. Didn't you know that you could buy that lumber for $20 or $22?—A. As I understand, this was a contract given out by the bureau before I came.

Q. Had you any specifications or papers to go by in receiving this plank; did you go by them in inspecting the timber?—A. Yes, sir; I made it my business. I have my foreman joiner inspect it all.

Q. But not in regard to price?—A. No, sir; not in regard to price, for we have nothing to do with the price. The next I bought was August 12, 1875, 3,000 feet white-oak planks, 4-inch, 16 to 18 feet long.

Q. What was that for?—A. That was for walks, and general use in the yard—general repairs.

Q. What did you give a thousand for that?—A. $60.

Q. Of whom did you buy it?—A. That was bought of Mr. Trickey. That was a requisition that I made for repairs in the yard.

Q. Who made that contract?—A. The paymaster in Boston.

Q. Did you have anything to do with fixing the price?—A. Nothing, sir.

Q. Do you know whether that price is high or low?—A. I generally know the price of things, and I have generally considered them to have been fair prices, as far as I knew.

Q. Were they such prices as an individual would have to pay for the same lumber?—A. I cannot say that. I thought they were fair market-prices.

Q. Don't you believe that an individual, having the money in his hands, could go out and buy it much cheaper?—A. He possibly might. I don't know, sir. There is another item on the same bill of 3,000 feet white-oak plank, 2 inches thick, same price, $60. Also 5,000 feet white-oak boards, 16 to 18 inches wide, $60.

Q. What were those for?—A. Those were for general repairs.

Q. What can you do with white-oak boards?—A. Well, we make wagon-bodies of them.

Q. Do you make your wagon-bodies here?—A. Yes, sir; we make all our carts and wagons here, and everything of that kind. "1,000 feet black walnut, 1 inch thick, $75." This was No. 1 joist.

Q. What size joist?—A. I have not got the sizes here.

Q. What was that required for?—A. For repairs of furniture.

Q. Did it go into the cabinet-shop?—A. No; it didn't go into the cabinet-shop until we took it out of our shed. It goes into the shed from which we draw.

Q. Of whom did you buy that?—A. Of Mr. Trickey.

Q. Did you ever get any lumber from anybody else except Mr. Trickey?—A. No, sir; I don't remember any other person except Mr. Trickey, since I have been here. "1,000 feet black-walnut plank, 2 inch," at the same price. "1,000 feet black-walnut plank, 4 inch," at the same price. "2,000 feet black-walnut boards," at the same price. Here are "1,000 feet of spruce plank at $23," and "166,000 shingles, at $6 a thousand," October 8.

By Mr. JONES:

Q. What kind of shingles?—A. They are cedar shingles, sawed. These were shingles for repairing the house. November 9, there was 19,987 feet of pine plank, 4-inch, from Mr. Trickey, at $30.

Q. What was that plank for?—A. For floors.

Q. In what place?—A. In our spar-shed. We are at work on it now.

By Mr. BURLEIGH:

Q. How long were those planks?—A. I haven't the lengths of them here.

By Mr. HARRIS:

Q. Is there any other lumber on your book that you received?—A. There is "25,000 feet white-pine timber, 6 inches square, November 11, 1875." That was purchased for repairing this wharf and the Wabash.

By Mr. JONES:

Q. What did you give for that timber?—A. $34.50.

Q. Do you think that is a fair price? Don't you think you could go out into the market and buy it cheaper than that?—A. I don't know, sir.

By Mr. HARRIS:

Q. Your paymaster has bought all that on your requisition?—A. I make a requisition, and it goes to the commandant's office and then to Washington, and is sent back approved, and goes to the paymaster, who purchases the article and sends it to us.

Q. It is random lengths, isn't it?—A. Yes, sir.

Q. Now, I want to ask you a question. As an inspector of lumber, supposed to have some knowledge as to its quality and value, do you not believe that the lumber you have named there might have been bought in the open market, by a person seeking to get the lumber at the lowest price, for a great deal less than the prices, there named—25 or 50 per cent. less? If you had been intrusted with the purchase of it, would you not have been able to go among the dealers here and purchase it for a less price, in your judgment?—A. No, sir; not any that I have purchased since I have been here. I generally take the price from the price-current.

Q. Who fixes the price?—A. The bureau at Washington; no, they simply approve it. When I make a requisition for any lumber, I look to see what the quotations are, and put them on the requisition. That goes to Washington and comes back. They have sometimes said they could not buy it for that: that the price had gone up since those quotations were made.

Q. How happens it that only Mr. Trickey gets these contracts?—A. Indeed, sir, I don't know.

Q. Don't you know what relation Mr. Trickey has to this yard? Has he any rights or power here that any other individual outside of this yard ought not to enjoy?—A. Not that I know of.

Q. How happens he to be the only man who has furnished lumber here through a period of eighteen months to your department?—A. I don't know.

Q. Do you know him?—A. Yes, sir.

Q. Before you make a requisition, don't you talk with him about it?—A. I don't think I ever made a requisition for lumber that I talked with him about.

Q. Does he come to you about it?—A. No, sir.

Q. Have you ever told him you were going to make a requisition?—A. No, sir.

Q. Don't you think he has known beforehand of every requisition you ever made?—A. I think he might have known after the requisition was made.

Q. Do you know of his making any gift to anybody connected with the yard?—A. No, sir.

Q. Or to any member of the family of any officer of the yard?—A. No, sir.

Q. How do you suppose Mr. Trickey can know that you made a requisition?—A. Well, sir, I have made a requisition for stores here, and in an hour or two after the requisition went to the commandant's office—it would seem as if it was as soon as it could get there—I would have men come in and want to know about those goods.

Q. What men?—A. Men who wanted to bid for them or purchase them for the Government. I have remarked to my clerk, "How in the world do people know when a requisition is made?"

Q. Do you know whether your clerk communicates the fact to anybody?—A. I am confident he does not. I do not speak of any particular requisition.

Q How happens it, when there are so many people here all desirous of furnishing lumber, that Mr. Trickey is always successful in getting it?—A. I don't know that.

Q. Do you consider this yard a close corporation, in which only a few men have a right to interfere?—A. No, sir.

Q. Have you ever made any effort yourself to bring about competition in these purchases of lumber or materials?—A. I have always selected the materials that I have bought with care, or had them selected by my foreman.

Q. Have you ever yourself made purchases of any kind of goods in open market where you had the right both to select the article and determine its price?—A. Yes, sir.

Q. What kind of goods?—A. Well, tools, hardware, and the like of that.

Q. Of whom have you made those purchases?—A. I have made them of the regular dealers in Boston.

Q. Name some of them.—A. Well, the hardware from Wilkinson & Co.

Q. Do you generally buy of them?—A. I never bought of them but once, and then I selected them on account of the quality of the goods, although I think another firm had the order. That was the largest amount I ever bought.

Q. How much was that?—A. I cannot tell now. It was perhaps $2,000 worth that I bought. It was some surplus funds that we had at the close of last year that we should have turned into the Treasury. I made a requisition for those tools and made the purchases myself. That is, I selected them and they were bought on that selection.

Q. At the price for which you agreed?—A. Yes, sir.

Q. Who gave you the order?—A. I made a regular requisition for those tools, and sent it the same as any requisition to Washington. It was approved, came back, and I selected this property.

Q. Now, I want to go from this subject to another. When you took possession of your department you had more or less lumber placed in your charge?—A. Yes, sir.

Q. Has there been any claim at any time that you had not the quantity of lumber borne upon your books?—A. Yes, sir.

Q. When was that claim first made?—A. It was first made by myself, after I had been here a short time. I was told that I would not find the amount of lumber that my books called for.

Q. Who told you that?—A. I think the commodore, for one, and my foreman advised me it was not here, and my clerk.

Q. Upon what evidence did they make that declaration?—A. Upon evidence of their own eyes; what they had seen done before I came here.

Q. What did they say or claim they had seen done?—A. They said they knew that a great deal of lumber had been used that had never been receipted for.

Q. This is partly hearsay; but I want it as specific as you can give it. We will treat it as hearsay: but as a means of getting at other information, I want you should be as specific as possible, and state what they told you about it.—A. They told me I would find this shortage, and they told me that lumber had been carted out of the yard.

Q. By whom?—A. That they did not say.

Q. Did you get no intimation to whom they referred?—A. I got information under whose administration that was done That was the civil engineer before me.

Q. What was his name?—A. Charles Hastings.

Q. Now deceased?—A. Now dead.

Q. Did you get information to whom it was sent?—A. No, sir.

Q. Do you mean to say that you have no knowledge, by information, who profited by that large fraud?—A. I haven't the slightest knowledge.

Q. Do you know whether either gentleman who told you could furnish the committee with any information?—A. I don't know whether they could or not. They might be able.

Q. How much timber was it alleged had disappeared?—A. No particular amount, sir.

Q. How soon after you came into office did you have that information?—A. Within a month.

Q. What did you do about it?—A. I asked and obtained a man to assist me in the care of the lumber and to measure it. When I came here, this timber and lumber were in charge of a laboring man that I didn't think much of, and I went to the commodore and asked him to have me allowed a suitable person to take charge of the timber as clerk and assistant store-keeper, and he told me that would not be allowed, as he knew the bureau would not allow another clerk. I told him some one ought to be there more responsible than this man and asked him if he could not rate a responsible man as a mechanic and place him there. He told me at first that that could not be, because it would be a false muster of the man but I urged strongly upon him the necessity of having a responsible man there, and he finally consented. Then I went to work and had a survey made of the lumber.

Q. How lately was that survey completed?—A. I was along into the spring, a year ago making it, and after I had made it I found I was about half a million feet short of what the books called for.

Q. Of what kind of lumber?—Of all kinds.

Q. Have you the means of presenting to the committee the exact shortage?—A. Yes, sir.

Q. Together with the different kinds and qualities?—A. Yes, sir.

Q. Will you do so?—A. Yes, sir; I went to the commodore and told him that I was satisfied there was a large deficiency, and I wished he would appoint a board of regular officers to make a survey, and he said he would. I went to my office and wrote a request for the board, and he appointed it.

Q. How lately was that board appointed?—A. That was, I think, last July.

Q. How recently have they completed their work?—A. They completed it, I think, in October.

Q. They have made a written report?—A. They made a written report, and I sent it to Washington, with the amounts as called for by my books, showing a discrepancy in each item of timber and lumber, and I asked to be relieved from the responsibility of carrying it on my books.

Q. What reply did you get?—A. I have had no reply. A reply came in this way: A board was appointed to examine into the probable causes of the discrepancy. That board met here, but never summoned me before it, never took a word of testimony from me, and made their report.

Q. Were you not before that board?—A. No, sir; there was no evidence before that board against me; but everything to show that the discrepancy had occurred before my time.

Q. Was that the report of the board?—A. The report of the board charged it upon me.

Q. Have you a copy of their report?—A. Yes, sir; and a copy of every word of their evidence.

Q. Has that report gone to Washington?—A. Yes, sir.

Q. Was the commandant called before that board?—A. I don't think he was.

Q. Did you have no opportunity to appear before the board?—A. Never, sir.

Q. Did you make a request to appear before them?—A. No, sir; I expected every day every hour, that they would send for me. They had every other man up; but they didn't send for me.

Q. Do you say that any lumber has been taken from your department since you have been in charge of it, which has not been properly accounted for?—A. No, sir; there is not a inch of lumber which has not been properly receipted for when delivered from my shed.

Q. Did the last board have before them the report of the preceding board?—A. Yes, sir.

Q. Did that board have your letter applying for the appointment of such a board?—A. I presume they did. I don't know as they did, either.

Q. Have charges been made against you by any person that the deficiency was attributable to negligence on your part?—A. No, sir; the whole thing was ferreted out and asked for by myself, to straighten my books.

Q. Will you give us an opportunity to read the report of the last board?—A. Yes, sir.

Q. Have you a copy of the report of the first board?—A. No, sir. In 1874, Mr. Hastings, civil engineer, made a survey, and there it is. [Exhibiting paper.] His book called for 1,152 feet of mahogany. His survey makes 5,152 feet. Now, in large items the books called for 224,133 feet of lumber; his survey is 224,133 feet. Nobody could take a pile of lumber and make it come out in that way; it is impossible. Here is another item of 276,000 feet called for by the books, and 276,000 feet shown by the survey. That was his report. Now, here is the report made by the board that I asked the commandant to appoint. There is a deficiency in each article, right straight along down.

Q. What deficiency did the last board, which condemned you, find?—A. They found the same as the previous board, which I asked for.

Q. You have a copy of their report?—A. Yes, sir.

Q. Will you furnish it?—A. Yes, sir.

Q. Then, as I understand you, you claim that none of that deficiency arose during your administration?—A. Not an inch of it. There is one item on the list that I have drawn on here where there is a shortage of 90,000 feet, and no transaction in that article has occurred

during my administration. According to the survey made by the board that I asked for, there was a shortage of 90,000 feet of white-pine boards, and there has been no transaction in that article since I have been here.

Q. Now, passing from that, I want to go to the subject of the dredge-boat. I understand that you have had some difficulty with reference to that boat. What control or charge did you have of that boat?—A. It was a machine belonging to the Department of Yards and Docks.

Q. And was in your custody?—A. Yes, sir.

Q. What was its condition before any transaction concerning it took place?—A. It was dismantled and sunken in the dock.

Q. With the machinery on board?—A. No, sir; the machinery was stored in different places around the yard.

Q. What application, if any, did you have for the use of that boat?—A. I had an application from Mr. Charles H. Lewis.

Q. What is his business?—A. General contractor.

Q. Where does he live?—A. I think he lives in Somerville now.

Q. Just state what that transaction was exactly as it occurred.—A. Mr. Lewis came over here with a man whom I supposed was his partner, and wanted to know if they could get the use of that dredge. He said that they had a contract for removing the shoals in front of the navy-yard here. I told him they could not have it unless they made application for it, and it would have to go through the regular channel. They made an application to me for the use of the dredge.

Q. Had you ever had any conversation with them before about the dredge?—A. Never, until they came to this yard.

Q. Had you known them before?—A. I had.

Q. How long had you known them?—A. I had known Mr. Lewis for twenty-five years.

Q. Intimately?—Yes, sir.

Q. Have you any personal or family relations with him?—A. No, sir; I was at college with him, and when we left college, we went to the western country together, and were together for six or seven years.

Q. Friends?—A. Yes, sir; they made a written application to me for the dredge. I forwarded it to the commandant, and he to the Department, and the Department wrote back, authorizing the loan of the dredge.

Q. What were the terms of that proposition or offer?—A. The terms of that proposition were, that he was to raise her, put her in thorough repair, and have the use of her for ninety days. I took him down and showed him the dredger, and told him the machinery was in good order and the rigging, and there would be no expense about that.

Q. The Department authorized that?—A. The Department authorized it, yes, sir.

Q. Was there any estimate made or stated as to the cost of putting her in repairs?—A. I don't think there was. There might possibly have been, but I don't think there was any amount stated.

Q. Was it stipulated that there should be any compensation to the Government for the use of the dredger?—A. Not a cent.

Q. The proposition was that he should put it in thorough repair, use it ninety days, and return it to the Government?—A. Yes, sir; he came here and raised it and repaired it. At that time, he came to me to see about mechanics to work on it. I told him that we had discharged the men; they were out of work and waiting to be re-employed in the yard, and if he went to the foreman who formerly employed them, probably this foreman could get him the men to make these repairs. He went to my foreman, and that foreman hired the men for him.

Q. At whose expense?—A. At his own expense. They went to work, hoisted the dredge, and repaired it. I gave orders to the machinist to deliver to them the machinery of the dredge, and to the man who had the rigging for him to deliver that to them. That was done. The dredge was made ready for work and they took her and went to work. I never knew of anything done upon the dredge. My attention was first called to it by my clerk, who said there was reported work done on the dredge. I sent at once for my foreman and asked what he was doing on that dredger. He said it was a small job that took his men about half an hour; that they broke something and he repaired it for them. I gave him orders that not a blow was to be struck on the dredger in any event.

Q. What was your foreman's name?—A. Philip Cassidy. I had noticed one or two men employed by the Government working on the dredge while they were repairing her, and I spoke to Mr. Cassidy about it. He said they were men that had exchanged with two of his men on the wharf for that day; that there was an equal number of their men working on the wharf, and he put them there because they understood it better.

Q. They had exchanged work?—A. Yes, sir.

Q. He had given them Government men and taken their men?—A. Yes, sir; just for the time.

Q. How long did that continue?—A. I never saw it but once.

Q. How many days did it take to repair the dredge and get her fit for service?—A. It took over a month.

Q. It was a month before she did any work?—A. Yes, sir. The only thing that I ever gave them was this: They broke a shovel-handle, and came over to the yard and said they could not find the timber anywhere else to make that handle of; they had broken "spuds" frequently before and had gotten them in East Boston of some firm there; but they could not find anything to make this shovel-handle of, and I made a requisition on the construction department and carried it to the commandant and he approved it. It was a stick 60 feet long.

Q. What sort of wood?—A. Hard pine.

Q. What size?—A. I think 12 by 14 inches. I won't be sure. That was given them.

Q. Charged to them?—A. Yes, sir; they were to replace it.

Q. Or pay for it?—A. Yes, sir.

Q. You say that was done with the approval in writing of the commandant?—A. Yes, sir; I don't remember of hearing anything more from them. O, I did give the house on deck a coat of mineral paint, to have the Government barge look decent when it went out of the yard. I think that cost in labor and material $20 or $25; but it was simply a wish of mine to paint it. Within two or three days of the time that the dredge was to be delivered back to the yard, a notice came from Washington stating that this dredge had been loaned to parties to fulfill a certain contract, and that they were now working for private parties with it, and underbidding the other dredgemen in the harbor. The commodore ordered that the dredge be returned to the yard. I went to the dock and took the dredge where it was at work and brought it to the yard.

Q. Under his orders?—A. Yes, sir; that was within a few days of the time when their time would expire. I didn't know what they were doing with it, but was told afterwards that they were waiting for the commissioners to determine lines for them to resume on this contract, and that while they were laying by the wharf the parties there wanted them to dredge out the dock where their vessels came out, and that that was what they were doing.

Q. Have you stated all that took place under your direction or authority?—A. Well, I put some angle-irons on the crane; that, I thought, would be a good thing; that was after she was at work in the stream.

Q. At whose request?—A. At no one's request. I never saw one of the parties who took the dredge until after it was returned to the yard.

Q. How much was the cost of that work?—A. I think about $40.

Q. What else was done by you or by your authority?—A. Nothing whatever.

Q. Then you say that all that was furnished by the Government was a stick of timber, upon requisition to the commandant, the mineral paint upon the house, and the angle-irons put on by yourself, at a cost of about $40?—A. Yes, sir.

Q. Was that everything you did to the boat, or that was done to her by your order?—A. That was all.

Q. Haven't you been charged with furnishing lumber for the repair of that vessel?—A. No, sir.

Q. Has it not been claimed that you allowed some considerable amount of lumber to go out of your hands and into the hands of those people to repair the vessel?—A. No, sir.

Q. Do you say that none was given them?—A. None that I know of, sir.

Q. Haven't you been so informed?—A. I have been informed that lumber was given them and work was performed on that dredge that I didn't know anything about.

Q. From whom did you derive that knowledge or information?—A. From the parties who had the dredge.

Q. What did they say about it?—A. Well, they said that they came here to the yard one time to see me about getting some work done upon the dredge, and that they met a foreman of mine who told them that they need not go to me to get any work done, because I had given orders not to have it done, but that he would do it for them, and the work was done for them unbeknown to me and concealed from me.

Q. What work?—A. That I don't know.

Q. Where are these men who did this?—A. They are in the yard, sir.

Q. What are their names?—A. This was my foreman.

Q. What was his name?—A. Cassidy. He was paid money by these parties.

Q. How much money?—A. I don't know the amount.

Q. Has not he stated it to you?—A. Well, he stated—I don't know the amount. It was somewhere about $40 to one, and the same to another. I won't say the exact amount.

By Mr. JONES:

Q. Another one of your men?—A. Yes, sir; his name is Charles R. Whitney, foreman of machinists.

By Mr. HARRIS:

Q. Do you know now, from information derived from either of your men, or from Mr. Lewis, whether any lumber was furnished them?—A. No, sir.

Q. Do you say that, so far as you are informed, no lumber has been furnished them?—A. Yes, sir; as far as I am informed, no lumber has been furnished them; none to my knowledge.

Q. That may be; but whether or not you are informed that lumber was furnished them without your knowledge?—A. That information never has been brought to me.

Q. Has any been charged on your books as delivered to them?—A. I don't recollect of any, sir.

Q. Could any lumber be taken out of your sheds without some written authority?—A. No, sir.

Q. Are you informed now that no lumber has been used except that one stick of hard pine?—A. That is all I know of, sir.

Q. Are you not aware that the accusation is that $2,000 worth of lumber has gone out to be used on that dredge?—A. Why, no, sir. This is the first intimation that I have had of it. Why, everything that was done, including putting the machinery on board and putting it together, the cost of rigging and painting, and putting on everything, was only $1,200 or $1,300. That is the whole amount of that tabulated statement, and that included all these repairs.

Q. Who made this tabulated statement?—A. The board.

Q. Which board?—A. The board which investigated it.

Q. Did they find that $1,200 worth of work and material had been furnished by the Government?—A. Yes, sir.

Q. By what authority?—A. By my authority.

Q. Did you authorize that work to be done?—A. No, sir; only just what I have stated. They have charged the rigging here; she was dismantled when she was taken. This rigging was furnished to them and brought back to the yard, and put back into our store-house again. The machinery was brought back. They might just as well have charged that. They did not agree to furnish the machinery for the boat; they were told that the machinery would be furnished.

Q. Was the rigging charged in the account?—A. Yes, sir; that is in the $1,300.

Q. Do you mean to say that the board has charged the rigging that was taken and put on board the vessel?—A. Yes, sir; they have charged the value of it.

Q. Was it the rigging that belonged to her?—A. Yes, sir.

Q. Do you mean to say there were no additions to the rigging?—A. The only addition I know of was a coil of rope.

Q. By whose authority was that given?—A. It was given by my authority.

Q. On what ground did you give them a coil of new rope?—A. It was required for their rigging. The old was not fit.

Q. But, as I understand you, they were to take that vessel and repair her and put her in good working condition?—A. Yes, sir.

Q. Why did you furnish her with any new rigging, then; was that in accordance with your agreement?—A. Well, I didn't think at the time that it was outside of the agreement. If I had found a piston-rod broken on the engine, I should have considered it no breach of the contract on my part, nor defrauding the Government, if I made that good, as I told them it was in good condition.

Q. But everything in the shape of a contract between them is set forth in their written offer transmitted to the Department at Washington. That was the contract, wasn't it?—A. Yes, sir.

Q. Now, what right had you to interfere with the contract? Supposing the engine had been broken to pieces, were they not still bound to repair it, if they saw fit to take the boat?—A. Yes, sir; after it was given to them.

Q. After it was given to them you undertook to supply them with new rigging?—A. I supplied them with nothing new in the world but one piece of rope.

Q. Do you know that an order was given to repair the machinery or put it in order after she was delivered over to them?—A. No, sir; it was not done by any order of mine.

Q. Was it done while they were repairing it? That is, while they were here working thirty days to get that vessel in order, was any work done in any of the departments of the yard upon that vessel at Government expense?—A. Not that I know of.

Q. Was there any work done in the machine-shop to put that engine in order?—A. Yes, sir.

Q. By what authority?—A. By my authority.

Q. Then you gave directions to have the machinery put in order?—A. Put together and put on board.

Q. You did that?—A. Yes, sir.

Q. And that was at Government expense?—A. At Government expense.

Q. Did they not understand perfectly well, at the time they took the contract, that the vessel was sunk and that they could take it, and put the machinery together and put the vessel in order at their own expense, and have the use of it for ninety days?—A. No, sir; I told them, "I want you to stick to the contract."

Q. They made a contract directly with the Government and not with you. Where did you get your authority to lift your finger to put that machinery in condition?—A. I didn't think at the time about it. The machinery was in different parts of the yard, the boiler in one place, the engine in another. My foreman informed me it was all in good working order, and that all that had to be done was to put it together and put it on board. I told him to do it and deliver it to them.

Q. The commandant was not informed of your purpose to do that, was he?—A. No, sir.

Q. You got no permission from Washington to do that?—A. No, sir.

Q. Isn't it simply this, Mr. Granger, that having a friend who wanted this boat, you went forward and did things for his benefit at the expense of the Government in violation of the spirit of that contract?—A. No, sir; it was not.

Q. Why did you do it when the contract itself was right exactly in the face and eyes of it?—A. I told the parties that this machinery was here and to be put on board, and that was all I told them would be done. I didn't think at the time that that was repairing the dredge. I did not at the time think or wish to give them the advantage of one single cent. It was farthest from my thoughts.

Q. When you allowed the people in the shop to repair that engine at Government expense?—A. I never allowed them to repair the engine at Government expense.

Q. Was anything done to it?—A. No, sir; my foreman informed me that the engine and boiler were all in good order and simply needed to be put together, and that is what I informed those parties. I never knew of their making a new thing for that boat.

Q. Did they repair an old thing?—A. No, sir; I never knew of their putting one dollar of repair on the engine or boiler.

Q. They put it together?—A. They put it together.

Q. Did they set it up on board the boat?—A. They simply put it on board the boat.

Q. Did they unite the parts?—A. They might have done that.

Q. Connected the pipes and all that?—A. They had their machinist who took charge of it.

Q. Did the workmen from this navy-yard simply put the parts of the engine on board that vessel and roll the boiler on board and hand the things over to the engineer of the contractors, or did they go down there and set up the parts and connect them?—A. They put it together and put it on board.

Q. And put it in place on board?—A. Yes, sir.

Q. Didn't they repair that whole vessel here?—A. Yes, sir.

Q. Who repaired it?—A. They did.

Q. Didn't some men from the yard?—A. No, sir; not to my knowledge.

Q. Wasn't the lumber furnished for it.—A. Not that I know of.

Q. Now, Mr. Granger, if you have any statement that you want to make in your own way, I would like to have you make it.—A. Well, I want to make this statement. What I did to the dredge, I did supposing that I was doing everything proper and right; that I was defrauding nobody, and it never entered into my head that I was doing so. It did enter my head that I was doing a good thing for the Government. Here was a dredge that had lain here for two or three years on the mud, stove up, good for nothing, simply because the Government would not appropriate money to raise her and repair her; and I conceived that if the parties outside, for the use of her for three months, would raise her and put her in repair, it was a good thing for the Government. They paid their workmen here between six and seven hundred dollars, I believe, through Mr. Cassidy. Besides that, they told me that they paid hundreds of dollars after they took her to private parties in East Boston and Boston; and the dredge lies to-day at the wharf ready to do dredging at any time. When they took her she was leaky, at the bottom of the river, and in whatever I did I did not consider I was injuring the Government or any person.

Q. Can you inform the committee how much was done at Government expense on that dredge, putting it together?—A. The committee who investigated it, and who, as I told you, charged for the rigging and everything else, estimated between $1,200 and $1,300.

Q. Can you tell me what that consisted of?—A. It consisted in the cost of rigging.

Q. They didn't charge for any of the old rigging, did they?—A. Yes, sir; they have got a tabulated statement of everything. They have charged for the paint I put on it, and for the iron-work I put on it.

Q. Do you think you had any authority from any source to paint it?—A. I had no authority other than as I would paint a pile-driving machine or a derrick here, which I thought might be preserved by painting.

Q. If you had waited until the dredge came back, and painted it then, wouldn't it have done just as well?—A. Yes, sir; it would have done just as well.

Q. Do you think you were authorized to furnish them with that pine stick for a steam-shovel handle?—A. No, sir. I would not furnish it. I went to the commandant for it. That I considered a repair to the dredge.

Q. Do you think that they have paid for it?—A. No, sir; they have agreed to deliver it in just such lumber as we want. The stick was measured and the cost of it taken.

Q. Have they paid any person for the use of the dredge?—A. No, sir. They were not to pay any person.

Q Have they paid any consideration for the privileges of using it?—A. No, sir, only what they paid in repairs.

Q. Haven't they paid your men something?—A. Yes, sir; they say they have paid them money.

Q. Have you ever received any benefit from it?—A. No, sir; only injury.

Q. Any promise of any benefit?—A. No, sir.

Q. Did you at the time expect to receive any remuneration?—A. I never expected any. I only expected that they would put her in repair and we should have a working machine at the yard.

Q. Is Mr. Lewis where we can reach him?—A. Yes, sir.

Q. What is his partner's name?—A. I don't think he has a partner.

Q. Didn't he have at the time?—A. Yes, sir. I don't know whether he has a partner or not. I don't know anything about his business arrangements. All I know is that I was told by Mr. Lewis that he had a gentleman by the name of Ledby with him.

By Mr. MILLS:

Q. What was the average value of this lumber which is reported as deficient?—A. I suppose it would be on an average $30 a thousand.

Q. Did you buy any of this plank or lumber as low as $30 a thousand?—A. Yes, sir; some as low as $23. I don't know what it was bought for before the war.

Q. What do you give a thousand for white-pine plank?—A. One item here is "white-pine plank, $30."

By Mr. JONES:

Q. Will you state the names of the parties who informed you that lumber had been hauled out of the yard which had not been accounted for?—A. I think Mr. Philip Cassidy, my foreman.

Q. Will you name the tools and machines you selected from Mr. Wilkinson?—A. I can give you a complete list of every article. I will furnish such a list. (See A annexed.)

Q. Did I understand you to say that some other parties had that requisition to fill at the time you went to Wilkinson & Co. and bought those tools?—A. I think that was the case.

Q. Who were the parties who had the requisition?—A. That I cannot say. I don't know.

Q. Why didn't you get the tools and machines where the requisition was sent to be filled; you generally take lumber and other material where the requisition is sent, don't you?—A. Because I had found such tools as I wanted at this place, and got their prices for them.

Q. How do you know that they didn't have the tools at the place where they had the requisition; or was it a shoemaker or tailor who had the requisition?—A. I don't know who had the requisition, but I informed the paymaster that I had found those tools at that place, and he gave an order on Wilkinson & Co. for those things.

Q. Had he given the requisition previously to some one else to fill?—A. I am under the impression that he had.

Q. By whom was the requisition for the tools sent to Washington; by you?—A. Yes, sir.

Q. Have you ever had an assistant civil-engineer under you?—A. Yes, sir; for a month or so.

Q. You haven't one now, have you?—A, No, sir.

Q. How many clerks or writers have you?—A. I have only two clerks, two writers, and one draughtsman.

Q. Haven't you ever had more than that since you have been here?—A. No, sir.

Q. You have a draughtsman?—A. Yes, sir.

Q. How many buildings have you built or rebuilt since you have been civil engineer in this yard?—A. There have been no new buildings erected since I have been in the yard.

Q. There has been nothing but repairs?—A. Nothing but repairs.

Q. Have you and your corps performed any duty since you have been here that the heads of the departments could not have performed without detriment to the Government; could not your duties be performed by some other officers here without detriment to the public service?—A. No, sir.

Q. Why not? You say you have not built any new buildings. Why does it require a civil-engineer, a draughtsman, and two or three writers and clerks to paint a house or repair one, or lay a side-walk? You have masons under your charge, haven't you?—A. Yes, sir; but the masons have to have grades furnished, and they have to conform to the grades, and have to have their lines and levels given.

Q. Is there not somebody here who could do that?—A. That is my business.

Q. Could it not be done by the heads of the departments without detriment to the Government?—A. No, sir; it could not be done.

Q. How many men have you in your department at the present time?—A. I think about one hundred and fifty, all told. That includes twenty-seven watchmen.

Q. The laborers come under your charge, don't they?—A. Yes, sir.

Q. Who furnishes you with the white-lead and oil that you use?—A. All that I have used has been furnished by different parties.

Q. Well, who are the parties?—A. The white-lead has been sent from the Boston Lead Company.

Q. From whom does your oil come?—A. I don't remember now. I have purchased but very little since I have been here.

Q. I haven't asked you what you have purchased. You have made requisitions?—A. I have received but very little. I think not more than a barrel since I have been here.

Q. You could not have done much painting, then?—A. No, sir.

Q. How much white-lead have you received?—A. I could not tell you without refer to my books.

Q. Did you not go to the commandant and say that Lewis & Co. would put that dr ing-machine in good order at their own expense, and urge the commodore a second tin let them have her and put her in good order without any expense to the Governm didn't you go to him a second time and ask him if he hadn't better ask for a requisitic let them take this dredging-machine and put her in perfect order without any expense t Government?—A. Never. I don't know what you mean by "a second time." I wr communication and sent it to him.

Q. You didn't make the request the second time?—A. No, sir. In regard to the dred machine, whatever I did upon her was what I considered in good faith, and if there is point of difference I would like to explain it to the committee. The dredger is back at wharf, with all this amount of money charged against her; she has been returned.

By Mr. HARRIS:

Q. Would she not be just as well off with that hole in her bottom, in the dock, and machinery in the store-house, as far as any benefit to the Government is concerned?—A sir; she is ready to go to work to-morrow.

Q. Does anybody want any work done by her?—A. We want dredging done here.

Q. Have you any authority to do any dredging?—A. We do that under general rep

Q. Do you use her here?—A. Yes, sir; we had occasion to use her last year, and is now two or three thousand dollars' worth of dredging that can be done this summer.

Q. The only charge made against you is that you knowingly permitted the expenditu money and material upon that dredger without taking any account of it, or making effort to prevent it?—A. I have done just what I told you. I told my men to put the chinery together and put it on board. That is all I did, Mr. Harris.

A.

O. P. 118.

A. J. WILKINSON & CO., *August* 3, 1875.

General maintenance, 1874 *and* 1875, *tools, &c.*

4 dozen Gorman's mill, 2d cut, 10-inch files, $5	2
1 Smith's power mortise and boring machine	22
1 turning-lathe, iron bed	12
1 patent plow, Fillister & Matcher	1
1 extension sash-tool	
1 dozen jig-saws	
1 sett turning-chisels and gouges	1
1 sett hollows and rounds, double iron	1
1 plumb and level, adjustable	
1 Bailey's circular plane	
1 boring-machine, with augers	
1 dozen iron rakes	
2 Stilson's pipe-wrenches, 10 and 18 inch	
6 monkey-wrenches, 12 inch, 75 cents	
1 Stubb's screw-plate, ¼ to ⅝ inch	
1 Stubb's hand-vise, 5 inch	
2 patent tuyere-irons, Porter's, $6	1
10 dozen Gorman's files, assorted	3
2 pair cutting-plyers, 1.20	
1 pair wing dividers, 24 inch	
1 pair wing callipers, 18 inch	
1 Chesterman's steel tape, (100 feet)	2
	53

Authorized by bureau, June 3, 1875.

BOSTON, *March* 21, 18

BROWNELL GRANGER recalled.

By Mr. HARRIS:

Question. You stated the other day that when you made a requisition for lumber, were in the habit of putting upon it the cost or value.—Answer. Yes, sir.

Q. That is transmitted to Washington, approved, returned, and then given to the pur ing-paymaster?—A. Sent to the purchasing-paymaster.

Q. And your estimate goes with it?—A. There is nothing but that one paper.

Q. Your estimate is on that paper?—A. Yes, sir.

Q. Now, will you tell the committee how you form that estimate. How do you ascertain the fact that the lumber can be purchased at that price?—A. I ascertain it by the price-current of lumber, and I have sent out my foreman to get the prices from the dealers. I have made it a general rule in my department, in all purchases where the material was to be used for certain purposes, to send the foreman to ascertain the best prices he could get it for.

Q. Has not that foreman always gone to one person?—A. No; I do not know that they have.

Q. Do you not attend to it yourself?—A. I have attended to it myself.

Q. Do you not send your clerk?—A. No, sir; I send the foreman of the department in which the supplies are to be used.

Q. So that if the foreman of the department happens to go to Mr. Trickey, it is Mr. Trickey's estimate, and nobody's else, is it not?—A. If he does so, that is so.

Q. Do you know he does not?—A. I don't know that they ever did.

Q. Have you any reason to suppose that the foreman ever went to Mr. Trickey for lumber since you have been in the yard?—A. I do not believe he ever went to Mr. Trickey.

Q. Mr. Trickey has some agents, has he not?—A. Not to my knowledge.

Q. How happens it that Mr. Trickey is always willing to furnish, and always has furnished, lumber at the estimate which you sent out?—A. If he has always done so, that I know nothing of whatever.

Q. Why should you not know, as the officer in charge of this department?—A. Because it is not my business.

Q. Is it not your business to purchase lumber at the lowest cash price?—A. No, sir; that is the purchasing-paymaster's business.

Q. Then why do you make an estimate?—A. I make an estimate, and I generally make the estimate large enough to cover contingencies, to cover any rise.

Q. You know the paymaster never has purchased any lumber of any person but Mr. Trickey, do you not?—A. I believe he has not, since I have been here.

Q. You knew that he would not, did you not?—A. No, sir.

Q. You had reasonable ground to believe that he would not?—A. No, sir.

Q. Was it not understood by you that Mr. Trickey was to furnish the lumber on your estimate?—A. No, sir; not at all.

Q. Can you explain to this committee how it is that Mr. Trickey is always willing to furnish it at your estimate, and that your estimates go to Mr. Trickey and nobody else?—A. No, sir, I cannot.

Q. Do you not look upon it as an indication of the grossest fraud that such is the fact?—A. I could not possibly know.

Q. Do you not know that the whole thing is a fraud upon the Government?—A. No, sir; I do not.

Q. With this vast amount of lumber in the city of Boston, within a mile and a half of you, with a hundred dealers, respectable men, can you explain to this committee how it is that Mr. John Trickey has supplied every foot of lumber you have ever ordered?—A. No, sir, I cannot.

Q. Do you not think, upon the face of it, it is an indication of fraud and rascality?—A. I have nothing in the world to do with it at all.

Q. Why should you be in the office, unless you have something to do with it?—A. I do my duty as laid down to me.

Q. Is it not your duty to protect the Government against such things?—A. It is the duty of every officer to protect the Government against fraud.

Q. Why do you not do it; you have been buying lumber at more than 40 per cent. above the market-price; you are aware of that, are you not?—A. No, sir, I am not.

Q. If such be the fact, the only person responsible for it is yourself; is that not so?—A. I cannot say how that is, sir.

Q. Can you not see that you can protect the Government against prices such as you have been paying in a market of this magnitude?—A. I do not know to-day that we have paid any price 40 per cent. above the market-price.

Q. Is it not understood between you and the paymaster that your estimate is to be the price paid Mr. Trickey for lumber?—A. No, sir; no more than it is understood between yourself and myself.

By Mr. MILLS:

Q. Why do you make the estimate?—A. Because we are required to.

By Mr. HARRIS:

Q. Why do you not make the estimate on the market-price?—A. Because I have usually had it happen that when an estimate came back that had the market-price on it, we could not purchase for that price.

By Mr. MILLS:

Q. Did you ever know Mr. Trickey to refuse to furnish lumber upon your estimate?—A. No, sir.

Q. Did you ever know the paymaster to pay $1 above your estimate to Mr. Trickey?—A. No, sir, I never did.

Q. Then you are satisfied that you always estimate at a price that will satisfy Mr. Trickey? —A. No, sir, I am not.

Q. Why should he furnish the lumber if he was not satisfied with the price?—A. I will give you one case in point; where I sent Mr. Cassidy, my foreman, to ascertain the market-price of a quantity of lumber. It went to Washington and was approved, and came back, and no parties would furnish that lumber for that price.

Q. How is it that Mr. Trickey, when you send your estimates to him, goes into the market and buys from these very lumber-dealers in Boston, and then sells the lumber to the Government? Has he not got to make a profit over what they would sell the lumber to the Government for? He goes into the market and buys the lumber, never touches his hand to it, and it is delivered at the yard by the parties of whom he purchases. Why can you not do that?—A. I have nothing to do with it.

Q. You have something to do with it because you make the estimates of the prices at which he is to furnish the lumber. Do you not confer with Mr. Trickey before you make those prices?—A. No, sir.

Q. Have you never done so?—A. I have never done so.

Q. Is there not an understanding between you and Mr. Trickey, that you shall make these estimates above the market-price?—A. No, sir.

Q. You do make them above the market-price, do you not?—A. In making my estimates for lumber, where we have had the same kind of lumber before, I put that down as the market-price to go by. My foreman comes to my office and asks for a requisition for lumber. I ask the price of it, and he gives it to me. and says, "It is about the same it was before;" and I put it down. That goes to Washington and comes back with the order that the price shall not be exceeded.

By Mr. HARRIS:

Q. That is to say, if Mr. Trickey got 50 per cent. more than the market-price for his lumber on the last purchase, you let him have the same price for it the next time, and follow that rule?—A. I don't do it at all.

Q. What do you make an estimate for?—A. It is required that I shall make an estimate which has to be sent to Washington, approved, and then go to the paymaster.

Q. If this responsibility is upon you to make an estimate, why do you not go into the market and find the lowest cash-price, industriously, laboriously, every time?—A. If I take the price-current——

Q. Answer my question—why do you not do it?—A. Because I have taken the price-current in many instances.

Q. Do you mean to say that there is a price-current which controls and governs you in making those estimates in a single instance?—A. Yes, sir.

Q. Won't you bring me a paper that contains the price-current of lumber that you have calculated from?—A. I can bring them.

Q. You are here as an officer of the Government and subject to make requisitions and you are under obligations to make estimates; will you explain to this committee why it is that your estimate is not made at the lowest cash market-price always—at the lowest cash market-price known to you?—A. Well, I will tell you why. If it has ever exceeded that it has been from instructions from the paymaster, when I sent in a requisition, to be sure that my price would purchase the article.

Q. Have you got any written instructions from that paymaster?—A. No, sir; but I think the paymaster will tell you the same thing.

Q. Will you swear that he ever gave you instructions to put the estimates high enough to be sure to purchase the article?—A. Yes, sir; he gave me those instructions.

Q. What paymaster has given you those instructions?—A. Paymaster Abbott, of Boston.

Q. Then, according to his request, you have put your estimates high enough so as to be sure to purchase the article. Now, did you ever know the paymaster to buy one foot of lumber for less than your estimate?—A. I don't know that I have.

Q. Do you not know that he has not? Do you not know that he simply hands your estimates over to Mr. Trickey without a word of comment, and asks him to fill the order?—A. I do not know how he does it. I know Mr. Trickey always furnishes everything.

Q. Do you not know this fact, that you push up your estimates for your own reasons, or out of respect to the wishes of the paymaster, and that those estimates are handed over to Mr. Trickey without a word of comment?—A. No, sir; I don't know that to be the fact.

Q. Do you not believe it to be so?—A. I do not know how that is.

Q. Have you any doubt about it?—A. I only know——

Q. Answer my question: have you any doubt about it?—A. Well, I don't know.

Q. Just come right square down and tell me if you have any doubt that Mr. Abbott has always handed your estimates over to Mr. Trickey without asking for any reduction?—A. I do not know that he ever asks anybody else, or how he gives it to him. That is done in his office, not in mine.

Q. Do you not know that he could not hold his office at this navy-yard without Mr. Trickey's consent?—A. No, sir.

Q. Have you any doubt that Mr. Trickey could remove him?—A. I don't know about that.

Q. Have you any doubt that Mr. Abbott thinks so?—A. I do not know anything about it.

Q. On whom did you rely for your appointment?—A. I relied for my appointment upon Senator Dawes, principally, and Mr. Pierce, and Speaker Blaine.

Q. Mr. Trickey had no influence in your appointment?—A. No, sir; I never knew the man, nor saw him, nor had anything to do with him whatever.

Q. Are you not satisfied that you have estimated for all the lumber for your department at a price above the market-price?—A. No, sir; I am not satisfied of it.

Q. What article do you think you have estimated at a fair market-value?—A. I endeavor to all.

Q. Now, Mr. Granger, do you look upon it as your duty in every estimate which you make out to seek the lowest market-price for the article?—A. Yes, sir; the best goods for the money. If you will let me add, I have been complimented by my foremen for the purchases that have been made; that they were the best that ever came into the yard; that their tools were the best. I have sent them to select their own tools.

Q. Have you been complimented by anybody who was a judge upon the fact that you have bought your material at the lowest prices?—A. Yes, sir; for they made the prices.

Q. Who?—A. These foremen.

Q. Who are they?—A. Mr. Cassidy and Mr. Whitney.

Q. Do you say that you allow the responsibility which rests upon you to be taken by other people?—A. Yes, sir; if I consider that I am serving the Government when I do so.

Q. Are you not bound to judge for yourself without Mr. Cassidy in regard to lumber?—Have you bought any other article in such large quantities as lumber? Is not lumber vastly the greatest item of all your purchases?—A. I do not know as it would be, necessarily. No, sir; I do not think it has been since I have been here.

Q. What article have you purchased in as large quantities as lumber?—A. I do not know as there has been anything as large as that. My purchases have all been small since I have been here. I have here a statement of everything that has been purchased, amounting to $69,476.92; and you will see that I have paid $20,867.94 for water and gas, which of course were not purchases. This comprises all that I have bought, lumber, tools, and everything, since I have been here.

Statement of materials received in the Department of Yards and Docks from September 24, 1874, to March 1, 1876.

Months.	Material received by contracts.	Material required previous to Sept. 24, 1874.	Water and gas.	Material required since September 24, 1874.	Total received.

Q. I understood you to say that Mr. Hastings before going out of office had a survey made?—A. Yes, sir.

Q. Who did it?—A. He did it himself.

Q. Did he die in office or out of office?—A. He died after he resigned.

Q. Do you understand that any board made an estimate of the lumber on hand?—A. No, sir. I present a statement showing the discrepancies between the surveys and the quantities of lumber as called for by the books.

B.—*Statement showing discrepancies between report of survey October* 1, 1875, *and survey of January* 1, 1874; *also between books of yard January* 1, 1875, *and survey of October*, 1875.

Lumber.	On hand January 1, 1874, as per yard books.	On hand January 1, 1874, per report of survey.	Quantity received from January 1, 1874, to October 1, 1875.	Total as per survey account.	Quantity issued and expended from January 1, 1874, to October 1, 1875.	Quantity remaining October 1, 1875, as per survey account of 1874.	On hand as per survey October 1, 1875.	Excess as per surveys January 1, 1874, and October 1, 1875.	Deficiency as per surveys January 1, 1874, and October 1, 1875.	Lumber actually on hand October 1, 1875.

Q. You say that when Mr. Hastings went out of office he made up this account?—A. No, sir; before he went out of office. That is, what he left on his books when I took charge.

Q. I noticed that in most of the items he finds, by his survey, precisely the same amount that appears on his books, even to a single foot; but I find that he claims to have on hand 13,538 feet of maple, while, according to his books, he should have had on hand 12,538 feet; that is, he had more on hand than the books charged him with?—A. Yes, sir.

Q. I notice that he had on hand, according to his survey, 29,505 feet of assorted lumber, while his books show that he should have had on hand 15,666 feet. Now, when was the survey made upon which you were charged?—A. It was reported in October of the next year.

Q. So that in one item here of white-pine lumber there was a discrepancy of 262,746 feet?—A. Yes, sir.

Q. And there is a deficiency of 90,528 feet of white-pine boards?—A. Yes, sir.

Q. You say those deficiencies were not ascertained until October, 1875?—A. No, sir.

Q. And you had been in your position here how long?—A. From the October previous. But they were found by me in the winter of the same year that I took charge.

Q. Now, I want to go back to the dredger. You told me that there were two gentlemen whom you knew, or who, you had been informed, had received money from the contractor?—A. Yes, sir.

Q. I think you called Mr. Philip Cassidy one, and Mr. Whitney the other?—A. Yes, sir.

Q. Do you know how much money they were said to have received?—A. No, sir.

Q. Did either of them tell you?—A. No, sir.

Q. Has either of them denied that he received any money?—A. No, sir, not that I know of. I never mentioned it to them.

Q. What do you say you understood Mr. Cassidy received from the contractor?—A. I do not know the amount. I am under the impression that it was $40 or $50.

Q. What did you understand they received it for?—A. For doing work unbeknown to me.

Q. Work which you did not order?—A. Yes, sir.

Q. You ordered the machinist to do what he did to the dredger?—A. No, sir; I did not order the machinist to do what he did.

Q. Did you order him to do anything?—A. I ordered him to put the machinery together, and put it on board that dredger, and he reported to me, and his report is on file in my office in writing, that the machinery was in good order, and almost new.

Q. I don't care about that. You did tell him to put it in order, and put it on board the boat, did you not?—A. Yes, sir, I did.

Q. You told him to put it in perfect order, put it on board the boat, and put it in place on the boat?—A. Yes, sir.

Q. You also ordered Mr. Cassidy to haul the boat up, repair her bottom, put in staterooms, and put a room in the bow?—A. I never ordered Mr. Cassidy to turn his hand over on that dredger, sir. The only transaction I had with Mr. Cassidy about the boat was to say to him, "These parties want to employ mechanics. Now go and get those men who have been discharged, and give them a chance."

Q. You knew that he expended in labor something like $250, did you not?—A. No, sir, I did not.

Q. Why should you not know it?—A. It was kept from my knowledge.

Q. Was not the boat repaired here?—A. Yes, sir.

Q. Was it not here forty or fifty days, undergoing repairs?—A. Yes, sir.

Q. Did you not command the force that Mr. Cassidy had charge of?—A. No, sir, I did not have charge of them. Those were outside parties. I saw two men there one day who were on the rolls, and asked Mr. Cassidy about it, and he said, "I have simply exchanged works with some of Mr. Lews's men who are on the wharf." Those parties were paid by the contractors.

Q. I understand that a certain number of men were employed by Mr. Lewis, and paid by Mr. Lewis; that Mr. Lewis gave you the money, and you handed it over to Mr. Cassidy?—A. I never touched a dollar. I would not. I refused it. I said to Mr. Cassidy, "You pay these men that you have hired," and Mr. Lewis gave the money to Mr. Cassidy, and he paid them.

Q. Mr. Cassidy was an employé of the yard?—A. Yes, sir.

Q. Was he employed on the boat?—A. He had supervision to see that they did it right.

Q. Did you order him to overlook it; did you tell him to look out for it?—A. I think I did. I think I told him to see that they made a good job.

Q. Did you not know that Mr. Cassidy took that boat out of the water with the help of the machinist—drew her up with the aid of the steam-engine—and then repaired her bottom before the machinist put the engine into her?—A. I knew she was hauled out; yes, sir.

Q. Did you not know it took labor to do that?—A. Yes, sir.

Q. Did you not know the Government furnished all that labor?—A. No, sir; I did not know that they furnished $1.

Q. Why should you not know it? I don't understand why you should not know it, if such

a thing was going on.—A. I do not know the workmen in the yard. He went out and hired the men for an outside party, and they came in here. I never asked whether they had twenty or thirty men. I only knew that the men who were employed there were doing the work, and I supposed they were paid for it. I only told Mr. Cassidy that these men would be responsible for the pay of the men.

Q. You made the arrangement with the commodore that those men should have the use of the boat for repairing her, and when the time was up they should turn her over to the Government?—A. Yes, sir.

Q. You ordered the machinist to go on and put the machinery in her?—A. Yes, sir; and I am willing to stand by it. I did that, but I did not understand that to be repairs.

Q. You knew that cost something like $500?—A. No, sir; on the contrary, there is the engineer's estimate, with everything put down, even to putting the machinery on board, for $275.

Q. You knew that Mr. Lewis's agreement was to pay for the repairs of that boat?—A. Yes, sir.

Q. Have you ever called upon him to pay this bill which the Government has against him for repairing it?—A. No, sir. I did not know that the Government had any bill against him for repairing it.

Q. You know the Government has spent $1,300 on it, do you not?—A. No, sir; all the rigging, blocks, and tackle came back with the dredge and went into the store-house.

Q. Their contract was that they were to repair that dredge, and bring her back in good working condition. If it needed rigging to put that boat in perfect repair, you perfectly well understood that that rigging was to come back with the vessel, did you not?—A. Yes, sir.

Q. You went to work and put it on that vessel, and you claim that that should not be charged?—A. Why should it be charged?

Q. Because the contract was that they should put in perfect repair. It was simply giving it to them. What business had you to give them anything? When the contract was to take it as they found it, and put in perfect repair, and give it to the Government after they got through, what right had you or anybody else to put a dollar's worth of work or material upon that vessel?—A. I had no right to put a dollar's worth upon that vessel, but I considered that I had a right to give them the rigging of the dredger.

Q. Why did you not consult the commodore?—A. I did not think at the time that it was necessary to consult anybody.

Q. Did not the men who applied to you understand that that boat was out of order?—A. Yes, sir.

Q. They could have inspected her before they touched her?—A. Yes, sir.

Q. They knew her machinery was up in the loft?—A. Yes, sir; in good order.

Q. Who said "in good order?"—A. I did.

Q. Then you made representations which were not communicated to the commodore?—A. The commodore knew that.

Q. Did he know what you said to them?—A. I don't know that the commodore knew what I said to them.

Q. That is, you made certain representations to them that you wanted to make good?—A. Yes, sir.

Q. And you did it at the expense of the Government?—A. Yes, sir; I did it at the expense of the Government.

Q. Before they took possession of that boat, and before they made the arrangement with you, was there not an estimate made that it would cost $2,000 to put her in order?—A. No, sir; on the contrary, there was an estimate that the expense of putting that dredge in good order by the Government would not exceed $1,111.

Q. Did the commodore know of that estimate?—A. Yes, sir; I want to disabuse your minds in regard to that $2,000. There was an estimate made during Mr. Hastings's administration of what it would cost to paint her, put a new roof on her, and do everything that was required to put her in perfect order, amounting to about $1,100. That estimate was sent to Washington when they were talking of repairing the dredge to do Government work.

Q. Was there not an estimate just before these men had it, that it would cost $2,000 to put her in repair?—A. No, sir; I think in my letter to the Department I said that it had "been stated that it would cost at least a thousand dollars to put her in repair." I think that is the way my letter reads.

Q. It turned out that $1,300, or thereabouts, were expended upon her by the Government, and some $600 by the contractors; is that not so?—A. That is so, so far as this statement of it goes, but I claim that that statement is incorrect.

Q. In what particular do you say it it is incorrect?—A. I pretend to say it is incorrect. I say that not to exceed $250 would place that machinery on board that boat.

Q. You know that your machinist spent almost $500 on it, do you not?—A. I know that whatever he spent over and above that amount, he spent unbeknown to me, and for repairs on that dredge which I never ordered.

Q. Did you order repairs on her to the amount of $250, by him?—A. I ordered no repairs.

I ordered the machinery put together, (it was in different places in his shop,) and put on that dredge.

Q. In good condition?—A. No, sir; I did not say that. I tell you it was reported to me that it was in good order.

Q. You might have been deceived in that. It is not what you were told, but whether you told the machinist to put that work together, and put it on board the vessel in good condition?—A. I did not tell him so.

Q. What were your instructions?—A. My instructions were to put that machinery together, and put it on board that vessel, and deliver it to them.

Q. You knew that when they put it on board they put it in good working order, did you not?—A. No, sir; I knew of my of my own knowledge, and it will be proved to you, that it was not. I will take the onus of putting on board that machinery without a dollar, or a cent's worth of labor upon it. I will take the blame of painting her, which I should have had to do when she came back, which I considered my duty as a Government officer to do. Above that, I disclaim ever giving an order to expend one cent upon that dredge. I have got witnesses to prove that I told them not to touch it, and that when the Government asked me to make a report of what had been done on that dredge, I made it in writing, and sent for Messrs. Cassidy and Whitney, the two foremen who had worked on her, and read it to them, and said: "Do you know of anything more that has been done on this dredge?" And they both said, "No; that is right."

Q. Where is that report?—A. The Department have it.

By Mr. JONES:

Q. Have you not got a copy of that report in your office?—A. Yes, sir; my clerk was there, and I sent for them, and said, "I have been asked from Washington to state what I have done to this dredge, and read the report I had written in regard to it to them." They said it was right. I said, "Very well, I will send it." When the board met here to investigate the matter, I relied upon that statement. I met Mr. Cassidy after he had testified, and I said. "Well, have you got through with your testimony?" He says, "Yes." I said, "You had no work to do on that dredge." He said, "I done something on it;" just that way. I made him no reply, for I knew there was no earthly reason why he should turn his finger over, for those parties had told him to hire the men to do that work, and given him the money to pay them, and he had no reason in the world to turn his hand over, or do a dollar's worth of work on it. I went before the committee, and they said I would have a chance to explain and put in rebutting evidence at a future time. I supposed an opportunity would be offered me to be heard, and I have waited from that time until this for a chance to put in my testimony. I can prove all these things I have stated; that I absolutely refused to have them touch the dredge, and that when I sent my report I called them up and read it to them, and they said it was right; but afterward they testified that they had done certain things on the boat.

Q. By whom can you prove these facts?—A. By my chief clerk, Mr. Haskell.

Q. What is the name of your foreman-machinist?—A. Whitney.

Q. Did he not report to you every day who were at work on that dredge under him in his department?—A. No, sir, he did not.

Q. Did you not know that he did work on that dredge on fifty different days that was paid for by the Government, and did you not get reports in your office to that effect during the time they were at work on that boat?—A. No, sir, I did not. The reports that come to my office are reports where the men are working to-day. The reports that go to the time-clerk's office are reports where the men worked yesterday. The time-clerk's reports are made up semi-monthly. They do not come to my office. They are left in the mustering-clerk's office, giving the time of the men. The reports that came to my office bore no such record at all. The fact that men employed by the Government were at work on that dredge was first brought to my attention by my clerk, who said, "The report comes in that men are working on that dredge," and I sent for my foreman and told them not to touch it.

Q. Does not the foreman of every gang report to you what his men are doing, and what particular job they are engaged upon? Do they not say, "So many at work on the wharf," &c.?—A. Yes, sir.

Q. Do you say before this committee that this man, Whitney, did not report to you so many men employed by the Government, and paid by the Government, working upon this dredge? Do you swear to that?—A. Yes, sir, I swear to that. I wish to be distinctly understood about it. The reports that came to my notice did not have any men charged to the dredger, and when my clerk said, "Here are some men reported as working on the dredger," I sent for Mr. Cassidy and Mr. Whitney, and said, "Here is a report which says you are at work on this dredger; what are you doing?" And Mr. Cassidy said, "They broke something that my men can mend in half an hour, and I told them to do it."

By Mr. MILLS:

Q. Can a man get any material out of the stores without your authority?—A. No, sir.

Q. Then how could they obtain the material to repair this vessel?—A. Mr. Cassidy might

have obtained it for other purposes. When I come to my timber-account I will explain satisfactorily, I think.

Q. I wish to know whether in order to obtain the material under you keeping a party m not have a pass with your signature?—A. Yes, sir.

Q. Your doors do not stand open so that a man can go in and get lumber?—A. No, si

Q. Do you know of any way by which they could have obtained this lumber to repai this vessel by fraudulent means?—A. By getting lumber for something else that they had in their workshops.

Q. And having it charged to some other account?—A. Yes, sir.

Q. Do you say that you never gave them authority to obtain lumber from some other place to work on the boat?—A. Yes, sir; I do most emphatically say so.

Q. Is it the custom in your department, and in all these departments, for the foremen to state in their reports what the men are at work upon?—A. Yes, sir; a report comes from Mr. Cassidy, for instance, that he has fifty men, forty men at work on the wharf, and ten men somewhere else. Those are the stations at which those men are at work that morning when set at work.

Q. Then if those men, Cassidy and Whitney, did not place on the reports they made the names of the men who were at work on a particular day, you would have no means of knowing that they were at work on that boat?—A. That is just what I mean.

By Mr. HARRIS:

Q. Do they give you the names of the men, or only say so many men working at this place?—A. They do not give the names. When this report came to me, and the conversation occurred as I have stated, I sent for the men and told them, "It doesn't make any difference if it is not a ten-minutes' job; don't you touch that dredge."

Q. You seem to imply pretty strongly here that those two men have been doing something without your authority and without your knowledge?—A. I do, most emphatically; that is just what I mean.

Q. They say they did nothing without your authority?—A. Yes, sir; I know that is where they fall back. I stand almost isolated on this yard. When this lumber matter first came up the commodore appointed the man who was chairman of the board on the dredger the chairman of that board, and on something that I ferreted out, because I was bound to have my books straight, they made a report and sent it to Washington that I should be dismissed the service. They never called me before them. There was nothing to show that I was responsible in any way for the deficiency, but by inference that report said that I was the man.

Q. Are you in the habit of giving orders for lumber in writing?—A. I am now.

Q. Were you before this?—A. The foreman-joiner comes and wants certain things for repairs, and I order the store-clerk to deliver them to him.

Q. In writing or verbally?—A. That has been done verbally. The foreman-joiner will go down to the store, and they will deliver, say, 1,000 or 1,500 feet of plank, and a memorandum is sent to the office, and at the end of a month those are consolidated and compared with the joiner's minutes which he has kept. He signs that receipt, and there is a voucher for the Government, because a man cannot send to the shed and tell just what he wants.

By Mr. JONES:

Q. I understand that you have been in the habit of giving orders to the foreman for material or lumber or for anything in your department of yards and docks?—A. Yes, sir; I cannot get along without doing so. There is no way to defraud the Government. As I say, I don't know how much to deliver. For instance, a steam-pipe bursts, and we have to supply the pipe. We do not know whether one length or two lengths will be wanted, and I tell the store-keeper, "Deliver to the man what he wants, and take his receipt for it."

Q. When the heads of your department go there and get anything, does not the clerk at your store take a receipt for whatever the foreman takes?—A. Yes, sir; that is the way I have been running it.

Q. You direct your store-clerk to take a receipt from Mr. Cassidy or any other foreman o whatever he may deliver him?—A. Yes, sir.

Q. Why have you kept Mr. Whitney and Mr. Cassidy in your employment, when you do not believe them to be truthful and faithful to the Government?—A. Because I am waiting for a settlement of this case. I have never been in such a position that I could remov or displace them. I never knew of this until after this board met. Everything was apparently fair and square with them and with me. I kept it to myself, only reporting it to th Secretary of the Navy, and I told him if I could have a hearing, I could show that th statements which I made were correct. Those men, every one of them, opposed my appoin ment tooth and nail, but I have never displaced one of them. I come here an entire strange and they were politically opposed to me. They worked for one man and I for another.

Q. For whom were they working?—A. I believe that when a person is a servant of a other or a government, he should work for that government. That is, if he comes in he and claims a position to work under an administration, he should not work against the a ministration that placed him here when a political crisis occurs in the country, unless f treason or something of that kind.

Q. You claim that these fellows did not support Mr. Rice?—A. No, sir, I do not. I say that they went against the nominee of this district, but I never spoke one word to them one way or the other, and you will find that when this excitement was going on about the election my department was decreased instead of increased.

BOSTON, *March* 24, 1876.

Commander ALFRED T. MAHAN sworn and examined.

By Mr. MILLS:

Question. Do you know anything about any live-oak timber that is said to have been received at the yard within the last few months, where it came from, and whether it had been inspected and rejected or not?—A. I don't know anything of my own knowledge. I only know common report about the yard.

Q. Do you know anything about abuses in the construction department, such as receiving timber not fit for use, or improper measurements, or anything of that kind?—A. Not of my own knowledge.

Q. Do you know of any deficiency in lumber in any of the departments?—A. Yes, sir.

Q. In whose department?—A. In the civil engineer's department.

Q. To what extent?—A. It is between half a million and a million feet of lumber.

Q. How did that occur?—A. It is not certainly known. It occurred before the present incumbent came in.

Q. Who was the prior incumbent?—A. A man by the name of Hastings. He is now dead.

Q. Do you know where he came from?—A. He came here from the New York yard.

Q. Was he an officer in the Army?—A. No, not that I know of. He was a civil appointee of Government.

Q. He was an officer?—A. He was a civil officer and a salaried officer.

Q. How long had he been appointed?—A. I don't know the date of his appointment.

Q. What sort of timber is in the charge of the civil engineer?—A. Timber for the construction of houses, drains, and things of that kind, all qualities; not, of course, the heavy timber that is used for ship-construction.

Q. What is the value of that timber which is missing?—A. I don't remember. The way I know what I do, I was on a board of investigation, and we tried to find out how it was lost from the yard.

Q. Did you make and render a report?—A. Yes, sir.

Q. Can you furnish a copy of that report?—A. A copy of the report can be got from the Bureau of Yards and Docks at Washington, to whom it was made, and possibly the commandant may have a copy of it.

Q. Did you investigate that before Mr. Hastings left?—A. No, sir; we investigated it about six weeks ago.

Q. Did he die in the service, or did he leave it before he died?—A. He died in the service. The conclusion was that probably the timber was never received; that is, it was a deficiency, caused by false receipting, which is due, of course, to inadequate inspection. The civil engineer inspects and receipts for his own lumber; consequently, of course, if he is dishonest, he can receipt for an amount not received, and there is no check upon him.

Q. The same thing might occur in the construction department, could it not?—A. I believe it could. I believe all the bureaus inspect their own stores, which is radically wrong, in my judgment.

Q. Do you know of any other deficiency in the material for ship-building here in any other department?—A. No, sir, I do not.

By Mr. HARRIS:

Q. Do you know who delivered the lumber during the time of Mr. Hastings?—A. No, sir; but the books of the engineer will show that.

By Mr. MILLS:

Q. Do you remember what that deficiency was in? Was it pine lumber?—A. All kinds. There were at least fifteen different kinds, in which there was more or less discrepancy between the amount on hand and the amount which the books called for. There was spruce, pine, walnut, and maple.

Q. Will not the books show when that lumber was delivered, and by whom?—A. The engineer's book will show.

Q. Who ought to know about it?—A. The report of the board censured Mr. Granger, the civil engineer of the yard, for not having inspected the matter until he had been in office a year, but we found nothing to show that he was responsible for the disappearance of that lumber.

Q. Do you know of any Government property being used on this yard for individual purposes?—A. I am not aware of anything.

Q. Do you know of any lumber taken from the yard, to be used to build houses outside of the yard?—A. I do not.

Q. Do you know of any person who has given any consideration for an official position to parties about the yard?—A. I do not.

Q. Do you know of any persons taking up collections in the yard for the purpose of making presents to any officers?—A. No, sir; that they would conceal from me; and, moreover, there has not been anything going on for the six months I have been here.

Q. Do you know whether any drafts have been drawn against the fund appropriated for the building of the eight sloops of war other than for that purpose?—A. I know as far as this: The paymaster of the yard, W. W. Woodhull, told me that he had received money (I think I make the statement correctly) which was to be charged against the appropriation for the eight sloops; and it did not come in his province to pay any charges for such sloops. He has nothing to do with them.

Q. What does he do?—A. He is simply the paymaster who pays the officers and employés of the yard.

Q. Not the purchasing-paymaster?—A. Not the purchasing-paymaster; he, *i. e.*, the purchasing-paymaster, is the man who makes payments for any work that is done.

Q. He simply had deposited with him a portion of the money charged to that account?—A. Yes, sir; that money was to be charged against the eight sloops.

Q. Did he state whether or not the money had been drawn out by checks from his possession?—A. The money is furnished to him and he sends in monthly reports, in which he states the money received and the appropriation against which it is charged.

Q. It is charged to the eight sloops-of-war fund?—A. A certain amount is on his books, and he pays the money out to employés and the officers.

By Mr. HARRIS:

Q. There is no work being done on the eight sloops of war?—A. There is not now, but if there was, it would not be Mr. Woodhull's business to pay any bills on the eight sloops of war.

By Mr. MILLS:

Q. Is he in the yard?—A. Yes, sir; he is the paymaster of the yard.

Q. Do you know anything about the contract for the boilers of the Wachusett?—A. Only that I have heard it said that the boilers for the Wachusett were contracted for, and I think the person said that the man who got the contract had not even got a shop.

Q. Who made the contract?—A. I forget the name, if I heard it; and I do not think I heard it. Those contracts are all made at Washington.

Q. Who would be likely to be the paymaster through whom the payments would be made on those boilers to the contractor?—A. I take it, Mr. Abbott. The bills would be sent in, properly vouched for as to the work done, which would be by the engineering department.

Q. Supposing they were to advance him any money before any work was done.—A. That would be by authority of the Chief of Bureau of Steam-Engineering. The man here could not authorize it.

Q. Suppose the contractor for the boilers of the Wachusett desires to get an advance, as some others have done, before the work is done; to whom would he apply?—A. He would apply to the Chief of Bureau of Steam-Engineering, and if he gave him the order, I am not sure whether it would have to pass through the hands of the commandant here, but I presume it would, and then it would have to be paid by Mr. Abbott, if it was done without the work being done But if the work had been done there would have to be a certificate from the yard that it had been done.

Q. Do you know anything about the boilers that were made for the Lackawanna?—A. There was a report that the boilers were contracted for here in the East, the Lackawanna being in San Francisco, and that they started them across the plains, and they are adrift somewhere out between New York and San Francisco now.

Q. Who would be likely to give us correct information on that subject?—A. You would have to go to Washington for that.

Q. The Lackawanna has gone to sea without those boilers?—A. She is now at sea.

Q. Other boilers were put in her?—A. Yes, sir. She is now, I think, in commission in China; I am not sure. My understanding was, that the contract was that they were to be delivered in San Francisco; but they were not delivered, and there is a hitch somewhere.

Q. Do you know anything about coal being contracted for here at the yard and rejected, and afterward received here by orders from the bureau?—A. I know that it is said such was the case. My knowledge is only hearsay.

Q. What coal was that and when was it delivered?—A. It was in the winter of 1870-'71, I think, and Admiral Steedman was the commandant. I sailed on a ship about that time, and they said we had some of that coal. When we got to sea we found our coal was very bad; and they were talking about it, and they said that it was the coal that had been surveyed and condemned, and retained over the survey. That is the way I came to hear about it.

Q. Do you know of any other abuses than those of which you have spoken in any of the

departments of the navy-yard?—A. I know, as the result of our investigation of the civil engineer's department, that it is kept in a very loose way, exceedingly loose, and, I presume, that it has come to your knowledge that there were very serious charges against Mr. Granger, with reference to the dredger.

Q. Do you think that that department is in any safer condition now than it was before?—A. No, sir.

Q. What do you think on the subject of a change of the officer in command of that department?—A. My own feeling is strongly against his reliability.

Q. What is the necessity of that office at all?—A. I don't think there is any necessity now.

Q. Can the duties devolving upon the civil engineer be performed by some others in the yard without any detriment to the public service?—A. I think so.

Q. Equally as well?—A. Quite as well, I think.

By Mr. HARRIS:

Q. Have you not officers here much better qualified to discharge the duties?—A. I think so myself; that is my opinion. But I should like to say that if, as was the case during the war, there were large buildings going up, it is probable the naval officer's knowledge would not extend to such buildings. The knowledge of an expert would be required; but I don't think you find that in the civil engineer.

Q. Could they not go out and employ engineers?—A. Certainly they could, and they would get a better and more competent man. The naval officers ordinarily could do all the work of the civil engineer. As things now are in the yard, there is no necessity for a civil engineer.

By Mr. JONES:

Q. Could not the heads of the departments, with their foremen under them, such as carpenters, masons, and machinists, perform those duties, if plans were drawn by outside engineers, and submitted to the departments?—A. I think so; I think there is no doubt about it.

By Mr. HARRIS:

Q. Why would not the foreman carpenter be competent to do all that work, if he had proper plans?—A. I think he is, or else he is not fit for his business.

Q. And so with the mason-work?—A. The same way; we have foremen of all these branches in the yard.

Q. What are the specific charges which you understand have been made against Mr. Granger, or which the testimony would sustain?—A. The charge in regard to the dredger is this: There was a proposition made by some outside parties to use the Government dredger; that as a *quid pro quo* they would put the dredger in thoroughly good order. That was to be the pay they would make for the use of this dredger. That was recommended by Mr. Granger, and received the sanction of the Bureau of Yards and Docks in Washington. They were to have it for a specified time, three months, I think. Under those circumstances they took the dredger. Mr. Granger allowed them to keep it much over the time specified, and, in addition, it was shown by the passes for material out of the yard, that he had passed out $2,000 worth of material to be put upon this dredger while in the hands of those parties, which was a direct breach of contract. Their purchase-money, so to speak, of the dredger, was to put it in order and supply the material that was used. I was not on that board, which consisted of Captain Chandler, Captain Brown, and Lieutenant-Commander Nichols.

Q. Was there any evidence that Mr. Granger received any consideration from these parties?—A. Not that I know of.

Q. And the other point that you heard against him was, that he suffered the amount of lumber in his department to go unverified for a whole year after he took possession?—A. Yes, sir: and my recollection is, that it was shown that he knew of this deficiency as much as nine months before he took any steps to ascertain whether it existed.

Q. Do you know whether in any way he was connected with the former civil engineer or interested with him?—A. I do not.

Q. You know nothing more of your own knowledge than you have stated?—A. I can tell you one or two things that came out in the course of the investigation. For instance: we found what we call a "store-order" that called for 2,000 feet of lumber which was changed to 12,000 by putting a 1 before the 2. Then another item, in the same store-order, was changed in the same manner so as to call for 20,000 more feet of lumber than actually had been used. Then these store-orders required the authentication of the foreman carpenter, who uses this material. He refused to sign them, and went to Mr. Granger about it, and Mr. Granger said he supposed that Mr. Haskell, the chief clerk, wanted to square up his books. That was all the comment upon it. Those orders were produced before us so that we could see exactly where the alterations had been made; and then subsequently, when Mr. Cassidy, the foreman carpenter, refused to sign the orders, those two units were scratched out. Then, on the return sent to Washington, we found four or five evident forgeries of a foreman's name, and called him up, and he said they were not his signatures.

Q. Committed during Mr. Granger's time?—A. Yes, sir; Mr. Granger's name was signed to the papers. It is only right to say that that might have been mere carelessness on Mr. Granger's part. Of course, he has to take the responsibility; but it may have been mere heedlessness. I think he ought to have known the signatures of the men which came to him.

Q. He ought to have recognized the signatures of his subordinates?—A. Yes, sir. Properly, all these store-orders require his own signature and that of his subordinates. This man's signature was very easily recognized from the fact that he had injury to his arm which made his hand exceedingly tremulous, and his signature was peculiar for that reason. These four or five signatures that I speak of were written as a perfectly well man would write.

Q. Did you pursue that down and find out who committed those forgeries?—A. No, sir; we did not.

Q. You became satisfied that the administration of affairs in that Department was very loose?—A. Very loose.

Q. Did you recommend his removal?—A. No, sir; it was not our province to do that.

Q. By whom were the passes signed?—A. By Mr. Granger.

BOSTON, *March* 25, 1876.

Commander GEORGE DEWEY sworn and examined.

By Mr. MILLS:

Question. What is your profession, sir?—Answer. I am commander in the Navy. At present, light-house inspector of the second district.

Q. On duty where?—A. On duty in Boston, at the second light-house.

Q. Do you know anything about any hemp that was condemned at Charlestown, and afterward purchased by the Government?—A. Well, I have heard. In the fall of 1870 I was here on duty in this navy-yard, and heard (we hear a great many things) that a cargo of hemp, consisting, I should think, of about three hundred tons, had been sent here, furnished by Mr. Cattell, of New Jersey; that it had been rejected by the inspector of hemp at this place; and that an order was received afterward from the Secretary of the Navy to receive it.

Q. And it was received?—A. Now, that part of it I don't know.

Q. Here it says, by my informant, "that a quantity of hemp and cordage which was perfectly rotten, and condemned by the naval inspector at Charlestown, and yet paid for by orders from Washington?"—A. Now, you see I don't know that of my own knowledge. I only wish I did know it. I was on duty here at the yard.

Q. Where can I make the inquiry? Would it come from the Bureau of Equipment?—A. Captain Spicer, who is on duty here at the yard, is the equipment officer. He is in charge of the rendezvous. He was the man in charge of the equipment bureau.

Q. Do you know of any abuses in the Navy that you could report to the committee?—A. The last ship that I commanded, (the Narragansett,) the paymaster of the ship got his accounts into such a condition that the Fourth Auditor of the Treasury sent a clerk out to investigate the accounts, and he was on board the ship under my command, and was on my ship living with me some two weeks, investigating his account. He told me that he found the paymaster short about between $2,000 and $3,000 in cash. It was Assistant Paymaster McGowan. He is on duty on board the Pawnee now.

Q. Has any inquiry been ordered into that?—A. No, sir.

Q. And the Navy Department knew it?—A. They must have known it.

Q. Who was the officer that investigated it?—A. He was a clerk of the Fourth Auditor's Office, and his name is Brown. He had no right to be $2,000 short in his cash.

Q. Now do you know of any property that has been clandestinely taken from this yard by any person?—A. I have heard a report lately about the civil engineer. (You know we talk these things over among ourselves, and we hear this and that, but it is another thing to be stating what I know under oath.)

Q. Are there any other abuses that you can think of, the correction of which you can suggest to the committee?—A. I think there are so many. Have you ever read the plan of Captain Luce for a joint commission? I think everything is wrong about the Navy. I would earnestly recommend something of that kind, such as is found in Captain Luce's suggestion.

Q. Do you think that, providing the heads of Departments should go according to the laws of Congress, there would be as many abuses in the Navy as there are at the present time?—A. No, sir; if the heads of Departments will be sustained in their interpretation of the law.

Q. You mean if the heads of Departments at Washington would obey the laws of Congress, there would not be as many abuses?—A. Of course there would not. But I am not prepared to say that there are laws enough to cover every case. For instance, lumping the naval appropriation. That is all wrong. I believe that the money that you appropriate for the pay of the Navy is not used for the pay of the Navy.

By Mr. JONES:

Q. Don't you think it would be an improvement to the Navy if a law should be passed in Congress taking the commission away from any officer connected with the Navy, if he did not discharge his duty honestly, and in obedience to law, and that he should be finally dismissed?—A. I do think so. I think so most certainly. But I don't believe the trouble is there with the officers.

BOSTON, MASS., *March* 25, 1876.

JEREMIAH S. REMICK sworn and examined.

By Mr. MILLS:

Question. Have you ever worked on the yard here?—Answer. O, yes, sir.

Q. How long?—A. Well, perhaps on and off for twenty-five years; sometimes here three months and sometimes six.

Q. In what capacity?—A. I began as quarterman shipwright.

Q. Were ever you quarterman under Mr. Sprague, that had charge of the bending-machine?—A. No, sir. Mr. Griffiths had charge when I was quarterman on it; when I was there.

Q. Have you any books or papers that will show what material was bent by that machine?—A. Yes, sir.

Q. And in what condition it was bent?—A. Yes, sir.

Q. Please show them.—A. My private memorandum would give it to you; the time-book and journal simply gives the work that was done and what it was on, but not the condition. There are orders that I have received from the Construction Department about the work and other things about the yard, delivering tools, &c., and various matters. Those that you see there upon that book show what the men were at work upon at such a date. These are all different dates. "1874, January 1, Thomas W. Goods paid sawing dead-wood for Mr. McKay, &c."

Q. Was this in the saw-mill?—A. No, sir; in the bending-mill. This book relates altogether to the bending-mill. That one entry illustrates the whole thing. That takes one man. This next entry takes another man, George C. Glover, and states what he was doing for the whole month. That man was sawing. Then Benjamin W. Coffin was repairing the frame-work for the plank-shear for the Vandalia. That was, fixing the machinery for bending the plank-shear for that ship. That includes the whole for that month, which you see there.

Q. Is that besides yourself?—A. I do not charge myself in this book. The foremen I charge to general purposes, whatever they do, and calculate that they are looking after everything pertaining to the department. Now this gives the time of the men, foremen included; this other, tools. This is the same man here, only it is the time-book.

Q. Now get your book and show what was done on the bending-machine; the bending that was done.—A. That is in my private memorandum-book, which I now produce. This is from December, 1874, to December, 1875. At the time I commenced I had been suspended a long time. I was re-instated at that time, 1874, and continued till 1875. This is a private memorandum of the whole thing, every day. [Reads:] "December 1. By order of Constructor Easby, discharged John R. McDonald and suspended myself."

Q. Explain to me where you set down the bending of the timber, and the like of that; the number of pieces that you bend per day.—A. [Reads:] "Tuesday, August 17, took out two pieces that we put in yesterday in the steam-box. Made two braces, both of them good bends, with no splinters on the back." "August 18. Took out two pieces that we put in the box yesterday morning, with 200° to 260° of steam; both well bent, with slight checks on the back." "August 19. Bent and took from the box and frame two sticks, both good, &c."

Q. Do you know anything about that paper which I now show you? [Showing report on bending-machine.]—A. I took charge of the mill in January, 1874—or, I had no office to keep my books in until January. [Reads:] "July 24, 1873. Lost, or probably stolen from my coat-pocket, memorandum-book containing daily work done in bending-mill, with number of men employed, their names, the quality and condition of the work done, with all the necessary marks to enable me to know nearly the cost of each article from March to July 24. Also some private papers and memoranda that cannot be of any benefit to the thief or finder." "July 25. Bent two pieces of white oak, 15 by 20, for ship's knees for the Vandalia. Both broke and spoiled."

Q. Have you anything bent July 23?—A. All I can give you is from July 26, forward. [Reads:] "July 26, sawed and bent one stick of yellow pine."

Q. I want you to summarize the whole of this. I want you to give in a summarized form how many you bent, and how many were spoiled and how many not?—A. Probably when I wrote that report I had done that. [Continues to read from the memorandum-book diary of each day's work.] It runs right through in that same way until I took charge of the mill.

Q. Why should it do better since you took charge?—A. Because I am a practical mechanic and know how to do it. I commenced there last December, sawing frame. The prices are there; you can see what they are.

By Mr. HARRIS:

Q. You have shown us enough for us to understand what you were about, and that you ought to give us the net results of that machine, in your opinion.—A. I would like to have you go down to the mill and look at the timber. You can there see what is broken and what is not.

Q. Did you make that report, which I now show you?—A. Yes, sir; it looks like my handwriting.

Q. Can't you take the report that you have here and make a summary of it, and tell us how many pieces were bent, of different kinds, and how many were broken, and how many were imperfect? We want you to do that, and to put it on a piece of paper. Is this, on this paper, a fair report of it?—A. Yes, sir.

Q. Are you willing to give that to the committee as your report, under oath?—A. Yes, sir. At the time it was made, that work was done under another man. That man, in my judgment, did not know how to do it. Now, I went down, on a trial, in November, 1873. Mr. Fernald, that is now constructor, Mr. Sampson, the master carpenter here, and Mr. Marston, the master iron-fitter, were a commission to examine them. A complaint had gone to Washington that I was not competent. I bent twelve pieces for knees. Those pieces are fit to go into a ship now. Mr. Griffiths made the complaint against me. He did not want me to have the place, I presume.

Q. I notice by the contract that Mr. Griffiths was bound to bend the frames for three ships before the machine was accepted. You knew about that, did you?—A. No, sir; I did not.

Q. Were three frames ever bent by that machine?—A. I cannot tell.

Q. When were you first employed?—A. I was first employed in March, 1873. Mr. Griffiths was in charge of it at the time.

Q. Did you do any work with that machine after that time?—A. I did nothing until I took charge of it.

Q. You did, after March?—A. No, sir. I had nothing to do but stay there. He gave me no orders whatever.

Q. Have you done any work with that machine since March, 1873?—A. Yes, sir. From November, 1873, when I got my appointment in charge of the mill.

Q. Did you remain in charge of the mill from March, 1873, to November, 1873?—A. was not in charge from March to November at all. I was only quarterman. Mr. Griffiths a carpenter in the United States Navy, had charge.

Q. Was any work done on the mill from March to November?—A. Yes, sir.

Q. Did you do anything there?—A. No, sir.

Q. When did you begin to have charge?—A. November, 1873.

Q. Is that record which you have given us the record of what you did?—A. Not at that time. I don't know where that record is.

Q. From January, 1874—that paper which you have had?—A. That is a record of what was done by Mr. Griffiths previous to the 20th day of October, 1873.

Q. What did you know about it?—A. I was there and saw it.

Q. You made a record?—A. Yes, sir.

Q. You were not employed there?—A. I was employed there as quarterman.

Q. Did you have anything to do with that bending?—A. Not at all.

Q. Then you took a record of what other people were doing?—A. Precisely.

Q. Now, I want to know if you have a record of what you did after you took possession?—A. Yes, sir.

Q. Where is it?—A. It is in that book.

Q. Now, make an abstract of that, and tell us every stick that you bent, and whether it was good or bad, and hand in the abstract in a day or two.—A. That I will do.

Q. Now, what proportion of the timber bent on that machine was spoiled after you took possession?—A. Well, not over 2 per cent.

Q. What before you took possession?—A. Well, I should say 50 per cent.

Q. How much went on board of the Vandalia of timber which you bent?—A. Well, I bent for the Vandalia her chocks, her forecastle, and her poop-deck, plank-shears for the poop-deck, and a portion of her water-ways.

Q. Did you make good work of that?—A. Yes, sir.

Q. As good as natural shapes?—A. Yes, sir; as good as for any ship in the United States.

Q. Do you believe in that bending-machine?—A. I do, most thoroughly.

Q. What relation had you to the machine when Mr. Griffiths had it? Did Mr. Griffiths employ you?—A. No, sir.

Q. Did you have anything to do with Mr. Griffiths?—A. William L. Hanscom sent me there. He was constructor here at the time.

Q. You claim that after you took possession you made good work?—A. I do.

Q. Now, was there any saving to the Government by that bending?—A. Undoubtedly.

Q. Have you kept an accurate account of all the bending that you did?—A. Yes, sir; it is all in that book.

Q. And you will give us an abstract?—A. Yes, sir.

Q. Now, was there any timber ruined by bending?—A. I say about 2 per cent. I cannot tell now—but not over that.

Q. Do you think that there is any saving to the Government over what it would be to fit the timber by hand?—A. My opinion is that it would save the Government 50 per cent. in the stock.

Q. How about labor?—A. I think it would save something in the labor, but not so much as in the stock.

Q. You think Mr. Griffiths mismanaged it, do you?—A. I don't think he knew how to manage it. Still, he is a fine fellow and has a good deal of theory, and understands draughting; but when it comes to the practical part he knows nothing about it.

Q. You say that so far as you have any opinion about it the bending-machine is a very valuable thing?—A. Yes, sir.

Q. That it would save in stock and labor?—A. I think I can save the Government 50 per cent. on stock and something on labor; but not so much.

Q. Do you think the Government could afford to spend $160,000 for that machine for any advantage that they would get?—A. I think so; and I think as they have got the machine it will pay to run it.

Q. Have you had any ill-treatment on the yard?—A. I think I have. I made in the first place an application for that mill and was promised it, as first-class foreman. Instead of receiving that I received an appointment as quarterman at $1 less a day. Isaiah Hanscom appointed me. I got the appointment by Mr. Gooch and Henry Wilson. I applied to them. Mr. Gooch wrote to Washington and Mr. Wilson went to Washington about it.

Q. Did they go especially on that account?—A. Mr. Wilson did.

Q. To get you that place?—A. I don't know but he had other business at the same time.

Q. Did anybody else share in your pay?—A. No, sir.

Q. Did you pay anybody for the knees?—A. No, sir.

Q. Were you at that time a republican?—A. Yes, sir; and have been ever since.

Q. Were you before?—A. I was turned out of the navy-yard for being one—because I would not go in for slavery.

Q. Were you turned out of your place on the bending-machine?—A. No, sir; but I am suspended without pay and have been repeatedly.

Q. How lately has any work been done on that machine?—A. I think it was the 1st of December last.

Q. How many sticks a day can you bend with that machine?—A. Two; sometimes four, and sometimes none. But I average two sticks a day.

Q. Can't you bend knees?—A. Yes, sir.

Q. How many in a day?—A. I cannot tell, because I have had no chance to try. They have not given me the opportunity and the stock. All the knees I bent I bent on trial.

Q. Had you any knowledge of this machine before you were put there?—A. No, sir.

Q. You think you understand it better than the rest of them?—A. I think I understand how to do the work better than any that have been there. I think the work shows that.

The following letter was subsequently received from the witness and ordered to be made part of the testimony:

CHARLESTOWN, *March* 27, 1876.

Hon. ROGER Q. MILLS,
Chairman of Special Naval Committee, Charlestown Navy-Yard:

SIR: Your committee required of me an abstract of the timber bent by the bending-machine since it has been in my charge, which I give as follows:

I took charge October 20, 1873, and from that time until January 1, 1874, I am unable to find a record, but will state from memory as correctly as possible.

Bent 12 pieces of white oak, 9 x 9 x 10 feet, for knees.

Bent 9 pieces of white oak, 4 x 12 x from 35 to 60 feet, (edgewise,) for plank-shear for torpedo-boat.

Bent 9 pieces of white oak, 5 x 14 x from 35 to 60 feet, (edgewise,) for plank-shear for Vandalia.

Bent 2 pieces of yellow pine 12½ x 13 x 50 feet, for water-ways for Vandalia.

Bent 4 pieces of yellow pine, 4 x 12 x from 20 to 40 feet, (edgewise,) for water-ways for torpedo-boat.

1874.

January 8.—2 pieces of white oak, 5 x 14 x 40 feet, (edgewise,) for plank-shear for Vandalia.
9.—2 pieces of white oak, 4 x 7 x 60 feet, (edgewise,) for rails for torpedo-boat.
10.—2 pieces of white oak, 4 x 7 x 60 feet, (edgewise,) for rails for torpedo-boat.

January 13 —2 pieces of white oak, 5 x 14 x from 40 to 60 feet, (edgewise,) for p
for Vandalia.
14.—2 pieces of white oak, 9 x 10 x from 35 to 60 feet for chocks for Va
16.—2 pieces of white oak, 9 x 10 x from 35 to 60 feet for chocks for Va
19.—2 pieces of white oak, 9 x 10 x from 35 to 60 feet for chocks for Va

No bending was done from January 19, 1874, until August 17, 1875, at whic commenced bending frames for Terror and class, and ceased bending December 6

August 17.—Bent 2 sticks; good frame.
18.—Bent 2 sticks; good frame.
19.—Bent 2 sticks; good frame.
20.—Bent 2 sticks; good frame.
21.—Bent 2 sticks; good frame.
23.—Bent 2 sticks; good frame.
24.—Bent 2 sticks; good frame.
25.—Bent 2 sticks; good frame.
26.—Bent 2 sticks. The poorest bend we have had, but not bad enou demn it.
27.—Bent 2 sticks; good frame.
28.—Bent 2 sticks; good frame.
30.—Bent 2 sticks; good frame.
31.—Bent 2 sticks: good frame.

September 1.—Bent 2 sticks; good frame.
2.—Bent 2 sticks; good frame.
3.—Bent 2 sticks; good frame.

December 2.—Bent 2 sticks; good frame.
3.—Bent 2 sticks; good frame.
4.—Bent 2 sticks; good frame.
6.—Bent 2 sticks; good frame.

190 sticks, or 95 frames, for Terror and class.
Bent November 30, 2 pieces for knees; both broke.
There has been bent 190 pieces for Terror and class.
14 pieces for knees.
50 pieces for Vandalia and torpedo-boat.

254 pieces.

Of the above, three pieces only are a total loss, viz, a white-oak piece 4 x 12 x 35 feet, in ended for plank-shear for the stern of torpedo-boat, (bent edgewise,) and two knees.
Four pieces, intended for plank-shear for Vandalia, split at the end after bending, and were used for harpins.
The remainder, with the exception, perhaps, of one frame for Terror and class, are suitable for the purpose intended.
The timber used has not been of such dimensions or quality as is required for first-class work.

Very respectfully,

JEREMIAH S. REMICK.

BOSTON, *March* 25, 1876.

SAMUEL MCKAY sworn and examined.

By Mr. MILLS:

Question. When were you put to work in the yard?—Answer. I have been here the last four or five years, off and on.

Q. Who was it that appointed you here in the yard when you first came in?—A. There was no necessity of appointment at all. All there was to do was to come up on the yard and they would take your name.

Q. Who employed you?—A. I think I came in under William L. Hanscom.

Q. It was through him that you obtained your appointment?—A. Yes, sir.

Q. In what capacity are you at work?—A. As carpenter.

Q. Did you deliver any of the iron or other materials to your brother, Donald McKay, for building the sloop of war Adams?—A. Yes, sir.

Q. How much of the material did you deliver to him?—A. I could not tell. The books, of course, will tell that.

Q. Whose books will show that?—A. The store-clerks, I should suppose.

Q. You could not state how much you had delivered—the estimate?—A. No, sir. I think it is on the books, though, down to the office.

Q. Do you know of any other material going out of the yard except that?—A. No, sir.

Q. Do you know that there was a correct account of the timber that went out and oth[illegible] material kept?—A. I don't know whether it was a correct account or anything of the kin[illegible] I kept a correct account of what I had; I don't know about the others.

Q. Do you know of any abuses existing in the yard here?—A. No, sir.

Q. Do you know anything about the building of the little boat that was built in the ch[illegible] of the boat-makers' department, that went to the yacht America?—A. No, sir.

Q. Do you know anything about any tools being furnished to Donald McKay?—A. I think I do; yes, sir.

Q. What was the value of the tools furnished from your department?—A. I could not te[illegible]l; I have kept no account of them.

Q. Have they been returned?—A. Some have and some not.

Q. Have you kept account of those returned?—A. No, sir; it did not come under me at all.

Q. In what department are you engaged now?—A. In the constructor's storehouse.

By Mr. JONES:

Q. Are you there to deliver and receive material?—A. Yes, sir; I am clerk there. They have a store-clerk. I am there with him. The orders come to him, and I deliver whatever there may be.

Q. And to whatever bureau it may be to?—A. Yes, sir.

Q. Do they supply all the different bureaus from your store, or only construction?—A. Only construction.

Q. Did you say that you had never known of any lumber that had ever gone out of this yard except by regular order of the Navy Department?—A. That is what I said.

Q. Did you know whether that had a correct and proper account made of it?—A. Yes, sir. I went into the store the 1st day of July and remained there until the 15th of January of last year.

Q. Where were you previous to that?—A. I was in the other storehouse here—the constructor's.

Q. All in the same department?—A. Yes, sir.

Q. What did you do there?—A. I was in the storehouse delivering whatever stuff was necessary for mechanics or workmen.

Q. Were you the head man in this other storehouse?—A. I was under the head clerk.

By Mr. HARRIS:

Q. When were you appointed? Was it before or after the contracts with your brother?—A. I was appointed before.

Q. Was it at or about the time those contracts were being entered into?—A. I was appointed at or about the time he got the contract, I think. I have not got it in my memory now.

Q. You were placed in charge of what material?—A. Iron.

Q. Did you deliver all the iron that went into those ships?—A. All that came from the yard under his second contract I think I delivered. He had two contracts.

Q. You say it was under the second contract?—A. Yes, sir.

Q. Upon whose order did you deliver it?—A. The requisition is made out by the constructor and from there sent to the head clerk, and the head clerk sends an order to me. I deliver it according to his order—a copy from the requisition.

Q. Did you deliver any lumber that was not drawn on requisition?—A. No, sir.

Q. Did you return a correct account of the material delivered by you?—A. Yes, sir.

Q. What other person was charged with the duty of ascertaining whether the quantity was correct, or correctly entered, of iron?—A. There was no one.

Q. Then you had the entire charge of the deliveries of iron to your brother?—A. Yes, sir; and weighing it out and making the return. So many bars of iron were required. I would weigh out so many bars.

Q. By whose recommendation were you appointed?—A. I went to Washington and asked Mr. Hanscom myself, and he appointed me.

Q. At that interview was anything said about those contracts with your brother?—A. No, sir.

Q. Have you known Mr. Hanscom long?—A. Yes, sir.

Q. Did you ever serve under him?—A. Yes, sir.

Q. Were you removed?—A. I was suspended when there was no work to do, the same as others.

Q. How long have you been connected with the navy-yard?—A. Some four or five years, off and on.

Q. Did you ever hold any appointment in the navy-yard before you went to Hanscom and asked for it?—A. I was quarterman; I was shipwright here in the yard.

Q. Were you at the time you asked for this appointment?—A. No, sir; we were all suspended and broke.

Q. You asked for this special appointment?—A. Yes, sir.

Q. You got an order appointing you store-hand?—A. Yes, sir.

Q. Not to be suspended?—A. No, sir; I don't say so.
Q. You are liable to suspension like anybody else?—A. Yes, sir.
Q. What is your pay?—A. The pay was to have been $3.50.
Q. What consideration did you pay to any person to secure that situation for you?—A. Not a cent. I paid my fare to Washington and back again. That is what it cost me.
Q. Had you any recommendation?—A. No, sir.
Q. You were not appointed by political influence?—A. No, sir.
Q. What is your occupation?—A. Ship-carpenter.
Q. How long have you been such?—A. I have worked at it over thirty years.
Q. Where have you worked?—A. I have worked for my brother, in his yard.
Q. Did you work at the time he built the Great Republic?—A. No, sir; I was building then on my own hook on the Merrimac River, at Newburyport.

By Mr. JONES:

Q. Did I understand you to say that you were in the same capacity when your brother had the first contract on the hull of the Adams? You said you were in the second contract.—A. I was not in the storehouse when he took the first contract—only the second. I was here when he built the hull, and was with him part of the time—about six months of the time that he was building the first ship. After he launched her I left him and went into the yard. It was before he made the second contract.
Q. Were you here at the time the frame was delivered to him?—A. Yes, sir.
Q. Were you at work for the Government?—A. Yes, sir. I got the frame out for him. The Government got it out, but I was the quarterman who had charge of it.
Q. In what shape did you deliver him that frame?—A. By the mold.
Q. Was it beveled?—A. Yes, sir.
Q. Was it all beveled?—A. Yes, sir.
Q. Was it ready to put up?—A. Yes, sir; it was ready to put up.
Q. Were the ends cut off?—A. No, sir.
Q. Was that dovetailed together?—A. No, sir.
Q. As that frame was delivered, were the ends to be cut off when the ship was set up?—A. No, sir; before.
Q. How long pieces would have to come off?—A. There was very little, because the frame was molded very close. Sometimes there would be 1½ inches; from that to 3 and 4 inches.
Q. There were no long pieces?—A. No, sir.
Q. You just delivered the exact amount that the mold required?—A. Yes, sir; in every particular.
Q. You don't know as there was any more live-oak delivered to him except that frame?—A. That was all. There might have been half a dozen sticks or so, for other purposes, belonging to the ships, where the Government used live-oak pieces that could not be molded beforehand.

BOSTON, *March* 25, 1876.

NEHEMIAH GIBSON sworn and examined.

By Mr. HARRIS:

Question. Where do you reside?—Answer. In Boston.
Q. What is your business?—A. My business formerly was wood and coal business. Now my business is mercantile. My business is in shipping altogether.
Q. Are you a builder of ships?—A. I have built one, and one only—*i. e.*, built it myself. I built one upon what we call the new principle of frames.
Q. You are interested in ship-building more or less, and have been for some years?—A. Yes, sir.
Q. Do you buy ships to take down and destroy?—A. Yes, sir.
Q. To what extent do you do that business?—A. I have bought quite a large number, dating back to the time when the Government sold them out freely—dating back to 1864, 1865, or 1866; Government ships.
Q. What class of ships?—A. Ninety-day gunboats, 501 tons. I bought quite a number of those. I have in every instance refitted and sent them to sea; took out the machinery and made sailing-vessels of the ninety-day gunboats.
Q. Did you buy them at public auction?—A. Yes, sir.
Q. How many of those did you buy?—A. The first one I bought was in New York in 1865; quite a large one, called the Pembina. This was the pioneer of the fleet. The Government approved of her, and built twenty-three more of that particular class. They were steamers. They were known as the ninety-day gunboats.
Q. What did you give for her?—A. I think I paid in the neighborhood of $14,000 or $14,500. I put in spars, and she is now at sea.
Q. Is she a good vessel?—A. She was somewhat rotten. I took her to Wilmington and rebuilt her and put in new timbers. I took her planking off to put her timbers in. We

have to take off the outside deck and take off the frames and put them in again. Her value at the present day would be $16,000.

Q. What did it cost you to repair that vessel?—A. I have made, perhaps, a wrong statement. I did not lay out a very large sum at that time. Mr. Hall was interested with me in her—Samuel Hall. He took her out to his yard and did the repairs on her at that time. She was of Ohio oak. Running through fresh water rots vessels very easily.

Q. You paid about $14,000 for her, refitted her, and put her to sea, and she is worth $16,000 now as a sailing-vessel.—A. She was worth more when we put her to sea; but now she has more age on her.

Q. What competition had you in the bidding for that vessel?—A. We had quite a large quantity the day they put her up. There was a large number of vessels there.

Q. Was there any combination among the bidders?—A. No, sir.

Q. Did you buy any other vessel on that day?—A. Yes, sir.

Q. What other vessel did you buy?—A. I bought altogether five or six. I bought one in the Washington navy-yard. I bought one in Norfolk about the same time, if I recollect right. I think it was immediately following. I could give the dates.

Q. You mean of that class?—A. Yes, sir.

Q. What did you give?—A. I don't think I have bought any less than $12,500, and I paid as high as $15,500. I have treated them all in the same way, and they have proved good ships. They are worth $10,000, more or less, now. I was the pioneer in the altering of them. I have quite a number of them going on the water to-day.

Q. In any of the purchases of this class of vessels, were there combinations among the bidders?—A. Yes, sir.

Q. Explain to the committee just how that was accomplished?—A. What we call combination is, suppose six of us are well posted and know the value better than the general class of bidders. We say to one another, "We will form a combination," *i. e.* one of us is appointed bidder. Suppose I am appointed bidder. I bid for that vessel all that I would give, against all outsiders. Suppose there are three or four hundred outsiders for instance. My confederates stand perfectly quiet. The understanding is this, that I am appointed a bidder to bid the last bottom dollar that I would give for the vessel. Then, after she is knocked down—provided the boat is knocked down as against all outsiders—I stand for my ring. I bid the last dollar I will give for the boat as against all outsiders and if my knowledge is superior to all outsiders' and they don't press me up, I buy the boat as cheap as I can buy her. Then, if any of the parties in this ring see fit to give more than I have given for her they have a right to do so after I have ceased to bid, take her up, and run her up as high as they please. But at whatever price they knock that boat down, that gentleman has got to start that boat at a private meeting for bidding among ourselves. If there is a profit it is divided among the ring, and the successful man takes the boat. I bid what I am willing to take the vessel at as against all outsiders. I get it for less than I am willing to give, if the outsiders don't run me up.

Q. Is it known among the ring what your highest bid would have been?—A. Not at the time; no, sir.

Q. The vessel is bid off by you?—A. Yes, sir.

Q. And if you stop there, all the other gentlemen in the ring have a right to bid higher?—A. Yes, sir.

Q. And if that gentleman stops, then another can go on and bid higher?—A. Yes, sir.

Q. So that all members of your ring have a right to bid at the public sale what they are willing to give for her, if outsiders follow them up?—A. Yes, sir.

Q. Now, you have bought these vessels in that way; each of you know what has taken place? Now, you go into your ring-auction and you put up the first vessel; you, having bid her off, are obliged to bid there at the ring-auction just what you bid at the public auction exactly. Then, if any other gentleman of your ring will give more, he has a right to buy her?—A. Yes, sir.

Q. The difference between his bid and your bid is paid into the pool as profits?—A. Yes, sir.

Q. And so you sell each vessel?—A. Yes, sir.

Q. And every gentleman is obliged to start the bid in the ring at the price that he bid her off at?—A. Yes, sir.

Q. How many vessels did you ever buy in that way at one time?—A. We have bought, I think, as many as six vessels at a time.

Q. Do you remember the gross profits realized at the ring-sale on such an occasion over and above the price at which the boat was bid off at the public-auction sale?—A. Our profits have been various. There have none been very large. There was one time when there was eight in the ring. I think we divided on two vessels 1,880 odd dollars. Each person got that.

Q. Do you remember what the profits were where the ring purchased six at one time?—A. They were not so large. We were run pretty heavily at that time. There were a good many outside bidders; there were more in the earlier stages of it.

Q. Now, I will ask you whether or not your ring paid out the profits realized in your ring-sale in money to any officer of the Government or any auctioneer, or any one having

charge of the sales?—A. Not a dollar to my knowledge, sir; I don't know of a dollar being paid.

Q. And you claim, then, that those sales were perfectly fair, except so far as the combination might be considered unfair?—A. Yes, sir.

Q. Open, and anybody could bid?—A. Yes, sir.

Q. No attempt to suppress their bidding except in that way?—A. None whatever; they are done as fair as any auction-sale could be.

Q. Still they left a large profit?—A. There is not profit enough to pay me for having the name of having been in such a ring.

Q. Do you mean to say that you prefer to go in on your individual judgment and buy in competition with the world than to go in with the ring?—A. It does not cost me any more to buy them from the Government than from the ring. They have played it so much here in ringing these yards, in every instance where they have sold. In some instances they get everything. I don't like being in with such a class of men. There are too many of them.

Q. How many vessels do you think you have purchased from the Government at the open auction sales?—A. Where it is knocked down to me I pay for it; perhaps she is passed over to somebody else. Perhaps I have bought of others that have bought of the Government in these rings. They are so mixed up that I cannot distinguish only here and there occasionally a boat where I have bought them independent, without being tangled up with other parties.

By Mr. MILLS:

Q. Do you know that you or any other parties connected with you have used any influence with the Department to get them to put up a boat for sale?—A. I never have in any shape or form. I couldn't say what other parties have done.

Q. You don't know, then, what other parties may have done on that score?—A. No, sir.

Q. Do you know of any parties connected with the purchase of these vessels who have made any presents to any one connected with the Naval Department?—A. I do not, sir. There are other parties who know more about it than I. I only go when there is an auction. If they offer a vessel of the Navy for sale, I am pretty sure to be there.

Q. Now, when you form your rings, as an appendage to that ring, do you organize an arrangement by which there shall be outside bidders—men who, if there should be vessels struck off to them, would "vamoose" and not turn up?—A. No, sir. The secret of buying these vessels is that people in starting with them find there is a good deal of copper and composition in them. A Government vessel is much richer than any other vessel. There is a great deal of value in it, especially in the steamers.

Q. Have you ever purchased any by written bid?—A. No, sir; I don't recollect as any were ever advertised in that way.

Q. Did you ever obtain a vessel from the Government in any way except by open auction purchase?—A. I never have.

Q. State when and what have been sold otherwise.—A. A monitor left this yard which it was said was going around to John Welch & Son for repairs. That was the Miantonomoh, I think.

Q. Do you understand that she was ever sold?—A. No, sir.

Q. We have her history. I am talking now of vessels of the Government sold in any other manner except by auction sales?—A. I don't know of an instance of that kind.

Q. What vessels have you purchased which you have taken down?—A. I was a purchaser in the ring of the United States sloop-of-war Albany.

Q. What did you give for her?—A. I paid the Government $48,000, I think; and I purchased a United States sloop-of-war which went to Portsmouth to take an admiral's body, and got ashore on the Nantucket shoals. She was a large ship; one of the largest frigates.

Q. Did you purchase her after the accident happened to her?—A. O, yes, sir. She was repaired after that, and went on a cruise. It was after she came home from the Mediterranean. We gave $54,000, I think, for her. She was a frigate. She was a very nice frigate, except that she was rotten and decayed a good deal. She was built in the war. She was 346 feet long, and 46 feet beam.

Q. You got a pretty good trade there, didn't you?—A. A very fair trade.

Q. What was she worth the day you bid her off?—A. She was worth the day we bid her off for $54,000—worth $75,000 to $77,000.

Q. Was it bought to tear down?—A. Yes, sir.

Q. Where was she destroyed?—A. We took her to Nineteenth street, East River; took her up to Cow Bay and burned her up there. All that we saved was the material. We took out the machinery.

Q. Do you know what you realized?—A. It was $198,000 and some odd dollars. It was not independent of expenses. We realized over $13,000 to a share. There were four of us. Those are the best ones I have ever had anything to do with.

Q. What did you realize on the Albany?—A. I got on the Albany and the Guerriere—the materials sold for $198,009. After paying what we paid to the Government and all the expenses, (for it is a very expensive job to get the materials out of her; it cost us over $25,000 to wreck those ships and get the material suitable for market,) on the two we realized $13,000 apiece—all four of us.

Q. What other vessels have you bought which you have destroyed?—A. I have not bought any of the regular navy-built ships except those built temporarily for war—double-enders.

Q. Have you not bought some of the monitors that are being sold now?—A. No, sir.

Q. You have no interest in those?—A. No, sir.

Q. Now you say you have engaged in a ring such as you have described before. You have never bought any vessel at private sale from the Government, and have never bought any upon sealed bids?—A. No, sir; I never had any opportunity to do so.

Q. You took those ninety-day gunboats and took their machinery out?—A. Yes, sir.

Q. What did you realize?—A. About seventeen to eighteen or nineteen thousand dollars—composition, engines, and boilers.

Q. You sold the machinery at from $17,000 to $19,000?—A. Yes, sir.

Q. Did you have to take the machinery out?—A. Yes, sir.

Q. What would be the cost of doing that?—A. It cost about $3,000.

Q. So that, in point of fact, after having got your machinery out, you would have your hull all free profit?—A. Yes, sir.

Q. Why were not those vessels good enough to keep for the Government at the time they were sold?—A. It would cost them more to repair them than any vessels you could build It was awfully expensive.

Q. So that you cleared the hull ready to be fitted into a sailing-vessel after you got your machinery out?—A. Yes, sir.

Q. What would such a hull be worth?—A. About $10,000.

Q. So you would get a clean profit on the operation before you began to put any repairs on her of about $10,000?—A. Yes, sir; by husbanding her value in my economical way. I claim to be able to do it economically.

Q. Have you a partner?—A. Well, my son and son-in-law. My name is at the head of the firm. I have done most of the business. I have in reality nothing to do with the firm except when they want to get credit.

Q. If you know of any irregularity or fraud, actual or constructive, in the administration of affairs in the Navy Department, I wish you would state it, for you are as much interested as anybody else to have our naval affairs conducted with economy and honesty.—A. I hear a great deal of talk, but I know nothing. I travel the navy-yards a good deal, and have done so.

Q. Do you know the value of ship-timber?—A. I do not know what live-oak is worth.

Q. What is white-oak frame worth?—A. I suppose really white-oak frame would be worth possibly $19 to $20 a ton. A ton would be 480 feet, board-measure. It would be about $40 a thousand, reckoning in that way.

Q. What would white-oak planks fit for outside work cost?—A. I don't believe you could get such plank as they use in the Navy short of $60 to $65 a thousand.

Q. Has that been so for the last two years—a little higher than it is now?—A. I wouldn't be surprised if it had been as high as $75 a thousand.

Q. What would hard-pine plank be worth, fit for inboard work?—A. For inboard ceiling we use the poorest plank.

Q. Do they use white-oak plank for Navy work for inboard?—A. I don't know but they do.

Q. Then it would be the same price for inboard and outboard. Have you not some idea of the value of live-oak timber?—A. I have not, in the least. I never bought a stick in my life. It is not used outside at all.

Q. Were you here at the sale when those two iron-clads that are being burned down here now were put up at auction in this yard?—A. I was not here. I was represented by my son-in-law, Mr. Ritchie.

Q. Did you bid on those vessels?—A. I think we did.

Q. Do you know who bought them?—A. They were knocked down to Nathaniel McKay at that sale.

Q. Do you know any reason why he didn't take them?—A. I don't know; only I have an idea, of course; but I don't know the fact.

Q. Do you know of a reason why the sale was not confirmed?—A. I met Nathaniel McKay in Wall street three months afterward. He had a letter from the Secretary of the Navy, and wanted that I should take them off of his hands. Iron had fell a good deal then. The boats were not worth so much. The letter was about the exchange in New York. On the 12th day of August he showed me the letter. I won't swear that the Secretary's name was to it; but I think it was from the authority of the Secretary.

Q. Then Mr. McKay was disposed to get somebody else to take the boats off his hands?—A. Yes, sir; he offered them to me.

Q. You say that you were present when those two vessels were sold here?—A. I was represented here.

Q. You know the amount that the boats sold for?—A. I knew at that time.

Q. You think they sold at very fair value?—A. Yes, sir.

Q. Do you think they were worth any more than they sold for?—A. No, sir.

Q. Do you think the purchaser got a hard bargain for that sale?—A. Well, it is just

about an even thing. There was not any show to make any profit, or what a man ought to make.

Q. Was not the machinery that was on board of them salable?—A. The machinery in them is very small of value to sell. The navy-engines lie below the water-line, and they lose a great deal of the power of the engine, and one-eighth of the coal you burn is good for nothing.

Q. What would the Government realize from breaking them up?—A. In their way of breaking them up they would realize nothing. Here is one cut up in this yard that I offered $25,000 for, and I don't believe the Government realized a dollar. The laborers here don't do anything. I have seen so much of their idleness and inefficiency that I would not pay their board. If I had a thousand such men to work for me I wouldn't pay their board for what they would do. They put in everything—old cripples that are not good for anything. That makes the Navy cost tremendously. It makes me crawl when I go about the yard and see the men loafing. They get hid up out of sight—a pack of loafers that calculate living on the navy-yard. There are a pack of people around this city that don't calculate to do anything. It is a premium offered to them to do nothing, because their work lasts so much the longer if they don't do anything.

Q. I would like to ask you if you don't think the old ship Virginia, and some of the other ships here that are condemned, could be sold to private individuals for something?—A. Yes, sir; that Virginia, the one that was cut up, the old frigate that they started in 1817, I offered the officers here $25,000 for that ship as she lay, to take her down myself.

Q. Now there is the Iowa; do you know anything about that—that lies outside there now afloat, and the Niagara? Do you know what the Iowa is worth?—A. She was a fast ship, and never sailed but one trip, from New York here. Four years ago I would have given $70,000 for her. To-day she is worth the difference which is occasioned by the shrinkage of the value of the copper and composition, five or six cents a pound, and iron is half a cent a pound. For an off-hand statement I should say that the ship was worth from $45,000 to $50,000. I would be willing to take her and pay that for her.

Q. Do you think it is of any advantage to the Government to keep her here?—A. It is a continual expense. She is not worth a cent for anything except to take her material and break it up. She has fine engines in her.

Q. For what the outside world could use, could you sell that engine to be put up again?—A No, sir; not unless the Government would take her. They are splendid machines. They could put them into another ship.

Q. Now, the Niagara, which lies alongside of her, what is her value?—A. That ship has got a great quantity of pig-iron that you have put into her. She is all broken through. Her ends are so long and sharp that she has broken a hole through, and to save her they had to put in two or three hundred tons of pig-iron, and put chains under her. She is humped right up in the middle. She is all gutted out. I should be willing to give $17,000. It is an awful job to handle her. There are two or three hundred tons of pig-iron in her, but that is very cheap now.

Q. How much is Scotch pig-iron worth a hundred?—A. New iron is not worth over $20 a ton.

Q. That would be $6,000.—A. This ship is entirely cleaned out. There is nothing to her but her bare hull. The timber is tremendously hard to get the copper and iron out of. It is not like a ship that has got her boilers and engines in her.

Q. You think you would have been glad to have bought the Virginia for $25,000?—A. Yes, sir.

Q. Now what do you suppose it would cost the Government to cut her down?—A. I think the Government never realized anything out of her more than what they paid for labor. I think the remnants were sold here two and a half years ago. I came here and bought 175 iron tanks, and there were lots of that ship cut into pieces 6, 8, or 10 feet square sold at the same time, and they got sick of it. She is very heavily fastened with inch and a half copper bolts, which tell when you get hold of those fellows.

Q. Have you looked at the Virginia lately as she stands now?—A. No, sir.

Q. Now there are two or three vessels outside that never were launched. Do you know about the Connecticut?—A. I know about one of them.

Q. We understand that to be worthless to the Government. I wish you would look at them and see what they are worth to tear down. We want to get some man who has some knowledge to give an opinion about them. What is the Ohio worth as she floats?—A. My impression is that the Ohio is worth $30,000.

Q. Do you think you would give that to take her down?—A. No, sir; she is worth $20,000 to $30,000. She has a good deal of copper bolt in her, but it is an awful job to get it out. She is all soaked with salt. We take the vessels down upon the beach, take the spring-tide, put powerful shores to her and hold her, and commence to burn on the next flood-tide. We set fifty fires fore and aft. We have an iron chain to her and she will lighten up very fast—tons and tons every second, and we keep hauling her in; usually they fill. We take and board up the open places at low water. We let the water all run out, and then take canvas and boards and stop up the places and keep her afloat in that way; and in that way we ultimately get the whole ship on to the land. I had one down to Norfolk. That was

the hardest thing a man ever undertook. We lost twelve guns off of her deck that went down thirty feet into the mud. The vessel was the Plymouth.

Q. We would like to have you look over the vessels that we have alluded to, on Monday next.—A. I will do so.

BOSTON, *March* 27, 1876.

NEHEMIAH GIBSON recalled.

By Mr. HARRIS:

Question. Have you examined the useless ships in the yard and made an estimate to ascertain what you would be willing to give for them as they are?—A. I have been looking over the ships and I have made safe estimates. Perhaps I might, by looking over them further, enlarge a little. I estimate the Connecticut at $16,000.

Q. Is she copper-bolted?—A. Yes, sir; but her decks are not laid. She is a mere shell now, so to speak—no machinery in her at all.

Q. Is her stern wheel on her?—A. No, sir; no wheel or shaft, or anything. The next is the Niagara, $19,000.

Q. Has she any machinery in her?—A. No, sir; her machinery is all out. Her propeller is on. That includes the iron, as near I can get at it, anywhere from 250 to 350 tons of pig-iron. The copper has been pretty much drifted out of the Virginia, and that reduces her value very low. I estimate her at $3,000.

Q. What would it cost to break her up and get her out of the way?—A. I have no doubt it would cost the Government $5 where they get one.

Q. You would take her and leave the place vacant, without any cost to the Government?—A. Yes, sir.

By Mr. JONES:

Q. How large are the copper bolts in her keel?—A. About 1⅝ inches—the upper ones.

By Mr. HARRIS:

Q. Is there not some way to utilize that timber by cutting it up and putting it into the market?—A. No, sir; it is too much work.

Q. Could it not be cut up for fire-wood?—A. It would not pay for the labor to cut it up for that purpose. It is very hard work to cut it. You have got to use up a good many tools. It is hard wood to split.

Q. So that, practically, you would have to give that away?—A. Yes, sir; I might get something for it. The next one is the Iowa; that ship, of course, would have been worth six years ago, at least $20,000 or $25,000 more than she is to-day, in consequence of the great fall of stock. Copper is worth to-day only 20 or 20½ cents; then it was worth 30 cents; there is one-third off at once. I should be willing to give for her, as she lies, $45,000.

Q. She has got some fine machinery in her, has she not?—A. Yes, sir; but it is good for nothing except to be used by the Navy. There is not a merchant in the city who would give anything for it except to smash up; that ship is going to destruction very rapidly.

Q. She is worthless?—A. Yes, sir. She is very rotten, so rotten that you can pick some of her timber to pieces. She was built in a hurry, of green oak.

Q. Wouldn't you say it is a loss to the Government to let these vessels stay where they are?—A. It is a dead loss. Every day they are growing poorer and poorer, and, of course, there is some expense attending them. The next is the Ohio, $20,000. Possibly she may be worth more.

By Mr. JONES:

Q. Isn't she full of copper bolts?—A. Yes, sir; she has the usual amount of copper. She is copper-fastened, about 19 feet I think.

Q. Is there a vessel in the yard that is worth anything to the Government?—A. Almost all you have got there are in the hospital, I should say, and hopeless cases. They are not what you require; they adopted so many fanatical ideas of people outside during the war, that a good many vessels were built which were not what they ought to be.

Q. For how much would you cut them up and deliver the material to the Government?—A. That would require some considerable figuring. I will make a rough estimate of those ships as I pass them.

Q. You have only figured what you would be willing to pay in cash to the Government for the vessels as they are now?—A. Yes, sir.

Q. Is there one of them that you think could be put to sea?—A. Not one of them.

BOSTON, *March* 25, 1876.

JOHN M. S. WILLIAMS sworn and examined.

By Mr. MILLS:

Question. Were you a member of the Bending-Machine Company that sold that machine to the Government?—Answer. I was a stockholder in it, sir.

Q. When was that company organized?—A. I don't know, sir.

Q. As a stockholder of the company, don't you remember anything about the organization of it?—A. No, sir; it was before my time.

Q. When did your connection begin with it?—A. I think about the winter of 1868-'69. It may have been later.

Q. How many persons were interested, and who were they, in that bending-machine?—A. I don't know how many, sir.

Q. Who kept the books in that Bending-Machine Company?—A. A gentleman by the name of Means. He is dead now.

Q. Who has those books?—A. I really don't know, sir.

Q. Was that a patented concern, that bending-machine?—A. Yes, sir.

Q. Was the patent conveyed to your company by the patentees?—A. I understood so.

Q. To whom was that thing patented?—A. I don't know, sir.

Q. Were you not familiar with the title of the property that you owned?—A. No, sir; I never had anything to do with it.

Q. How much stock did you have?—A. About one hundred and twenty shares I think. It was nominally worth $100; it was not really worth anything, or but very little.

Q. Did your company have a right and title, as you understood, to that thing when you owned it?—A. Yes, sir.

Q. Did you think you had a right to convey a good title to that concern to the Government of the United States?—A. I always supposed so. I had nothing to do with the management of it.

Q. Who negotiated between your company and the Government?—A. I understood that it was Charles Allen Brown, the president of the company. I don't know who it was on the part of the Government. Mr. Brown lives in Boston, but is now in Europe, where he went about eighteen months ago. It is very uncertain when he will return. It depends on the health of his wife, who is with him.

Q. Does any other person connected with that company know anything about the terms of negotiations between your company and the Government?—A. I don't know, sir.

Q. Do you know anything about any amount of money paid by that company to Oliver W. Griffiths in connection with that trade?—A. I do not, sir.

Q. Did you ever hear Mr. Griffiths say he received any money of Charles Allen Brown, coming from that company?—A. No, sir; I wouldn't be likely to.

Q. Did you hear Mr. Brown say he had been appealed to by Mr. Griffiths for money?—A. Nothing of the kind. I had nothing to do with the business of the company.

Q. Did they make any reports to you?—A. No, sir; I never paid any attention to it. It was a matter we went into to please Charles Allen Brown. We were with him in other transactions. He wanted my firm to go in with him and build a ship on this principle. We did so. I never took interest enough to go near the ship while it was building, or after it was built.

Q. Didn't you regard that company as visionary?—A. No, sir.

Q. Did you regard it as an impracticable idea?—A. No, sir; our ship was a perfect success.

Q. Why have no more ships been built with it?—A. Ship-building has been so dull. I don't know why others didn't adopt our plan.

Q. How does that ship stand at the French Lloyd's?—A. It stands high on the list. It makes good passages and carries her cargoes well. It is a great success.

Q. Have you the report of the French Lloyd's by which we could see how it stands?—A. I suppose it is with the ship—the ship New Era.

Q. Is it in Boston in some office so that we can see how it rates?—A. I think it can be had here, sir.

Q. At the agent of the French Lloyd's?—A. I don't know where that is.

Q. In what part of Europe is Charles Allen Brown?—A. I don't know, sir.

By Mr. HARRIS:

Q. Is that ship still owned by your firm?—A. No, sir; we own part of her. We are not managing owners now. We have sold out to Sears & Co. She is now in San Francisco.

Q. Was there any difficulty in having her rated first at the French Lloyd's?—A. I don't remember, sir.

Q. Some one has said that the French Lloyd's declined to rate her because she was a new invention.—A. Ship-building became dull at that time. I didn't think it best to build ships. Charles Allen Brown was so much connected with us in business that we were willing to risk forty or fifty thousand dollars in anything he wanted us to. We carried out our contract, and the Government paid the money.

Q. You said the stock was substantially worthless. What do you mean by that?—A. I never knew anything about its value or gave any attention to it

Q. Do you know whether any portion of this money received for the sale of this machine came to the Bending-Machine Company?—A. I have no doubt they got the whole of it, sir. It was always understood that the machine cost about what they got for it. We never made any money out of it. I never have got a cent. The company paid back nearly the equivalent of the money invested—what we got out of the ship and out of the Government for the machine. The ship and the machine were put together. We lost a very little. That was the result of the whole affair. Mr. Brown has always been in hope of selling more patents to foreign governments and making more profit.

Q. Your patent has not yet expired in foreign countries?—A. I don't know as we have any patents in foreign countries, but he has been in the hope of selling to foreign governments.

Q. Has that ship ever met with any disasters?—A. No, sir; she has been on the water six or seven years.

Q. Has she performed well?—A. Yes, sir; very well, indeed.

Q. She is looked upon by the owners as valuable property?—A. You know ship-property is very much depressed.

Q. Do you know what relationship exists, if any, between John W. Griffiths and Isaiah Hanscom?—A. No, sir.

Q. You said that there was received back from the Government and from the ship about what was the original investment in the company?—A. Yes, sir.

Q. Were you ever a director or an officer in that company?—A. I never was. I never took any interest in it at all.

Q. Do you know whether this ship had to be calked a great deal oftener than one not built by this process of bending the timber?—A. I didn't know it. I never paid any attention to her. I always heard that she was a great success. At the time that ship was built, I was treasurer of twelve different corporations, which engaged all my attention. I paid no attention to the ship at all, or to the ship business.

Q. You were not treasurer of this company?—A. No, sir; I never had anything to do with this company.

BOSTON, *March* 25, 1876.

SYLVESTER E. WILSON sworn and examined.

By Mr. MILLS:

Question. Do you know anything about any abuses in the Navy at Mare Island, California? If you do, please state them to the committee.—A. For about two years I was constructor's clerk at Mare Island, Cal. For about a year and a half I was ordnance clerk. I went there in December, 1869, and I was there in construction until June, 1871—I think that was the time. I was there during the time that Constructor Hart was there. After he left, Assistant Constructor Delano had charge for three months, and, after that, Constructor Wm. L. Hanscom.

Q. How were materials supplied?—A. Material was supplied partially by contract and partially by open purchase.

Q. Which was the larger amount—by contract or by open purchase?—A. Well, open purchase would be the larger amount, unless you termed what was called "an open-contract requisition" by that name. I think "open purchase" is the largest.

Q. Was that "open purchase" in a large measure, or not, directed from the Navy Department, direct from Washington? Did it originate at Washington or at the navy-yard at Mare Island?—A. It originated at the island.

Q. Did they, or not, receive some things that they did not want there and were not ordered to be delivered there?—A. Live-oak timber came from the East, and was sent from the New York yard—a reshipment of the stock on hand from the New York yard.

Q. How would it be shipped? Would it be by rail?—A. No, sir; around the Horn. Immense quantities came there—more than would be used. There was very little live-oak purchased in San Francisco by the Government. It was used in building and repairing ships. It was stored there on the yard, the same as on this yard—owned by the Government. It comes as a reshipment from the navy-yard. Nearly all the live-oak furnished that yard is sent from the New York yard. It is first cut in Florida, transported to New York, and then back by Florida again, around Cape Horn and San Francisco.

Q. Don't you think that would add to the cost of transportation?—A. I should judge that it would. Live-oak is a pretty high-priced material out there.

Q. What does it cost out there?—A. Two hundred dollars or two hundred and twenty-five dollars a thousand cubic feet.

Q. What character of live-oak do you mean? There is the "straight," "curved," and "particular pieces," which last is the highest-priced sort. Which one does that price apply to?—A. It applies to the lowest, to the "straight."

Q. What are the curved pieces worth out there per cubic foot?—A. I could not say, I am sure.

Q. Didn't the books show when you were clerk?—A. The timber-inspector's books would show that.

Q. Would it be worth, in proportion, as much more as the "straight" is?—A. Yes, sir; more than that, I should think.

Q. Do you think the price on "curved" and "particular" pieces would bear the same relation to the price at the New York yard that the straight pieces there would bear to the straight pieces here?—A. I should think so, sir.

Q. What about political influence out there? Do you know anything about that, as affecting the appointment of officers in the yard and employés?—A. I don't know. There is a foreman working on that yard that don't hold his position on political influence.

Q. Who is chief manager and director of that? Who runs the yard?—A. Senator Sargent has the credit of it.

Q. We don't want what is reported about it, if we can get knowledge. If you know anything about it, state that.—A. Well, if a man wanted a position as foreman or as quarterman, he would bring influence to bear upon Senator Sargent.

Q. Are you talking matters that you know, or hearsay?—A. I am talking what I have heard parties talk over, and seen there, month after month.

Q. I don't think we ought to take mere rumors. If you know the fact you ought to state it.—A. I don't know of any fact, because he never did anything for me. Senator Sargent is the official man of the coast, and the one that is looked to for influence in all positions and all appointments.

Q. Do you know anything about the controversy between Mr. Hart and the bureau at that place? Do you know what he was ordered away from there for? Or was he ordered away?—A. Yes, sir; he was detached from the yard and ordered away.

Q. What was he ordered away for? Do you know whether he had become obnoxious to the bureau?—A. Not obnoxious to the bureau, but obnoxious to the foremen, workmen, and parties who were endeavoring to furnish supplies.

Q. Was it through the influence of the foremen, workmen, and of the contractors that he was removed?—A. It was through the influence of the foremen-workmen.

Q. What had they to do with it?—A. They civilly petitioned, asking for his removal, and stating for reasons that he employed men who were not republicans, or men were employed under him who were not, and he would not allow the foremen full swing, as they termed it.

Q. What did they mean by that? How did he interfere with them?—A. He objected in several instances to men being employed who were not competent mechanics.

Q. By whom were those men put on the yard?—A. By the foremen.

Q. For what purpose?—A. Ostensibly to work in the gangs in the different departments, the different gangs.

Q. Mr. Hart objected to those men?—A. Yes, sir; some of them.

Q. Was it on account of incompetency?—A. Yes, sir.

Q. Do you know what controlled the appointment of these men? Not ostensibly, but really. What was the controlling influence?—A. A letter from a member of the State central committee.

Q. Who was that member?—A. O, there were different members. I think at one time it was Mr. Van Dyke.

Q. Did you see any of these letters?—A. I have seen several such letters. They would read thus: "You will please employ ——— ——— in the capacity of ——— ———." Or, "You will please give Mr. ——— ——— work as ———."

Q. When would that be done?—A. It would be done all through the year, but more particularly 60 days before the election.

Q. How long would that be continued after the election?—A. Some longer than others. Perhaps some would be at work three or four weeks before election, and some several months.

Q. How many men would be employed just before election? What number would they put on?—A. They had no number. They would employ just as many as they could put on.

Q. How many have you seen employed just before election?—A. I reckon that just before the election in 1873 there were perhaps ten or twelve hundred men employed there in the yard.

Q. Was there any necessity for the employment of those men at that time particularly?—A. O, they were repairing ships, putting up buildings, fitting up a foundery there. They found work for them all.

Q. How long was it before they were discharged?—A. Some of them were discharged the day after the election.

Q. What was that for? Was there not as great necessity for them the day after the election as there was before the election?—A. A good deal of the work had been completed.

Q. Was there any left uncompleted and incomplete?—A. There were some of those men taken on that were not discharged for a long time afterward.

Q. Was there any greater necessity just preceding the election to work those men on that building than there was three or four months before?—A. The necessity was the order from Washington to complete such and such work. There would be greater necessity if they

wanted the work done beforehand. The ships lay as ships do here, in the stream, hauled out in the way, nothing doing on them at all.

Q. Do you know anything about the work in that yard? Do you know anything about the work required to be done in that yard at all for the good of the service?—A. Well, I should say that it would be for the good of the service to prevent all ships from going to decay.

Q. Didn't that exist three or four months before the election? Was there not the same necessity for the employment of that 1,200 men three months before the election as there was at the election?—A. I should think there was.

Q. Now after that, you say, orders came from the Navy Department to employ this force?—A. Yes, sir.

Q. Orders from what bureau of the Navy Department?—A. There were orders from Construction Bureau, and Yards and Docks Bureau. They don't say, "You will employ so many men." They say, "You will prepare such and such a ship for service as soon as possible;" that would be the substance of the order.

Q. Where was William L. Hanscom on duty in the fall of 1873?—A. I could not say.

Q. When was he on Mare Island?—A. He was on duty there May, 1871.

Q. When was Mr. Pook there?—A. He came there in 1872, I think.

Q. Was he there in 1873?—A. Yes, sir; Mr. Hanscom was there during the election in 1871. California elects members of Congress once in two years. The State election is once in four years. Mr. Hanscom was there during the election in the fall of 1871, and Mr. Pook during the election in the fall of 1873.

Q. Are there any other abuses that you know anything about, or any abuses at all at that island, that you can tell us about any further? Do you know of any iron or copper or other material belonging to the navy-yard that has been shipped from that yard?—A. No, sir.

Q. Do you know of any timber that has been shipped to that yard, belonging to private individuals, and still kept there?—A. Yes, sir; there was that.

Q. Whom did it belong to?—A. There was a boom of timber there down to one end of the island, stored there. Laurel there takes the place of a great deal of this nice white oak you are speaking about, in that country. There was a good deal of that. The ship-timber belonged to Mr. Montaigue, of San Francisco.

Q. What was the value of it?—A. There was a cargo, more or less.

Q. Do you know of any timber that had been rejected at any other navy-yard in the United States that was afterward delivered there and received?—A. Not to my knowledge.

Q. Do you know of any material rejected there at all, and then ordered to be received from the bureau at Washington?—A. No, sir; material such as copper, oakum, and white oak was shipped from the East. We don't have at San Francisco the advantage of markets that they have East.

By Mr. JONES:

Q. Did I understand you to say that they did receive live-oak at Mare Island besides that which was received from the New York navy-yard?—A. Very little. There might be a piece.

Q. Was there ever at any time any live-oak delivered there on that island or in its docks that belonged to private individuals, according to the best of your knowledge, received there for storage?—A. No, sir.

Q. Any other material received there?—A. Well, there was this Oregon pine timber used for masts and spars.

Q. Was that sold afterward to the Government?—A. Yes, sir.

Q. By order of the bureau?—A. Yes, sir.

Q. Where did they get their orders?—A. We would make a requisition; for instance, if they wanted a mast or a spar, they would make a requisition and describe it and state what it was wanted for, and they would say, "Can be furnished by so and so." Then the requisition would come back approved by the chief of bureau.

Q. Would the price be stated upon that requisition when it was sent to the bureau?—A. In most cases. Yes, sir.

Q. The order would come back approved?—A. Yes, sir.

Q. Do I understand you to say a large number of men were employed upon Mare Island just previous to a State election?—A. No, sir: not a State election. It was a congressional election. They only have a State election there once in four years.

Q. Would those men be discharged after an election of that kind?—A. Yes, sir.

Q. Very shortly after?—A. Yes, sir; there were some of them employed in 1873 discharged the day after the election—three or four hundred, perhaps, more or less, the very next day.

Q. Was that the same in 1873?—A. It was in 1873 I am speaking of.

Q. How was it in 1871?—A. There were not so many employed in 1871.

Q. I understood you to state that if a foreman or quarterman wanted a position on the yard, he was recommended by the State central committee for that position.—A. Yes, sir.

Q. Was there anything in your knowledge to the effect that Senator Sargent had anything to do with it?—A. Not of my personal knowledge. This order didn't read that it was by request of his.

Q. Were there a great many subordinate positions held there in the yard by appointments coming from the Department?—A. O, yes, sir; often. Men were employed by order of the Department.

Q. Do you know of any man being discharged from that yard for incompetency or dishonesty, and afterward replaced on the yard?—A. No, sir.

BOSTON, *March* 25, 1876.

Capt. WILLIAM F. SPICER sworn and examined.

By Mr. MILLS:

Question. What position do you hold in the Charlestown navy-yard?—Answer. I am commanding the rendezvous at the navy-yard. I have been serving in that capacity since the 11th of March, 1875. I was before that at sea. I was here in 1870, 1871, and 1872.

Q. In what position?—A. I was in charge of the equipment department.

Q. Do you know anything about a cargo of hemp being brought here or sent here by Mr. Cattell, of New Jersey?—A. I should have to refresh my memory by reference to books. It was some time ago. We were constantly getting hemp, agreeably to requirement.

Q. Do you remember a cargo of hemp sent here that was condemned, but you were ordered from Washington here to receive it?—A. I can't recall such an event.

Q. Would your books show that fact if it is true?—A. Doubtless.

Q. Do you remember anything about a board of survey that was made on some hemp and canvas, (which board found a deficiency,) over which board there presided Lieutenant-Commander Walker and Mr. Leighton?—A. I don't remember, sir.

By Mr. JONES:

Q You were at the head of that department at that time, were you not?—A. Yes, sir.

Q. Don't you recollect a board of survey being ordered to take account of stuff in the equipment department?—A. Yes, sir.

Q. Do you recollect whether it came out according to your books, or was there a shortage? Did that survey agree with your books at that time—with the record of your survey?—A. I believe it did. I shall have to refresh my memory. The books are there. I think they state everything. They must necessarily. They contain every proceeding that occurred.

Q. Somebody ordered you to make the books conform to the report?—A. It was ordered by the commandant to have the survey made of the stock on hand, and the result of that survey was sent to Washington and came back to the commandant, I believe, approved. That is the only present recollection I have of the circumstance. I have been separated from that department by two terms at sea. I can't recollect these matters at the present time as accurately as you may desire, but by reference to the books I think I could.

Q. How long would it take you to overhaul your books?—A. I have not the books. I could go to the office where they are and consult them. It would take some time. Captain McCauley is at the head of that department. He is equipment-officer and executive officer of the yard.

Q. I want you to look at the books for two facts—first, whether during the time that you were here as equipment-officer there was a cargo of hemp sent here by A. G. Cattell & Co. of New Jersey, which was condemned by a board of survey and afterward ordered to be received, and under whose order it was received; second whether a board of survey was ordered to take an inventory of the hemp and canvas, r to take any inventory of the stock of the equipment department, that found a deficiency in the hemp and canvas.—A. I remember a cargo of hemp arriving from Mr. Cattell; but with regard to its survey and condemnation I have no present recollection.

Q. Was it taken and used?—A. Doubtless it was if it was received and passed inspection.

Q. Do you remember whether it was good?—A. Yes, I think it was; but yet I can't be certain. It may have been inferior to other hemp we received, and may have been as good. We were in the habit of receiving only the best.

BOSTON, *March* 27, 1876.

Capt. WILLIAM T. SPICER recalled.

By Mr. HARRIS:

Question. When you were before the committee the other day you were asked several questions which you were not then prepared to answer. Can you do so now?—Answer. My research has not been so satisfactory as I would desire, but I have, perhaps, sufficient data to answer the two questions asked me on Saturday last, the 18th instant, "Whether a cargo of hemp, sent by Mr. Cattell, of New Jersey, was condemned and subsequently

ordered to be received, and by whom?" Two cargoes of hemp were received from A. G. Cattell & Co., one in July, 1871, or thereabout, consistingof 125 tons. Of this lot about 100 tons passed the usual inspection, and that amount was received. The balance was rejected and afterward sold by the contractors to Messrs. Sewall, Day & Co., I believe, of Boston. Of the second lot, consisting of 100 tons, about 42 tons passed inspection and were received; the balance was disposed of by the contracting parties, as in the previous case. This was in September or October, 1871.

Q. Was any portion of that hemp which was rejected upon that survey ever received in the navy-yard?—A. No, sir; it could not be received, possibly. It is all subject to inspection.

Q. Whether or not any portion of that hemp had been previously inspected. Were there two inspections of it?—A. No, sir; I don't remember two. Only one was necessary. One came over in a cargo and was inspected here. The other was inspected in the bonded warehouse, as near as I can recollect.

Q. The only thing I want to fix is whether or not Mr. Cattell undertook to have that inspected at a previous time and had it all rejected?—A. No, I have no record of that, or recollection of that. It was inspected, and part of it found not to be as good as we were in the habit of receiving—not as good as it is necessary to receive—and was rejected. The rejected part was sold, I believe, (we had nothing to do with that,) by Mr. Cattell to Sewall, Day & Co.

The second question was, "Do you know of any hemp that was ever rejected here and afterward received upon orders from the Department at Washington?" No, sir, never.

The third question was, "Do you remember a board of survey which was ordered to take an inventory of the stores in the equipment department and found a deficiency in the hemp and canvas on hand?" It was requested of Admiral Steedman, in command of the station at the time, that an inventory be taken of the stores on hand in the equipment office, which request was granted, and a board ordered by Admiral Steedman, consisting of the late Commander E. A. Walker, then lieutenant-commander, Master J. B. Eaton, and Carpenter William F. Leighton. An inventory was taken by these officers, and forwarded through the proper channel to the Bureau of Equipment and Recruiting in Washington. There was no record of any report of deficiency having been made by the board to the bureau. No report of deficiency was ever made to me, nor did I ever know of any.

Another question was, "Do you know whether any order came from the Department to open the books in accordance with the report of that survey?" The inventory was sent to the Bureau of Equipment and Recruiting through the commandant of the station, and returned to him, who ordered, through Lieutenant-Commander Walker, chief of the bureau and executive officer of equipment, that the books of the office be taken up and kept in accordance with the inventory, which was done. I was officially absent from the station at the time, Lieutenant-Commander Walker being in charge of equipment.

Q. So that if there was any deficiency, it was dropped out by that new account?—A. We were ordered to take up the accounts in accordance with the inventory made. In taking charge of the equipment office, I continued its business as I found it had been conducted by my predecessor. Before it became a separate department in the yard it had been blended with the department of construction, navigation, yards and docks, &c., and governed by a civil officer, a naval store-keeper. I do not know the history exactly of its transfer to a separate establishment, but have been told and led to suppose that no thorough system of organization was established in the beginning, that its books were imperfect and unreliable as means of reference, and so passed down from officer to officer, who for a long or short term of control were obliged to depend almost solely on the clerical ability supplied (generally of an inferior and unskillful order) to carry on its business. From such a confused and unreliable state of affairs, it is little to be wondered at if inconsistencies between statement of books and material on hand, either one way or the other, should be found in excess or otherwise. It was because certain material stated in the books to be on hand could not be found when required that the request for an inventory was made. I think it was in 1867 that the equipment department in the yard became a separate establishment. Previous to that time it had been incorporated with navigation, construction, &c., and governed by a civil officer, the naval constructor, as before related. I suggested that an inventory better be taken, and a new basis formed, that we might have something precise, and know what we had on hand and what we had not on hand, and the inventory was accordingly asked for and made, which was the first for a series of years, I believe.

Q. So that it would have been absolutely impossible to have detected the fraud if any material had been improperly taken away?—A. I don't see how it would have been possible to have formed any correct estimate of the stores under the old regime. It was necessary to have something to go by that was accurate and reliable.

Q. And you supposed this was the result of many years?—A. Doubtless a series of years.

Q. Is there any other fact within your knowledge upon the subject?—A. No, sir; I don't think of any other.

Q. What is your judgment in regard to the system of different bureaus?—A. I don't like it.

Q. You think that system has abuses?—A. Yes, sir.

BOSTON, *March* 25, 1876.

DANIEL A. STOREY recalled.

By Mr MILLS:

Q. I believe you were to give us some information this morning.—A. There is a copy of the certificate given to Donald McKay.

[Reads certificate as follows:

"BOSTON, *October* 28, 1874.

"Surveyed to Donald McKay, at his place of business, 29 p., 1,771 feet cubic, No. 1 white-oak timber, or 44 $\frac{1}{40}$ tons.

"DANL. A. STOREY,
"*Deputy Surveyor.*"

Q. That was at his yard?—A. It was outside of his place of business where this timber lay, just over the fence.

Q. Now, have you any estimate of what that timber was worth?—A. I don't know. It was not first-class. Most of it was long timber, but not large timber.

Q. That was after the completion of the hull of the Adams?—A. That was October 28, 1874.

Q. Was she launched then?—A. I don't know whether she was launched. I should think she was. because he was moving his stock. I think it was moved up to Chelsea Bridge, or the East Boston side near the bridge; I think Purcell & Fowle were the teamsters that moved it.

Q. Where does Mr. Purcell live?—A. He lives in East Boston.

Q. What are their given names and their residences and places of business?—A. Samuel L. Fowle, he lives on East Summer street, East Boston. Their place of business is Central Square, East Boston. Mr. Purcell's name, I think, is Charles. I don't know his residence. His place of business is Central Square, East Boston. You were speaking about the quantity of white-pine lumber. I should think Henry Jones would know about that.

BOSTON, *March* 25, 1876.

SAMUEL E. CHANDLER sworn.

By Mr. MILLS:

Q. Do you know anything about a report made by Isaiah Hanscom on the bending-machine?—A. Yes, sir; I wrote a report. He was one of a board ordered to examine and report upon it. I was at that time chief clerk in the construction department.

Q. We have got one report from him?—A. I will say that I had an impression that he wrote a report or a letter, or rather I wrote it at his dictation, unfavorable at one time. But I can't find any record of it. I have that impression in my mind, and I have recently attempted to look the matter up, but I have failed to find it.

Q. Whom was it written to?—A. I could not say whether it was an official letter or an unofficial one. but I have got that impression without being able to state decisively what it was, but I feel sure that it was this report that was on the record of the commandant's, and I am very certain that I looked at it within a week or two and found, very much to my surprise, that it was favorable. But the other is simply an idea that I had that it was unfavorable. Perhaps that was a letter to the Department, or it might have been a private letter that I wrote for him.

Q. Were you a clerk?—A. Yes, sir; but not appointed by him.

Q. Did you ever hear him express an opinion unfavorable to the machine unless it was in that letter?—A. No, sir; I do not.

Q. Do you know of any irregularities in the administration of the naval department here, in this yard?—A. No, sir; I don't think I do.

Q. Do you of any frauds perpetrated on the Government?—A. No, sir; I don't know of any.

Q. Do you of any lumber that has gone out without being ordered out by proper officers?—A. No, sir; I should not be likely to know it. It does not come under my department. I have the bills and requisitions simply.

Q. You don't know about false measurements?—A. No, sir; I should not be likely to know if such a thing occurred. The requisition is made for one hundred thousand feet of lumber. I keep a copy of the requisition and the date of approval, for the bureau, and when the bills come in I credit it to the requisition.

Q. Do you know of any contractors using money improperly to influence official action?—A. No, sir; I never did. You wanted to know, yesterday, in reference to a bill where no authority was stated; that was the bill of $62,000. I looked over the records; I can't find anything. That special bill I can't find—no official memorandum for the letter, or order pertaining to it. It is for $62,769.75, for live-oak furnished to Mr. Swift, July 2, 1874. I put down on the book, "No authority stated" Such was the case. The bills went on and

no authority by order of the bureau. Here is another bill which I have looked up, and I will read a statement which I have prepared [Reads the following statement:]

"May 28, 1874, a set of bills in favor of W. C. N. Swift, for delivery of live-oak timber amounting to $47,219.55, were approved and forwarded to the Bureau of Construction and Repair, with date of authority (January 15, 1874) indorsed thereon. June 29, 1874, these bills were returned from the bureau, with orders to have a new set made, in order that the amount could be paid from appropriation. Construction and Repair, 1874-'75. July 2 a new set was forwarded, as above directed. August 11, 1874, the last set was returned from the bureau, with directions to have a new set prepared, omitting the date of authorization, and August 14, the third set of bills was forwarded to bureau, with no authority stated for the purchase.

"The bill in question, for $62,679.75, I can find no special record of, but as there were ten or twelve bills returned about that time, to be made anew, and authority omitted, I presume this bill might have been treated in like manner without an official order to that effect. Am certain that the date of authority was omitted in the case of this bill, and it might have been done in compliance with a private order or understanding to that effect."

Q. This statement you make under oath?—A. Yes, sir.

Q. Has it been the practice of the bureau to order you all to make out your bills, going forward to the ensuing fiscal year?—A. Yes, sir.

Q. To what extent?—A. Well, sir, I should say $75,000—just from memory. It may be more and may be less. I have all the different bills throughout the yard in the different departments, but particularly in the construction department.

Q. It would be all bills that were due along in the money from the last appropriation made?—A. Along in the months of April, May, and June of the last fiscal year bills were made, and then returned, and the dates identifying them with that year were ordered to be omitted, for them to be paid for the ensuing year, out of the next appropriation.

Q. You would be ordered to make out your bills, dating them from the first of July?—A. Yes, sir; in order that they could be paid.

Q. So that if they were for articles furnished they would apply for articles furnished the next year?—A. Yes, sir; they were actually furnished in one year and directed to be paid from the appropriation for the next year.

BOSTON, *March* 25, 1876.

SAMUEL B. HAMLIN sworn and examined.

By Mr. MILLS:

Question. Where do you reside?—Answer. At Acushnet, Mass., a small town near New Bedford.

Q. What is your business?—A. My business is lumbering.

Q. Do you manufacture lumber?—A. I do to some extent.

Q. Do you furnish and supply ship-timber?—A. I do.

Q. Mainly for the whaling-vessels?—A. Whalers, merchantmen, and anything.

Q. Do you deal in ship-timber here in Boston?—A. I do, sir.

Q. With what classes of lumber are you most familiar?—A. I am familiar with our pine lumber and white oak.

Q. Do you deal in eastern pine, also?—A. I do not.

Q. Do you manufacture lumber from our Massachusetts timber?—A. Native pine; yes, sir.

Q. Do you know anything about the value or price of live-oak timber?—A. I am not much versed in that, and I don't know hardly enough to give you what would be correct. I know the prices we used to pay for it. When we used to build ships we used to put in particular sticks.

Q. Have you been accustomed to get out frames for whaling-vessels?—A. Yes, sir; for all descriptions of vessels.

Q. What would be your idea of about the value of live-oak timber delivered anywhere here in Massachusetts?—A. That depends very much upon its size.

Q. Suppose it is good-sized straight timber?—A. It has been offered here for a dollar a cubic foot, molded for ships—a ship of the size of 400 or 500 tons—and then it is sold by pieces at, I guess, from $1.50 to $2 a foot; certain sticks.

Q. Suppose I give you prices a dollar and a half a cubic foot in large quantities for straight timber, curved timber, fit for ribs, I suppose would be $1.85, and the principal pieces (you know what that means, I suppose) at $2.10, what would you say as to such prices as that, taking 50,000 or 60,000 cubic feet at a time?—A. I should think those prices were very high.

Q. How much too high?—A. I am not versed enough to give it to you correct. I makes a difference whether timber is molded or in the rough.

Q. This was rough timber, sir.—A. Large timber stands higher in the market than small timber, but a person cutting live-oak can get that large timber frequently, so that it will sell at a less price than you get the small timber, because it generally grows large. They work the small timber out of the limbs and crooked parts. The timber is large.

Q. Would you call that a heavy price for rough oak timber?—A. I should think it was a very remunerative price, to say the least.

Q. What is the value of spruce boards?—A. They vary. At the present time you can buy very good spruce board—dimension—I have had them offered to me at $15.

Q. How has it been within the last two years?—A. I guess, if you go back for the last year and a half—I guess dimension lumber was worth about $18 to $20, if it was large and long.

Q. How with spruce boards?—A. Promiscuous boards, in length and width, as they happen to come, were not worth more than $18 for the last eighteen months—I don't know but two years.

Q. What is square pine timber worth?—A. Well, with us our prices range—I am dealing in higher prices in pine. I have been getting for dimension pine anywhere from $35 to $45.

Q. Supposing you were getting out timber fit for the cap of a wharf?—A. Well, that is the cheapest kind of timber.

Q. How much?—A. Well, at the present time it is worth about $25.

Q. Supposing you go up to 14 inches square, and the same length—16 feet long?—A. It would be considered by Maine prices that $25 to $30 would be high.

Q. How about 6-inch timber lined?—A. That would be 16 feet long. I am retailing it out of my yard for $25, and that is $7 or $8 higher than I can go into the lumber-yard and buy it.

Q. Have you furnished any 4-inch pine for wharfing?—A. I have not recently.

Q. You know the price of pine plank for wharfing?—A. Well, they don't use much pine plank for that.

Q. They do in this yard.—A. With us, where they use soft plank for bridging, they use spruce; have not sold any for that purpose the last year. But I saw some at Provincetown the other day that came from somewhere in New Hampshire, sold and delivered in Provincetown for $25.

Q. Now, what about white-oak plank for ship's planking, which I suppose you know all about? You have a mill on purpose to saw off ship's planking?—A. Yes, sir.

Q. You furnish planking for New Bedford whalers?—A. Yes, sir; and bring it to Boston.

Q. Do you furnish a good quality?—A. Yes, sir; but I will explain a difference. Our plank I consider a better quality than any other plank you can get; but it is not so long or so wide. It is, however, better for ship use. I have sold it here in this yard, and it is actually better than western or southern plank.

Q. Is it so considered?—A. The way we give out our contracts it is pasture-oak—that we are selling to-day in New Bedford for in-board and out-board; first quality out-board for $60 a thousand, delivered at New Bedford or delivered here, and that is above the market-price. You can go right over here to-day and buy it for about $50.

Q. How has it been for the last eighteen months?—A. For the last two years we have not sold at over $60.

Q. You are now giving us the prices for which you retail it from your mill?—A. Yes, sir; delivered at New Bedford or Boston.

Q. What could you have bought southern plank for the last two years?—A. I have never dealt in that, but I tell you they can sometimes buy mine for less. When we have oak we saw it, and take it and stick it up. We keep our pine in dock.

Q. You deal more largely in ship-timber and ship-materials of this class than any other man in New Bedford?—A. Yes, sir; twice as much.

Q. Do you know Mr. Swift, of New Bedford?—A. Yes, sir.

Q. Is he in the lumber business?—A. Not except in the live-oak business.

Q. Does he do that himself?—A. He carries it on.

Q. Does he cut the timber?—A. No, sir; he does not go out there hardly at all. He and his brother Adolphus were out there.

Q. How long have they been selling ship-timber to the Government?—A. You have asked me too much. For forty years or more; before I went to New Bedford to live.

Q. They are called the live-oak Swifts, are they not?—A. Yes, sir. The father of them is gone, and one or two of the brothers. The firm now goes by the name of the Swift Brothers.

Q. Have they any other business except this live-oak business?—A. William C. N. Swift has been engaged in whaling, and owns a large amount of property.

Q. Do you know anything about their contracts with the Government?—A. I do not, only by hearsay, and that is nothing. They are reputed to make a great deal of money on their live-oak contracts. It is so considered.

Q. Are they square men?—A. I furnish Mr. Swift with pretty much all the timber he has for repairing his ships, and have for a number of years. He is very square; but they are sharp, shrewd men, though very fair men.

Q. They don't sell any live-oak timber in New Bedford?—A. Very little. Occasionally they have had part of a cargo to retail out, but not much.

Q. What are pine plank for in-board worth?—A. Well, the best quality of pine in the high prices is worth here—if I want to come here to buy it they would ask me about $30—8 cents per foot for the best. For one plank or so, they might ask a cent more a foot.

Q. How has it been in the last year?—A. I think it is worth about $60—$50 or $60, according to what purpose it is for.

Q. You could buy it at wholesale for $45?—A. O, yes; they buy now for $25 what they used to pay about $40 for, and I think they buy for $30 or $40 what they used to pay $55 or $60 for, certainly.

Q. Do they use pine plank for planking the whaling-vessels?—A. They do outside amidships. What they call the hood-heads forward and aft are generally of oak.

Q. Are not the vessels built for whaling service very strong, heavy vessels?—A. They are considered the best vessels that go to sea.

Q. Are they better than the Government vessels?—A. I don't know as they are. They used to be fastened with copper, but now they are fastened with galvanized iron.

Q. Do you know what it is worth to build a vessel of, say, 700 tons, to build the hull and spars; what is it worth to build such a vessel copper-sheathed?—A. Copper-sheathed is very different from copper-fastened.

Q. Suppose you put in galvanized bolts and copper sheathing?—A. I guess where they use copper sheathing they have to use copper fastening or composition fastening.

Q. What is the price right through to build the hull and spars with common white oak?—A. They are getting ships built in Maine that rate in the French Lloyds for six years as A 1 for $47 per ton.

Q. Suppose you made it A 1 for eleven years at Lloyds; *i. e.*, hull, spars, and iron-work complete, but not sails?—A. Do you mean the spars in place?

Q. No, sir; the spars would be alongside.—A. I am interested in a ship that is over here on the stocks, that the Lyons have taken possession of, and we think we shall not be able to get more than $47 per ton. She is just as good as she can be, fastened with galvanized iron. The inspector told me the other day that she was just as good a ship as he ever inspected in his life. She is not named, but is over there on the stocks in Donald McKay's yard. She has been built ready to launch for a month. Mr. Samson built her and got her along a certain distance. I furnished the frame for her. A man by the name of Gorham got her up, and Mr. Samson was to build her. She would cost, free of all these things, about $81,000—1,450 tons, carpenter's measurement.

Q. Do you know anything about the bending-machine they have in this yard? Have you formed any opinion as to the practicability of bending timber by this means to be used in ship-building?—A. My idea of bending timber is that it is not practicable unless you have a very clear, clean kind of timber. Supposing you have had a large lot in the center of that ship, steaming would not soften it so but what it would break in bending. They say they work very well, but I never yet have found that they would.

Q. Would you judge that it must weaken the timber?—A. No. If they can confine that knee by bending it thoroughly and backing it properly, I don't know but it would make a very good knee. But I should prefer a good living knee.

Q. Could you not get one out as cheap as you could bend that?—A. No; I guess not. I guess you could get them out cheaper by bending.

Q. Do you take into account the cost of the bending-machine?—A. No, sir; I did not.

Q. If you had as much ship-building as you could do all the time would you think it could be as cheap to expend $160,000 for a bending-machine for bending timber as to hire hands?—A. I should hire hands, decidedly.

Q. Don't you understand that the fibers are drawn up by bending?—A. Yes, sir.

Q. Don't that destroy its value?—A. It may in a measure, I suppose. But when you draw it up, when it is once cool it forms a little in the backing. The strength would depend very much upon the fitting. If that knee was properly fitted in its place after being fastened, it would hold the strength of that timber there.

Q. Would it be as likely to last as long as though it was in its perfect shape?—A. In some instances it might, and in others it might not.

Q. Would not the displacement of the grains of that wood be more apt to make it decay?—A. It may make it loose so that it will absorb. I can describe it to you a little in another form. We have on our whale-ships bent davits that hang on the side of the ship to put boats on. Now, where they have heavy ones and put them on good they saw them into three pieces before they bend them. That prevents the fibers from pulling apart, and it will not cramp inside. This being sawed in here gives it a chance to work. If you bend it as you bend your knee you have got the displacement as in the other. You have got to get shrinkage on that side even if you bend it.

BOSTON, *March* 25, 1876.

WILLIAM W. WOODHULL sworn and examined.

By Mr. MILLS:

Question. What is your office?—Answer. Paymaster United States Navy.

Q. What part of the duty of paymaster do you perform?—A. Pay the mechanics employed in the navy-yard, and also officers employed in the yard, officers on leave and awaiting orders, and officers on the retired list in the vicinity of Boston.

Q. Is it your duty by virtue of your office to pay any contractors?—A. No, sir.

Q. State whether you have any of the preparation of the eight sloops-of-war placed in your hands?—A. I have.

Q. When was that done?—A. Well, I don't remember exactly now, sir; but it was soon after I came here. I came here in December, 1873.

Q. What amount was placed in your hands?—A. Really I could not say without referring to my books. I think it was about $125,000 or $130,000.

Q. What was done with that money?—A. It was paid to mechanics in the construction department. It was paid out to mechanics here in the yard.

Q. The whole of it?—A. Yes, sir.

Q. To laborers?—A. Yes, sir. I don't know who the parties are or for what purpose money is paid. I am instructed to draw every month for different departments and pay-rolls.

Q. Was any of that money expended in the preparation for building the eight sloops of war?—A. I could not say, sir.

Q. Did you pay any of it on checks to Donald McKay?—A. No, sir.

Q. He is the only man who built those sloops of war voted by Congress?—A. I think so. I have no means of knowing to what the money is applied. I paid it to Government employés. I did not pay any of it to contractors.

Q. Do you know of any misappropriation of public funds here?—A. No, sir.

Q. Any misappropriation of public property here?—A. No, sir.

Q. Do you know of any abuses in the navy-yard the correction of which you could suggest to the committee?—A. No, sir. I know very little about what is going on here. My duties are entirely in the office, and I have no connection with matters outside.

Q. Now, be kind enough to make out the figures for us—statements of the amount of money you have got from the Government, and when you got it; all the money you have gotten of the appropriation for the eight sloops of war. Do you know of any one man that is on your pay-roll that you pay twice?—A. No, sir.

Q. You pay it out to the heads of departments?—A. No, sir; to the individuals themselves. The pay-rolls are made out by the heads of different departments and sent to me.

Q. Do you know of anybody that draws money that does not perform any duty?—A. No, sir; there are a good many men employed in the yard that do not perform much duty.

Q. Is there any that you know of who do not perform any duty and yet draw pay?—A. No, sir.

The following was subsequently received from the witness, and ordered to be made part of his testimony:

PAYMASTER'S OFFICE, UNITED STATES NAVY-YARD, BOSTON,
March 25, 1876.

DEAR SIR: In compliance with your request, I have the honor to submit the following statement of the amount received and disbursed by me at this station from appropriation "eight steam-vessels of war:"

December, 1873	$125,000 00
April, 1874	5,000 00
May, 1874	6,500 00
June, 1874	1,039 26
Total	137,539 26

I am, sir, very respectfully, your obedient servant,

WM. W. WOODHULL,
Paymaster, United States Navy.

Hon. R. Q. MILLS, M. C.,
Chairman Sub-Naval Committee, Boston.

BOSTON, *March* 27, 1876.

PHILIP E. CASSIDY sworn and examined.

By Mr. MILLS:

Question. Do you know anything about any abuses in the navy-yard?—Answer. I do, sir.

Q. State them to the committee.—A. Well, when I first received my appointment in the yard, I found that I could not have charge of the material that came under me; that parties were expending it without my knowledge, and when I sought to make inquiries I was given to understand that it was none of my business.

Q. Who gave you to understand that?—A. Well, the civil engineer.

Q. What was his name?—A. Mr. Hastings. I attempted to discharge the men who came under me, who came under my rule, especially the man who had charge of the lumber, and he was transferred from my rule to the foreman of laborer's rule, and still continued in the same place, and then he was eventually discharged, and a man by the name of Coleman, laborer, was put in his place. The first man's name was Henry Cotton.

Q. Are you on duty in the yard now?—A. I am, sir.

Q. Were you then?—A. Yes, sir.

Q. Have you been continued ever since?—A. Yes, sir.

Q. You are in the civil engineer's department?—A. Yes, sir.

Q. Now, what about Mr. Cotton?—A. He was rated as a wharf-builder in charge of the lumber, and he had the receiving of stock, &c., and I never was allowed to have any say about the quality or anything of that kind, and I reported him.

Q. He had charge of the timber himself?—A. Yes, sir.

By Mr. HARRIS:

Q. What is your duty?—A. I am foreman of joiners.

Q. Who has the proper custody of the lumber?—A. I always thought I ought to have it.

Q. Do you know who had it at that time?—A. This Mr. Cotton had it at that time.

Q. What was his duty?—A. His duty was in charge of the lumber-sheds, but I thought I should have something to say.

Q. No matter about that; I want to find what your exact relation to the business was. Was Mr. Cotton under you or over you?—A. He was under me, as a wharf-builder.

Q. You were a wharf-builder?—A. I am a joiner, and have charge of all the wood-work in the department.

Q. You are foreman of joiners?—A. Foreman of joiners, sir.

Q. As foreman of joiners, was it your duty to receive, inspect, and deliver lumber?—A. Well, I required lumber for certain purposes, and I think it was.

Q. Do you know whether it was your assigned duty or not?—A. It is now.

Q. Was it then?—A. My superior would not sustain me in it.

Q. Your superior did not assign that duty to you?—A. No, sir.

Q. You claimed that you were entitled to have charge of it?—A. Yes, sir.

Q. And you were not sustained in it?—A. No, sir.

By Mr. MILLS:

Q. But he assigned it to one of your subordinates?—A. He assigned it to a journeyman under me.

By Mr. HARRIS:

Q. Now, you can state anything you know about any frauds or wrongs in the yard.—A. I succeeded in discharging that man. I did not have any confidence in him, and I was required to sign receipts for lumber received, expended, &c. Then there was another man assigned to it, transferred from my gang. I found that lumber was sent up to the mill and manufactured there, and I went to the mill-man and inquired by whose order. He said by Mr. Coleman's order; he sent it up from the lumber-sheds; and I went to see him about it. I told the man at the mill not to manufacture any without orders from me. He was a journeyman under me. Then I saw Mr. Coleman, and wanted to know by whose order he sent the lumber up there, and he said by order of the store-clerk.

Q. What was the store-clerk's name?—A. William H. Herbert was the store-clerk then; he is not on the yard now. I caught him afterward in a copper scrape.

By Mr. MILLS:

Q. State what the "copper scrape" was you caught him in,—A. There were two of us appointed together, Mr. Whitney and I. The store-clerks and their subordinates used to give us considerable trouble about signing vouchers, &c., for material we were positive was never required or expended and we refused to sign, and there was a ring of them.

By Mr. HARRIS:

Q. Don't talk mystery; tell us exactly what took place.—A. I will, as well as I can. They threatened to have me removed.

Q. Who?—A. A man named George Gershom; he was the spokesman.

Q. What was he?—A. He was a gas-fitter in the machinists' gang, assigned to the storehouse as assistant clerk.

Q. Who else were in that "ring?"—A. Well, there was the foreman of sail-makers, in nother department.

Q. What was his name?—A. Bibrono; he is dead now; and this Coleman and Herbert; that is all.

Q. Now, what did they say to you?—A. Well, they presented vouchers to me to sign for material that I had never required or expended, and I refused to do so. Then I heard that they were going to have me removed, with other parties.

Q. Who told you?—A. Well, it was generally understood that a party had gone on to Washington from this city.

Q. Do you know anything about it?—A. I only know what they say themselves.

Q. Well, who say?—A. I heard this Gershom say at one time that within 24 hours I was going to be removed.

Q. For what?—A. Well, they wouldn't say for what.

Q. Do you know for what?—A. I am positive in my own mind it was because I wouldn't help them out in signing for this material.

Q. Was it your duty to sign for material?—A. It was my duty to sign for material that I had drawn and expended.

Q. What material did they ask you to sign for which you refused to sign for?—A. They asked me to sign for lumber.

Q. How much in quantity?—A. Well, many times; I can't say how much.

Q. Do you know whether any such lumber was used?—A. I know there was lumber used, and I signed for it.

Q. Do you know what became of the lumber which you refused to sign for?—A. I traced part of it to the store-house, sir.

Q. Not *from* the store-house?—A. No; to the store-house from my mill. It was worked in the mill, and sent back to the store-house.

Q. It was originally in the timber-sheds, and was taken from them and went to the mill, and was brought back to the store-house?—A. Yes, sir; I traced it thus far.

Q. Would that be right or wrong?—A. Wrong.

Q. Why wrong, if it is only taken from the shed, worked, and put back into the store-house? They wanted you to make the certificate that it had been used, did they?—A. That I had expended it.

Q. Do you know the object of that?—A. Well, I detected them in taking out metal and hardware afterward. I was the means of catching some of the parties.

Q. Confine yourself to the lumber; I will come to the metal afterward. Do you know the object of that change?—A. I am positive the object was to take it out of the yard; to deliver from the store-house on somebody's pass.

Q. Did you learn that there was a shortage anywhere, and that they were trying to cover that up?—A. Yes, sir; I knew there was a deficiency.

Q. Did you know there was a deficiency during the time of Mr. Hastings?—A. I heard so.

Q. You had the impression that he was delivering lumber from the store-sheds without authority?—A. Yes, sir.

Q. Have you any absolute proof of that?—A. Nothing more than I traced it to the store-house and never saw it afterward.

Q. Did you trace that particular lot of lumber to the store-house?—A. I heard it was sent to the store-house.

Q. Did you go to the store-house and see?—A. No, sir; I have been to the store-house and seen what I could see: but I could not get into the departments.

Q. Do you know that that same lumber was afterward improperly delivered to anybody?—A. No, sir.

Q. Who told you to mind your own business?—A. Mr. Hastings.

Q. Was Mr. Hastings your superior officer?—A. Yes, sir; he was my superior officer. I went to him with these vouchers that had been sent to me, and told him I wouldn't sign them, &c.; and when I wouldn't sign them, they were taken from me.

Q. By whom were they signed?—A. That is a question I don't know.

Q. Then they asked you to sign for lumber said to have been used in your department, which you knew had not been?—A. Yes, sir.

Q. Can you not give the committee some idea of the quantity or the number of times that that thing was done?—A. Well, when I had refused three or four times, I was not troubled with the lumber after that. I didn't have anything to do with receiving it, or anything about it.

Q. Didn't you have charge of the lumber in your own department?—A. Yes, sir; I kept the run of it, and I signed for what I received.

Q. Now, can you give the committee to understand how much you were asked to sign for which you know was not used in your department?—A. I cannot.

Q. Can you give any idea of the amount?—A. I have been asked to sign for from 1,000 to 2,000 feet at a time.

Q. How many times?—A. Well, three or four times.

Q. Did you sign for all that was actually used in your department?—A. Yes, sir. By the way, the detective at the gate was in that ring.

Q. Who was he?—A. His name was Adlington.

By Mr. MILLS:

Q. Where is he now?—A. He was turned out of the yard on account of the copper scrap that we caught him in afterward.

By Mr. HARRIS:

Q. You say he belonged to the ring. Do you know of his doing anything in regard t lumber which was improper?—A. I don't know that he had anything to do with the lum ber, only he had charge of the gate, and anything he saw fit to pass was all right.

Q. Would he pass anything for which there was no ticket?—A. He did afterward; it wa proved.

Q. But with regard to lumber, you do not know?—A. No; I don't know.

Q. Now, will you tell all you know about that copper scrape, in your own way?—A. knew they were after me, and I made up my mind——

Q. Don't talk in that way; tell us what you know. You say you knew "they wer after you;" who were after you?—A. This ring.

Q. Who were the ring?—A. Mr. Adlington, Mr. Herbert, Mr. Gershom, Mr. Coleman, and the civil engineer, Hastings.

Q. That was how long ago?—A. That was in 1872 and 1873.

By Mr. MILLS:

Q. Was his clerk in it?—A. I think he was interested.

By Mr. HARRIS:

Q. You know perfectly well we cannot take your suspicions. We want to get at some facts upon which you base that idea of yours. Can you tell why you formed that opinion; what acts they did?—A. Well, I know that this clerk went with Mr. Hastings to see Alexander H. Rice, the present governor of this State, (he knew he was a friend of mine,) to see if he couldn't have me removed.

Q. Did you have that from Mr. Rice?—A. I have not got it direct, but my friends have.

Q. That is what you mean by saying they were "after" you?—A. Yes, sir. Then, in relation to the copper, I missed packing-lumber going from my shop, and I traced it to the store-house; and they had a laborer in the store-house, and I interviewed the laborer, and he gave me the intimation that they were stealing this material right along out of the store-house.

Q. Who was that laborer?—A. He is John Donovan.

Q. Where does he live?—A. He is at present in the store-house, and he agreed to let me know when they would take load out. I told him if he did that I would trip them up; but it seems he let them slip, and it failed; and I went to him again, and I says, "It is your duty, as an honest man, to let me me know;" and he said he would. So on the evening of December 10, 1873, he came to my house and told me, (I had heard the hammering and packing going on myself inside the iron door,) he came and told me that they were all ready to send out a load, and that they would send it out in the morning. This was between 9 and 10 o'clock, I judge. I told him I would attend to it. I immediately went up to the boss machinist's house, (Mr. Whitney,) and told him that we would bag this gang of thieves, or something of that kind, if he would lend a hand. He said he was in for it. And then I went to a brother-in-law of mine, who fires up for this building, and I let him into it. I knew they were pretty smart and pretty hard to catch, and he said he would take hold. I requested Mr. Whitney to stay here and see who received the pass at the main gate. I took my station at the store-house to see it delivered, and stationed the fireman (Mr. Durkin) in a mill out on Water street, gave him a description of the driver, and told him to follow that team and report immediately back to Mr. Whitney, and Mr. Whitney was to report to me, and I was to see the commodore. So it was delivered according to the programme in the morning at bell-ring.

Q. By whom?—A. It was delivered from the loft, through the hatch, to a teamster—Mr. Noble. Mr. Whitney saw this Mr. Adlington at the gate take the pass, and the fireman followed the team over to Hawkins street to a brass store, and immediately reported to Mr. Whitney. Mr. Whitney let me know, and I went and notified the commodore, and the commodore sent the captain of the watch, with Mr. Whitney and I, and within half an hour of that time we had possession of a box of copper and two boxes of pig-tin; but the boxes that the pig-tin was in were broken up, and the pig-tin piled against the furnace. We took possession in the name of the Government.

Q. How much was there of that material in value?—A. A thousand dollars, or thereabouts, I guess. Then Mr. Gershom jumped.

Q. What do you mean by that?—A. He cleared out.

Q. He ran?—A. He ran, and he had to shoulder the load, and that was all there was about it.

Q. Was he caught?—A. No, sir.

Q. Was anybody convicted?—A. No, sir. The district attorney gave us to understand that they would find the Scotch verdict.

Q. Not proven?—A. Not proven.

Q. Was the case brought before the courts?—A. Yes, sir.

Q. What parties were attempted to be indicted?—A. The gate-keeper, the teamster, and the man who received the material.

Q. The man here in Boston was charged with receiving stolen goods, and the other two men with stealing?—A. Yes, sir.

Q. What do you mean by saying that the district attorney said they would give the Scotch verdict?—A. Well, that is what he said.

Q. Who was he, Mr. May or Mr. Cheney?—A. No; it was the United States commissioner, Mr. Hallett.

Q. Was Mr. Sawyer then United States district attorney?—A. Yes, sir.

Q. What did he tell you—that there was not proof enough?—A. That there wasn't proof enough. We got the material, at any rate, that they bagged here; we found that.

Q. This man Gershom ran away?—A. Yes, sir.

Q. Has he ever been captured?—A. No, sir.

Q. Was the party who delivered the goods prosecuted?—A. No, sir. A man by the name of Frisby delivered the goods, by order of Mr. Gershom. They had him up as an accomplice.

Q. Were all those persons removed from the yard?—A. The commodore removed the store-keeper, Herbert, and Gershom ran and never has come back, and Adlington was removed by order of the Government, I believe.

Q. Is there anybody who was engaged in that conspiracy or fraud now at work upon the yard?—A. No, sir; not that I could say was engaged in it.

Q. As far as you know, did the officers in the yard do their duty in attempting to convict those people?—A. Yes, sir.

Q. Then, the truth is, you discovered a gang of thieves, who were employés in the yard, and you broke them up?—A. Yes, sir.

Q. Had the civil engineer, who is now dead, Mr. Hastings, anything to do with it?—A. Well, yes, sir.

Q. What?—A. I don't like to talk about dead men.

Q. We want to know about dead men as well as those who are alive.—A. He came to me and took on very hard.

Q. What did he say?—A. He wanted to know if I wanted to put him in Dedham jail.

Q. What did you tell him?—A. I told him I didn't want to put any honest man in Dedham jail.

Q. Did you doubt his integrity then?—Yes, sir; I always doubted it.

Q. Do you believe that he allowed lumber and material to go out of the yard improperly?—A. Yes, sir.

Q. Do you attribute that great deficiency in lumber, found in the engineer's department, to his administration?—A. Yes, sir.

Q. Has there been anything of that kind going on in any department since the present man came in?—A. I don't think there has.

Q. Have you seen anything indicating that Mr. Granger has allowed lumber to go improperly out of the yard?—A. No, sir; I don't think anything has been stolen and passed out of the yard.

Q. You say you knew for a long time that there was a deficiency of lumber in the engineer's department?—A. Yes, sir.

Q. How long had you known it before Mr. Granger came in?—A. I knew it within two months after I came in myself as foreman.

Q. How long were you here before Mr. Granger came?—A. I have been here since June 11, 1872.

By Mr. MILLS:

Q. Do you know anything about this dredge-boat?—A. I do, sir.

Q. Do you know anything about the amount of material that was used on that dredge?—A. I know what I used.

Q. How much did you use, in value?—A. I could give it to you exact; between three and four hundred dollars, perhaps.

Q. Were you not a witness before the examining board?—A. I was.

Q. That material belonged to the Government?—A. Yes, sir.

Q. By whose order did you use that material?—A. By order of the engineer.

Q. What is his name?—A. Brownell Granger.

Q. The same man who is here now?—A. Yes, sir.

Q. Did you make a report of the material used on that boat to Mr. Brownell Granger?—A. No, sir.

Q. Did you make a report to any one?—A. No, sir.

Q. It would have to be charged on the books, would it not?—A. Yes, sir; I keep it on my books.

Q. Don't you make a return to your superior?—A. I do, if he calls for it. I am always ready to make reports.

Q. You were asked if you made a report of the labor and material expended in your department, and you said "yes." Are your records of the labor and material expended in your department contained in the book you have with you, the same as those you returned to the civil engineer?—A. Yes, sir.

Q. So, you must have made returns to him?—A. We have returned our books since the trouble.

Q. Were the returns that you made to the civil engineer the same as you have on your books?—A. Yes, sir.

Q. Were not the names of the mechanics employed mentioned on one and not on the other?—A. I have the names of the men and everything in my book. I make two reports—one in the morning and one in the evening, and do not give the men's names.

Q. When did you commence work on the dredge?—A. I commenced about the 20th or a little after, of June, 1875. I know t e machinist commenced first on the machinery, and in a few days after I commenced.

Q. Where was the material used in repairing the dredger drawn from?—A. Drawn from the ship-timber sheds and the store, sir.

Q. All of it the property of the Government?—A. Yes, sir.

Q. Was any portion of the labor expended on that dredge the labor of the Government of the United States?—A. Yes, sir.

Q. How much of it?—A. Not much, in my judgment; I hired in a gang of men.

Q. Were the figures you gave to the board that investigated that matter correct?—A. Yes, sir; I would swear to them.

Q. Do you recognize these as being your figures: "Fifty days' labor, $163.52; material, $171.41?"—A. Yes, sir.

Q. Is that correct?—A. Yes, sir; that is correct.

Q. From whom did you receive the order to expend that material in repairing the dredge?—A. The civil engineer.

Q. And from whom did you receive the order to employ the labor of the Government on it?—A. From the civil engineer, sir.

By Mr. HARRIS:

Q. Did you hire on men for anybody else?—A. I hired on carpenters and calkers for the contractors.

Q. Who paid them?—A. The contractors, sir.

Q. Who were the contractors?—A. A man named Isaac Lewis.

Q. Do you know whether Mr. Lewis paid Mr. Granger anything?—A. No, sir, I don't; yes, he paid Mr. Granger, and Mr. Granger paid me the money for the outside men.

Q. I mean outside of the yard; do you know whether he paid him anything for his assistance in having work done here?—A. No, sir.

Q. You don't know anything about that?—A. No, sir; I don't know anything about that.

Q. Who ordered you to take on additional men to do that work?—A. Mr. Granger.

Q. He told you that Mr. Lewis would settle for it?—A. That he would be responsible; that Mr. Lewis would pay for it. He told me that he would be responsible for it.

Q. Those men were settled with by Mr. Lewis?—A. Yes, sir; they were never on the yard-rolls at all.

Q. How long after you got the order to fit up the dredge was it before you took on those laboring-men?—A. I got orders to get ready a few days, perhaps a week, ahead—perhaps the 17th or 18th of June, and got ready, and then I immediately hired on the men.

Q. Did you do any work on that dredge after it was launched that was paid for by the Government?—A. I did, sir.

Q. Did you do any work on her after she was in the stream?—A. Yes, sir.

Q. Did you send any material on board of the dredge after she was afloat?—A. Yes, sir.

Q. What was it?—A. Well, I sent cleats, and a stick for a spoon-handle, or shovel-handle, and a number of little things.

Q. Was any material sent from the store-house while she was out in the stream?—A. I don't remember that there was, in my line.

Q. What was the character of the work done by Government in your department on her?—A. Well, we found the dredge hauled up on pile-capping; piles drove to receive ship's ways. She was hauled upon them, and she was snagged by the flood-tide. It lifted her enough to let a pile head under her, a cut-off pile, so that her bottom was badly damaged; chawed up. I jacked her up with hydraulics, and shoved under her a couple of her own spuds, made launching-ways of the spuds, and hauled her up out of the mud, and then jacked her up, and blocked her up, and repaired her bottom, put in new bulkheads, caulked her, repaired her decks, put in a state-room, and gave her a general overhauling.

Q. In what condition was that vessel when you commenced repairing her; was she sunk in the water, or up on blocks?—A. She was up on the capping of the way-piles.

Q. Was that boat injured in any way while Mr. Lewis had it; did it come back to you for repairs at any time during the time he had it?—A. No; she never came back for repairs until she came back for good.

Q. Never came back after she went away until she came back to stay?—A. No, sir.

Q. How long did he have her?—A. I think he had her all of three months; I could not swear to the exact time. I did not keep account. I was not interested in it.

Q. During the time he had her, he did not send her in for repairs, that you remember of?—A. No; she was never towed back.

Q. Do you remember whether in your report you made to the civil engineer, you gave the names of some of the Government hands that were at work on that boat, that were omitted from the report of the civil engineer to the next officer above him?—A. I never gave the names from the reports; I gave the number of men, so many men on the dredger, so many men on buildings.

Q. Do you know anything about any Russia hemp that has been improperly used in the yard?—A. No, sir.

Q. Do you know anything about any coal-dust that has been improperly used?—A. No, sir.

By Mr. HARRIS:

Q. You say the whole amount of labor and materials expended by you on the dredger is correctly stated in your former report?—A. Yes, sir.

Q. That amount was all expended by you upon the dredger in obedience to the orders of Mr. Granger?—A. Yes, sir.

Q. A correct account of it was kept by you?—A. Yes, sir.

Q. And a report made to him?—A. Yes, sir.

Q. When you first began work on that vessel, she was so far injured that the tide came into her?—A. Yes; the tide ran right into her.

Q. You made her bottom tight?—A. Yes, sir; nearly replanked it.

Q. You built a state-room for the officers, and a room forward for the crew?—A. Yes, sir.

Q. Were there such apartments in the boat before?—A. There was a work-shop in the boat before. It was all ripped out. There was nothing in it when I took hold of her.

Q. Do you know whether any work was done upon that vessel by other departments?—A. O, yes; we all worked together.

Q. What other departments in the navy-yard furnished labor or materials to repair that boat?—A. Whenever I require laborers, I go to the engineer and tell him. I do not hire laborers myself. I went and get laborers from the foreman of the laborers in the yard by order of the engineer. My men helped the machinist in handling his work and so on.

Q. Did the machinist furnish material and labor, and did the steam-engineer furnish any labor and material?—A. I guess nothing outside of our own department. We all worked together.

Q. Does your account give the whole business?—A. No, sir.

Q. Then the steam-engineering department did something on that boat, did it?—A. The machinist in our department, not the steam-engineering department.

Q. He did something there which he ought to have an account of?—A. Yes, sir.

Q. What other foreman furnished labor and material?—A. I saw the painters at work on board there.

Q. Who else?—A. The machinist had charge of the laborers' time. I did not keep their time; never did keep their time.

Q. You kept the time of the men from your department?—A. Yes, sir.

Q. Did he not keep the time of the men in his department?—A. I do not know. He is supposed to look after his own men, and take their time.

Q. To whom did you go for laborers?—A. I went to Captain Hutchins.

Q. And he gave you labor of which you have no account?—A. Yes, sir; I had his laborers at work with me on the wharf.

Q. Do you know whether he has an account of the labor which he furnished for that boat?—A. I don't think he has.

Q. Can you give the committee any idea of how much labor was employed from that department?—A. I think I had three men myself, and I am inclined to think Mr. Whitney had two or three. I guess there was five or six all told.

Q. Mr. Whitney is what?—A. Machinist.

Q. You say there were men employed there from the laborers' department?—A. From the laborers' and masons' department. I know I had one or two men that belong to the masons' department that were with our gang, and I used them in my shop.

Q. Have you any idea what the whole amount of labor and material put on that by the Government was?—A. We made an estimate and I think we estimated it would cost about $2,000 to put her in order.

Q. Was all the work done by you?—A. No, sir; I hired in calkers and carpenters.

Q. How much did the calkers' and carpenters' work amount to that Lewis paid for?—A. I paid out over $500.

Q. Which you understood came from Mr. Lewis?—A. Yes, sir.

Q. Was the rest done by the Government?—A. Yes, sir.

Q. So that you judge there must have been some $1 200 or $1,500 expended by the Government on that boat?—A. I do not know. I cannot swear, you know, how much was spent on her. She was put in good condition.

Q. Was any new hemp or new rigging put on her?—A. Yes, sir; there was rope put on her.

Q. Where shall we find an account of that?—A. That was required at the store-house.

Q. Who would have charge of the account?—A. The store-clerk.

Q. What is his name?—A. Delano.

Q. Would he have charge of all the things delivered to that vessel except the lumber?—A. I cannot get anything unless it is delivered by the store-keeper, sir.

By Mr. JONES:

Q. Where was that lumber used that you were asked to sign for?—A. I cannot tell you sir?

Q. Do you not know what became of it?—A. No, sir.

Q. Are any of the members of that "ring" in the yard, now?—A. No, sir; I cannot say there are.

Q. How long has it been since any of them have been employed on the yard?—A. Not within a year.

Q. Did you furnish the lumber from your department that was used in repairing the dredger?—A. Yes, sir; there was no material brought into the yard for it that I know of.

Q. Did the store-keeper furnish the oakum to calk that dredge?—A. Yes, sir.

Q. Did he furnish the putty and tar?—A. No, sir; the putty and tar was borrowed from construction, to be repaid.

Q. Do you know whether they repaid it or not?—A. I do not, sir.

By Mr. MILLS:

Q. Who was the chief of construction at that time?—A. I think Mr. Sampson was acting at that time.

By Mr. JONES:

Q. Did I understand you that you made a report to the civil engineer of what lumber and other material you used on that dredge?—A. Not a separate report.

Q. Did you make any report?—A. I made a general report of everything.

Q. I understood you a few moments ago to swear that you did not make any reports to the civil engineer of what lumber and material you used?—A. We are required to turn in our books with all our reports, and everything entered. We have handed in our books since the trouble.

Q. Before the trouble you did not?—A. No, sir.

Q. You never were required to hand in anything?—A. No, sir.

Q. Did you not put it so that it went on to the account somewhere before?—A. No, sir.

Q. Did you take out lumber promiscuously and not report it?—A. It has to be signed for by the engineer as you require it.

Q. Is Captain Hutchins now on the yard?—A. No, sir.

Q. How long has he been away from the yard?—A. Within a couple of months; I think he was removed.

Q. You have a draughtsman in your department?—A. I do, sir.

Q. Is he needed here, in your judgment?—A. Yes, sir; I think he is.

Q. Are you not competent to build any building or repair any building on this yard?—Yes, sir.

Q. Without any draught or specifications from him, could you not do it?—A. They generally furnish some draughts.

Q. That is not the question; I ask you if you could not do it without any draughts? If you had received an order from the civil engineer, could you not have done anything you have done since you have been here, without the assistance of a draughtsman?—A. We have made a model here of a dock, and it required instruments.

Q. You have not had any appropriation for the dock, you have not received any money for it, it is merely an experiment, as I understand it; but has there been anything done in your department of yards and docks that you could not have done without the assistance of a draughtsman?—A. No, sir; we have not built any buildings.

Q. Has there been anything you could not have done, if the civil engineer had required it, without the aid of a draughtsman?—A. I don't know of anything, sir. In fact, we have not built any buildings.

Q. Nor remodeled any?—A. Yes, sir; we have remodeled.

Q. There has been nothing done that you could not have done yourself without the aid of a draughtsman?—A. No, sir.

By Mr. HARRIS:

Q. What has the draughtsman been doing all this time?—A. That is a question I cannot answer.

Q. Have you seen any great product of his labor?—A. I have seen him round the yard surveying, &c.

Q. What, the draughtsman?—A. Yes, sir; I have seen him round the yard taking grades and levels.

Q. Has there been any change of grade in anything on this yard?—A. Not that I know of.

Q. Do you not look upon the whole business of a draughtsman and civil engineer here as boy's play, and a waste of money and time? Have you seen anything here which, in your

judgment, an individual, looking after his own interest, would have required the assistance of the civil engineer or his draughtsman to do?—A. We could get along without them.

Q. Could you not get along just as well without them as with them?—A. I think so.

Q. State whether or not, in your judgment, it is not a waste of money to employ that person with his corps of draughtsmen and other assistants?—A. Well, I think it would be a good thing to have a competent man to be responsible for any extensive Government works.

Q. Yes, if there were any going on, but if there were not?—A. We could do without them.

Q. For anything that has been done since 1873, has there been any real necessity for a civil engineer and draughtsman in your department?—A. As far as I know, there has been none, but I don't know what the Government in Washington require of them. They seem to have considerable business, and private business, that I do not know anything about. The draughtsman, at least, seems to be busy at all times, making draughts of contemplated improvements, &c. I have seen an elaborate work that he has been at work on.

Q. What is it?—A. Contemplated wet-bins for men-of-war ships.

Q. Do you know by whose orders he is making those draughts and plans?—A. No, sir; I do not know.

Q. Do you know that it is anything more than Mr. Granger's idea?—A. I guess he commenced on them before Mr. Granger came here.

By Mr. JONES:

Q. In your opinion, could not your Bureau of Yards and Docks, since you have been here, have been conducted under the Bureau of Construction and Repair?—A. Yes, sir. When I was a boy here, we were all under one department.

Q. Do you not consider that it would be much better to have it all in one department, and less expensive to the Government?—A. I do.

Q. You think the department of civil engineering should be abolished, and that it would be a saving to the Government?—A. I think it would be economy to have less departments here, although it may be against my interest.

By Mr. MILLS:

Q. Do you know anything about a boat that was built here for the yacht America?—A. I have seen squibs in the papers. I do not know anything about it.

Q. Did not that come under your charge?—A. No, sir.

Q. Did you not have anything to do with that?—A. No, sir; not in the yards and docks department.

Q. Who would have charge of that?—A. The boat-builders come under the construction department.

By Mr. HARRIS:

Q. Do you know anything about what the writers do in your department?—A. They keep the time.

Q. How much time do they spend a day in that employment?—A. I cannot say.

Q. You have ten men under you, and you report to them every day, do you not?—A. Yes, sir.

Q. You report to these same writers?—A. Yes, sir.

Q. And all they do is to take a transcript on their books of your statement?—A. Yes, sir.

Q. Do you know of their doing anything else?—A. They keep an account of all business appertaining to the department.

Q. That has been pretty small, has it not?—A. It has been lately.

Q. Do you think one man could spoil half a day a month doing the work here?—A. I cannot judge.

Q. You have no idea that the work is too heavy, have you?—A. No, sir; I do not think they are hurt any.

Q. Have you been involved in any of these political transactions?—A. Not to any extent. I believe there was an attempt to remove me for voting for General Banks at the last election.

Q. You were on the yard during the contest of 1874?—A. Yes, sir.

Q. Who attempted to remove you for voting for General Banks?—A. Persons outside.

Q. Who were they?—A. I heard Mr. Gooch was one of them.

Q. Anybody else?—A. I heard that Mr. Gooch was going to have me removed. That was rumor. I let it go for what it was worth.

Q. You do not know that he ever did anything toward it?—A. No, sir.

Q. You still "stick?"—A. Yes, sir.

By Mr. MILLS:

Q. Do you know anybody who has been removed for voting for General Banks?—A. No, sir.

By Mr. HARRIS:

Q. Were you put on the yard in General Banks's time?—A. Yes, sir.
Q. You are General Banks's friend, then?—A. Yes, sir.
Q. And have always been?—A. Yes, sir.

BOSTON, *March* 27, 1876.

PHILIP CASSIDY recalled.

By Mr. HARRIS:

Question. I forgot to ask you this morning whether you received any pay for any servic which you rendered, from Mr. Lewis, or any man acting for him?—Answer. No, sir.

Q. Didn't he pay you for some service?—A. No, sir.

Q. Did he pay you the money which you paid to the men?—A. He paid it to the engi neer, and the engineer paid it to me.

Q. Who was the engineer?—A. Brownell Granger.

Q. Did Mr. Brownell Granger ever receive a dollar from Mr. Lewis, or did he ever pa you any money?—A. He handed me the money to pay the men I hired.

Q. Are you sure Mr. Granger ever paid you a dollar?—A. He paid me all of it.

Q. How much?—A. Over $500.

Q. Are you sure you did not receive it direct from Mr. Lewis?—A. Yes, sir. The eng neer was sitting at his desk, and Mr. Lewis handed him the money, and he handed it to m

Q. Did not Mr. Lewis hand it to you? Stop and think about it, because it is quite it portant you should tell the exact facts.—A. I feel very positive, sir, that the engineer r ceived the money and handed it to me.

Q. Was Mr. Lewis sitting at the same table with Mr. Granger?—A. No, sir; standing u

Q. Will you swear that a dollar of money passed into Mr. Granger's hands?—A. I wi sir.

Q. You are sure about it?—A. Yes, sir, I feel positive.

Q. I don't want mere guess-work; I want you to say whether you are ready to swear or not. Were you three gentlemen at one table?—A. No, sir. The engineer was sitting his desk. There were two payments made.

Q. Don't go from the question. Will you swear that on any occasion Mr. Granger r ceived one dollar, which he afterward paid to you?—A. Yes, sir.

Q. How much?—A. I don't know. There were two payments; I don't know how mu money there was paid in the first payment.

Q. Did Mr. Granger receive that money?—A. He handed it to me.

Q. Are you sure?—A. Yes, sir, I am sure; one payment, at least.

Q. Mr. Lewis was there at the same time?—A. Yes, sir, Mr. Lewis was in the office.

Q. Did Mr. Granger count the money?—A. Yes, sir; he counted the money and hande it to me, and told me partially to pay the men with it, and I did so.

Q. Who told you so?—A. Mr. Granger. There was some trouble the first time abo cashing a note.

Q. Was that money intended by Mr. Lewis as payment to Mr. Granger, or you?—A. understood it was to pay the men that I hired.

Q. Mr. Lewis was there and took the money out of his pocket, passed it to Grange and Granger passed it to you?—A. Yes, sir.

By Mr. MILLS:

Q. Who hired the men, you or Mr. Granger?—A. I hired the men.

Q. What was the necessity for the money going into Mr. Granger's hands?—A. I belie Mr. Lewis couldn't cash the note, or something, to pay the men off when the work was con pleted, and there was some money raised. I think the engineer's clerk was sent dov to Mr. Mullett's or to the bank to borrow some money, and he failed in getting the amou

By Mr. HARRIS:

Q. Was it a check he was trying to cash?—A. It was a check he was trying to cash; I couldn't get the money for it, or something.

By Mr. MILLS:

Q. As I understand you, you hired the men to do this work for Mr. Lewis?—A. Yes, si

Q. And the money to pay those men was to come from Mr. Lewis?—A. Yes, sir.

Q. Then what was the necessity for that money going into Mr. Granger's hands befc it went into yours, if you hired the men and were to settle with them?—A. I don't kno any necessity.

Q. Did you give Mr. Granger any receipt for the money?—A. No, sir; Mr. Grange clerk paid the men.

Q. Was the clerk present at the time?—A. Yes, sir; in his room.

Q. Did he see the payment made?—A. I don't think he did; he was in his own roon

there is a partition between. Mr. Granger was sitting at his desk, and Mr. Granger's clerk came up. They wanted to break the money, and he came up to the pay-office, and the paymaster's clerk down below paid the men.

Q. Paid what men?—A. Paid those men at the pay-office. They couldn't break the money, or something didn't go right. Those were the men I am talking about—the men I hired.

Q. You say that, after all, you did not pay the men, nor did Mr. Granger pay them?—A. No, sir; the clerk paid the men.

Q. And it was because they could not break the money?—A. Yes, sir.

Q. And therefore they arranged with the paymaster to advance the money or break the check, or something of that kind?—A. No, sir; the clerk brought the money down here, the paymaster's clerk gave him the change, and the men were paid. That was one payment; and one payment I paid them partially myself; received the money and paid them myself. But the final payment was made down here in the pay-office.

By Mr. HARRIS:

Q. Because there was some difficulty about breaking the check?—A. About breaking the money.

Q. After all, can you say that any money was paid by Mr. Lewis to Mr. Granger, which Mr. Granger afterwards gave to you?—A. Yes, sir; he gave me the money; I remember it.

Q. There is a great deal of difference between his paying you money, and taking some money from Mr. Lewis and handing it right to you; which was it?—A. He did not pay the men with it.

Q. Did he pay you any money?—A. He gave me the money to pay the men.

Q. Did Mr. Lewis give Mr. Granger any money in your presence which Mr. Granger passed to you? You can answer that question "yes" or "no."—A. I am positive that Mr. Granger paid me money.

Q. I don't want anything but "yes" or "no" to that, because, if he simply passed the money over to Mr. Granger to count it was no payment to Mr. Granger.—A. It was no payment to Mr. Granger.

Q. Why did you come in here and undertake to say in your previous examination that Mr. Granger paid you that money, without mentioning the fact that Mr. Lewis was present? Don't you know that you may do great injustice to a man in that way?—A. I didn't propose to do anybody injustice.

Q. How much money did you receive from Mr. Lewis for having done what you had no authority to do?—A. I received over $500.

Q. How much of that did you put in your own pocket?—A. None of it.

Q. Were you not hired to do things which Mr. Granger knew nothing about?—A. No, sir.

Q. Did he ever tell you to repair the bottom of that boat?—A. Yes, sir; he told me to repair her, give her a thorough repairing—hire the men. I told him what was required.

Q. Didn't he tell you to do it at the expense of Mr. Lewis?—A. He said the contractors would pay for it.

Q. Answer my question. I ask you if he ever gave you any instructions whatever, except to hire some men, and Mr. Lewis would pay for them?—A. Yes, sir.

Q. What were they?—A. The instructions were to put the boat in order, get what material I wanted, &c., and if I wanted any laborers' help or cattle, or anything, to go and get them.

Q. Did he say all that to you?—A. Yes, sir; I wouldn't take his word. I went to the foremen of laborers about it.

Q. Don't go traveling off. I want his instructions, and nothing else. I don't care what you did outside of his instructions. He told you to hire men outside?—A. Yes, sir.

Q. Did he ever tell you to use a single man employed by the Government?—A. Yes, sir.

Q. What man?—A. He told me any men I wanted in the department to get them.

Q. Where did he tell you that?—A. When we were talking it over outside of his office.

Q. Who were present?—A. I don't know that anybody was present.

Q. It stands upon your naked testimony; you have nothing to back you up in it?—A. Nothing but his instructions to the other foreman.

Q. Did you hear them?—A. No, sir.

Q. His instructions were to get what you wanted in the yard to repair the boat?—A. Yes, sir.

Q. If you wanted oxen or labor, to get it and use it?—A. Yes, sir.

Q. But his general instruction in regard to the repair of the boat was to hire the men outside, and Mr. Lewis would pay them?—A. Yes, sir.

Q. From the time you got that instruction until the boat was afloat, did you tell Mr. Granger what you were doing, and what men you were employing?—A. I made a report every morning, telling him where the men were and what they were doing.

Q. Did you ever make a report showing that men were at work on that dredge?—A. Yes, sir; the time-clerk has them. I made the reports, one at night, and one in the morning. The time-clerk took charge of the night report, and the civil engineer's clerk took charge of the morning report.

Q. Will you produce those reports, covering the time during which the dredger was paired here?—A. Yes, sir.

By Mr. MILLS:

Q. I understand that the names of the laborers employed on this boat were not give upon your report?—A. I did not report them at all.

Q. Don't you state where the men are employed in your reports to your superior?—A. do, my gang.

Q. Why was it you left off the men employed on this dredge?—A. The other foreman reported them.

Q. You had been in the habit of reporting where the Government men were at work, had you not?—A. Not any outside men.

Q. Did you report the men in the Government employ?—A. Yes, sir; only my gang.

Q. Was there any report from any foreman to Mr. Granger showing that men employed by the Government were at work on that dredger—any daily report?—A. No, sir; no daily report. But I have got a copy of every daily report in my book, and I will swear that is correct.

Q. Does that show the names of the men?—A. No, sir; it does not, until after our books were required.

Q. Didn't you make up your daily reports from your book?—A. I did; but I did not tell who the men were. I could go back and give the names.

Q. Didn't you think at the time you found out that those men employed by Mr. Lewis were at work on that boat, that that job of work was for his benefit?—A. Well, I surmised considerable.

Q. Did you make that surmise known to the commandant, or any officer?—A. No, sir.

Q. You were an officer of the Government, and if you surmised that something was going on, why did you not make that fact known to some of the officers of the yard?—A. I supposed my report covered me, a *bona-fide* report.

Q. Your report never came to the knowledge of the commandant until it came from Washington, did it?—A. I don't know who received the report.

Q. Didn't you know that, day after day, labor paid for by the Government and materia belonging to the Government were being used and consumed clandestinely, to the injur of the Government?—A. I did not know by what authority it was done. I did not dare t question the authority for doing it.

Q. If you saw a fraud perpetrated upon the Government, would you not dare to go t the commandant and tell him of it?—A. If I thought I had a clear case; but I didn't know what authority there was behind it.

Q. Why didn't you state the facts to the commandant and tell him that you feared there was something wrong going on, and it would be well for him to inquire into it?—A. Well sir, I don't know if I should go and talk with the commandant about such things.

Q. You did not make those facts known to anybody, did you? You did not go to Mr Granger and complain that these things were wrong?—A. I have had those men come t me, and made them go personally to Mr. Granger, about getting jobs done.

Q. What did those men say when they came to you?—A. I had one man come to me t do a job. I was standing on the pump down at the wharf. It was to repair the rail on a tug boat, and I told him I should not send any of my men.

Q. What tug-boat?—A. The tug-boat that was at work with the dredger.

Q. Was that done under the contract with Mr. Lewis, too?—A. No, sir; it was when sh was out in the harbor. I referred this captain to the engineer. Said I, "You must take you orders from him." The engineer told me it was all right, and I sent a man named Clawso to do the job. As long as I had orders direct from my superior I supposed he was respon sible.

By Mr. HARRIS:

Q. As I understand you, if you think you are protected you do not trouble yourself t find out whether a thing is right or wrong?—A. If I knew it was wrong I would interfere but I didn't know. I couldn't question the authority of my superiors.

Q. You were carrying out what you supposed to be his directions, were you not?—A Yes, sir.

Q. You did not communicate to him exactly what you were doing under that authority?—A. I did, in my reports. I stated that there were so many men at work on the dredger.

Q. Do your reports show that?—A. Yes, sir.

By Mr. MILLS:

Q. Had you ever heard there was a contract between the commandant or any other office of the Government with Mr. Lewis that he was to take that boat and put it in thorougl repair for the use of it for ninety days, and furnish all the labor and material? Didn't yo hear that such a contract was in existence?—A. I had heard that the contractors wer going to pay the bills. I did not know what the contract was until it was read to m afterward. I think it was the commandant who read the contract to me, or the agreement

Q. You had nothing but your suspicions that there was something wrong when the hands of the Government were employed on that boat, and the material belonging to the Government was used on it?—A. I surmised that it was not straight, sir, but I did not know.

Q. Did you talk with Mr. Whitney, or any other of your companions who were working around there, about your surmises?—A. I did.

Q. What did Mr. Whitney say about it? Did he surmise like you did?—A. I think he did.

Q. And yet, although you thought the Government were being defrauded, you would no take the trouble to walk a few yards and tell the commandant what you thought about it? —A. I supposed our reports were sent to the commandant every morning.

Q. Would the report show that anything was being done upon the dredge?—A. If the report sent to the commandant was a copy of mine, it would show just where the men were at work.

Q. Would it show that any hands employed by the Government were at work on the dredge repairing it?—A. Yes, sir; we made plain English of it—dredger.

Q. That was sent in every night to be consolidated?—A. Yes, sir; every night and morning.

Q. When was it furnished to the commandant?—A. I believe the chief clerk furnishes the morning report copied from our reports. I suppose the reports are all here on file somewhere. I keep copies of all my reports. I am positive that in the investigation the board had all of those reports.

BOSTON, *March* 27, 1876.

PHILIP CASSIDY recalled.

By Mr. HARRIS:

Question. Have you brought your book and papers?—Answer. Yes, sir; I have brought a number of reports. I make a morning report and an evening report, and I cannot swear to which set these belong. I got these from the commandant's office. They were returned by the board of investigation.

By Mr. JONES:

Q. Did Mr. Granger get these reports every day?—A. Two reports are sent into the office every day.

Q. Was the lumber to put that cabin on the dredge furnished by the yard?—A. Yes, sir; they built a rough-board galley on top of the hurricane-deck.

By Mr. MILLS:

Q. Does the civil engineer have a consolidated report of the reports of the head joiner, machinist, mason, and painter?—A. Yes, sir; it is supposed to be copied from these.

Q. In these consolidated reports was any mention made of the dredger?—A. I do not know, I am sure. I have nothing to do with his reports. I report where my men are at work and what they are doing.

[The committee examined the reports of Mr. Cassidy, and also of Mr. Whitney, upon a number of which appeared entries for labor done upon the dredger by employés of the Government.]

BOSTON, *March* 27, 1875.

CHARLES R. WHITNEY sworn and examined.

By Mr. HARRIS:

Question. What is your position in the navy-yard?—Answer. Foreman machinist of yards and docks.

Q. Did you do any work upon the dredge-boat?—A. I did, sir.

Q. By whose orders?—A. The civil engineer's, Mr. Granger.

Q. Will you state what work you did on it?—A. I cleaned the engine that was stored in the shed and put it together, brought the boiler up, set the boiler, brought the shaft and gearing up, and connected them on board the boat.

Q. Set them in place on the boat?—A. Yes, sir; in working order. Previous to my putting the engine on board the boat, I had an engine there to draw the boat on the ways three days; and I tested the engine before they launched her, and after she was launched I done several days' work, such as piping, putting on chafe-irons, &c. I worked on her previous to her being launched and after she was in the stream at work; about one hundred and forty-seven days' labor, all told, from the time I first got the order until she was brought back.

Q. One hundred and forty-seven days' labor under your charge?—A. Yes, sir.

Q. Have you an account of that labor?—A. I have.

Q. Can you tell the amount of it?—A. It comes to $423.58 for labor and $152.23 for material.

Q. That does not include the material and labor furnished by Mr. Cassidy?—A. No, sir: independent of that.

Q. That includes all the material and labor furnished by you?—A. Yes, sir.

Q. Was that furnished at the Government expense?—A. It was, sir. I used to send in a report every morning. I always sent in every man, and what they did to the "dredger" was marked on my morning reports day by day.

Q. You did work on her both before she was launched and afterward?—A. Yes, sir.

Q. And you put her in perfect working condition?—A. I put her in working condition before she left here. After she went into the stream there were some improvements made.

Q. Were the materials used in the work done by you drawn from the store-house?—A. They were, sir.

Q. Was the work done in the department of yards and docks paid for by the parties to whom the boat was loaned?—A. No, sir; not to my knowledge.

Q. Was any money paid to you by anybody for any service which you rendered except the Government?—A. No, sir.

Q. Was there any offered to you?—A. No, sir; there was none offered to me. I will state here that when they first launched her they broke the crane, which was a large casting. They were very anxious to get to work. They said their contract was overdue then, and at their request I furnished the casting. Of course I could not get it cast here, and I got it cast outside, and paid for the casting, and they refunded me that money. I think it was between $12 and $15. That is all the money that ever passed into my hands.

Q. Who paid you that?—A. A man by the name of Pendleton. They called him captain. He had command of her in the stream.

Q. From whom did you receive orders to do this labor?—A. Mr. Granger. About the 1st of June, I think, Mr. Haskell, the chief clerk of the engineer, came down, (there were four gentlemen, and I think Mr. Lewis was one,) and wished to see the machinery belonging to the dredger. I took them in and showed it to them. They asked how long it would take to put that machinery in working order, and I told them a month or six weeks. They asked me how many men I would want to get it done in ten days, and I told them they could not get men enough on the boat to do it in ten days. I heard nothing more about it until somewhere along the 15th of June, when I was directed to clean the engine up and put it on board. My first day's work is charged the 18th of June.

Q. Did you understand from Mr. Granger that any material or labor was to be paid for by the parties to whom the vessel was loaned?—A. Not from the engineer.

Q. Did you from any person?—A. I did from Mr. Cassidy. Mr. Cassidy told me that he was going to hire the men. I think I commenced on the engine before he commenced on the hull of the boat, and I think I asked him if he was going to hire any men, and he said yes, and he said, "I believe the contractors are going to pay the bills." He hired the same men he had had working in his department—men he was acquainted with.

Q. Did you use any of your coal, oil, and other materials?—A. Yes, sir.

Q. Are they reckoned in your bill?—A. Yes, sir.

Q. Did you send any on board after she was ready to go to work?—A. I did not after she left the wharf. The coal that was put on board was put on board on the trial when I fired her up.

Q. Did you make any reports of the work you performed on the dredger to the civil engineer?—A. I did, daily.

Q. He knew from day to day how many men you were using there at the expense of the Government?—A. Yes, sir.

Q. Did you have anybody there who was not employed by the Government under your charge?—A. No, sir.

By Mr. JONES:

Q. I understand you are machinist in the yards and docks department?—A. Yes, sir.

Q. I want to ask you if you do not think that the work could be performed by the steam-engineering department just as well as it could by a separate department, and at a saving to the Government?—A. What do you mean—do away with the machine-shop in the yards and docks?

Q. Do away with the bureau of yards and docks; consolidate it with the steam-engineering department? Could not that be done without detriment to the Government?—A. Yes, sir; I think it could. I suggested that it be done years ago.

Q. In your opinion, couldn't the whole of the work of the bureau of yards and docks be done by the bureau of construction and repair?—A. Yes, sir; I know no reason why it could not.

Q. At a great saving to the Government?—A. Yes, sir.

Q. How long have you been here?—A. Since June, 1872.

Q. Do you think that the yard requires a civil engineer?—A. Well, I think they have draughtsmen here who would cover the ground.

Q. What have you for draughtsmen to do here in the civil engineer's department?

What have they done since you have been here?—A. Drawing plans for buildings, looking after drainage and sewers.

Q. How many buildings have they built since you have been here?—A. I don't know, sir.

Q. Then, what is there for draughtsmen to do?—A. Our draughtsmen, you know, construct the machinery.

Q. Couldn't the draughtsmen in the steam-engineering department do this same thing?—A. Yes, sir.

Q. Do you think, then, that a draughtsman is required to-day in the civil engineer's Department?—A. No; if you had it all consolidated under one department you would not need him.

Q. If it was all consolidated under one department, do you think the Government would require a civil engineer at this yard?—A. No, sir.

BOSTON, *March* 27, 1876.

CHARLES R. WHITNEY recalled.

By Mr. MILLS:

Question. Did either of you gentlemen [Mr. Cassiday being present] receive anything from Mr. Lewis, or from Mr. Lewis's brother-in-law, or any agent of Mr. Lewis, for anything you did for him?

Mr. CASSIDAY. No, sir; I never did.

Q. Did you never receive any money—$20, or $25, or $10, or any other sum?

Mr. WHITNEY. No, sir; only for that casting I spoke of.

Q. For yourself? I am not talking about anything you received to be paid to anybody else.

Mr. WHITNEY. No, sir; never. We have to keep records that we send into the civil engineer. I do not know what occasion there would be to pay us any money for a bribe.

Mr. MILLS. That is what they say it was.

Mr. WHITNEY. A bribe for what?

Mr. MILLS. Well, to get timber from the Government to work into the vessel. That is what they claim it was for.

Mr. WHITNEY. He must have been a queer engineer. He had the daily reports.

Mr. JONES. They say that the material was taken, and they did not know anything about it.

Mr. CASSIDY. I do not know how we could get anything of that kind. We have to have an order from the engineer to receive material and stock.

Mr. WHITNEY. These reports were sent to the civil engineer daily, and a copy of them was put on one paper and sent to the commandant.

Mr. WHITNEY: [To Mr. Whitney.] You swear that these entries upon your book correspond with your daily reports, except that your book gives the names of the men and your daily report does not?

Mr. WHITNEY. Yes, sir; that is all the difference.

Mr. HARRIS, [To Mr. CASSIDY.] And your book contains the same facts?

Mr. CASSIDY. Yes, sir; my books are true copies of the reports I send in every morning.

BOSTON, *March* 27, 1876.

Capt. CALEB J. EMERY sworn and examined.

By Mr. MILLS:

Question. What office do you hold?—Answer. I am pay-director in the Navy.

Q. State whether you have received any money appropriated for the building of the eight sloops of war?—A. Not a dollar. I do not receive nor disburse any money, except for the things which we sell at auction, and that I turn into the Treasury. I am the inspector in charge of stores.

Q. What property of the Government have you sold?—A. Only condemned stores; and very few of those.

Q. The proceeds of those sales you have turned into the Treasury?—A. Not into the Treasury, but to the paymaster of the yard, to the credit of the several appropriations they were sold under. If we sold provisions, we would turn the proceeds into the appropriation for provisions. If we sold clothing, we would turn the proceeds into the appropriation for clothing, &c.

Q. You do not purchase anything?—A. I make no purchases. The purchasing-paymaster in the city makes the purchases. I make requisitions on him for anything I want,

and when approved it is purchased and sent to me. I am to inspect it, and see if it is suitable; and, if it is not, I reject it. If it is, I take it and keep it and use it. That is what I have done since I have been here. I have been here only three or four years.

Q. Do you know of any abuses in the Navy to which you can call the attention of the committee?—A. I think, if you will allow me to say it, that the whole system of purchase as it is now, is wrong; it is an abuse.

Q. In what respect?—A. I think they have departed from the old rule established seven or eight or nine years ago, where everything over and above a hundred dollars was advertised for.

Q. What is the rule about purchasing, now?—A. There is no rule; nominally, the rule that if it is over a thousand dollars, you may advertise for it, providing you get permission from the Department at Washington, or from the Secretary of the Navy. You have got to get special permission for that. Then, after that, they leave it optional with you; provided you think you can purchase just as well without advertising as with advertising, they let you do it. There is nothing obligatory.

Q. How do you account for the fact that the same persons get contracts for supplies all the time?—A. Because they have got the inside track, I suppose; I don't know any other way.

Q. You think it is not because they furnish articles lower than anybody else would?—A. No, sir; I think it is owing to the fact that other dealers have not been asked to bid at all. I will explain to you in a few words how they manipulate these things. The purchasing-paymaster may make out the bids all fair and square; but he cannot run around and deliver them, and he gives them to his messenger, or his clerk, and he will go to only one man, and that man will bid, and, of course, he gets the contract. That is the way it is done.

By Mr. HARRIS:

Q. Must not the paymaster know if any such transaction as that took place?—A. How could he know it? At one time I relieved one of the old naval agents, and I instituted this system: when a requisition was received, I copied that requisition and sent it in a circular to every dealer in the article in the town; that is, if it was under $100. If it was over $100 it had to be advertised. I sent those out with tags attached to the bids, and I required the messenger to bring back the receipt of the man to whom the bid was delivered. I sent out eight or ten of those bids, and asked them to send in sealed proposals within a certain time, and those proposals were put in a locked box, and they were asked to be present at a certain time when the box and bids would be opened. Under that system I never heard of any imputation of fraud upon anybody; but they have now done away with the law requiring everything to be advertised which amounts to over a hundred dollars; it must be a thousand dollars; and you can understand that if anybody is disposed to act in collusion with the paymaster's clerk, they can defeat the whole object of the law. One of the great abuses is forcing a clerk upon the paymaster and obliging him to keep him whether he wants him or not.

By Mr. JONES:

Q. Do I understand you to say that a purchasing-paymaster does not have the right to select his own clerk?—A. They tell him that if he will not take a certain man as his clerk he cannot go to the place, and some men are willing to so far compromise themselves as to take the position on such conditions; and, although they may seem to have the direction of affairs, they really do not. That is the only thing in regard to abuses in purchasing that has come within my cognizance. In regard to the inspection of articles, instances have come to my knowledge where articles have been rejected, and afterward an order came from Washington to receive them. I know while I was in New York that was the case.

Q. Won't you state that case, that we may have the benefit of it?—A. There was a contract for canned meat. The chief of the bureau, Mr. Dunn, and myself had been at work for a long time getting up new cans in order that we should not lose anything. A great deal had been condemned, which came in the long cylindrical cans made of light tin, and we got up a stiffer and heavier can, so that we should not lose anything. The bureau advertised for proposals, and we received bids. Jones, of Portland, and, I think, Underwood, or Lewis, of Boston, put in bids which were just alike, and the contract was divided between them. I think it was for some 100,000 or 150,000 pounds. There was a company in New York called the "Texas Meat-Preserving Company," of which a man by the name of Monroe was president. He went to Washington, and he had influence enough to get a contract for a smaller amount, 50,000 or 100,000 pounds. He was to deliver it according to the written contract, just the same as the others. After it was delivered, I went down and merely took a superficial look at the cases and at the tins, and rejected it at once, on the ground that it were not according to contract, the tins being twice or three times too large. I reported to the bureau that I would not receive it, and it remained in store some three months, until warm weather came on, when it began to be a little offensive, and I notified Mr. Monroe to take it away immediately. He came over to see me, and, after talking it all over and trying to induce me to take it, I told him I could not, and then he says to me, "I would rather give $500 than take that meat away, if that is any inducement." Well, I got rid of

him. I didn't like his talk very well. In a week afterward I got an order from Washington to receive that canned meat.

Q. Signed by whom?—A. I think it originated with the Secretary of the Navy, because I protested against it to my bureau. The order was to receive it, notwithstanding the size of the cans and cases. The ground on which I rejected it was that the cans and cases were not according to contract. Then I went and opened the cases and examined the meat. The chief of my bureau, Mr. Dunn, was there, and I told him I was going to reject it on another ground, that the meat was of inferior quality, the cans were not in a suitable condition to keep the meat, and it was a total loss, or a great portion of it. I made that report, and it was there five months. I notified the man to come and take it away, and he did not come, and when I left there I left it in the store-house.

By Mr. JONES:

Q. Do I understand you to say that you had previously received an order from the Secretary of the Navy to receive this meat?—A. Yes, sir; I rejected it because the cans were twice as large as the contract called for. I did not examine the meat at that time, nor its condition otherwise. I rejected it on the ground that the size of the cans and packages was not according to contract. The contract called for 4-pound cans, and these were eccentric sizes, containing all the way from 6 to 9 pounds, and put up in all kinds of boxes.

By Mr. HARRIS:

Q. You rejected it because the size of the cans and the way it was packed in the boxes were not according to contract?—A. That is it.

Q. And then you received an order from the Secretary of the Navy to receive it notwithstanding those objections?—A. That is it, exactly.

Q. And then you rejected it again because the meat was not good?—A. Then I examined the meat with the chief of my bureau, Mr. Dunn, now in Baltimore, and then I rejected it on another ground: because I thought it would be a fraud to receive it.

Q. That meat never was received?—A. I don't know.

Q. During your time?—A. No; I never made the bills for it.

Q. When you were told to receive it, notwithstanding the mode of packing and the size of the cans, you still understood you had a right to determine upon the quality of the meat, and you did do that, and rejected it upon that ground?—A. I felt that the man should not have his contract filled that way. I felt as if he had used some misrepresentations to the Secretary to get it received, and used some influence to get is received, and I thought it should not be received; it wasn't right. I told Mr. Dunn I would either receive this meat, and instead of putting my name on it, put "Received by order of the Secretary of the Navy," or I would take the responsibility of rejecting it on another ground and they might remove me. I did not care if they did.

Q. Who was the Secretary of the Navy at that time?—A. The present Secretary, Robeson.

Q. About what was the value of that meat?—A. The contract-price was 18 or 19 cents a pound.

Q. How many pounds do you think there were?—A. It was an even number of pounds, either 50,000 or 100,000 pounds.

Q. Who was the contractor?—A. This Texas Meat-Preserving Company. It is a company in New York. The name of the president of the company was Monroe, I think.

By Mr. JONES:

Q. He had previously stated to you that he had rather give $500 than take it away?—A. Yes, sir; that is what he said.

Q. You have been in the Navy how long?—A. Between twenty and twenty-one years.

Q. What is your opinion in regard to the present system of having separate bureaus, as compared with the old system—whether it is advantageous to the Government or detrimental?—A. If they have a Secretary who will bring his bureau officers right up and make them all work together, no better system has ever been adopted.

Q. Do you think they work together?—A. No, sir; there is a jealousy between the bureau officers, and there always will be more or less jealousy, no matter who you get there.

Q. Are they not now disposed to feel as if they were separate institutions by themselves?—A. Each one wants to run his special department and make the best of it, without considering whether it clashes with the interests of the others.

Q. How is it with regard to the Bureau of Yards and Docks, and the Bureau of Construction and Repair? Why should they not be under one head?—A. Well, yards and docks has nothing to do but just to keep the yard-buildings and docks in order. That is all their province.

Q. Why, should that not be done under the Bureau of Construction and Repair?—A. Well, yards and docks is a department that anybody could look after. The commandant of the yard ought to look after that. The commandant of this yard does so, but knows but little about the workings of the rest of the departments. He never was in my place in his

life, and knows nothing more about my department than I do about yards and docks, or construction, or equipment.

Q. What, in your opinion, is the necessity for having a civil engineer in your yard?—A. He is the person who is called upon to repair the buildings, lay drains, and sidewalks, and one thing and another. That is all that is required of him.

Q. Why couldn't that be done by the foreman of whatever department the work might come under?—A. It certainly can, if the commandant of the yard is disposed to take any interest in it and look after it. In my opinion, the department of yards and docks is a great source of corruption, for every official who wants to give a man something to do will put him in there.

Q. Under the old system, wasn't that under construction and repair?—A. No, sir; it has always been "yards and docks" as far as I know. This is the third navy-yard in which I have been. I was at Portsmouth during the war. It was "yards and docks" then, and there I knew more about it than I do now. There I was paymaster of the yard, and inspector of provisions, and purchasing-paymaster, and I had to work then. They have too many clerical people, in my opinion, in yards and docks. They must have draughtsmen and a great many other people who are of no practical use.

By Mr. HARRIS:

Q. How do you sell the Government stores at auction?—A. That is in my bureau.

Q. Do you sell anything that isn't in your bureau?—A. Nothing at all.

Q. You wouldn't sell a ship, if one was to be sold?—A. No, sir. Ships are generally sold by the Government auctioneer. I sold three or four vessels at Portsmouth, because they got into a fight as to whether the marshal of Maine or of New Hampshire should sell them.

By Mr. JONES:

Q. In your department, what do you do when you run short of funds?—A. As I have said, I do not disburse a dollar.

Q. Are you ever ordered to draw from any other department, except your own?—A. Never. The only person who pays money is the paymaster of the yard, who pays the officers and workmen in the yard. The purchasing-paymaster over in Kilby street pays all bills on vouchers which are duly authenticated, and he has first to send those bills to Washington before he gets the money for that purpose. The paymaster of the yard here, in order to get his money, has to make a requisition, showing how many men there are in the yard, and then he gets the money and pays it out. The inspector has no charge of any money whatever. I have not disbursed a dollar of money.

By Mr. HARRIS:

Q. You draw your pay from the paymaster of the yard?—A. I draw my pay from the paymaster of the yard. I am just like the head of any other department.

Q. Have you ever known of any money or other consideration paid to any officer of the Navy by a contractor to secure his particular interest?—A. I never heard of such a thing in my life. Nobody ever offered me anything. The only case of the kind of which I have any knowledge is the one I have told you about, where the man said he would rather give $500 than take that meat away.

Q. Are you paid by a regular salary?—A. Yes, sir.

By Mr. JONES:

Q. Did I understand you to say that all the money that is disbursed by the regular paymaster of the yard comes to you to pay your department?—A. He pays the workmen employed in my department. I have only a very few. I make the roll out of the workmen I have, and send it up to his place, and he pays them.

Q. You are the paymaster of what?—A. I am paymaster of nothing now. I am pay-director in charge of stores. There are only thirteen pay-directors in the Navy, and they are generally in the pay-offices. This is my sixth year as an inspector.

Q. Your never have understood from any of the paymasters that they have drawn from one appropriation and expended the money in another department?—A. O, no; they have no more authority to draw than I have. If they want money they have to get it by a requisition sent to Washington. I have no doubt that they are sometimes compelled to pay out the money which is in their hands that belongs to one appropriation to another; but they should not do it. A paymaster, for instance, may have $50,000; $20,000 of it may belong to the pay of the Navy; some belongs in construction, and some in engineering. He draws under these different heads. When he comes to pay out the money he cannot keep the money of each appropriation separate. He may overpay on one appropriation, and, consequently, he has a deficit in that; but at the end of the month he makes his requisition to square it.

Q. Do you understand that sometimes, when there is no money in any one department, he draws money from another department to pay the help in the department where there are no funds?—A. He may. I will illustrate it in this way: If he has fifty men at work in construction and fifty men at work in steam-engineering, and has $5,000, say, under both, when

he comes to pay out the $5,000, he may be a little short in steam-engineering, and have a balance over in construction, and he will pay it all out, and when he comes to foot up he will say, "I have overpaid in construction, but I have a corresponding surplus in steam-engineering." He does not intend to overpay, but it takes pretty nice figuring always to pay out the exact amount. For instance, at the Portsmouth navy-yard, I overpaid in one instance $4,000 or $5,000, and I encroached upon the different appropriations to that amount, because the men had to be paid, and they would not fill my requisition; but, finally, I made another requisition and got money enough to make good the overpayments, and I would not pay anybody under that appropriation, and that brought it out square. A paymaster's accounts are very complicated. In war-time you have appropriations under fifteen different heads. You draw money under each one, and you must pay it under its appropriate head; you must not encroach upon any appropriation, if possible to avoid it.

Q. Have you been brought in contact with the purchasing-paymasters?—A. I know them all.

Q. Do you know whether or not the purchasing-paymasters, when they are stationed at a certain place, have to buy of certain parties, and those certain parties make the prices with the heads of the department that require the material, and those go to the purchasing-paymaster to purchase?—A. Well, I know nothing only what they have told me.

Q. What have the purchasing-paymasters told you?—A. Well, they said they were bored and harassed to death by people coming to them and asking them to buy of such and such persons—people whose wishes they did not feel at liberty to disregard. But that is only what they said. I know nothing about it personally.

Q. Did they say that those people, whose wishes they did not feel at liberty to disregard, were the people who got them the places where they were stationed as paymasters?—A. I didn't understand that; but they said they were persons who said that if they didn't do as they requested they would not stay in their places.

By Mr. HARRIS:

Q. Have you learned from them that the contractors had the power of removal, unless they purchased of them?—A. These were not contractors. For instance, there is $50,000 worth of stuff to be purchased, and certain gentlemen who have a good deal of influence with the powers that be go to Mr. Abbott, for instance, and say, "You must purchase of so and so." The contractors agree to deliver according to contract or sample, and they must deliver.

By Mr. JONES:

Q. Is it understood that if they do not go and purchase of so and so they will be emoved?—A. Well, it is tantamount to that. They are a little frightened; that is all.

By Mr. HARRIS:

Q. How long has that state of things existed?—A. For some years past; it should not exist at all. This is one of the abuses, as I have said. It has existed for years, and has been growing worse and worse. During the war, with all our purchases, no such thing occurred. During the war, we advertised for everything. We used to advertise in two papers, having the largest circulation in the town where the purchase was to be made. For instance, when I was at Portsmouth, I used to buy a great deal, and I would advertise in the Boston Journal, I think, because it had the largest circulation of any paper in Portsmouth; and there is another thing, every one is anxious, if there is a purchase to be made, all want to be purchasing-agents. They think they can get something out of it; I don't know how. There should be a stringent rule made that all purchases shall be advertised, and that rule should not be deviated from in any instance. Then there could not be any fraud, corruption, or collusion.

Q. You think it is a mistake not to advertise?—A. It is the greatest mistake in the world.

BOSTON, *March* 27, 1876.

DAVID MCKAY sworn and examined.

By Mr. MILLS:

Question. Do you know anything about the lumber and material used by Donald McKay for building the sloop-of-war Adams?—Answer. I don't know much about it.

Q. Well, what do you know about it; do you know that he received lumber from the Government?—A. He has received some lumber.

Q. How much?—A. I cannot tell you how much.

Q. Do you know anything about any lumber that he has stowed in East Boston?—A. Yes, sir; I helped stow some there some time ago.

Q. How much lumber has he that is stowed in East Boston that was obtained from the navy-yard?—A. I cannot tell how much there was.

Q. One hundred thousand feet?—A. No, sir.

Q. Seventy-five thousand?—A. Somewhere in that neighborhood; I don't know. I helped pile it there, and that is all I know about it.

Q. Where did you get it from?—A. It came out of the yard here; at least, I was told so.

Q. What has become of that lumber?—A. It has been used, I suppose, for the purposes of the ship.

Q. How much of it?—A. I cannot tell.

Q. Is there any left there now?—A. I cannot tell you that neither; I have not seen it for over ten months.

Q. Is there any left around the yard where the ship was built?—A. No, sir; it was not left there at all.

Q. How much lumber was there left that was originally drawn from the navy-yard for the launching of that vessel?—A. There was not a great deal of timber, nor there was not a great deal of lumber. There was some, of course. There was more lumber than there was timber, but then I am not to know how much there was. I worked on the ship.

By Mr. HARRIS:

Q. Is not some of that timber stored at Taylor's yard?—A. This was some of it, but that, I guess, they have received all back.

By Mr. MILLS:

Q. Did you remove any of that lumber from Mr. McKay's yard in the night-time?—A. No, sir.

Q. Was it all removed in the day-time?—A. Yes, sir; it was all done in the day-time what I had anything to do with.

Q. Nor any from this yard to East Boston?—A. No, sir; I worked on the ship, but I had nothing to do with the timber only as it came there, when we had got to take it into the yard before it was used, and pile it up.

Q. Who brought it from the navy-yard?—A. Well, it was teamsters who fetched it in.

Q. Who, representing the Government, delivered it to the teamsters?—A. I don't know who it was.

By Mr. HARRIS:

Q. More lumber was received than was used on that ship?—A. Well, it has been used for other purposes, probably, may be not for that ship. We ain't to know anything about that. It was got for that purpose from here, and stowed on a wharf in East Boston.

Q. Whose wharf?—A. Mr. Jones's.

Q. You think it was somewhere in the neighborhood of 75,000 feet?—A. I suppose it was. I cannot tell, because I did not measure it. I handled it.

Q. Did you use a large portion of that on the ship?—A. Yes, sir; we used a great deal of it. Of course, I do not know how much or how little. I cannot say whether that lumber is there to-day or not.

Q. Are you a ship-carpenter?—A. Yes, sir.

Q. Are you employed by your brother as foreman?—A. No, sir; not as foreman. I only work there as a fastener and ship-carpenter. That is my work.

Q. You had no interest in the vessel?—A. No, sir; not at all; only I worked there at day's work.

By Mr. MILLS:

Q. When you speak of that lumber, do you include live-oak?—A. That has nothing to do with live-oak.

Q. None was carted there?—A. None to that yard. There was some carted, but I do not know how much, nor from what yard. I cannot say anything about that. There was some white-oak plank taken up there. I suppose it is being used for the same ship now. That is what it went there for, for that purpose.

Q. Went from the Atlantic Works?—A. Yes, sir.

Q. Up where?—A. Up to Mr. Taylor's yard.

Q. Was there any live-oak there?—A. There was a very little.

Q. In what shape was it?—A. It was squared timber, same as you would have timber for a ship.

Q. Long timber?—A. No, sir; not long.

Q. Any whole pieces?—A. There was some, not many.

Q. The rest was white oak?—A. White oak.

Q. He keeps some of that stowed at Taylor's yard?—A. I cannot tell you whether it is there now or not.

Q. How much was there of it?—A. I cannot tell you.

Q. How many tons?—A. I don't know. He might have bought it. He bought all this, you know.

Q. You do not know how much came from the navy-yard?—A. No; I do not; but there is some there.

Q. I suppose there must be some left after building a ship?—A. There is always some left.

Q. Do you know there is as much as ten tons?—A. No; it cannot be as much as that.

By Mr. JONES:

Q. How many thousand feet of dry lumber should you think it would take to finish the inside work of the ship?—A. It might take from 35,000 to 40,000 feet, probably.

Q. Would it take as much as that?—A. I cannot tell exactly.

Q. If you were going to figure on that ship, should you figure on as much as 35,000 or 40,000 feet of dry lumber?—A. There is a great deal of waste in cutting the lumber for a ship like that.

Q. In your opinion, would not 25,000 feet of dry lumber do the inboard work in a ship of the class of the Adams?—A. You do not want so much pine lumber as that.

Q. Not as much as 25,000 feet?—A. No, sir.

Q. How much would it take?—A. It would take, probably, 15,000 feet.

Q. Out of this lot of 75,000 feet, which you say he received?—A. Well, I don't know; I think it was somewhere along there; then there was a good deal of black walnut and white oak.

Q. How much black walnut?—A. Four loads, I should think.

Q. How much ash?—A. There might have been six.

Q. How much to a load?—A. It would average from 2,200 to 2,300 feet.

Q. How much black walnut should you say there was used in finishing the whole of the inboard work of the Adams?—A. Well, there might have been 3,000 feet.

Q. How much ash?—A. There might have been a couple of thousand feet, may be 3,000 feet.

By Mr. HARRIS:

Q. Did you understand that that lumber was being furnished by the Government a little cheaper than it could be bought outside?—A. I should say it was worth $75 or $80 a thousand, but I am not to say what he was to give for the lumber; that is for you to judge for yourself.

By Mr. JONES:

Q. What would you have had to pay for that lumber if you had gone into the market to buy it?—A. $75 to $80.

Q. And what for the black walnut?—A. About $100.

Q. What for the ash?—A. That is not worth so much.

Q. How much do you call dry western ash worth?—A. May be from $45 to $50.

Q. Could you buy it eighteen months or two years ago at that price?—A. I do not know as you could buy it here; they have generally the very best.

Q. Could you have bought it outside in Mr. Paul's yard?—A. I don't know as you could.

Q. Could you have bought it short of $75 or $80?—A. You might if you took a lot of it. I do not know as you could buy a single thousand.

By Mr. HARRIS:

Q. You got the idea he was getting his lumber pretty cheap here, did you not?—A. That was not my business.

Q. But did you not understand that he was taking advantage of an opportunity to get pretty good stock at a low price?—A. It was for the man who was delivering it to look out for that.

Q. Was not that your impression?—A. It is nothing for my interest to say anything one way or the other. I was there as a laboring man, getting my day's pay; that is all I expect to get, anyhow. This lumber was there, and he got it at the Government price. I suppose they furnished everything, and he was to pay them so much for every thousand, let it be more or less.

Q. And he got a little more than you think was needed?—A. I don't know how much he got, or anything about it.

By Mr. MILLS:

Q. On an average, what should you say that 75,000 feet of lumber, delivered at Henry Jones's yard was worth per thousand?—A. I do not believe you could buy it short of $55, take it right through.

Q. The whole pile?—A. The whole pile, because it was picked lumber.

By Mr. JONES:

Q. I thought you stated to me that it was worth from $75 to $80?—A. I know that is what I have got; I don't know what lumber is worth myself, but I have got that from good authority, that some of it was worth about $75 or $80. Take it on the average, he might have got it for from $45 up to $65.

By Mr. MILLS:

Q. I asked you what in your opinion that lumber was worth, averaging the whole of it, per thousand.—A. I suppose it was worth may be from $45 to $55 a thousand, take it right through from beginning to end. I don't believe you could go outside and buy it any cheaper than that.

Q. I do not see how you could bring the average down to that, when you have not had a single piece at that price.—A. There were a good many piles of lumber came there, and there might be a good deal, you know, that was not first quality, don't you see, and when you come to average one thousand with another, if you could get $45 a thousand for it, you get a big price, don't you see?

By Mr. JONES:

Q. Did he receive any lumber there to do the joiner-work on the Adams that was not first-quality lumber?—A. Yes, sir; there was some. Of course it was rejected.

Q. How much?—A. Probably not 2,000 feet.

Q. All the rest was first quality?—A. First quality dry pine lumber.

Q. Do you mean to say it was not worth more than from $45 to $65 a thousand?—A. I mean, take the whole of it.

Q. How much of that 75,000 feet was dry pine?—A. I cannot tell.

Q. Three-quarters of it?—A. Yes, all of that.

By Mr. HARRIS:

Q. Have you not got that estimate pretty low? Do you believe you could have gone out at that time into the market and bought it for less than an average of $75 a thousand?—A. Well, I don't know; may be you might have bought it for more, and might have bought it for less. I cannot exactly say about it, you know.

Q. Have you not some opinion about it?—A. I know pretty well what lumber is worth. If I was going to buy it, I should buy it as cheap as I could. I would not want to estimate on another man's property what it is worth, or what it is not.

Q. You can tell us whether the market would have furnished any lumber like that at less than $70 a thousand on the average?—A. You could not get dry lumber, I guess, at that time, short of $65.

Q. Do you not think it would average from $65 to $70?—A. Yes, sir; somewhere about there.

BOSTON, *March* 27, 1876.

WILLIAM A. SIMMONS sworn and examined.

By Mr. MILLS:

Q. What office do you now hold?—A. Collector of the port of Boston.

Q. Do you know anything about the United States dredger that seems to have been borrowed from the navy-yard by Lewis & Co. to do some work? If so, state what.—A. Some months ago, Mr. William Wooley, an old friend of mine, came to me complaining very bitterly that the Government dredging-machine, or a Government dredger, from the navy-yard, was being used by private parties in competition with his business; that he was a republican and a friend of the administration, and he thought it was a little hard, and wanted to know what could be done about it. I told him if he would address a letter to me, stating the facts, I would represent them to Secretary Robeson, and make such comments upon them as would have the matter immediately attended to. He did so, and I forwarded his complaint to the Secretary in a personal note, stating who he was, and the facts as alleged by him, and that he knew they were so, and was prepared to prove them. I heard no more of it until Admiral Nichols came over one day and desired to know the facts. I said I would send Mr. Wooley to him, and Mr. Wooley went to him. I know nothing further about it, except what Mr. Granger and others have told me.

Q. You do not know anything further than that?—A. I only know what Mr. Granger has told me, and other people. I do not know of my own personal knowledge any fact in relation to it.

Q. What sort of a man is Mr. Granger?—A. I have always considered him a good man. I was very largely responsible for his appointment.

Q. Has he stood well in your community heretofore?—A. Yes, sir; he has always stood very well, as far as I know.

Q. Has he been a member of the Massachusetts legislature?—A. He has been a member of one legislature, and was a highly respected citizen, so I am told, out in the section of the city where I now live. I had not very great personal acquaintance with him. My acquaintance was of recent date, comparatively.

Q. Are you cognizant of any abuses in the administration of this navy-yard to which you could call the attention of the committee?—A. No, sir. I know nothing of my own knowledge regarding the navy-yard.

Q. Do you know anything about the contract system, or how they furnish supplies there? It seems from the investigation that we have made that one person furnishes, and has for years furnished, all the lumber. Can you explain how such a thing as that could occur?—A. No: I do not know anything about it, except that I suppose it is all done through the chief of bureau.

Q. At Washington?—A. Yes, sir. I do not know the rules which govern at all. Everything in our department is let by contract, and the lowest bidder gets it. I suppose the same principle prevails at the navy-yard, or ought to.

Q. If it did, it would seem strange that one man should be the lowest bidder all the time for a number of years, would it not?—A. It would be a very happy circumstance for him.

By Mr. JONES:

Q. Do you know anything about the contract for the ship Adams?—A. I do not know much about the ship. The first contract that Mr. McKay had on it I secured for him through General Butler and Mr. Hooper.

Q. Did you ever receive anything for getting that contract?—A. No, sir; I never received a dollar in my life.

Q. Do you know any one who did?—A. Mr. McMichael, who was a former ship-builder, was very much interested in Mr. McKay's having the contract, and Mr. McKay agreed to employ Mr. McMichael as his foreman in charge of the building of the ship. I think he said it was to consume between ten and twelve months in building, and he was to pay him $3,000 for his services. This he agreed to do with General Butler and myself.

Q. Did he make any writing to that effect?—A. I think that Mr. McMichael had a writing from Mr. McKay to that effect, if I remember rightly. At any rate, Mr. McKay agreed to do so, whether he put it in writing or not. That was the understanding at the time. Mr. McMichael, being a citizen of East Boston, with Mr. McKay, and being then out of work, and being a practical ship-builder, I thought, as a friend of Mr. McMichael, that it would be a good way to give Mr. McMichael, as a citizen of our district, employment; and as I was working for Mr. McKay merely to benefit the district, to benefit our mechanics, East Boston being a ship-building community, I thought it was a right and proper thing to do, and did it.

Q. Do you know whether Mr. McKay carried that contract out with Mr. McMichael?—A. No, he did not. Mr. McMichael came to me several times after the ship was commenced, and said that Mr. McKay wanted to get out of it, and wanted to know what it was best to do. I told him I thought Mr. McKay was in honor bound (I am quite sure that Mr. McMichael had a writing to that effect) to give him the place of foreman at the compensation agreed upon, which was not a large compensation; but finally Mr. McKay made so much trouble about it Mr. McMichael said he would agree to settle it, and I think Mr. McKay paid him $600 through Mr. B. F. Palmer, one of our city assessors. I think it was through him. I had some talk with Mr. Palmer about it, at any rate.

Q. Before this settlement was made with Mr. McKay was not Mr. McMichael ordered to repair some iron-clads in New Jersey by the chief of bureau?—A. I think while he was negotiating about this, (as I say, he was out of work, and not a moneyed man,) his friends secured him a position, which was given him by the Navy Department, to superintend iron-clads in New York.

Q. Was that after the contract was broken with Mr. McKay?—A. It was about that time. My memory does not serve me as to the dates.

BOSTON, *March* 27, 1876.

GEORGE H. FOGG sworn and examined.

By Mr MILLS:

Q. You are in the lumber business here, are you not?—A. Yes, sir.

Q. Were you in 1873?—A. Yes, sir.

Q. Do you remember selling a bill of lumber to Mr. Trickey in September, 1873?—A. I think I do.

Q. To what amount?—A. 70,224 feet.

Q. At what price did you sell it?—A. $32 per thousand.

By Mr. HARRIS:

Q. Where did that lumber go to?—A. It went to the navy-yard, I suppose.

Q. Did you deliver it?—A. I delivered it in the water, in the navy-yard dock.

Q. What was the lumber?—A. Rough-hewn timber.

Q. Oak or pine?—A. Yellow pine.

By Mr. MILLS:

Q. You delivered that lumber at the navy-yard without Mr. Trickey's being at any expense or cost at all?—A. We delivered it in the water, and then we left it. I do not know what was done with it afterward.

Q. You delivered it at the navy-yard?—A. Yes, sir.

By Mr. HARRIS:

Q. You delivered it in the wet dock where they wanted it?—A. In the ship-dock.

Q. You do not know what Mr. Trickey's contract was, whether to deliver it in the dock or on the wharf?—A. I know nothing about Mr. Trickey and the navy-yard.

Q. How soon did you get your pay?—A. I don't know as I could tell that.

Q. Did you wait until he got his?—A. I cannot tell.

Q. Do you believe you did?—A. I believe we waited, but I cannot tell how long. I don't know but we might have got our pay very soon after.

Q. Do you remember whether he told you he desired you to wait until the Government paid him?—A. I never heard anything of the sort. Mr. McQuesten, my partner, made the trade with Mr. Trickey, consequently I did not have much to do with it.

Q. You do not know the price Mr. Trickey got for it?—A. No, sir.

By Mr. JONES:

Q. What was eastern pine plank worth two years or two years and a half ago, four-inch wharf plank, such as you get in the eastern country?—A. I cannot tell positively.

Q. Well, what would you sell 40,000 or 50,000 feet for, a year and a half ago or two years ago?—A. I should be loath to answer that question under oath. I think we sold it somewhere about $30.

Q. What was 10-inch timber worth 16 feet long, eastern pine, such as we get out through the country here?—A. About $35.

Q. What were spruce boards worth, miscellaneous lengths, a year and a half ago?—A. We do not deal in them.

Q. Six-inch pine, 16 feet long, would that be the same price?—A. Yes, sir.

BOSTON, *March* 27, 1876.

CHARLES H. LEWIS sworn and examined.

By Mr MILLS:

Question. Do you know anything about the United States dredge-boat?—Answer. Yes, sir.

Q. Did you make a contract for the use of that dredge-boat?—A. Yes, sir.

Q. With whom did you make the contract?—A. I first saw Colonel Granger at the yard, and told him I would like that boat, and he told me I would have to make application, I think it was, to the commodore, or to the Secretary of the Navy, and I made the application.

Q. Was a contract entered into that you should have it, or the use of it?—A. No, sir.

Q. How did you get possession of the boat?—A. I took it from the navy-yard.

Q. Under what agreement?—A. The agreement was that I should put the dredge in repair.

Q. With whom did you make that agreement?—A. I think it was with the Secretary of the Navy.

Q. What were the terms of your agreement?—A. I was to put the dredge in repair for the use of it for nine months.

Q. To put it in thorough repair?—A. Yes, sir; in working order.

Q. Furnish all the labor and material necessary to put her in working order?—A. Yes, sir.

Q. Was any of the labor or material on that vessel furnished by the Government?—A. Well, sir, I would like to go back and tell my story. I am a civil engineer by profession, and live in New York. I had a contract to build a railroad in Maine and came down here, and when I got here I found I could not build the road. I was staying at the Parker House, and saw an advertisement for a dredging contract. General Ledby, a partner with me, was an old dredge-man. I had never had any experience in it at all. Colonel Granger was a classmate with me, and afterward a partner with me for six years. General Ledby and I went over to the navy-yard and saw the hulk of a dredge sunk there, no machinery in it, and General Ledby, who owned a dredge at Troy, said, "If we can get that dredge and repair it for less than we can pull my dredge round from Troy, we can get that contract." It was a contract for less than $1,100. We estimated that it would cost $500 to repair that dredge. It had been sunk, I think, for six years. Then I made this application for the dredge in the proper form, whatever it was—Colonel Granger told me. The authority came back from the Secretary of the Navy that I could have that dredge if I would put it in repair sufficient to do my work. My work was only for forty-five days. The harbor commissioner, General Whiting, told me that I could finish it in forty-five days, and we thought we could repair that dredge cheaper than we could haul one round alongshore from Troy. General Ledby thought we could repair her for about $500. I have got my bills here of all the repairs that we had made. We had a daily roll, and I took the money over there and paid those men. I think it was $500 or $600. I gave the money to pay the

men to Mr. Cassidy, the head carpenter of the yard, I believe, and he paid the men. I went over one day to pay them, and the amount was more than I expected, and I went over another day and paid them.

Q. Who was present when you paid Mr. Cassidy?—A. I do not know whether General Ledby was with me or not.

Q. Was Mr. Granger present?—A. Mr. Granger would not take the money. I drew my check, payable to Colonel Granger, and he would not take the money. He told me to give it to Mr. Cassidy, and I gave it to Mr. Cassidy. I do not know but I am a little mistaken about the time, but I know that one time when I went over I took a check and they could not get it cashed. They sent it down to the grocery where the officers congregate, and they could not get the money on it, so I had to go over again. I gave the money to Mr. Cassidy, and he had the pay-roll made up, from which I paid those men. My impression is the amount was between $500 and $600.

Q. That was for labor?—A. Yes, sir.

Q. You did not pay anything for material?—A. I did not have any material.

Q. Who furnished the material?—A. There was no material furnished.

Q. Was there not any lumber furnished?—A. I don't think I paid for any. There were two planks put into that dredge that I did not care to have in; of course, I merely wanted the dredge to stay up until I could do this job.

Q. If you paid several hundred dollars for labor, it seems to me there must have been some material furnished which was worked up into that dredge?—A. I do not know where it was worked up.

Q. They must have had something to labor with if you paid them between $500 and $600.—A. It was sunk, and it cost me a great deal to raise it. That was the principal expense. It was sunk in five feet of soft dock-mud.

Q. Did you pay Mr. Granger at all?—A. No, sir; he would not take the money; I offered it to him.

Q. You did not pay him anything to assist you in getting the dredge?—A. No, sir.

Q. Did you pay Mr. Cassidy anything?—A. No, sir; I did not pay him anything, but my clerk did.

Q. How much did he pay him?—A. He paid him $20. I know that he charged it to me, and as he is a brother-in-law of mine I suppose he paid him the money. I have no doubt of it.

Q. Was that all that was paid?—A. No, sir.

Q. What else?—A. A man named Whitney was paid.

Q. How much did you pay him?—A. One was paid $20 and the other $25. I think there was more paid. I think Whitney received a payment of $10.

Q. Did anybody else receive anything?—A. I think that was all.

Q. Was Mr. Buckley paid anything—another of the workmen there?—A. I do not know him.

Q. Was Mr. Little paid anything?—A. I do not know him. I think those were the only two that were paid.

Q. There were three payments made, one of $20, one of $25, and one of $10?—A. I know that those payments are charged to me. I know my clerk paid the money.

Q. Was the course of Mr. Granger in that transaction entirely honest and upright, as far as you had any dealings with him?—A. Why, yes, sir; just as upright as ever anything was in the world. In fact, he would not extend to me the same facilities that I should have supposed an outsider, a perfect stranger, would have done, and he was a classmate of mine and a partner for six years in business. He simply said to me, "Colonel, I would rather you wouldn't take this dredge," and he would not receive a dollar of money. I made out a check to him and handed it to him, but he would not take it.

Q. Did you pay anything to him for himself?—A. No, sir; not a dollar.

Q. Then I understand that the money that you paid for those laborers, between $500 and $600, is distinct from the $20, $25, and $10 payments that you made to those two men. That was for themselves, was it?—A. That was for themselves; yes, sir.

Q. What consideration did they render to you for that?—A. Well, I don't know as there was any particular consideration. They were very accommodating when we were working there. I did not go over much myself. My brother-in-law had charge of it. He was my clerk.

Q. Did these parties tell you they were working up Government material into the boat, getting lumber from the Government?—A. O, no, sir. They did not tell me anything about it at all. My clerk used to go off boating with Cassidy, and he was a very great friend of his, and thought there might be some things which we might want which belonged to that dredge, tackle and rope, and one thing and another, which ought to go with the dredge, and after we went on to the ground to work he would go back there and get those things. I went there for material at one time and saw Mr. Cassidy, and he said it was no use to go up and see Mr. Granger, he could probably fix the thing himself.

Q. You have been in business here some time?—A. No, sir; I live in New York.

Q. Do you not live in Boston?—A. I am living here now with my family. I have not got through with that job yet. The Government took that dredge away from me, and I have

lost from six to ten thousand dollars on that job. I have got bills amounting to $1,270, f work that was done on that dredge outside, to put it in proper order. and just as I got it good order down came an order from Washington to take it away from me, because the men in Boston thought I was off my territory here.

Q. Were you off your territory?—A They thought they ought to control the dredgi in Boston Harbor themselves.

Q. Were you doing anything here except what your contract bound you to do?—A. N sir.

Q. Did you not do a job of private dredging?—A. Yes, sir. I did a job of private dred ing; that is what brought on the trouble. I would load my scows at night, and if I cou not get off on the tide I would tie them at the Marble wharf, and I had dumped two or thr scows there; that is, they would dump themselves, roll over and turn bottom-side up a spill before morning; perhaps the water would become rough in the harbor, and the wa in them would get to shaking and the dirt would be thrown over. I took a private job the party that owns the Marble wharf, and did it lower than the regular rates here, beca I considered I had helped fill up his dock. I believe that job belonged to Mr. Wooley, he made a great fuss about it. I did not know him from a side of sole-leather. That the only private job I did, but that was inside of the time I had the dredge from the Gove ment.

Q. From whom did you obtain those coils of rope that you used on the dredge?—A. I cannot answer that; I did not get them myself, but I think they came through either Cas. sidy or Whitney.

Q. You do not know who did get them?—A. Well, my clerk must have got them: I do not know from whom.

Q. Where is your clerk?—A. He is at Somerville.

Q. He is not in the city?—A. No, sir; but he is only two miles out.

By Mr. HARRIS:

Q. We have had information that that boat when you began work on it was upon blocks.—A. Well, sir, she was not upon blocks; she was sunk from six to seven feet, the stern of her, in the mud, and the bow was upon blocks; she was in a great deal worse position than if she had been lying flat.

Q. How was the dredge hauled up? What did you do to get it up?—A. I paid for it.

Q. You paid these men for it?—A. Yes, sir.

Q. Do you not know that Mr. Granger used a steam-engine to pull it up at the Government's expense?—A. Yes, sir; there was a steam-engine used there.

Q. Did you pay for that?—A. No, sir.

Q. The engine and machinery were all put on board the boat without expense to you, were they not?—A. Yes, sir; that was the understanding.

Q. With whom?—A. It was the understanding I had, that the principal part of the expense that I was to go to was to raise that hulk and put it in repair.

Q. You have sworn that you made no specification except that you would take that hulk and put it in thorough repair, and return it to the Government at the end of ninety days, in good condition?—A. Yes, sir.

Q. Did you not understand when you made that contract, that you were to do everything to it?—A. No, sir; I did not, for this reason. I asked them where the machinery was; they said, "There is all the machinery there." I said, "Perhaps some portion of the machinery is gone." I went up to the machine-shop, and either Colonel Granger, or the head machinist, told me (that was the understanding I had) that they should put the machinery on board, because I only estimated upon $500 to do the whole job.

Q. Your letter says $1,000.—A. Limited to $1,000.

Q. Not "limited;" the correspondence with the Department at Washington speaks of $1,000.—A. I guess they said that they thought $1,000 would put it in repair. They came and painted the dredge, and did other things which I did not care anything about, which I did not want done, because I was pressed for time.

Q. But you said you would take the dredge as it was, and put it in repair?—A. All that that had reference to was to get it up. The dredge was sunk, and that was the principal part of the expense. I put a house on her.

Q. Your contract did not specify anything except that you would take it as it was, put it in perfect repair, and return it to the Government in good order after you had used it ninety days?—A. I spent $500 or $600 for labor there, and I spent $1,200 afterward. As soon as I got out into the harbor the dredge broke down, and everything went to pieces; I do not know, gentlemen, who is being tried here, but I have a little reputation at stake in this thing myself, because it is said here that I had my work done inside of the navy-yard. Mr. Worthington, of the Traveller, a friend of mine, and Mr. Pulsifer, of the Herald, have told me that, though of course they got it from their reporters.

[Witness here exhibited a number of bills which he said had been incurred for labor and materials expended on the dredge after it left the navy-yard.]

Q Do you say that all these bills, amounting to $1,278, were paid outside, beside the $500 or $600 paid at the yard?—A. Yes, sir; and I never did a thousand dollars' worth of

work with the dredge. When I got the dredge in good working order, the Government took it away from me, because Mr. Wooley went to the collector of this port and told him I was an interloper here; he was a good republican, and there was no reason why I should come here and get on his territory; that is just what he said in his letter.

Q. You say that all these bills relate to work done on that dredge?—A Yes, sir; every one of them are dredge-bills. I have spent $1,700 on that dredge, and did not actually get a thousand dollars' worth of work out of it. It would not do the work. I put in new wheels and pinions. In fact, I have rebuilt the machine. The largest bill here is McLauthlin's, the big machine and tool man here. Every pinion on that vessel is made of bell-metal, worth 42 cents a pound. I went to Colonel Granger myself and told him, "I think you ought to furnish me spuds. They are all rotten: that dredge has not been used for seven years." Colonel Granger said, "I can't furnish you a dollar:" and here is the bill where I bought the spuds of Huckins and one other firm. I got one stick of timber over to the navy-yard for a dipper-handle.

Q. It appears that they spent $1,200 on that dredge over at the navy-yard?—A. I don't know where they spent it.

Q. They furnished Manila rope, you say?—A. I returned the Manila rope.

Q. But you had the use of it while you had the dredge?—A. Yes, sir.

Q. How much in value do you suppose that was?—A. I do not know. I suppose $150. I cannot see where they spent $1,200 on that dredge. All they did under Heaven was to take the machinery which had been taken out, and put it in again.

Q. Did they not repair her keel?—A. I do not know any repairing that they did except to put in three planks which I did not want.

Q. Was there not a hole in her?—A. There was one plank which was broken in. Colonel Granger came out there one day in a steam-yacht when I was there, and the crane would rack and spring a little. It had been that way ever since I had been out. That was the best part of it: but he sent his man over, and he put on a lot of clamp-screws, and detained me a whole day. I did not want it done at all, and after it was done it did not work, because the rest of it was loose. I asked him what he wanted to do that for, and he said because it might drop off and fall into the river. This money that my clerk paid Mr. Cassidy and Mr. Whitney was a small amount, and he says he paid it because he wanted to get tackle and blocks, and one thing and another, and he thought it was right, because it was going back to the Government, and it has gone back.

Q. You gave that money to Cassidy and Whitney for the sake of getting something from the Government which you could not otherwise get, did you not?—A. My clerk did that for the simple reason that Colonel Granger told me he would not give me a single thing. The first day that I got on the ground my dredge broke, and I went over myself to Colonel Granger. and he says, "I cannot do a single thing." Then I went to McLauthlin. Here are my bills for $1,278. I went over one day to see Colonel Granger myself, and met Cassidy, and says he, "I guess it is no use to go and see Granger." I wanted something or other, I forget what it was now, and I guess likely I got it.

By Mr. JONES:

Q. Did I not understand you to say that you put a house on her?—A. Yes, sir; there are the bills.

Q. Did you do it by your men, or did the Government put it on?—A. I did it after I took the dredge away from the navy-yard.

Q. The house was not put on there at the yard?—A. No, sir.

Q. The lumber for it was not furnished by the Government?—A. No, sir; there is the lumber-bill there. I know I furnished the lumber. I got nothing myself out of the navy-yard, but, as I say, my clerk did get some things there. I do not think they all amounted to a great sight, but I do not know what they amounted to; but if they expended $1,200, I do not see how in the world it could have been done; that is all.

By Mr. HARRIS:

Q. Have you paid anybody for the use of this dredge except those men, Cassidy and Whitney?—A. Not a dollar.

Q. And that was for the purpose of getting them to do certain things which they would not otherwise do?—A. I suppose that is the way. I should say, if I had the same thing to do over again, I should go and take the blocks and tackle and anything that I wanted, knowing that it was all to go back again.

Q. Have you got a bill for that shovel?—A. Yes, sir.

Q. Have you paid for it?—A. No, sir.

Q. Do you intend to pay for it?—A. I do not know. I have got a bill against the State for $6,534 for materials which they have not paid me for, and this thing has been brought up there. It is nothing but malice in this Mr. Wooley. He has pursued me all through.

BOSTON, *March* 27, 1876.

FREEMAN M. JOSSELYN sworn and examined.

By Mr. MILLS:

Question. Will you state whether or not you are clerk for Mr. Paymaster Abbott?—Answer. I am.

Q. Will you state whether Mr. Trickey sold the navy-yard a certain amount of pine lumber during the month of October, 1873, amounting to 70,000 feet?—A. I find it so recorded on the requisition-book.

Q. Please state at what price he sold that lumber to the Government?—A. Of that I am not informed, but the estimate is $45 per thousand for 50,000 feet of yellow pine, and $55 per thousand for 20,000 feet of yellow pine, and I judge that that is very near the price paid.

BOSTON, *March* 27, 1876.

JOHN B. HUCKINS sworn and examined.

By Mr. MILLS:

Question. Are you a lumber-man here?—Answer. Yes, sir.

Q. Do you remember making a bid for 6,000 feet of white-oak timber, which was to be supplied to the Government, some time ago?—A. I made a bid some time ago. I do not know what amount it was.

Q. Did you have any conversation, before you made that bid, with any person, or confer with Mr. Trickey?—A. I do not know anything about it. The bid was made by my brother.

Q. Do you know whether or not, when bids are put out here for supplies for the navy-yard, for lumber, for instance, as that is in your line, that notices are sent only to a few persons, or are they sent to a good many persons dealing in lumber?—A. I do not know anything about it. I don't know as I ever saw a notice.

Q. Do you know whether the lumber-men get together and make combinations to prevent competition?—A. No, sir.

Q. Has your firm ever made any combinations of that sort with Mr. Trickey?—A. Not that I know of.

Q. Did you get any interest for bidding on that lumber?—A. No, sir.

Q. Do you remember what your bid was?—A. Ninety-odd cents, I believe.

Q. Why did you bid so high? You certainly did not want the contract?—A. I did not see the proposal, and don't know what it was. My brother told me at one time that he had put in a bid for some timber at the navy-yard. That is all I know about it.

Q. It was knocked off to Mr. Trickey at 90 cents, and your bid, you say, was over 90 cents?—A. Yes, sir.

Q. Do you know whether or not your firm had any interest in the lumber?—A. Not a cent.

Q. Did you not get any of the profits from it?—A. Not a dollar.

By Mr. HARRIS:

Q. Did you not furnish any of the lumber?—A. No, sir.

Q. Had you that lumber on hand?—A. I presume not, of the kind they wanted.

Q. What was white-oak timber worth in the market about that time last fall?—A. It was worth all the way from sixty cents a cubic foot to a dollar.

By Mr. MILLS:

Q. Could you sell white-oak timber to other ship-builders at those rates?—A. Yes, sir. I have got timber on my wharf to-day that cost me over a dollar a foot.

Q. White-oak timber?—A. Yes, sir.

Q. Where did it come from?—A. It came from Tennessee.

Q. How do you get white-oak timber from Tennessee?—A. Have it brought by rail.

Q. What kind of timber is that?—A. It is first-rate timber, 16 by 22, 16 by 20, and 15 by 20.

Q. Was this timber that was to be furnished under the contract with Mr. Trickey of that kind?—A. I cannot tell you, because I did not see the proposal.

Q. What is white-oak timber that you get from Maryland worth, say in quantities of 5,000 or 6,000 feet?—A. It is worth all the way from $20 to $40 a ton. Forty feet is a ton. That would be, at $40 a ton, a dollar a foot. There is a great deal of difference in timber, you know. There is large and small, and choice pieces; crooked pieces and stern-pieces come high.

By Mr. JONES:

Q. I understand it was straight timber that was furnished to the Government.—A. I cannot tell you anything about that, because I did not see that proposal. I understood my brother that he had put in a bid one day. My brother is here in the city, and I am over to East Boston. I attend on the wharf, and he attends to the business in the city.

By Mr. HARRIS:

Q. What is the market-price of ship-timber to-day?—A. There is really no price to-day. I have got some on my wharf which I should be glad to sell at considerably less than cost. It is common timber. I should sell it to-day, to any one, at $14 a ton

Q. Which would be less than fifty cents a foot?—A. Yes, sir.

Q. Did it cost you more than that?—A. Yes, sir.

By Mr. JONES:

Q. What do you consider timber has been worth any time within a year, such as the Government has been buying to saw up into planks—round logs?—A. They do not have round logs; they require better qualities of timber than we keep on our wharf. They have choice timber, well got out. It has to be long lengths, and it is large timber, squared timber, and it is a better class of timber than we keep on our wharf over there to sell. It is worth all the way from sixty cents, as I told you, to a dollar a foot.

Q. Do you keep soft lumber on your wharf?—A. No, sir. We keep hard pine, oak timber, and some spruce, but no white pine.

Q. You buy this timber to sell to ship-builders?—A. Yes, sir.

Q. Where do you get it from, mostly?—A. The oak timber comes mostly from Virginia; the hard pine from Georgia.

BOSTON, *March* 27, 1876.

PEMBROKE S. HUCKINS sworn and examined.

By Mr. MILLS:

Question. Do you remember putting in a bid some time last year for 6,000 feet of white-oak timber that was advertised for by the navy-yard?—Answer. Yes, sir.

Q. Do you remember what your bid was?—A. Something over ninety cents.

Q. Did you have any conversation, or any agreement, with Mr. Trickey about putting your bid in?—A. I don't recollect what conversation I had with him about it.

Q. Did you have any agreement with him that your bid was to be over ninety cents?—A. I do not recollect the conversation I had with Mr. Trickey, whether it was to be over ninety cents or under ninety cents.

Q. What conversation did you have with him on the subject? You conversed together about making your bids, did you not?—A. I think he said something to me about the bid. I put a bid in, I think, at ninety-five cents. I am not certain; it might have been less.

Q. You and he conversed about it beforehand?—A. I think he might have said something to me.

Q. Did he not?—A. Well, I think he did, but what he said I cannot recollect.

Q. You know he did have a conversation with you about it?—A. Well, he said something to me about it.

By Mr. HARRIS:

Q. He wanted you to put in a bid, did he not, at 95 cents?—A. I can't say he wanted me to put it in at 95 cents. He wanted me to put in a bid, and I put t

By Mr. JONES:

Q. Did he not know what your bid was, or about what it was?—A. I think he did.

By the CHAIRMAN:

Q. Did you not know what his was?—A. I can't say as to that.

By Mr. HARRIS:

Q. It was an accommodation bid; did you not intend to furnish the lumber?—A. I did, if the Government gave me the contract.

By the CHAIRMAN:

Q. Did you not know he was going to bid under you; did he not tell you so?—A. No, sir; he did not.

Q. Did you not know that he was?—A. I might have guessed at it.

Q. Did you have any interest in it?—A. None at all.

Q. Did you receive any of the profits from it?—A. No, sir; not a cent.

Q. Did you furnish any of the lumber?—A. I furnished two sticks the other day.

Q. Did you furnish any of that 6,000 feet?—A. This was to make up that contract, and that was rejected that I sent there. He bought two sticks of me, and afterward he told me they were rejected. They are over in the yard now.

Q. Is that all you furnished?—A. That is every stick.

Q. Did he compensate you in any other way?—A. No, sir.

Q. Did you have any interest in any other of his bids?—A. No, sir.

Q. How came he to talk to you about your bid?—A. That I cannot say.

Q. Do you and he frequently talk about such things?—A. Never before, that I know of.

Q. Have you since?—A. No, sir.

Q. Were you in any way interested together in bidding?—A. No, sir. I have sold Mr. Trickey timber.

Q. How much have you sold him; large amounts or small amounts?—A. Well, I think it was two years ago.

Q. Did he not give you some little advance on the market-price?—A. No. He owed us when he failed, and we have not got any money yet, and never shall, I guess.

By Mr. HARRIS:

Q. Now, I want to ask you this question, whether you did not understand that your bid was merely to help him fix his price for the lumber, to give the appearance of competition?—A. Well, perhaps so.

Q. Is that not the fact, that he wanted a competing bid?—A. I suppose it was so.

Q. So that upon the face of things it would look as though two men bid, and he made the lowest bid?—A. I suppose he made the lowest bid, because he got the contract.

Q. You understood that he wanted it for that purpose, to give an appearance of competition?—A. Well, it might be so.

Q. Is not that your impression?—A. Yes, sir. I suppose it is.

Q. Now, you knew at the time, did you not, that either of those bids, the 90 or the 95 cent bid, was far above the market-price of that lumber?—A. No, sir. I don't think it was above the market-price. I think 95 cents was a fair price for that kind of lumber.

Q. Could you not buy it in this market for much less than that?—A. Well, two years ago I bought some timber, and paid $85 a thousand for it, more than a dollar a cubic foot, and I have got it on the wharf now.

Q. Cannot sell it?—A. I cannot sell it.

Q. At that price?—A. I cannot sell it at the price I gave for it, and I gave over a dollar a foot for it a year ago last fall.

Q. What do you say the fair market-price for white-oak ship-timber, such as the Government uses, has been for the last two years?—A. Well, from 60 to 90 cents. It depends upon what they want. The Government requires very nice timber. It must be all 12 inches at the top end, and free of sap. You can buy ship-timber in the market, but the Government would not take it, for a great deal less than that.

Q. How much less?—A. I know ship-timber worth about 50 cents a cubic foot, common oak timber, the Government would not take. The last cargo I had, I do not think the Government would have taken more than 25 per cent. of it, for I picked out those two sticks, as I tell you, for Mr. Trickey, and they were two as good sticks as I could find, and they would not take them.

Q. So far as that bid was concerned, you had no expectation of getting the contract on it, had you?—A. It was a bid which I put in at his request.

Q. Without any expectation of getting any benefit from it yourself, was it not?—A. Yes, sir; I suppose it was.

By Mr. MILLS:

Q. Then of course you knew that your bid was higher than his?—A. Well, no: I do not know as I knew. I did not know what his bid was. He did not tell me what his bid was.

By Mr. HARRIS:

Q. But he knew what yours would be?—A. Yes, sir; I think he did.

BOSTON, *March* 27, 1876.

THOMAS S. HASKELL sworn and examined.

By Mr. HARRIS:

Question. Were you a clerk for Mr. Granger during the period when the dredger was being repaired?—Answer. Yes, sir.

Q. Did you receive daily reports from the machinists and carpenters?—A. Yes, sir.

Q. Did those reports disclose upon their face what the men were doing?—A. I receive two morning-reports. One morning-report is for the purpose of telling where the men were at work yesterday, to compile our report from; the other morning-report is one that has been in vogue now about two years and a half, for the commandant, that he may know where the men are at work during the day—where they are at work just as the report is made out. It is a report that simply states the number of laboring men, where employed, and how employed. This report is made in the morning at 9 o'clock, and simply states the last they are doing at that time, and therefore the other morning-report is the report which figure our time from.

Q. I understand that you make an abstract or condensed report to the commandant every day?—A. Yes, sir.

Q. Does that report show where the men are employed during the day?—A. No, sir; it shows where and how they are employed at the time the report is made out.

Q. Did those consolidated reports which you made to the commodore show that any men were at work upon the dredger?—A. They did.

Q. Every day?—A. No, sir.

Q. How often?—A. My attention was called one day to a report that bore "Dredger" on it. Knowing the fact, that that work was to be performed by the person who was to receive the loan of the dredger, I called the attention of the civil engineer to that fact, and a messenger was sent for Mr. Whitney and Mr. Cassidy. On both of their reports I have found this item. The civil engineer called them up, and asked them what they were doing to the dredger, and why they were doing it. Mr. Whitney spoke to the civil engineer and informed him that it was a slight job, and it had already been done. The civil engineer asked him, "What right had you to place any men on the dredger?" He said he had no right. This was in my presence, and in the civil engineer's office.

Q. For how many days in succession did your daily reports disclose the fact that men were at work on the dredger?—A. I am in doubt.

Q. Was it not right along for forty days?—A. No, sir; I guess the reports from the foreman machinist and joiner had it in for as many as fifteen or twenty days.

Q. That is, both the machinist's and carpenter's report?—A. They were not consecutive. Sometimes one, and sometimes another, as far as I have looked over the reports.

Q. Then you did have shown to you by one of the morning-reports the fact that men were working there right along for a good many days on the dredger?—A. No, sir; they both came to our office, but there are only two clerks to perform the duties of four men. The store-clerk is Mr Delano, and I am clerk of the civil engineer, and do the duties of time-clerk. To do that work, we divide it. He does what he can of the figuring, and I compile the accounts monthly, and make this report to the commandant every morning, and he takes the record of the foremen.

Q. On any of your morning-reports to the commandant did you show that men were at work on the dredger?—A. Yes, sir; I did. It struck me all of a sudden that it ought not to be there. Whether that was one of the first reports where the dredger appeared or the last I do not know.

Q. It struck you all of a sudden that there was something wrong?—A. No; it struck me all of a sudden that it ought not to be there.

Q. You called the attention of Mr. Granger to it, and he called the men up, and they made the explanation which you have stated?—A. They made that explanation, and he said, "You will from to-day do no work on the dredger."

Q. This was after the work had been done, was it not?—A. I do not know about that.

By Mr. MILLS:

Q. Was that after your attention had been called to it by the commandant?—A. No, sir; the commandant had not called my attention to it.

Q. Had the fact become public?—A. No, sir.

Q. Had any complaint been made that the dredger was being prepared at Government expense?—A. No, sir.

By Mr. HARRIS:

Q. Could not the civil engineer, by looking at those morning-reports, see where his men were at work every day?—A. Well, sir, in looking at those morning-reports, they came under my eye to compile them.

Q. Did he not look at them?—A. No, sir; not every day. He would look at the condensed daily reports. The condensed daily reports bore that, but he probably sometimes would not cast his eye over them.

Q. Was it not his duty to know where the men were every day?—A. Yes, sir.

Q. So that in point of fact he had the returns before him?—A. The condensed reports.

Q. And you had the extended reports?—A. Yes, sir.

Q. Either of them were accessible to him if he had seen fit to look at them?—A. Yes, sir.

By Mr. MILLS:

Q. Do you know whether the consolidated or compiled report, as you call it, that was carried to the commandant every morning, showed that those men were at work on the dredger?—A. Yes, sir; I think they do show it.

Q. Then, as a consequence of that, if Mr. Granger is guilty by reason of being informed by his morning-reports that those men were working on the dredger, the commandant is equally guilty, you say?—A. Yes, sir.

Q. They both had the same amount of information of a violation of the laws of the United States Government?—A. Yes, sir; the morning-reports in the interim while this dredger business was going on were taken by the other committee, and were at their dis-

posal, and I believe they were forwarded with the other documents, although I am not confident of it, because I do not know.

Q. How is material taken from the stores of the Government by the hands when at work?—A. If a foreman desires any material, he makes an order now. He used to make a request, but now it is an order. He writes it out and brings it to the office of the civil engineer, and an order is made out on a book, called the store-book, to draw the material from the store. On that order is stated what it is to be used for, and whom to be delivered to, and it is signed by the civil engineer. Then it is sent to the store-clerk, who delivers those goods to the person who asks for them.

Q. Could the foreman machinist or foreman joiner have obtained the necessary materials to repair that boat without permission of the civil engineer?—A. No, sir.

Q. Then how could the foremen have obtained this material consistently with the presumption of the innocence of the civil engineer?—A. I do not know, sir, I am sure.

Q. You admit that the material was obtained from the store that went into the boat, I suppose?—A. No, sir; I do not admit that, because I do not know.

By Mr. HARRIS:

Q. You know it could not have been obtained without the signature of Mr. Granger?—A. No, sir.

Q. Did Mr. Granger attend to his business or leave it to other folks?—A. He attends to his business now.

Q. Did he then?—A. I think he endeavored to do the best he could, because he was new at it.

Q. He had been in that position about a year, had he not?—A. He had been in just about a year.

By Mr. MILLS:

Q. Was that lumber under lock and key when it was taken to repair that dredge?—A. The lumber-shed is under lock and key. I think it ought to have been. I am pretty positive it was.

Q. There was some paint used on the dredger, was there not?—A. Yes, sir.

Q. Was it under lock and key?—A. Yes, sir.

Q. Only to be unlocked by permission of the civil engineer?—A. It is in the hands of the inspector of paints.

Q. The civil engineer would have nothing to do with that?—A. That has been issued from the store, and is at the inspector of paints' option to use it after he gets his order to perform his work.

Q. Was the material for the machinists' part of the work under lock and key, or could he obtain it surreptitiously if he wanted to do so?—A. I think he could have obtained it. It is not under lock and key. I think it is accessible to him, a good deal of it.

Q. Was there not some lumber that was accessible to the joiner?—A. Yes, sir; around the yard there may be. There is a good deal of lumber lying around there.

By Mr. HARRIS:

Q. There is lumber enough lying around the yard any time to fix such a boat as that, is there not?—A. I should judge so by the looks of it.

By Mr. JONES:

Q. How long have you been in the yard?—A. It will be four years this coming May.

Q. In the same capacity you now occupy?—A. Yes, sir.

Q. That is, clerk of the civil engineer?—A. Yes, sir.

Q. Head clerk?—A. Yes, sir.

Q. I understood you to say that this fact that men were employed on the dredger came to your knowledge, and you thought it was not right, because these parties had agreed to repair this dredge themselves, without any expense to the Government?—A. Yes, sir.

Q. Those daily reports were handed to you every day, and you had them accessible to you at any time?—A. Yes, sir.

Q. How could that thing be going along for thirty days with the word "dredger" appearing on the report almost every day, when Mr. Granger, the civil engineer, knew it, or should have known it?—A. I called his attention to it the moment I saw it myself.

Q. Did you call his attention to it the second time, or the third, or fourth, or fifth, or sixth time, or did you call his attention to it once and then let it go by?—A. I called his attention to it once. I do not recollect seeing it after that. It might have been that it escaped my eye.

Q. Will you swear that you did not see that but once, and then you called the civil engineer's attention to it?—A. That is the only time I ever saw it to my knowledge, and then I called his attention to it.

By Mr. HARRIS:

Q. Did you make the abstracts?—A. No, sir; I did not.

Q. Who did?—A. The foreman. They send them to me, and I compile them into one.

Q. You had to compare every one?—A. Yes, sir; and look over every one.

By Mr. MILLS:

Q. You not only did that, but you made up a consolidated report from the daily reports, which you sent to the commandant?—A. Yes, sir.

Q. How could you have done that for thirty days and not notice that dredger?—A. It does not strike me that I could. The moment I did see it I called his attention to it and I brought it fair and square right to him, and I wondered myself, if it had been so, that I had never thought of it prior to that. If it had been there half a dozen times or twenty times, it had escaped my notice, because the moment I saw it, knowing the facts of the case, it was my duty to call the attention of the civil engineer to it.

By Mr. JONES:

Q. Were you not down to the dredger several times while it was undergoing repair?—A. No, sir.

Q. Was not the civil engineer?—A. I think he was.

Q. Did he not go off in a steam-yacht where she was being repaired?—A. I believe he did, once.

By Mr. HARRIS:

Q. Were you with Mr. Hastings?—A. Yes, sir.

Q. Do you know anything about that shortage in the lumber-account?—A. It was always short.

Q. How long was it short?—A. Ever since I have been there.

Q. Who was the head of that department when you first went there?—A. Mr. Hastings.

Q. Do you know how it came short?—A. I do not.

Q. Did not Mr. Hastings allow lumber to go out of the yard that was not properly required?—A. He has made passes on which it passed out.

Q. Where it was not properly entered on the books?—A. No, sir.

Q. What do you mean by "passed out?"—A. There was lumber passed out that he said was rejected.

Q. Was it passed out of the lumber-sheds?—A. I do not know. I only know that he would come and say that there was so much lumber to be passed out, and I made out the passes.

Q. You did not know whether it was rejected or taken right out of the sheds?—A. No, sir.

Q. But you do know that at those times no record was kept of the lumber?—A. It was in the passes.

Q. Would the passes show the amount of lumber?—A. No, sir; only a load.

Q. So that all you would have would be the fact that lumber was passed out?—A. Yes, sir.

Q. You would have the passes, but you would not know whether it was properly entered or not?—A. No, sir.

Q. Were you satisfied it was not properly entered?—A. No, sir; because I was not store-clerk.

Q. Have you been store-clerk since?—A. No, sir.

Q. Do you say the same thing has not been done since Mr. Granger has been there?—A. No, sir; not to my knowledge.

Q. Did you tell Mr. Granger of this shortage when he first came in?—A. Yes, sir.

Q. Did he not ask you about it?—A. No, sir; I told him that the material on the yard did not agree with the material on the books.

Q. What is your explanation about it?—A. I have endeavored to find out, but I could only find out in this way, that Mr. Hastings said that when the material was changed from under the head into the various bureaus, he believed that the amount taken out of yards and docks never was there.

By Mr. MILLS:

Q. Do you know that Mr. Hastings, a short time before he resigned, took an inventory of all the stock, and showed that the amount on the books was there?—A. Yes, sir; he did.

Q. He had told you that it was not there?—A. Yes, sir.

Q. And afterward he took an inventory and showed it was there?—A. Yes, sir.

By Mr. HARRIS:

Q. Did you not know at that time that that inventory was a fraud upon his successor?—A. I told him (Mr. Granger) so.

Q. What did he say?—A. He said he would have it investigated.

Q. Did you tell Mr. Hastings that it was a fraud?—A. I did.

Q. What did he say when you told him it was a fraud?—A. He said he wanted to get over it as easy as possible.

Q. Did you tell anybody else what he was doing?—A. Well, there were two or three men there that knew at the time.

Q. Did the commandant know it?—A. I do not think he did.

Q. Did you not feel it your duty to tell him?—A. Well, I could not, very well.

Q. You say you told Mr. Hastings that it was a fraud. Your mind was satisfied that it was a fraud perpetrated on the Government. Did you not feel it your duty as an officer of the Government to attend to it?—A. I did; but he said he would settle it in his own way.

Q. Did you not consider that it was your duty to tell the commandant of the yard that this man was defrauding the Government?—A. I could not.

Q. Why not?—A. In the first place I had nothing to do with the inventory, only as the figures came in. He was writing a letter when the inventory of the material came in according with the books, and I asked him why he made it that way. He stated that he had taken a correct survey. Says I, "Can you find all this lumber down there?" Says he, "Yes." Says I, "Well, the store-clerk states to me that we have not got so much lumber on hand." I talked it over with the store-clerk. He thought that Mr. Hastings must have measured it right, and he measured it himself personally.

Q. You just now stated that you knew that was a fraud?—A. I thought it was.

Q. You were bold enough to tell Mr. Hastings that it was a fraud that he had perpetrated on the Government?—A. Yes, sir.

Q. You were satisfied it was a fraud, and you were there in the employment of the Government. Did you feel you were doing your duty when you were standing by and seeing the Government swindled in that way by the man who was there to protect it?—A. No, sir; I did not.

Q. Why did you not go and inform some man who had authority over him, who could put him under arrest, and stop it? You allowed that thing to go on under your eye without reporting it to anybody until the man resigned and went out.—A. Well, sir, I did not know what my duty was in the case. My duty, perhaps, may be clear now; but at the time, it was a very complicated case for me.

Q. If you were a clerk in a dry-goods store, and you saw a man come in and swindle your employer, should you feel you were doing your duty to your employer if you kept your mouth shut and did not tell him anything about?—A. No, sir.

By Mr. HARRIS:

Q. Well, if the lumber was gone in Hastings's time, or before Hastings came there, it was a fraud upon his successor to put his books in that condition, and make his successor responsible for it, was it not?—A. Yes, sir. He receipted on his arriving there for whatever there was on the books.

Q. Did you not tell him of the fraud?—A. I was not there then.

Q. Were you not there when Mr. Granger came there?—A. Yes, sir.

Q. If you knew there was a shortage there, and that Hastings had covered it up, you knew perfectly well it was a fraud upon his successor, did you not?—A. Yes, sir.

Q. What pains did you take to inform Mr. Granger of that fact?—A. I informed him when the return was made up that the books were wrong, that the material called for on the books I did not think was in stock, and he got a man to measure the timber, and found that the timber belonging to yards and docks was actually short.

Q. About half a million feet?—A. Somewhere about in that vicinity; about 400,000 feet.

Q. Do I understand you to say that you were satisfied Hastings was allowing lumber to go out improperly?—A. I cannot swear that he allowed it, or that it was taken out improperly, because I do not know; I was in the house.

Q. Do you know that timber went out upon passes that was not charged upon the books?—A. I do not.

Q. You said that you knew he was allowing lumber to go out on passes which he said sometimes was rejected lumber?—A. Yes, sir.

Q. You knew that some lumber went out under that pretense which was not entered on the books, did you not, as so much drawn from stock?—A. Well, I don't know. I do not know how he did it. I do not know whether it had ever been received into stock—the rejected lumber.

Q. Do you know whether the lumber he called rejected had ever been entered on the books?—A. I felt that way, but I could not tell, because I did not know. I do not know whether the lumber that he called rejected had been entered into the store or not. I thought there was something wrong about it, although I could not tell him he was doing wrong, or I could not tell him he was doing right.

By Mr. MILLS:

Q. Where was that lumber that went out by those passes carried out—through the gate or by the water-front?—A. Right out by the gate.

Q. How long had Mr. Granger been there before he took this account of stock?—A. He arrived in September, and I believe in November he had a person taking account of stock.

By Mr. HARRIS:

Q. Then he afterward called a board?—A. Yes, sir; he afterward called a board of officers.

BOSTON, *March* 27, 1876.

WILLIAM E. DELANO sworn and examined

By Mr. MILLS:

Question. In what business are you engaged?—Answer. Store-clerk in the yards and docks department.

Q. Who has the supervison of that department?—A. The civil engineer is at the head of the department.

Q. What do you know about this controversy in regard to the dredger?—A. I know nothing in regard to it. All that was drawn out of the store for the dredger was some cordage drawn by Mr. Cassidy by authority of the civil engineer.

Q. Do you know anything about any other material than that cordage?—A. No, sir.

Q. Do you know how the lumber was procured that was worked into that dredger?—A. It was procured by an order from the civil engineer's office.

Q. A written order?—A. A written order, store-book order.

Q. Have you ever seen it?—A. I have seen the store-order.

Q. An order with the civil engineer's name upon it?—A. Yes, sir; I do not know whether it was drawn for the dredger.

Q. I am talking about the material that was used in repairing the dredger. Do you know where that came from?—A. I do not know of any amount that was drawn for the use of the dredger. Mr. Cassidy draws the most of the lumber, and I do not know in what way he uses it. I will state that I am not in charge of the lumber. When I took possession of the store, which was July 1, 1874, I was informed that there was a man in charge of the lumber, who delivered the lumber and reported the amount delivered to the civil engineer who issued the order, and the order was delivered to me and I extended it on the books.

Q. Do you have anything to do with consolidating the reports that come in from the different departments in the civil engineer's bureau?—A. I do—the store-orders.

Q. Are they sent to the commandant?—A. No, sir.

Q. How often are they sent to him?—A. The store-reports are made weekly with the vouchers. Once in three months they go to the commodore, and he signs the books and vouchers. The orders that are drawn daily on the store are signed only by the civil engineer and then signed by the foremen when they receive the goods.

Q. How about the daily reports of labor?—A. Mr. Haskell is the time-clerk and I assist him in his duties. He is chief clerk and time-clerk, and at the time I was transferred to the store, the commandant said that we would have to do the work between us, and I assist him. He is the time-clerk and makes out all the daily reports and goes through the pay-roll.

Q. While the dredger was being repaired, did you notice that there was any work being done on the dredger?—A. I did, sir.

Q. Did you make out the consolidated reports for the commandant?—A. No, sir; Mr. Haskell makes out the consolidated reports.

Q. Did Mr. Granger have an opportunity to see those daily reports from the foremen?—A. I think very likely, for I was told that he signed the reports before they went to the commodore.

Q. There is no reason why he should not have seen them?—A. No, sir.

Q. You saw them?—A. I saw the daily reports, from which I knew there was work being done on the dredger, but what dredger I did not know. There is an appropriation that is called "Derricks, scows, and dredgers," and all work that is done of that kind is charged to that.

Q. Now, was Mr. Granger's attention ever called to the fact that men were at work on the dredger?—A. It was not called by me.

Q. Did you ever have anything said about it between Mr. Haskell and Mr. Granger?—A. No, sir.

Q. Were you present when he called up Mr. Cassidy and Mr. Whitney?—A. No, sir; most of my time is spent in the store-house.

Q. You knew the fact that work was being performed on the dredger from the daily reports?—A. Yes, sir; from Mr. Whitney's report I should say that he had worked two men for thirty days,

Q. It was a matter perfectly familiar to you all the time?—A. I knew there were men charged to the dredger.

Q. Did you know anything about the contract made with Mr. Lewis?—A. No, sir; I do not know Mr. Lewis. I never saw the gentleman.

Q. Did you not know that the agreement was that he should take the dredger and repair it?—A. No, sir.

By Mr. JONES:

Q. Did you not hear it talked over in the yard by the men, or with the clerk, Mr. Haskell, that the Government was not to pay anything for the repair of the dredger?—A. No, sir; that would be in the office. I would not be up there.

Q. What was your first knowledge of it?—A. My first knowledge was that I heard some of the foremen say there was trouble about the dredger, and I was called before the committee to testify what was delivered from the store in relation to the dredger, and I told them all that was charged directly to the dredger was cordage.

By Mr. HARRIS:

Q. How much cordage was charged to the dredger?—A. I should say somewhere in the vicinity of 600 or 700 pounds, may be less or more.

By Mr. JONES:

Q. Did you not deliver any oakum?—A. No, sir; not for the dredger. Probably there was oakum drawn. The foremen draw it. They do not let me know what it is drawn for. They make out an order, and the civil engineer signs it, and it is sent to the store, and I deliver it.

Q. Did you not know to what account it was to be charged?—A. I should charge it to the appropriation. I should not know to what use it is put.

Q. So that there is an opportunity for the foreman to come in and draw that article without telling you what he is going to do with it?—A. Yes, sir; the cordage I recollect from the fact that Cassidy asked me one morning if there was any cordage in the store. I told him there was, and he said he wanted to draw some for the dredger. That is distinctly in my mind.

Q. And you gave it to him?—A. Yes, sir.

Q. What was that worth?—A. I forget exactly. It is the only cordage that has been delivered from the store since I have been store-keeper.

Q. It would be worth how much a pound?—A. I should judge from 6 to 8 or 10 cents.

Q. So that the whole amount would be $60, more or less?—A. Yes, sir.

Q. Was that large cordage for fastening lines?—A. Yes, sir.

Q. Did they not get cordage of you more than once?—A. No, sir; it was all drawn at once, on one order.

By Mr. HARRIS:

Q. How many rolls?—A. I think two; possibly there might have been three; two different sizes.

By Mr. JONES:

Q. By whom was that order drawn?—A. Mr. Granger signed the order to draw it from the store, and Mr. Cassidy signed it as receiving it.

BOSTON, *March* 27, 1876.

JEREMIAH GALVIN sworn and examined.

By Mr. HARRIS:

Question. What is your occupation?—Answer. Well, sir, I open about seventeen doors in the timber-sheds in the morning, in the navy-yard, and I shut them in the evening, and I look after the old wood, and whenever there was chips made, I looked after those chips.

Q. What do you do with them?—A. I give the majority of them to the poor.

Q. You are employed by the Government to open the timber-shed doors and give away chips?—A. No, I look after the old wood, waste wood, that is of no use to the Government, only to give to the poor.

Q. You give it to the poor at the navy-yard?—A. I don't give it myself, only the constructor gives it to whoever he pleases. He gives the passes, and I do with it just as he tells me.

Q. How long have you held this important office?—A. Six or seven years. I was out of it a couple of years.

Q. Have you not been lately re-appointed?—A. I have been re-appointed to the position within a couple of months.

Q. Who got you the appointment?—A. Mr. Dawes and General Banks.

Q. You were appointed when everybody else was turned out, pretty much, were you not?—A. I have been there all the time. I have a large family to support, and they done it because I done my duty, I suppose, faithfully. I have a large family to maintain.

Q. What duty had you done which justified them in giving you this appointment?—A. I don't know. I don't know as I done my duty any better than any other person. The appointment don't amount to much.

Q. You had done something?—A. No; I have a right to my vote, I suppose, as any honest citizen has.

Q. For whom did you work in the political campaign of 1874?—A. I can't tell you; I don't know.

Q. Were you not at work for anybody in that fight between Banks and Gooch?—A. No; I didn't do any fighting at all.

Q. I do not mean fighting with your fists; I mean which side did you take in the political contest?—A. I don't know anything about any fighting that was going on anywhere.

Q. Were you not a Banks man?—A. Well, I always thought a good deal of General Banks.

Q. Were you not a Banks man?—A. That is a question I can't exactly answer. I can't hardly tell.

Q. Do you belong to the republican party or the democratic party?—A. The first day's work I ever got in the navy-yard, it was from the democratic party I got it.

Q. You have been a democrat ever since, have you not?—A. I have not, sir.

Q. You work for the party that pays?—A. No, sir; I don't. I never received a dollar in my life from any politician in the world.

Q. Do you say you did not work for General Banks's election?—A. I don't know how I worked; I might have worked; I don't know how that is. Working and fighting is two different things.

Q. You voted for him, did you not?—A. I can't exactly tell that neither.

Q. Why not?—A. I don't know what right I have to tell that. A man don't know probably sometimes when he would miss a vote.

Q. Were you not appointed in the navy-yard by General Banks this last time, because of some service you had rendered in the election?—A. General Banks is a man who will help anybody, He will help a democrat or a republican, any man at all. He is not that kind of a man. I have been supported by Mr. Claflin, and there is not a man in this State but what would give me a letter.

Q. Governor Rice?—A. He would as quick as any man in the State.

Q. Has he not done it?—A. Certainly he has.

Q. Passing from that, for I do not care anything about your politics except as a matter of curiosity, do you know of any particular wrong committed in the navy-yard?—A. I have never known any wrong to my knowledge in the navy-yard, as long as I am in it. Everything is fair and square, as far as I could see. I don't see any waste of the Government property: probably I would give a poor officer's widow a load of fire-wood that was of no use to the Government. It was rotting in the yard.

By Mr. MILLS:

Q. What is your title—"Chief of Bureau of Old Chips?"—A. I am only a laboring man, but get a little more pay because they get a little more work out of me.

Q. Do you do anything more than open doors and look after the wood?—A. I think I do. That is the hardest work I have. I allowed nothing to be carried out of construction. I am not to look after any other department. I am to see that nothing goes out of construction. I don't care what they take out of yards and docks, because I am not paid by that bureau at all. I am paid by the Bureau of Construction, and I attend to that and see that there is no wrong or injustice done as far as my knowledge goes.

By Mr. HARRIS:

Q. Do you think it necessary now to have you there?—A. Yes, sir; I do. There are hundreds of thousands of cords of wood there, and seventeen doors to be opened in the morning and seventeen closed at night, and I ventilate them sheds. That is what I do, sir. If I didn't do it somebody else would have to.

Q. You think it is necessary to ventilate the timber?—A. I do, sir. That is the most important business now. It is very important to the Government.

By Mr. JONES:

Q. Could not they put it out of doors the same as a lot they have got there?—A. No, sir; there is some of the best live-oak there that there is in the country, and if that is not attended to and ventilated it will decay. My little position there is not worth much.

Q. Were you not at one time in the store?—A. I was, when some other man had my place.

Q. How long?—A. I should think about a year and a half, or something like that.

Q. What were you discharged from the store for?—A. I was not discharged from the store, sir.

Q. Some other man got your place, you say?—A. John Taylor got a man in my place once, and when this man went out as an assessor in the country, where he got more pay, the place was vacant then, and it belonged to me to go back again, and I went back into that place. I found the place vacant, and went after it again.

By Mr. MILLS:

Q. When you found the place vacant to whom did you apply to get the place again?—A. I can't exactly say who I did apply to now.

By Mr. JONES:

Q. Did you go to Washington to get it?—A. No, sir; I did not.

Q. Did you send anybody?—A. No, sir; I did not.

Q. Were you never in Washington?—A. I was.

By Mr. MILLS:

Q. Did you write a letter to anybody?—A. I don't know as I did write any letter, but there was a whole lot of letters written. Some parties wrote a letter for me; I don't know who they were.

Q. To whom did they write it?—A. The Secretary of the Navy, I think; somebody in Washington.

Q. The appointment was sent directly to you from there?—A. Yes, sir.

Q. What is your salary?—A. Only $3.

Q. Three dollars a day?—A. Yes, sir. I guess it is little enough to support a man with nine in the family.

BOSTON, *March* 27, 1876.

CHARLES PURCELL sworn and examined.

By Mr. HARRIS:

Question. What is your business?—Answer. Truckman.

Q. What is your firm-name?—A. Purcell & Fowle.

Q. Did you at the time the sloop-of-war Adams was being built draw any lumber for Mr. McKay from the navy-yard?—A. Yes, sir.

Q. What kind of lumber?—A. Well, we hauled pine, oak, and hard pine.

Q. What kind of pine, sir?—A. Well, it was from an inch to four inches thick.

Q. How much in quantity?—A. I should think likely we hauled 60,000 of pine lumber—what we call Canada lumber.

Q. White-pine boards and plank?—A. Yes, sir.

Q. For the inboard work in that ship?—A. Yes, sir.

Q. Where did you carry it?—A. We carried it to Jones's wharf.

Q. Who delivered you that lumber here?—A. It was taken account of by Mr. Sprague, and Mr. Sprague delivered us the lumber.

Q. Was an account taken of all you took?—A. Yes, sir; he was very particular to take an account.

Q. Did you deliver an account of the separate loads to Mr. McKay?—A. No, sir.

Q. Did you have any ticket or anything that showed the quantity?—A. I didn't. When I could get an account of it from Mr. Sprague I did, for my own benefit. That is all. Sometimes I could get it and sometimes I couldn't.

Q. Did you charge Mr. McKay by the thousand for carting it?—A. Yes, sir; I think we did, as near as we could.

Q. Do you remember, now, what you charged him for carting?—A. I do not. I haven't looked at the books since that time.

Q. Your impression is that it was about 60,000?—A. Yes, sir; I should think I carted 60,000.

Q. Did you have tickets in going from the yard?—A. I had passes to give to the gate-keeper. I always got them signed by Mr. Sprague, and then went down to Mr. Sprague's office and got them signed generally by the captain of the yard.

Q. Did those passes contain the quantity or the number of pieces?—A. I cannot tell you exactly about that.

Q. Who was gate-keeper at that time?—A. The last of the time Mr. Trickey; but I believe he was sick a spell, and this man here at the door generally took the passes.

Q. Do you know whether you carted any more lumber out of the yard than was taken account of?—A. No, sir; I don't think I ever carried any out of the yard but what was taken account of by Mr. Sprague.

Q. Did you carry out oak plank—ship-plank?—A. Yes, sir.

Q. Do you know how much you carried out of that?—A. I can't tell you now, because I never kept no account. We generally got an account as near as we could; but sometimes we didn't get the account from Mr. Sprague. We would get the pass, but wouldn't get the account; and sometimes we measured it ourselves or guessed at it, as near as we could.

Q. Did you bring any plank back after the ship was built?—A. Yes, sir.

Q. Do you know how much you brought back?—A. I don't know; but I should think somewhere from fifteen thousand to eighteen thousand.

Q. All white-oak plank?—A. Yes, sir; white-oak plank and wales.

Q. Did you cart the frame across or was it floated across?—A. That was floated across on lighters.

Q. Whether or not any lumber which you carted out for that ship was unaccounted for here?—A. No, sir. I never got a load that wasn't taken account of at the time, and I was here myself with almost everything that went out of the yard.

By Mr. JONES:

Q. You say you could not always get an account. Why not?—A. Sometimes I could not get it of Mr. Sprague.

Q. Why couldn't you get it of Mr. Sprague?—A. Sometimes Mr. Sprague would take an account of the load and leave us and go up into his office and leave the passes, and we would get the passes; and when we got up there perhaps he had gone out of the yard or gone somewhere else.

Q. Did any one else take any account of the lumber that you carted away?—A. No, sir; Mr. Sprague was always the man.

Q. In your opinion was the account, as he gave it to you, less or more than was on the load?—A. I don't think it was any more or less. I think it was correct. I think they were very particular, more so than any place I ever went to before, in a man's private yard, as far as that was concerned.

Q. I understand you to say that you hauled back a lot of plank?—A. Yes, sir.

Q. Did you haul them when they went out?—A. Yes, sir.

Q. Were those plank that were returned of as good quality as the plank that you carted to Mr. McKay's yard?—A. The same plank.

Q. Hadn't they been culled?—A. No, sir.

Q. They might have been the same plank; but was the quality of the plank returned as good as the quality you hauled out? Would they average as good?—A. Yes, sir; they were carted there and piled up, and loaded on the teams and came back just as they were left.

By Mr. HARRIS:

Q. Without having been overhauled?—A. Without having been overhauled.

By Mr. JONES:

Q. He had to pay for carting?—A. Yes, sir.

Q. What was his object in carting them there and having them carted back again, without overhauling them at all?—A. I can't answer that question. He got more than he wanted. I suppose he was afraid he wouldn't have enough of such and such things and got more than he wanted

---

BOSTON, *March* 27, 1876.

F. F. BUCKLEY sworn and examined.

By Mr. HARRIS:

Question. What is your duty in the yard?—Answer. Inspector of paints, in charge of the painters' department in yards and docks.

Q. Did you do any work or furnish any material for the dredge-boat during the period of its repair?—A. Yes, sir.

Q. What material did you furnish?—A. I furnished some chemical paint and some labor.

Q. How much?—A. I cannot state just the amount.

Q. Will you state whether these figures are correct: "Labor was furnished to the amount of $18 and material amounting to $14.40."—A. I should say it was just about that, as near as I can get at it.

Q. Were these amounts charged to the dredger?—A. No, sir.

Q. Were they charged to the general account?—A. General repairs.

Q. That material and that labor went onto the dredger?—A. Yes, sir.

Q. Did you charge all the work done and all the material furnished to general repairs?—A. Yes, sir.

Q. Did you deliver any material to be used on the dredger which was used for other purposes?—A. Yes, sir. Perhaps there was four or five pounds of paint brought back in the can, and I used it on the roofs.

Q. That was all; the remnants?—A. Yes, sir.

Q. Who gave you the order to furnish this material?—A. Colonel Granger, the civil engineer.

BOSTON, *March* 27, 1876.

HENRY D. JONES sworn and examined.

By Mr. MILLS:

Question. Do you keep a lumber-yard?—Answer. I do.

Q. Where is your lumber-yard?—A. East Boston.

Q. How much lumber have you received in your yard and stored for Mr. McKay since the launching of the Adams?—A. I took no account of it, but I was told that there was between 60,000 and 70,000 feet, board-measure.

Q. That was taken to your yard?—A. Hauled to my yard and stored.

Q. What kind of lumber was that?—A. There is some pine lumber and some walnut.

Q. Any white oak?—A. No, sir.

Q. What has become of that lumber?—A. Well, it was taken by the ship-joiners and others that was at work on the sloop of war.

Q. What sloop?—A. I can't say; the one that Mr. McKay built two years ago.

Q. For the Government?—A. Yes, sir.

Q. Was it taken and used on the second contract, after the boat was launched?—A. No, sir; I took no account of it; I stored it by the month; I wasn't responsible for any of the lumber. They came there and got it as they wanted to use it.

Q. And used it on the vessel?—A. Yes, sir.

Q. Was that lumber hauled from the navy-yard to Mr. McKay's yard, and then from Mr. McKay's yard to yours?—A. No, sir; hauled from the navy-yard to my place.

Q. In the first place?—A. Yes, sir.

Q. And then he took it from your yard when he wanted it and used it?—A. Yes, sir.

By Mr. HARRIS:

Q. How much of that is left, probably?—A. It is only mere guess-work; I should think 18,000 to 20,000 feet; I don't know.

Q. Had he any other lumber there than that which came from the navy-yard?—A. No, sir.

Q. Has he any there now which came from other places?—A. No, sir; only that which came from the navy-yard.

By Mr. MILLS:

Q. Did all that you have there come from the navy-yard?—A. I heard it did; it came there on teams, and they told me about the quantity.

By Mr. HARRIS:

Q. Who told you?—A. Some person who was hauling; I can't say now.

Q. Is that good lumber?—A. Yes, sir.

Q. You think there are 18,000 or 20,000 feet there now?—A. I should judge so; I have no particular interest about it, as far as that is concerned, but I was in there every day looking at it.

Q. Have you spoken to the commodore about it or to Mr. Easby?—A. No, sir.

Q. Have you seen Mr. Easby?—A. No, sir.

Q. Did you see the men he sent there last week?—A. No, I did not; I was away.

Q. Do you know of any other lumber which Mr. McKay took from the navy-yard which he has stored now in any other yard?—A. I don't know of any.

BOSTON, *March* 27, 1876.

SAMUEL L. FOWLE sworn and examined.

By Mr. MILLS:

Question. Did you haul any lumber for Mr. McKay to any place in East Boston?—Answer. Yes, sir.

Q. Where did you haul the lumber from?—A. I hauled some from the navy-yard.

Q. To this yard?—A. Yes, sir.

Q. How much have you hauled?—A. That it would be almost impossible to tell you.

Q. Who else hauled lumber besides you?—A. I don't know of any one; I don't know but there were other parties; I don't know any one, however, who did haul any.

Q. Have you hauled any lumber from Mr. McKay's yard to any other place?—A. Yes, sir; I have hauled it to mill.

Q. Have you hauled any lumber that belonged to the United States Government from Mr. McKay's yard anywhere else?—A. No, sir; unless it is to the mill and back to the yard again.

Q. What mill?—A. McQuesten's mill.

Q. Do you know of any lumber belonging to the Government that has been improperly taken away from the yard?—A. No, sir; I don't.

Q. Do you know whether Mr. McKay had drawn the lumber which you hauled regularly from the yard to build the vessel?—A. I presume he had, from the fact that we have to have passes for everything that comes out of the yard.

Q. By whom were the passes signed—Mr. Easby?—A. I think they were, but I have not been over more than three or four times myself; my partner used to go.

Q. What is your partner's name?—A. Charles Purcell.

Q. After that vessel was launched, did you haul any lumber away from Mr. McKay's yard?—A. Yes, sir.

Q. Where to?—A. Up to what is called Taylor's yard.

Q. How much did you haul to Taylor's yard?—A. That I can't tell you; there was considerable of it old stuff, I call it fire-wood, and some timber.

Q. What sort of timber, live-oak?—A. I think my partner said there was some live-oak. I know there was some live-oak in the yard, and I presume that was hauled up there. It was some "short" stuff thrown out of the frame rejected.

Q. Did you haul any pine plank up there to Taylor's yard?—A. I think not; I am not certain in regard to that. I did not have anything to do with hauling it myself.

Q. How much lumber do you think was hauled up to Taylor's yard —A. I couldn't form any idea.

Q. 50,000 feet?—A. I shouldn't dare to make any estimate, for I don't know. Most of it was short stuff; there was some timber, and there might possibly have been some plank and some boards, stage plank.

Q. Did you or your partner haul any lumber from the navy-yard to Henry Jones's yard? —A. Yes, sir.

Q. Do you know how much?—A. I don't.

Q. What kind of lumber was it?—A. It was most, if not all, pine boards, from an inch to, I guess, as high as two, and there may have been some three-inch plank.

Q. When you took lumber from the yard yourself do you know whether any account was taken?—A. Everything that I ever took from the yard an account was taken of in the yard.

Q. Did you see the account taken?—A. Yes, sir; I saw the pass or ticket.

Q. Did you have a pass for everything you took out?—A. Yes, sir; in all cases.

Q. What does the ticket show?—A. It shows the number of pieces.

Q. That is, your ticket showed the number of pieces on the load?—A. I believe it did, invariably, in every case where I carried anything out of the navy-yard.

Q. To whom did you deliver the ticket?—A. To the gate-keeper at the gate.

BOSTON, *March* 27, 1876.

SAMUEL T. MANSON sworn and examined.

By Mr. MILLS:

Question. Are you employed in the navy-yard?—Answer. I am not, sir.

Q. Do you know of any abuses in the navy-yard that you can report to the committee? —A. I do not.

Q. What is your occupation?—A. I run a saw-mill and planing-mill.

Q. Where is your planing-mill?—A. It is at East Boston.

Q. Have you planed any timber for Mr. Donald McKay?—A. I have, sir.

Q. What sort of timber was it?—A. It was oak knees, &c.

Q. Where did those knees come from?—A. They come from the navy-yard, I understand. I hauled them from the Atlantic Works.

Q. And planed them and hauled them back again?—A. Yes, sir.

Q. Were they built into the Adams?—A. The first vessel he built there.

Q. Do you know anything about any lumber that has been hauled away from Mr. McKay's yard since the launching of the Adams?—A. I do not.

Q. Do you know of any lumber or timber hauled from the navy-yard that is deposited anywhere else in Boston?—A. I do not.

By Mr. HARRIS:

Q. Have you ever been employed in any way by the Government?—A. I never was.

Q. Have you had any connection with the navy-yard in any way?—A. No, sir.

Q. Have you ever planed any lumber that came from the navy-yard?—A. Not to my knowledge, excepting this; this might have come from the yard; I don't know where it came from.

Q. Do you ever plane knees by machinery?—A. We do, sir; that is our business.

Q. Can you plane a knee on the crooked side by machinery, on the inside?—A. We saw that.

Q. Saw it to mold?—A. Yes, sir.

Q. And then plane it by hand?—A. We plane the knee first, and then saw it; we plane the sides of the knee.

Q. All the outside?—A. We plane just the two sides of the knee. It is sided down. We put it on the machine and plane the sides, and then it is molded, and we saw it with a circular saw inside; with a belt-saw or jig-saw.

Q. And then smooth it?—A. That is another part of the business, which we do not do.

Q. Did you ever work upon any live-oak?—A. I don't think we have. There might have been some live-oak knees, but they were most all white-oak knees; I can't say positively about that. I did not see every knee, perhaps. I am superintendent of the mill, and I have men to do the work.

By Mr. JONES:

Q. Do you know the price of lumber?—A. I know the price of some kinds of lumber.

Q. Do you know the price of white-oak lumber, fit for outside work?—A. I should say it varies very much from one year to another.

Q. Take it a year or eighteen months ago?—A. I should not want to give any opinion about that, because I do not deal in it at all.

Q. Do you deal in any kind of lumber?—A. Our business is planing and sawing; we do not deal in lumber specially, but we do sell some lumber.

Q. I suppose you know the price of pine timber and pine plank and spruce plank?—A. Yes, sir; I do.

Q. Take eastern pine, 10 inches square, 16 feet long, what has been the price for the last eighteen months of first-rate timber for wharf-capping?—A. I should say it would run from $20 to $35, perhaps up to $40, a thousand. The price of that kind of timber varies a good deal. If you wanted to buy a few pieces, you would have to pay a certain price for it; if you wanted to order a cargo of it, it would be a different thing.

Q. What would it be by the cargo?—A. From $20 to $35

Q. What would a good quality of eastern spruce-boards have been worth by the cargo any time within the last eighteen months?—A. I should say you could get a cargo for from $18 to $25.

Q. Couldn't you for $13?—A. No, sir, I couldn't; not a year ago; I could to-day. We bought spruce a year ago, and paid, I think, $22 for it.

Q. For miscellaneous length spruce-boards?—A. Yes, sir; good quality. When spruce-boards come, they are surveyed and divided into first quality and refuse. You have got to pay for first quality a certain price, and another price for refuse. We have sold boards fit for flooring at $35.

Q. Couldn't you buy them in the market, by wholesale, for $28?—A. Yes, sir; I think that would be a fair price for them.

Q. What could you buy them for to-day?—A. I don't know as there is any established price. I guess you could order them for $18.

By Mr. HARRIS:

Q. Have you ever dealt in yellow-pine plank?—A. No, sir; I have not.

Q. Do you know its price?—A. Well, we are buying small quantities, and using it at times.

Q. What is it worth to-day?—A. I presume you could buy southern pine by the cargo for $22.

Q. What could you buy it for a year ago?—A. I guess it was worth $35. I wouldn't state this as a fact; but that is my impression, that it was worth from $28 to $35; it would depend upon the length. Ship-timber is worth some more than other timber.

Q. Do you know anything about white-oak timber fit for vessels?—A. No, sir; I do not.

BOSTON, *March* 27, 1876.

Captain HENRY ERBEN sworn and examined.

By Mr. MILLS:

Question. Do you know of any abuses in the navy-yard at Portsmouth, at Boston, or anywhere else in the United States, in any of the navy-yards, that you can give information about to the committee?—Answer. I know none at Portsmouth, because I have but recently reported there. I have known men taken on at the New York navy-yard when I could not see any necessity for their employment at that time, and discharged after a week or two. They would be taken on a week or two preceding an election, and discharged immediately after.

Q. How many would be taken on?—A. To my recollection, quite a large number. I suppose it would be safe to say four, or five, or six hundred. Then those men would get paid for the afternoon by a circular-letter, when they did not work, which I thought was not right.

Q. Who had charge of that business?—A. That was by a circular-letter issued by the Navy Department, that the men should go out to vote, and should be given a half day's pay.

Q. That was on election-day?—A. That was on election-day. I only know one case where a place was made for a man by the Bureau of Construction, as master of ship-keepers—an unheard-of thing.

Q. Was that in New York?—A. Yes, sir; a man came there from New Jersey and took the position.

Q. By whom was he appointed?—A. He came appointed by Mr. Hanscom, as master of ship-keepers; I don't recollect what his salary was, but at all events it was equal to that of a captain of watch, if not more. The man never attended to any business there whatever. He came when he wanted to and went when he pleased.

Q. Do you know anything about any abuses in the way of contracts, supplies, &c.?—A. No, sir.

Q. Do you know of any abuses at Mare Island, California?—A. Only what I heard as common talk among the officers in regard to a cargo of coal.

Q. What was that?—A. That is hearsay; a cargo of coal was offered to the Government just before my arrival there, a year ago last August. It was offered to the Equipment Bureau, I think, for $20 a ton, but was not taken. Admiral Rogers telegraphed to Washington about this coal, and it was declined. Some four or five or six days afterward, an order came to receive the coal, and it was bought from another party at an advanced price, as I was told, of $7 a ton.

Q. You do not know anything about that fact yourself?—A. I don't know anything about that fact, except I know it occurred. That is, I know they all said so.

Q. Do you know it of your own knowledge?—A. I know nothing in regard to it of my own knowledge.

By Mr. HARRIS:

Q. Do you know of whom the coal was finally bought?—A. Not of my own knowledge.

Q. Have you information?—A. I have information. The information came to me from the Equipment officer who is at the coal-yard, and from one of the officers in the department for which the coal was bought. I think it was Steam-Engineering or Construction. The coal, when it was bought, was bought of Mr. Hanscom.

Q. What Hanscom?—A. Young Hanscom, a merchant in San Francisco; he is a son of Isaiah Hanscom.

Q. Who told you?—A. That was told me by Commodore Fitzhugh, in the navy-yard, and it was told me by the chief engineer of the yard, Mr. Lawton.

Q. He told you that the coal was rejected when it first came?—A. The coal was rejected by the Department when it first came.

Q. By what Department?—A. By the Secretary of the Navy, at the time. I mean, by the Navy Department itself.

Q. The coal could not be rejected by him, could it?—A. The coal for the Navy is purchased by that Department. They purchase all the coal for steam purposes.

Q. It has to be inspected?—A. Yes, sir.

Q. By whom?—A. It is inspected by the coal-engineer, who is at Philadelphia, and at the yard it is inspected when it arrives. It did not come to Mare Island at all. The coal was at San Francisco.

Q. It had not been rejected by the inspector at the yard?—A. I am confident it had not, because the coal had never come to Mare Island, which is thirty miles from San Francisco.

Q. You understand that it was in some way rejected at $20 a ton?—A. They declined to take it, as I understand; the Government did not want it.

Q. And then they afterward purchased it at $27 a ton?—A. The difference between the price at which the coal was offered, and the price at which it was bought, was $7 a ton.

By Mr. MILLS:

Q. Let us get that just exactly right. You say it was rejected by the Navy Department?—A. The coal is supplied by contract, and this was a cargo that came out on a venture, and belonged to Mr. Low, I think.

Q. When it got to San Francisco, the naval inspector inspected it and condemned it?—A. No, sir; I don't think they ever inspected it at all; the Government refused to buy it.

Q. Why did the Government refuse to buy it?—A. I don't know.

Q. Somebody must have seen it, if the Government refused to buy it.—A. I don't think anybody saw it at all.

Q. How could the Government refuse to buy it?—A. They did not want to buy it, and then they changed their minds in a few days and bought it.

Q. What department of the Government refused to buy it?—A. I think it was refused by the Chief of the Bureau of Equipment, Admiral Reynolds.

Q. Where was he?—A. He was at Washington.

Q. Did he see the coal?—A. He could not have seen the coal. I don't think anybody could have seen the coal.

Q. Would a man send a cargo of coal around there and expect to sell it to the Government?—A. He did not expect to sell it to the Government. It came there on a venture. They bring it there in ships as ballast, to sell in the market. It went out there just as you would send any article there. The Government refused to purchase it, and then afterward purchased it at an advance of $7 a ton of Mr. Hanscom. The general supposition was that he purchased the coal of the man who owned it there.

Q. What officer was it who purchased the coal from Mr. Hanscom?—A. That was done by a telegraphic order from the bureau.

Q. What officer refused to buy it on the part of the Government?—A. Admiral Reynolds, I suppose. I think the telegraphic dispatch came from Admiral Reynolds, not the Secretary. I think the coal was taken for either Construction or Steam-Engineering, which do not require that kind of coal.

Q. How much of that coal was there?—A. My recollection is, something about 1,000 or 1,200 tons. The coal was sent out as coal is very frequently sent out, as ballast in merchant-ships, and no person wanted it at the time, and Mr. Low, one of the principal merchants there, who owned the coal, offered it to the Government, and it was declined. That is all I know about it.

By Mr. HARRIS:

Q. Are you stationed at Portsmouth?—A. Yes, sir.

Q. In what capacity?—A. I am senior aid on the yard in the executive department. have been there since the 1st of November.

Q. Have you known at any time, in any yard, any material which has been inspect and rejected by the proper officer, to be afterward received?—A. No; I have never know anything of that kind.

Q. Have you anything to do with the open purchases of material for the yard?—A. N sir; I have not.

Q. Have you not some knowledge of irregularities there?—A. None at all. The on time I have ever been at a navy-yard, I was on ordnance duty, which was a separate s of thing. The powder, shot, and shell are supplied by contract. I had very little to with outside parties.

BOSTON, *March* 27, 1876

WILLIAM P. BLANEY sworn and examined.

By Mr. MILLS:

Question. Do you know who is the owner of the yacht America?—Answer. I do know; but I suppose from the papers that I took from the yacht America, and held in possession, that General B. F. Butler was the owner.

Q. From whom did he obtain the boat?—A. That is more than I can say; I took ch of the yacht America after she arrived here from Annapolis.

Q. Do you know anything about the building of a boat for her in this yard?—A. I not, sir.

Q. You do not know by what authority one was built and sent on board of her?—A. sir; I only know that I had a boat that came with her.

Q. What sort of a boat was it?—A. It was an ordinary launch; a boat that had b somewhat neglected as well as herself, I found, to my sorrow.

Q. Where did she come from?—A. She came from Annapolis.

Q. Had she been a Government boat?—A. Yes, sir; I had seen her long before I t command of her, and known her from her infancy. I took command of her in Bay Vi his summer residence.

Q. You had nothing to do with having a boat made for her here?—A. Nothing, sir.

By Mr. HARRIS:

Q. Has there not been a new boat built for her?—A. Not to my knowledge; there w none while I had command of her.

Q. How long were you in command of her?—A. I took command of the America the l of May, 1873, and laid her up the 20th of October, 1873; that was when my term of servi expired with General Butler.

Q. Where did you lay her up?—A. In Beverly.

Q. Have you seen her since?—A. But once.

Q. Has she not two boats now?—A. She had not when I saw her; I went out on a da pleasure in a steam-yacht, and went alongside of her, and she had no boats then with h they were away from the yacht.

By Mr. MILLS:

Q. What was that yacht America worth when you took charge of her?—A. There w parties, friends of mine, who were anxious to purchase the yacht, and they asked my opini I would not have given $4,000 for the America as she stood when I took her; she was in worst condition I ever saw a boat.

Q. What did you do with her while you were in command of her?—A. Nothing but round the coast here.

Q. Did you carry any merchandise?—A. No, sir.

By Mr. HARRIS:

Q. The general was taking his friends out in her?—A. Yes, sir; sailing round for ple ure. The general was with her on but one or two occasions; his time was so much oc pied that he was not able to go.

Q. Who did use her?—A. His family; the general's son was the principal one who u her.

Q. Did she carry anything at all?—A. Nothing whatever; she simply went out fo day, and came in at night.

Q. Purely a pleasure-boat?—A. That is all.

Q. How large a crew did you have?—A. I had sixteen men.

Q. What is her tonnage?—A. Two hundred and one of the old; about one hundred the new.

Q. Who owns her now?—A. That is a conundrum; I do not know, I am sure. I not know where she is now.

Q. Do you know of the Government doing anything to that vessel after she came here?—A. Nothing at all, except this; that I took out some shot and shell at this yard and landed it, and took in some iron ballast.

Q. By whose orders?—A. I cannot say, except the commandant, who was then Mr. Parrot, I believe.

Q. What had she to do with shot and shell?—A. That is more than I can say; that is what I found in her. It was in as ballast, I suppose.

Q. And you exchanged that for pig-iron for ballast?—A. Yes, sir.

Q. What did you do with that?—A. I left that in her.

Q. You carried it all the time for ballast?—A. Yes, sir.

Q. Did you take any more in than you took out?—A. No, not much.

Q. I suppose the shells were empty?—A. Yes, sir; I should not have remained there a great while, I think, if they had been loaded.

Q. She had no guns, or any means of using shot or shell?—A. No, sir; none whatever.

Q. Do you know what the Government had used her for?—A. I think they used her for a midshipman's training-ship; she was used for that purpose when I saw her in Newport, several years ago; she was there some time before the rebellion.

WASHINGTON, *April* 11, 1876.

JOHN B. SIMONDS sworn and examined.

By Mr. MILLS:

Question. In what business are you engaged?—Answer. In the navy-yard.

Q. What navy-yard?—A. Charlestown, or rather called Boston navy-yard, now, I believe.

Q. What are you doing at the navy-yard?—A. I have been under the inspector of timber and lumber; it has been my business to assist him in his duties.

Q. How long have you been engaged in that business?—A. I have been there since the 12th of June, 1861. I went in, in the first place, as quarterman over a gang of laborers.

Q. Have you been out at any time?—A. Yes, sir.

Q. When were you out?—A. I have been suspended some two or three times; I don't recollect just the dates.

Q. When were you last employed there?—A. I was at work when I was summoned.

Q. When did you receive your last appointment to report to that yard for work?—A. I guess I was notified to come in to work on the 17th of March.

Q. From whom did you receive your appointment?—A. I do not know who from. I made no application to any one. There was a man came up and notified me that there was an order for me to go to work in the yard.

Q. Where were you then?—A. At home.

Q. In Boston?—A. Charlestown; it is a part of Boston now.

Q. Did you not apply to Mr. Hanscom for a place by letter or otherwise?—A. No, sir.

Q. Nor any of your friends?—A. Not that I am aware of.

Q. Don't you know that you were employed by telegraphic order from him?—A. I understood so.

Q. Who told you so?—A. Well, I think it was the constructor.

Q. Don't you know who it was?—A. No, sir.

Q. Were you surprised at the appointment?—A. I was at the time.

Q. Have you seen Mr. Hanscom since you came to Washington?—A. I have not.
